(2) Each raft must have a trailing line, and must have a static line designed to hold the raft near the airplane but to release it if the airplane becomes totally submerged.

(c) Approved survival equipment must be attached to each liferaft.

(d) There must be an approved long-range signaling device for use in one liferaft.

(e) For airplanes not certificated for ditching under § 25.801 and not having approved life preservers, there must be an approved flotation means for each occupant. This means must be within easy reach of each seated occupant and must be readily removable from the airplane.

**§ 25.1419 Ice protection.**

(a) If certification with ice protection provisions is desired, compliance with this section must be shown.

(b) The airplane must be able to safely operate in the continuous maximum and intermittent maximum icing conditions determined under Appendix C. An analysis must be performed to establish, on the basis of the airplane's operational needs, the adequacy of the

ice protection system for the various components of the airplane.

(c) In addition to the analysis and physical evaluation prescribed in paragraph (b) of this section, the effectiveness of the ice protection system and its components must be shown by—

(1) Laboratory dry air or simulated icing tests, or a combination of both, of the components or models of the components;

(2) Flight dry air tests of the ice protection system as a whole, or of its individual components;

(3) Flight tests of the airplane or its components in measured simulated icing conditions; or

(4) Flight tests of the airplane in measured natural atmospheric icing conditions.

(d) For turbine engine powered airplanes, the ice protection provisions of this section are considered to be applicable primarily to the airframe. For the powerplant installation, certain additional provisons of Subpart E of this part may be found applicable.

MISCELLANEOUS EQUIPMENT

**§ 25.1431 Electronic equipment.**

(a) In showing compliance with § 25.1309 (a) and (b) with respect to radio and electronic equipment and their installations, critical environmental conditions must be considered.

(b) Radio and electronic equipment must be supplied with power under the requirements of § 25.1355(c).

(c) Radio and electronic equipment, controls, and wiring must be installed so that operation of any one unit or system of units will not adversely affect the simultaneous operation of any other radio or electronic unit, or system of units, required by this chapter.

**§ 25.1433 Vacuum systems.**

(a) There must be means, in addition to the normal pressure relief, to automatically relieve the pressure in the discharge lines from the vacuum air pump when the delivery temperature of the air becomes unsafe.

(b) Each vacuum air system line and fitting on the discharge side of the pump that might contain flammable vapors or fluids must meet the requirements of § 25.1183 if they are in a designated fire zone.

(c) Other vacuum air system components in designated fire zones must be at least fire resistant.

**§ 25.1435 Hydraulic systems.**

(a) *Design.* Each hydraulic system must be designed as follows:

(1) Each element of the hydraulic system must be designed to withstand, without detrimental, permanent deformation, any structural loads that may be imposed simultaneously with the maximum operating hydraulic loads.

(2) Each element of the hydraulic system must be designed to withstand pressures sufficiently greater than those prescribed in paragraph (b) of this section to show that the system will not rupture under service conditions.

(3) There must be means to indicate the pressure in each main hydraulic power system.

(4) There must be means to ensure that no pressure in any part of the system will exceed a safe limit above the maximum operating pressure of the system, and to prevent excessive pressures resulting from any fluid volumetric change in lines likely to remain closed long enough for such a change to take place. The possibility of detrimental transient (surge) pressures during operation must be considered.

(5) Each hydraulic line, fitting, and component must be installed and supported to prevent excessive vibration and to withstand inertia loads. Each element of the installation must be protected from abrasion, corrosion, and mechanical damage.

(6) Means for providing flexibility must be used to connect points in a hydraulic fluid line, between which relative motion or differential vibration exists.

(b) *Tests.* Each element of the system must be tested to a proof pressure of 1.5 times the maximum pressure to which that element will be subjected in normal operation, without failure, malfunction, or detrimental deformation of any part of the system.

(c) *Fire protection.* Each hydraulic system using flammable hydraulic fluid must meet the applicable requirements of §§ 25.863, 25.1183, 25.1185, and 25.1189.

**§ 25.1439 Protective breathing equipment.**

(a) If there is a class A, B, or E cargo compartment, protective breathing equipment must be installed for the use of appropriate crewmembers.

(b) For protective breathing equipment required by paragraph (a) of this section or by any operating rule of this chapter, the following apply:

(1) The equipment must be designed to protect the flight crew from smoke, carbon dioxide, and other harmful gases while on flight deck duty and while combating fires in cargo compartments.

(2) The equipment must include—

(i) Masks covering the eyes, nose, and mouth; or

(ii) Masks covering the nose and mouth, plus accessory equipment to cover the eyes.

(3) The equipment, while in use, must allow the flight crew to use the radio equipment and to communicate with each other, while at their assigned duty stations.

(4) The part of the equipment protecting the eyes may not cause any appreciable adverse effect on vision and must allow corrective glasses to be worn.

(5) The equipment must supply protective oxygen of 15 minutes duration per crewmember at a pressure altitude of 8,000 feet with a respiratory minute volume of 30 liters per minute BTPD. If a demand oxygen system is used, a supply of 300 liters of free oxygen at 70° F. and 760 mm. Hg. pressure is considered to be of 15-minute duration at the prescribed altitude and minute volume. If a continuous flow protective breathing system is used (including a mask with a standard rebreather bag) a flow rate of 60 liters per minute at 8,000 feet (45 liters per minute at sea level) and a supply of 600 liters of free oxygen at 70° F. and 760 mm. Hg. pressure is considered to be of 15-minute duration at the prescribed altitude and minute volume. BTPD refers to body temperature conditions (that is, 37° C., at ambient pressure, dry).

(6) The equipment must meet the requirements of paragraphs (b) and (c) of § 25.1441.

**§ 25.1441 Oxygen equipment and supply.**

(a) If certification with supplemental oxygen equipment is requested, the equipment must meet the requirements of this section and §§ 25.1443 through 25.1453.

(b) The oxygen system must be free from hazards in itself, in its method of operation, and in its effect upon other components.

(c) There must be a means to allow the crew to readily determine, during flight, the quantity of oxygen available in each source of supply.

(d) The oxygen flow rate and the oxygen equipment for airplanes for which certification for operation above 40,000 feet is requested must be approved.

**§ 25.1443 Minimum mass flow of supplemental oxygen.**

(a) If continuous flow equipment is installed for use by flight crewmembers, the minimum mass flow of supplemental oxygen required for each crewmember may not be less than the flow required to maintain, during inspiration, a mean tracheal oxygen partial pressure of 149 mm. Hg. when breathing 15 liters per minute, BTPS, and with a maximum tidal volume of 700 cc. with a constant time interval between respirations.

(b) If demand equipment is installed for use by flight crewmembers, the minimum mass flow of supplemental oxygen required for each crewmember may not be less than the flow required to maintain, during inspiration, a mean tracheal oxygen partial pressure of 122 mm. Hg., up to and including a cabin pressure altitude of 35,000 feet, and 95 percent oxygen between cabin pressure altitudes of 35,000 and 40,000 feet, when breathing 20 liters per minute BTPS. In addition, there must be means to allow the crew to use undiluted oxygen at their discretion.

(c) For passengers and cabin attendants, the minimum mass flow of supplemental oxygen required for each person at various cabin pressure altitudes may not be less than the flow required to maintain, during inspiration and while using the oxygen equipment (including masks) provided, the following mean tracheal oxygen partial pressures:

(1) At cabin pressure altitudes above 10,000 feet up to and including 18,500 feet, a mean tracheal oxygen partial pressure of 100 mm. Hg. when breathing 15 liters per minute, BTPS, and with a tidal volume of 700 cc. with a constant time interval between respirations.

(2) At cabin pressure altitudes above 18,500 feet up to and including 40,000 feet, a mean tracheal oxygen partial pressure of 83.8 mm. Hg. when breathing

30 liters per minute, BTPS, and with a tidal volume of 1,100 cc. with a constant time interval between respirations.

(d) If first-aid oxygen equipment is installed, the minimum mass flow of oxygen to each user may not be less than four liters per minute, STPD. However, there may be a means to decrease this flow to not less than two liters per minute, STPD, at any cabin altitude. The quantity of oxygen required is based upon an average flow rate of three liters per minute per person for whom first-aid oxygen is required.

(e) If portable oxygen equipment is installed for use by crewmembers, the minimum mass flow of supplemental oxygen is the same as specified in paragraph (a) or (b) of this section, whichever is applicable.

**§ 25.1445 Equipment standards for the oxygen distributing system.**

(a) When oxygen is supplied to both crew and passengers, the distribution system must be designed for either—

(1) A source of supply for the flight crew on duty and a separate source for the passengers and other crewmembers; or

(2) A common source of supply with means to separately reserve the minimum supply required by the flight crew on duty.

(b) Portable walk-around oxygen units of the continuous flow, diluter-demand, and straight demand kinds may be used to meet the crew or passenger breathing requirements.

**§ 25.1447 Equipment standards for oxygen dispensing units.**

If oxygen dispensing units are installed, the following apply:

(a) There must be an individual dispensing unit for each occupant for whom supplemental oxygen is to be supplied. Units must be designed to cover the nose and mouth and must be equipped with a suitable means to retain the unit in position on the face. Flight crew masks for supplemental oxygen must have provisions for the use of communication equipment.

(b) If certification for operation up to and including 25,000 feet is requested, an oxygen supply terminal and unit of oxygen dispensing equipment for the immediate use of oxygen by each crewmember must be within easy reach of that crewmember. For any other occupants, the supply terminals and dispensing equipment must be located to allow the use of oxygen as required by the operating rules in this chapter.

(c) If certification for operation above 25,000 feet is requested, there must be oxygen dispensing equipment meeting the following requirements:

(1) There must be an oxygen dispensing unit connected to oxygen supply terminals immediately available to each occupant, wherever seated. If certification for operation above 30,000 feet is requested, the dispensing units providing the required oxygen flow rate must be automatically presented to the occupants. The total number of dispensing units and outlets must exceed the number of seats by at least 10 percent. The extra units must be as uniformly distributed throughout the cabin as practicable.

(2) Crewmembers on flight deck duty must be provided with demand equipment. In addition, there must be an oxygen dispensing unit, connected to an oxygen supply terminal, immediately available to each flight crewmember when seated at his station.

(3) There must be at least two outlets and units of dispensing equipment of a type similar to that required by subparagraph (1) of this paragraph in—

(i) Each washroom; and

(ii) Each lavatory, if separate from the washroom.

(4) Portable oxygen equipment must be immediately available for each cabin attendant.

**§ 25.1449 Means for determining use of oxygen.**

There must be a means to allow the crew to determine whether oxygen is being delivered to the dispensing equipment.

**§ 25.1451 Fire protection for oxygen equipment.**

(a) Oxygen equipment and lines may not be in any designated fire zone.

(b) Oxygen equipment and lines must be protected from heat that may be generated in, or escape from, any designated fire zone.

(c) Oxygen equipment and lines must be installed so that escaping oxygen cannot cause ignition of grease, fluid, or vapor accumulations that are present in normal operation or as a result of failure or malfunction of any system.

**§ 25.1453 Protection of oxygen equipment from rupture.**

Oxygen pressure tanks, and lines between tanks and the shutoff means, must be—

(a) Protected from unsafe temperatures; and

(b) Located where the probability and hazards of rupture in a crash landing are minimized.

**§ 25.1455 Draining of fluids subject to freezing.**

If fluids subject to freezing may be drained overboard in flight or during ground operation, the drains must be designed and located to prevent the formation of ice on the airplane as a result of the drainage.

**§ 25.1457 Cockpit voice recorders.**

(a) Each cockpit voice recorder required by the operating rules of this chapter must be approved and must be installed so that it will record—

(1) Voice communications transmitted from or received in the airplane by radio;

(2) Voice communications of flight crewmembers on the flight deck;

(3) Voice communications of flight crewmembers on the flight deck, using the airplane's interphone system;

(4) Voice communications of flight crewmembers using the loud speaker system (if there is one); and

(5) Voice or audio signals identifying navigation or approach aids introduced into a headset or speaker.

(b) The recording requirements of paragraph (a)(2) of this section must be met by installing one or more cockpit-mounted area microphones arranged to pick up continuously any voice communication by flight crewmembers when at their assigned stations on the flight deck. The microphones must be located, and the preamplifiers and filters of the recorder must be adjusted or supplemented, if necessary, so that the intelligibility of the recorded communications will be as high as practicable, when recorded under flight cockpit noise conditions and played back. Repeated aural or visual playback of the record may be used in evaluating intelligibility.

(c) Each cockpit voice recorder must be installed so that the part of the communication or audio signals specified in paragraph (a) of this section obtained from each of the following sources is recorded on a separate channel:

(1) For the first channel, from each microphone, headset, or speaker used at the first pilot station.

(2) For the second channel, from each microphone, headset, or speaker used at the second pilot station.

(3) For the third channel, from the cockpit-mounted area microphone best located for recording voice communications originating at the first and second pilot stations.

(4) For the fourth channel, from each other source including—

(i) Each second cockpit-mounted area microphone, if one is required for any required flight crewmember station other than the first or second pilot station;

(ii) Each microphone, headset, or speaker used at the station for a third crewmember (if required), if the signals at that station are not picked up by another channel; and

(iii) Each microphone on the flight deck that is used with the airplane's loud speaker system, if its signals are not picked up by another channel.

(d) Each cockpit voice recorder must be installed so that—

(1) It receives its electric power from the bus that provides the maximum reliability for operation of the cockpit voice recorder without jeopardizing service to essential or emergency loads;

(2) There is an automatic means to stop each erasure feature from functioning at the instant of crash impact; and

(3) There is an aural or visual means for preflight checking of the recorder for proper operation.

(e) The record container must be located and mounted to minimize the probability of rupture of the container as a result of crash impact and consequent heat damage to the record from fire. In meeting this requirement, the record container must be as far aft as practicable, but may not be where aft mounted engines may crush the container during impact. However, it need not be outside of the pressurized compartment.

(f) If the cockpit voice recorder has a bulk erasure device, the installation must be designed to minimize the probability of inadvertent operation and actuation of the device during crash impact.

(g) Each recorder container must be bright orange.

## Subpart G—Operating Limitations and Information

**§ 25.1501 General.**

Each operating limitation specified in §§ 25.1503 through 25.1533 and other information necessary for safe operation must be—

(a) Included in the Airplane Flight Manual;

(b) Expressed in markings and placards; and

(c) Made available by any other means that will convey the information to the crewmembers.

OPERATING LIMITATIONS

**§ 25.1503 Airspeed limitations: general.**

When airspeed limitations are a function of weight, weight distribution, altitude, or Mach number, limitations corresponding to each critical combination of these factors must be established.

**§ 25.1505 Maximum operating limit speed.**

(a) The maximum operating limit speed ($V_{MO}/M_{MO}$—airspeed or Mach number, whichever is critical at a particular altitude) is a speed that may not be deliberately exceeded in any regime of flight (climb, cruise, or descent), unless a higher speed is authorized for flight test or pilot training operations. $V_{MO}/M_{MO}$ must be established so that it is not greater than the design cruising speed $V_C$ and so that it is sufficiently below $V_D/M_D$ or $V_{DF}/M_{DF}$ to make it highly improbable that the latter speeds will be inadvertently exceeded in operations. The speed margin between $V_{MO}/M_{MO}$ and $V_D/M_D$ or $V_{DF}/M_{DF}$ must be determined under the detailed requirements of paragraph (b) of this section or may be selected in accordance with paragraph (c) of this section. However, the speed margin may not be less than the margin found necessary in the flight tests conducted under § 25.253.

(b) The minimum speed margin is the greater of the values determined under subparagraphs (1) and (2) of this paragraph:

(1) From an initial condition of stabilized flight at $V_{MO}/M_{MO}$, the airplane is assumed to be upset, flown for 20 seconds along a flight path 7.5 degrees below the initial path, and then pulled up at a load factor of 1.5 (.5g acceleration increment). The speed increase occurring in this maneuver may be calculated if reliable or conservative aerodynamic data are used. Power, as specified in § 25.173(a), is assumed until the pullup is initiated, at which time power reduction and the use of pilot controlled drag devices may be assumed.

(2) The minimum speed margin must be enough to provide for atmospheric variations (such as horizontal gusts, penetration of jet stream or cold front) and for instrument errors and airframe production variations. These factors may be considered on a probability basis. However, the margin at altitudes where $M_{MO}$ is limited by compressibility effects may not be less than 0.05M.

(c) The minimum speed margin may be chosen so that $V_{MO}/M_{MO}$ is not greater than 0.8 $V_D/M_D$ or 0.8 $V_{DF}/M_{DF}$.

**§ 25.1507 Maneuvering speed.**

The maneuvering speed must be established so that it does not exceed the design maneuvering speed $V_A$ determined under § 25.335(c).

**§ 25.1511 Flap extended speed.**

The established flap extended speed $V_{FE}$ must be established so that it does not exceed the design flap speed $V_F$ chosen under §§ 25.335(e) and 25.345, for the corresponding flap positions and engine powers.

**§ 25.1513 Minimum control speed.**

The minimum control speed $V_{MC}$ determined under § 25.149 must be established as an operating limitation.

**§ 25.1515 Landing gear speeds.**

(a) The established landing gear operating speed $V_{LO}$ may not exceed the speed at which it is safe to extend or retract the landing gear, as determined under § 25.729 or by flight characteristics.

(b) The established landing gear extended speed $V_{LE}$ may not exceed the speed at which it is safe to fly with the landing gear secured in the fully extended position, and that determined under § 25.729.

**§ 25.1519 Weight, center of gravity, and weight distribution.**

The airplane weight, center of gravity, and weight distribution limitations determined under §§ 25.23 through 25.27 must be established as operating limitations.

**§ 25.1521 Powerplant limitations.**

(a) *General.* The powerplant limitations prescribed in this section must be established so that they do not exceed the corresponding limits for which the engines or propellers are type certificated.

(b) *Takeoff operation.* The powerplant takeoff operation must be limited by—

(1) The maximum rotational speed (r.p.m.);

(2) The maximum allowable manifold pressure (for reciprocating engines);

(3) The maximum allowable gas temperature (for turbine engines);

(4) The time limit for the use of the power or thrust corresponding to the limitations established in subparagraphs (1) through (3) of this paragraph; and

(5) If the time limit established in subparagraph (4) of this paragraph exceeds two minutes, or if the maximum cylinder head and oil temperatures differ from the maximum limits for continuous operation, the maximum allowable cylinder head (for reciprocating engines) and oil temperatures.

(c) *Continuous operation.* The continuous operation must be limited by—

(1) The maximum rotational speed;

(2) The maximum allowable manifold pressure (for reciprocating engines);

(3) The maximum allowable gas temperature (for turbine engines); and

(4) The maximum allowable cylinder head and oil temperatures.

(d) *Fuel grade or designation.* The minimum fuel grade (for reciprocating engines), or fuel designation (for turbine engines), must be established so that it is not less than that required for the operation of the engines within the limitations in paragraphs (b) and (c) of this section.

(e) *Ambient temperature.* Ambient temperature limitations must be established as the maximum ambient atmospheric temperature at which compliance with the cooling provisions of §§ 25.1041 through 25.1045 is shown.

**§ 25.1523 Minimum flight crew.**

The minimum flight crew must be established so that it is sufficient for safe operation, considering—

(a) The workload on individual crewmembers;

(b) The accessibility and ease of operation of necessary controls by the appropriate crewmember; and

(c) The kind of operation authorized under § 25.1525.

**§ 25.1525 Kinds of operation.**

The kinds of operation to which the airplane is limited are established by the category in which it is eligible for certification and by the installed equipment.

**§ 25.1527 Maximum operating altitude.**

The maximum altitude up to which operation is allowed, as limited by flight, structural, powerplant, functional, or equipment characteristics, must be established.

**§ 25.1531 Maneuvering flight load factors.**

Load factor limitations, not exceeding the positive limit load factors determined from the maneuvering diagram in § 25.333(b), must be established.

**§ 25.1533 Additional operating limitations for turbine engine powered airplanes.**

(a) Additional operating limitations for turbine engine powered airplanes must be established as follows:

(1) The maximum takeoff weights must be established as the weights at which compliance is shown with the applicable provisions of this part (including the takeoff climb provisions of § 25.121(a) through (c), for altitudes and ambient temperatures).

(2) The maximum landing weights must be established as the weights at which compliance is shown with the applicable provisions of this part (including the landing and takeoff climb provisions of §§ 25.119 and 25.121 for altitudes and ambient temperatures).

(3) The minimum takeoff distances must be established as the distances at which compliance is shown with the applicable provisions of this part (including the provisions of §§ 25.109 and 25.113, for weights, altitudes, temperatures, wind components, and runway gradients).

(b) The extremes for variable factors (such as altitude, temperature, wind, and runway gradients) are those at which compliance with the applicable provisions of this part is shown.

MARKINGS AND PLACARDS

**§ 25.1541 General.**

(a) The airplane must contain—

(1) The specified markings and placards; and

(2) Any additional information, instrument markings, and placards required for the safe operation if there are unusual design, operating, or handling characteristics.

(b) Each marking and placard prescribed in paragraph (a) of this section—

(1) Must be displayed in a conspicuous place; and

(2) May not be easily erased, disfigured, or obscured.

**§ 25.1543 Instrument markings: general.**

For each instrument—

(a) When markings are on the cover glass of the instrument, there must be means to maintain the correct alignment of the glass cover with the face of the dial; and

(b) Each arc and line must be wide enough, and located, to be clearly visible to the pilot.

**§ 25.1545 Airspeed limitation information.**

The airspeed limitations required by § 25.1583(a) must be easily read and understood by the flight crew.

**§ 25.1547 Magnetic direction indicator.**

(a) A placard meeting the requirements of this section must be installed on, or near, the magnetic direction indicator.

(b) The placard must show the calibration of the instrument in level flight with the engines operating.

(c) The placard must state whether the calibration was made with radio receivers on or off.

(d) Each calibration reading must be in terms of magnetic heading in not more than 45 degree increments.

**§ 25.1549 Powerplant instruments.**

For each required powerplant instrument—

(a) Each maximum and, if applicable, minimum safe operating limit must be marked with a red radial line;

(b) Each normal operating range must be marked with a green arc not extending beyond the maximum and minimum safe operating limits; and

(c) Each takeoff and precautionary range must be marked with a yellow arc.

(d) Each engine or propeller speed range that is restricted because of excessive vibration stresses must be marked with red arcs.

**§ 25.1551 Oil quantity indicator.**

Each oil quantity indicator must be marked with enough increments to indicate readily and accurately the quantity of oil.

**§ 25.1553 Fuel quantity indicator.**

If the unusable fuel supply for any tank exceeds one gallon, or five percent of the tank capacity, whichever is greater, a red arc must be marked on its indicator extending from the calibrated zero reading to the lowest reading obtainable in level flight.

**§ 25.1555 Control markings.**

(a) Each cockpit control, other than primary flight controls and controls whose function is obvious, must be plainly marked as to its function and method of operation.

(b) Each aerodynamic control must be marked under the requirements of §§ 25.677 and 25.699.

(c) For powerplant fuel controls—

(1) Each fuel tank selector control must be marked to indicate the position corresponding to each tank and to each existing cross feed position;

(2) If safe operation requires the use of any tanks in a specific sequence, that sequence must be marked on, or adjacent to, the selector for those tanks; and

(3) Each valve control for each engine must be marked to indicate the position corresponding to each engine controlled.

(d) For accessory, auxiliary, and emergency controls—

(1) Each emergency control (including each fuel jettisoning and fluid shutoff control) must be colored red; and

(2) Each visual indicator required by § 25.729(e) must be marked so that the pilot can determine at any time when the wheels are locked in either extreme position, if retractable landing gear is used.

**§ 25.1557 Miscellaneous markings and placards.**

(a) *Baggage and cargo compartments, and ballast location.* Each baggage and cargo compartment, and each ballast location must have a placard stating any limitations on contents, including weight, that are necessary under the loading requirements.

(b) *Fuel and oil filler openings.* The following must be marked on, or near, each appropriate filler cover:

(1) The word "fuel", the minimum fuel grade or designation for the engines, and the usable fuel tank capacity.

(2) The word "oil" and the oil tank capacity.

(c) *Emergency exit placards.* Each emergency exit placard must meet the requirements of § 25.811.

(d) *Doors.* Each door that must be used in order to reach any required emergency exit must have a suitable placard stating that the door is to be latched in the open position during takeoff and landing.

**§ 25.1561 Safety equipment.**

(a) Each safety equipment control to be operated by the crew in emergency, such as controls for automatic liferaft releases, must be plainly marked as to its method of operation.

(b) Each location, such as a locker or compartment, that carries any fire extinguishing, signaling, or other life saving equipment must be marked accordingly.

(c) Stowage provisions for required emergency equipment must be conspicuously marked to identify the contents and facilitate removal of the equipment.

(d) Each liferaft must have obviously marked operating instructions.

(e) Approved survival equipment must be marked for identification and method of operation.

**§ 25.1563 Airspeed placard.**

A placard showing the maximum airspeeds for flap extension for the takeoff, approach, and landing positions must be installed in clear view of each pilot.

AIRPLANE FLIGHT MANUAL

**§ 25.1581 General.**

(a) An Airplane Flight Manual must be furnished with each airplane, unless otherwise prescribed.

(b) Each part of the manual listed in §§ 25.1583 through 25.1587, that is appropriate to the airplane, must be furnished, verified, and approved, and must be segregated, identified, and clearly distinguished from each unapproved part of that manual.

(c) Any information not specified in §§ 25.1583 through 25.1587 that is required for safe operation because of unusual design, operating, or handling characteristics, must be furnished.

**§ 25.1583 Operating limitations.**

(a) *Airspeed limitations.* The following airspeed limitations and any other information necessary to meet the requirements of § 25.1545 must be furnished:

(1) The maximum operating limit speed $V_{MO}/M_{MO}$ and a statement that this speed limit may not be deliberately exceeded in any regime of flight (climb, cruise, or descent) unless a higher speed is authorized for flight test or pilot training.

(2) If an airspeed limitation is based upon compressibility effects, a statement to this effect and information as to any symptoms, the probable behavior of the airplane, and the recommended recovery procedures.

(3) The maneuvering speed $V_A$ and a statement that full application of rudder and aileron controls, as well as maneuvers that involve angles of attack near the stall, should be confined to speeds below this value.

(4) The flap extended speed $V_{FE}$ and the pertinent flap positions and engine powers.

(5) The landing gear operating speed $V_{LO}$ and a statement that this is the maximum speed at which it is safe to extend or retract the landing gear.

(6) The landing gear extended speed $V_{LE}$, if greater than $V_{LO}$, and a statement that this is the maximum speed at which the airplane can be safely flown with the landing gear extended.

(b) *Powerplant limitations.* Information must be furnished to explain the powerplant limitations and to allow

marking the instruments under §§ 25.1549 through 25.1563.

(c) *Weight and loading distribution.* The weight and center of gravity limits required by §§ 25.25 and 25.27 must be furnished, together with the items included in the empty weight in § 25.29(a). In addition—

(1) There must be loading instructions, for each loading condition within these limits, that affect weight and center of gravity;

(2) If certification for more than one center of gravity range is requested, the appropriate limitations, with regard to weight and loading procedures, for each separate center of gravity range, must be furnished; and

(3) The positive maneuvering limit load factors for which the structure is proven, described in terms of accelerations, and a statement that these accelerations limit the angle of bank in turns and limit the severity of pull-up maneuvers, must be furnished.

(d) *Flight crew.* The number and functions of the minimum flight crew determined under § 25.1523 must be furnished.

(e) *Kinds of operation.* The kinds of operation approved under § 25.1525 must be furnished.

(f) *Altitudes.* The altitude established under § 25.1527 and an explanation of the limiting factors must be furnished.

(g) *Usable fuel.* A statement that the fuel remaining in fuel tanks when the quantity indicator reaches "zero" is not usable in flight must be furnished.

(h) *Turbine engine powered airplanes.* For turbine engine powered airplanes, the operation limitations established under § 25.1533 must be furnished.

§ 25.1585 **Operating procedures.**

(a) Information and instructions regarding the peculiarities of normal operations (including starting and warming the engines, taxiing, operation of wing flaps, landing gear, and the automatic pilot) must be furnished, together with recommended procedures for—

(1) Engine failure (including minimum speeds, trim, operation of the remaining engines, and operation of flaps);

(2) Stopping the rotation of propellers in flight;

(3) Restarting turbine engines in flight (including the effects of altitude);

(4) Fire, decompression, and similar emergencies;

(5) Ditching (including the procedures based on the requirements of §§ 25.801, 25.807(d), 25.1411, and 25.1415 (a) through (e)); and

(6) Use of ice protection equipment.

§ 25.1587 **Performance information.**

(a) *Each airplane.* For each airplane, the Airplane Flight Manual must contain information to warn flight crewmembers against jettisoning fuel when any means (including flaps, slots, and slats) for changing the airflow across or around the wing are being used.

(b) *Reciprocating engine powered airplanes.* For each reciprocating engine powered airplane, the Airplane Flight Manual must contain a summary of any pertinent performance data, including data necessary for the application of any operating rule of this chapter, together with descriptions of the conditions, such as airspeeds, under which those data were determined, and must contain—

(1) The indicated airspeeds, corresponding to those determined for takeoff, and the procedures to be followed if a critical engine fails during takeoff;

(2) Instructions for use and adjustment of flap controls necessary to obtain the pertinent performance data specified in this paragraph;

(3) An explanation of significant or unusual flight or ground handling characteristics; and

(4) Operating correction factors that are determined under § 25.61, and that are approved.

(c) *Turbine engine powered airplanes.* For each turbine engine powered airplane, the Airplane Flight Manual must contain the performance information computed under the applicable provisions of this part (including §§ 25.115, 25.123, and 25.125 for the weights, altitudes, temperatures, wind components, and runway gradients, as applicable) within the operational limits of the airplane, and must contain the following:

(1) The conditions under which the performance information was obtained.

(2) The following performance information (determined by extrapolation and computed for the range of weights between the maximum landing and maximum takeoff weights):

(i) Climb in the landing configuration.

(ii) Climb in the approach configuration.

(iii) Landing distance.

(3) Procedures established under § 25.101(c) that are related to the limitations and information required by § 25.1533 and by this paragraph. These procedures must be in the form of guidance material, including any relevant limitations or information.

(4) An explanation of significant or unusual flight or ground handling characteristics of the airplane.

## Appendix A

FIGURE 1—Basic landing gear dimension data.

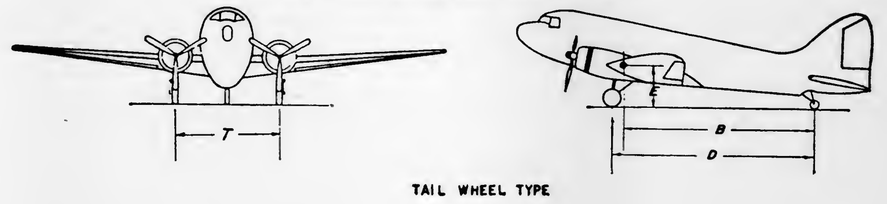

FIGURE 2—Level landing.

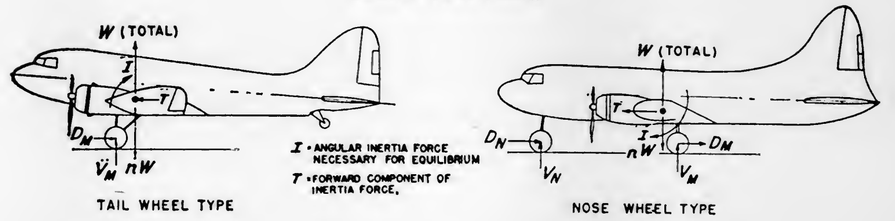

FIGURE 3—Tail-down landing.

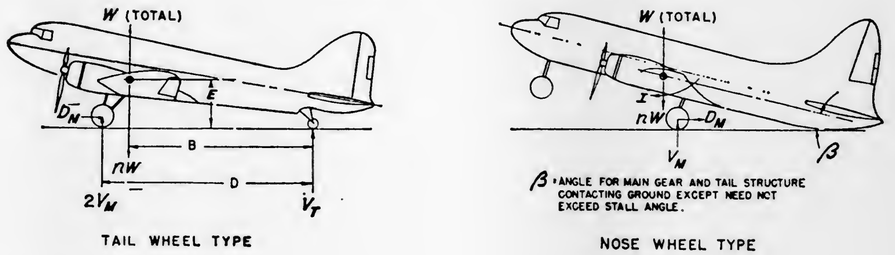

FIGURE 4—One-wheel landing.

FIGURE 5—Lateral drift landing.

FIGURE 6—Braked roll.

FIGURE 7—Ground turning.

## Appendix B

FIGURE 1—Pictorial definition of angles, dimensions, and directions on a seaplane.

FIGURE 8—Pivoting, nose or tail wheel type.

FIGURE 2—Hull station weighing factor.

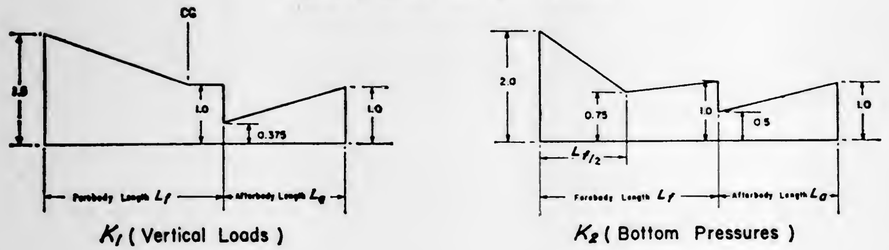

FIGURE 3—Transverse pressure distributions.

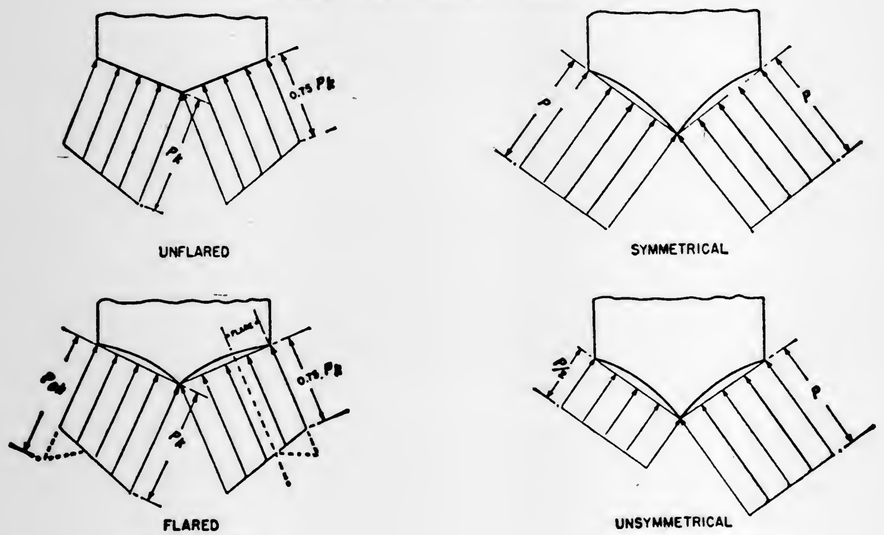

FIGURE 1.

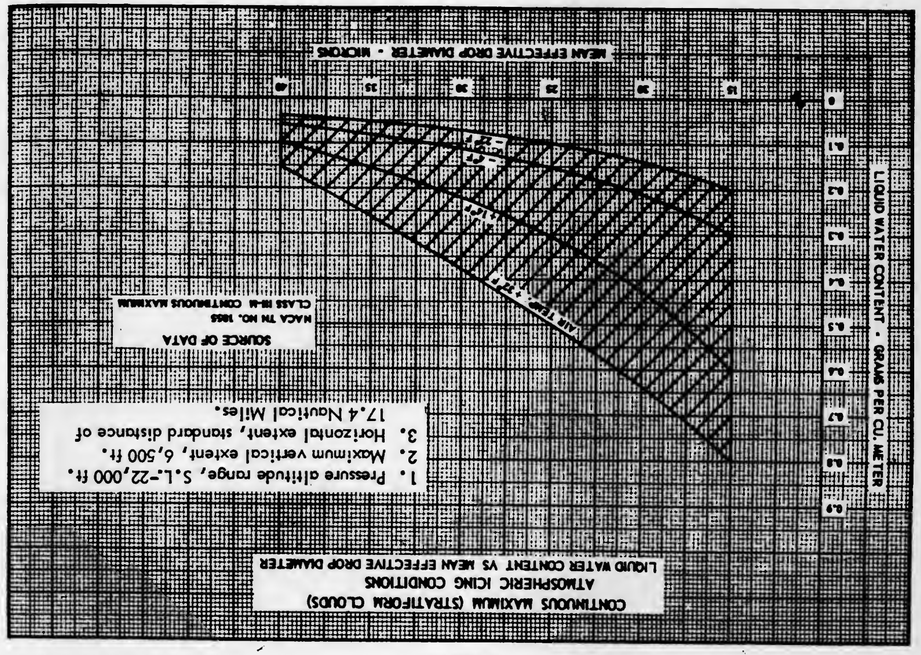

FIGURE 1.

## Appendix C

(a) *Continuous maximum icing.* The maximum continuous intensity of atmospheric icing conditions (continuous maximum icing) is defined by the variables of the cloud liquid water content, the mean effective diameter of the cloud droplets, the ambient air temperature, and the inter-relationship of these three variables as shown in figure 1 of this appendix. The limiting icing envelope in terms of altitude and temperature is given in figure 2 of this appendix. The inter-relationship of cloud liquid water content with drop diameter and altitude is determined from figures 1 and 2. The cloud liquid water content for continuous maximum icing conditions of a horizontal extent, other than 17.4 nautical miles, is determined by the value of liquid water content of figure 1, multiplied by the appropriate factor from figure 3 of this appendix.

(b) *Intermittent maximum icing.* The intermittent maximum intensity of atmospheric icing conditions (intermittent maximum icing) is defined by the variables of the cloud liquid water content, the mean effective diameter of the cloud droplets, the ambient air temperature, and the inter-relationship of these three variables as shown in figure 4 of this appendix. The limiting icing envelope in terms of altitude and temperature is given in figure 5 of this appendix. The inter-relationship of cloud liquid water content with drop diameter and altitude is determined from figures 4 and 5. The cloud liquid water content for intermittent maximum icing conditions of a horizontal extent, other than 2.6 nautical miles, is determined by the value of cloud liquid water content of figure 4 multiplied by the appropriate factor in figure 6 of this appendix.

## PART 39—AIRWORTHINESS DIRECTIVES [NEW]

### Boeing Models 707 and 720 Series Aircraft

A proposal to amend Part 507 of the Regulations of the Administrator to include an airworthiness directive requiring the installation of a placard on the cockpit fuel dump chute panel prohibiting speed brake actuation during fuel jettisoning and a notation in the limitations section of the Airplane Flight Manual to this effort on Boeing Models 707 and 720 Series aircraft was published in 29 F.R. 10523. Since the publication of that proposal, Part 507 has been recodified into Part 39 of the Federal Aviation Regulations, effective November 20, 1964, therefore this amendment is being made to Part 39.

Interested persons have been afforded an opportunity to participate in the making of the amendment. Comments received objected to the placard, feeling that the Airplane Flight Manual notation would be sufficient. Both a placard and an Airplane Flight Manual notation are required by the Civil Air Regulations with respect to the prohibition against dumping fuel with the speed brakes extended since this prohibition is an operating limitation of the airplane. A placard is not required regarding the use of full and rapid aileron control while dumping fuel since this is only a precautionary note in the Airplane Flight Manual. In addition, the manufacturer has already accomplished a Flight Manual change to include the note regarding the use of ailerons while dumping fuel and the limitation prohibiting the use of speedbrakes while dumping fuel. As a result of a comment received, the AD has been revised to allow a compliance time of 500 flight hours to be compatible with scheduled routing maintenance periods.

In consideration of the foregoing, and pursuant to the authority delegated to me by the Administrator (25 F.R. 6489), § 39.13 of Part 39 (14 CFR Part 39), is hereby amended by adding the following new airworthiness directive:

BOEING. Applies to Models 707 and 720 Series aircraft.

Compliance required as indicated.

Flight tests have disclosed that speed brake actuation during fuel jettisoning causes fuel to impinge on the horizontal stabilizer. To correct this condition, accomplish the following:

(a) Within 500 hours' time in service after the effective date of this AD, unless already accomplished:

(1) Install a placard on the fuel dump chute panel in the cockpit that reads,

"Do not dump fuel with the speed brakes extended."

(2) Amend the limitations section of the FAA approved Airplane Flight Manual by adding the following two statements under fuel dumping limitations:

(i) "Do not dump fuel with speed brakes extended."

(ii) "NOTE: Do not use full and rapid aileron control while dumping fuel."

(b) Equivalent wording, subject to prior approval by the Chief, Aircraft Engineering Division, FAA Western Region, may be used in lieu of that specified in this AD.

This amendment shall become effective January 23, 1965.

(Secs. 313(a), 601, 603; 72 Stat. 752, 775, 776; 49 U.S.C. 1354(a), 1421, 1423)

Issued in Washington, D.C., on December 17, 1964.

C. W. WALKER,
*Acting Director,*
*Flight Standards Service.*

[Docket No. 6393; Amdt. 39–15]

## PART 39—AIRWORTHINESS DIRECTIVES [NEW]

### Piper Model PA–30 Aircraft

Amendment 769, 29 F.R. 9823, AD 64–16–7, as revised by Amendment 798, 29 F.R. 11971, requires the installation of a placard which restricts the airspeed limits until a new design stabilator torque tube is installed on Piper Model PA–30 aircraft. This was to be accomplished on an optional basis. As the result of an additional failure, it has now been determined that the installation of the heavy-walled torque tube should be mandatory, and Amendment 769 is being superseded by a new directive to specify this installation.

As a situation exists which demands immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable and good cause exists for making this amendment effective in less than 30 days.

In consideration of the foregoing, and pursuant to the authority delegated to me by the Administrator (25 F.R. 6489), § 39.13 of Part 39 [New] (14 CFR Part 39 [New]), is hereby amended by adding the following new airworthiness directive:

PIPER. Applies to Model PA-30 aircraft, serial numbers 30-1 through 30-565.

Compliance required within 30 hours' time in service after the effective date of this AD, unless already accomplished:

As a result of instances of progressively stronger stabilator vibration, accomplish the following:

Install a new design stabilator torque tube, Piper P/N 22655-07, in accordance with the instructions attached to Piper Service Bulletin No. 222A, dated August 10, 1964, or an equivalent modification approved by the Engineering and Manufacturing Branch, FAA Eastern Region and then remove the "Do not exceed 205 m.p.h. IAS" placard.

Note: The original stabilator torque tube removed during compliance with this AD should be destroyed to avoid inadvertent reinstallation.

(Piper Service Letter No. 428, dated June 30, 1964, and Piper Service Bulletin No. 222A, dated August 10, 1964, pertains to this subject.)

This supersedes Amendment 769, 29 F.R. 9823, AD 64-16-7, as revised by Amendment 798, 29 F.R. 11971.

This amendment shall become effective December 24, 1964.

(Secs. 313(a), 601, 603; 72 Stat. 752, 775, 776; 49 U.S.C. 1354(a), 1421, 1423)

Issued in Washington, D.C., on December 17, 1964.

C. W. WALKER,
*Acting Director,*
*Flight Standards Service.*

[Airspace Docket No. 64-WE-73]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Alteration of Control Zone

The purpose of this amendment to Part 71 [New] of the Federal Aviation Regulations is to alter the description of the Salt Lake City, Utah, control zone.

The Salt Lake City control zone extensions are presently designated with reference to the Salt Lake City radio beacon. However, the Federal Aviation Agency is decomissioning the radio beacon as it is no longer required for air traffic control purposes. Since a requirement remains for the retention of the control zone extensions, action is taken herein to substitute geographical coordinates for the radio beacon in the description of the Salt Lake City control zone.

A comprehensive review of the controlled airspace requirements in the Salt Lake City area is presently being conducted under the CAR Amendments 60-21/60-29 implementation program and further alteration of the Salt Lake City control zone will be made upon the completion of this review.

Since this amendment is editorial in nature and imposes no additional burden on any person, notice and public procedure hereon is unnecessary. In consideration of the foregoing, Part 71 [New] of the Federal Aviation Regulations is amended effective March 4, 1965, as hereinafter set forth.

In § 71.171 (28 F.R. 966), the Salt Lake City, Utah, control zone is amended to read:

SALT LAKE CITY, UTAH

Within a 5-mile radius of Salt Lake City Municipal Airport No. 1 (latitude 40°47'10" N., longitude 111°58'05" W.); within 2 miles each side of the 346° bearing from latitude 40°49'45" N., longitude 111°57'39" W., extending from the 5-mile radius zone to the Layton FM and within 2 miles each side of the 263° bearing from latitude 40°49'45" N., longitude 111°57'39" W., extending from the 5-mile radius zone to 10 miles W. of latitude 40°49'45" N., longitude 111°57'39" W.

(Sec. 307(a), Federal Aviation Act of 1958, as amended; 72 Stat. 749; 49 U.S.C. 1348)

Issued in Los Angeles, Calif., on December 16, 1964.

A. E. HORNING,
*Acting Director,*
*Western Region.*

[F.R. Doc. 64-13196; Filed, Dec. 23, 1964; 8:45 a.m.]

[Airspace Docket No. 64-WE-74]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Alteration of Control Zone

The purpose of this amendment to Part 71 [New] of the Federal Aviation Regulations is to alter the description of the Laramie, Wyo., control zone.

The Laramie control zone is presently designated, in part, with reference to the Laramie nondirectional radio beacon. The Federal Aviation Agency plans to decommission this facility on March 4, 1965. Therefore, action is taken herein to redescribe the control zone extension based entirely on the Laramie VOR.

Since the change effected by this amendment is less restrictive in nature than at present, notice and public procedure hereon are unnecessary. However, since it is necessary that sufficient time be allowed to permit the appropriate changes to be made on aeronautical charts, this amendment will become effective more than 30 days after publication.

In consideration of the foregoing, Part 71 [New] of the Federal Aviation Regulations is amended, effective March 4, 1965, as hereinafter set forth.

In § 71.171 (28 F.R. 10563), the Laramie, Wyoming, control zone is altered as follows: Within a 5-mile radius of General Brees Field, Laramie, Wyo. (latitude 41 18'50" N., longitude 105°40'25" W.); within 2 miles each side of the Laramie VOR 332° radial, extending from the 5-mile radius zone to 8 miles NW of the VOR.

(Sec. 307(a), Federal Aviation Act of 1958, as amended; 49 U.S.C. 1348)

Issued in Los Angeles, Calif., on December 16, 1964.

A. E. HORNING,
*Acting Director.*

[Airspace Docket No. 64-CE-51]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Alteration of Control Zone and Transition Area

On October 7, 1964, a notice of proposed rule making was published in the FEDERAL REGISTER (29 F.R. 13828) stating that the Federal Aviation Agency proposed to alter the control zone and transition area at Bozeman, Montana.

Interested parties were afforded an opportunity to participate in the rule making through submission of comments. All comments received were favorable.

In consideration of the foregoing, Part 71 [New] of the Federal Aviation Regulations is amended, effective 0001 e.s.t., March 4, 1965, as hereinafter set forth.

In § 71.171 (29 F.R. 1101) the Bozeman, Mont., control zone is amended to read:

BOZEMAN, MONTANA

Within a 5-mile radius of Gallatin-Bozeman Airport (latitude 45°46'50" N., longitude 111°09'20" W.), and within 2 miles each side of the Bozeman VOR 277° radial extending from the 5-mile radius zone to 6 miles W of the VOR.

In § 71.181 (29 F.R. 1160) the Bozeman, Mont., transition area is amended to read:

BOZEMAN, MONTANA

That airspace extending upward from 700 feet above the surface within a 7-mile radius of Gallatin-Bozeman Airport (latitude 45°46'50" N., longitude 111°09'20" W.), and that airspace extending upward from 1,200 feet above the surface within 6 miles S and 8 miles N of the Bozeman VOR 097° and 277° radials extending from 8 miles E to 13 miles W of the VOR.

(Sec. 307(a), Federal Aviation Act of 1958; 49 U.S.C. 1348)

Issued at Kansas City, Mo., on December 15, 1964.

EDWARD C. MARSH,
*Director, Central Region.*

[Airspace Docket No. 64-SW-23]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

## PART 73—SPECIAL USE AIRSPACE [NEW]

### Modification of Restricted Area

On September 25, 1964, a notice of proposed rule making was published in the FEDERAL REGISTER (29 F.R. 13349) stating that the Federal Aviation Agency proposed to change the time of use of Restricted Area R-6303 from "sunrise to sunset" to "continuous" and to designate the area as joint-use.

Interested persons were afforded an opportunity to participate in the proposed rule making through submission of comments. All comments received were favorable.

In consideration of the foregoing, Parts 71 and 73 [New] are amended, effective 0001 e.s.t., February 4, 1965, as hereinafter set forth.

1. In § 71.151 (29 F.R. 17550), add the following:

R-6303 Matagorda Island, Tex.

2. In § 73.63 (29 F.R. 17766), the Matagorda Island, Tex., Restricted Area R-6303 is amended to read as follows:

*Boundaries.* Beginning at latitude 28°15'20" N., longitude 96°26'50" W.; to latitude 28°18'55" N., longitude 96°27'45" W.; to latitude 28°20'55" N., longitude 96°29'15" W.; to latitude 28°12'00" N., longitude 96°46'00" W.; to latitude 28°07'00" N., longitude 96°42'00" W.; thence 3 nautical miles from and parallel to the shoreline to the point of beginning.

*Designated altitudes.* Surface to flight level 600.

*Time of designation.* Continuous.

*Controlling agency.* Federal Aviation Agency, San Antonio ARTC Center.

*Using agency.* Commander, Second Air Force, Barksdale AFB, La.

(Sec. 307(a), Federal Aviation Act of 1958;

Issued in Washington, D.C., on December 17, 1964.

CLIFFORD P. BURTON,
*Acting Director,*
*Air Traffic Service.*

# Title 26—INTERNAL REVENUE

## Chapter I—Internal Revenue Service, Department of the Treasury

SUBCHAPTER A—INCOME TAX

[T.D. 6782]

## PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Treatment of Nonresident Alien Individuals Who Participate in Certain Exchange or Training Programs

On December 17, 1963, notice of proposed rule making with respect to the amendment of the Income Tax Regulations (26 CFR Part 1) under sections 117, 871, and 872 of the Internal Revenue Code of 1954 to conform the regulations to subsections (a) through (c) of section 110 of the Mutual Educational and Cultural Exchange Act of 1961 (75 Stat. 535), was published in the FEDERAL REGISTER (28 F.R. 13749). After consideration of all such relevant matter as was presented by interested persons regarding the rules proposed, the amendment of the regulations as proposed is hereby adopted, except that the amendment of paragraph (b) of § 1.871-2, as set forth in paragraph 4 of the notice of proposed rule making, is hereby deleted.

[SEAL] BERTRAND M. HARDING,
*Acting Commissioner of Internal Revenue.*

Approved: December 21, 1964.

STANLEY S. SURREY,
*Assistant Secretary of the Treasury.*

In order to conform the Income Tax Regulations (26 CFR Part 1) under sections 117, 871, and 872 of the Internal Revenue Code of 1954 to subsections (a) through (c) of section 110 of the Mutual Educational and Cultural Exchange Act of 1961 (75 Stat. 535), such regulations are amended as follows:

PARAGRAPH 1. Section 1.117 is amended by revising section 117(b)(2)(A) and by adding a historical note. These revised and added provisions read as follows:

§ 1.117 Statutory provisions; scholarships and fellowship grants.

Sec. 117. *Scholarships and fellowship grants*—• • •

(b) *Limitations*—• • •

(2) *Individuals who are not candidates for degrees.* • • •

(A) *Conditions for exclusion.* The grantor of the scholarship or fellowship grant is—

(i) An organization described in section 501(c)(3) which is exempt from tax under section 501(a),

(ii) A foreign government,

(iii) An international organization, or a binational or multinational educational and cultural foundation or commission created or continued pursuant to the Mutual Educational and Cultural Exchange Act of 1961, or

(iv) The United States, or an instrumentality or agency thereof, or a State, a territory, or a possession of the United States, or any political subdivision thereof, or the District of Columbia.

• • • • •

[Sec. 117 as amended by sec. 110(a), Mutual Educational and Cultural Exchange Act 1961 (75 Stat. 535)]

PAR 2. Paragraph (b)(1) of § 1.117-2 is amended to read as follows:

§ 1.117-2 Limitations.

• • • • •

(b) *Individuals who are not candidates for degrees*—(1) *Conditions for exclusion.* In the case of an individual who is not a candidate for a degree at an educational institution, the exclusion from gross income of an amount received as a scholarship or a fellowship grant shall apply (to the extent provided in subparagraph (2) of this paragraph) only if the grantor of the scholarship or fellowship grant is—

(i) An organization described in section 501(c)(3) which is exempt from tax under section 501(a),

(ii) The United States or an instrumentality or agency thereof, or a State, a territory, or a possession of the United States, or any political subdivision thereof, or the District of Columbia, or

(iii) For taxable years beginning after December 31, 1961, a foreign government, an international organization, or a binational or multinational educational and cultural foundation or commission created or continued pursuant to section 103 of the Mutual Educational and Cultural Exchange Act of 1961 (22 U.S.C. 2453).

PAR. 3. Section 1.871 is amended by redesignating paragraph (d) as paragraph (e), by inserting after paragraph (c) a new paragraph (d), and by revising the historical note. These added and revised provisions read as follows:

§ 1.871 Statutory provisions; tax on nonresident alien individuals.

Sec. 871. *Tax on nonresident alien individuals*—• • •

(d) *Participants in certain exchange or training programs.* For purposes of this section, a nonresident alien individual who (without regard to this subsection) is not engaged in trade or business within the United States and who is temporarily present in the United States as a nonimmigrant under subparagraph (F) or (J) of section 101(a)(15) of the Immigration and Nationality Act, as amended, shall be treated as a nonresident alien individual engaged in trade or business within the United States.

(e) *Cross references.* (1) For doubling of tax on citizens of certain foreign countries, see section 891.

(2) For tax treatment of certain amounts distributed by the United States to nonresident alien individuals, see section 402(a)(4).

[Sec. 871 as amended by secs. 40(a) and 41(a), Technical Amendments Act 1958 (72 Stat. 1638, 1639); sec. 2(b), Act of April 22, 1960 (Pub. Law 86-487, 74 Stat. 79); sec. 110(b), Mutual Educational and Cultural Exchange Act 1961 (75 Stat. 535)]

PAR. 4. Section 1.871-7 is amended by revising subparagraph (3) of paragraph (a), and by revising subparagraphs (1) and (4) of paragraph (d). These amended provisions read as follows:

§ 1.871-7 Tax on nonresident alien individuals.

(a) *Classes of nonresident aliens*—• • •

(3) *Class 3.* Nonresident alien individuals who at any time during the taxable year are engaged in trade or business within the United States and, for taxable years beginning after December 31, 1961, nonresident alien individuals who are deemed to be engaged in trade or business for purposes of section 871 because they are temporarily present in the United States as nonimmigrants under subparagraph (F) or (J) of section 101(a)(15) of the Immigration and Nationality Act (8 U.S.C. 1101). A nonresident alien individual who is temporarily present in the United States as a nonimmigrant under such subparagraph (J) includes a nonresident alien individual admitted to the United States as an "exchange visitor" under section 201 of the United States Information and Educational Exchange Act of 1948 (22 U.S.C. 1446); and

• • • • •

(d) *United States business*—(1) *Imposition of tax.* Except as otherwise provided by paragraph (e) of this section, a nonresident alien individual within class 3 is, in accordance with the provisions of subsections (c) and (d) of section 871, subject to tax under section 1 or, in the alternative, under section 1201(b) upon his taxable income.

• • • • •

(4) *Inapplicable provisions.* The provisions of paragraphs (b) and (c) of this section have no application in determining the tax of nonresident alien individuals described in paragraph (a)(3) of this section.

PAR. 5. Section 1.871-8 is amended by adding a new paragraph (d) which reads as follows:

**§ 1.871–8 Definition of engaging in trade or business within the United States.**

* * * * *

(d) *Participants in certain exchange or training programs.* For taxable years beginning after December 31, 1961, a nonresident alien individual who is temporarily present in the United States as a nonimmigrant under subparagraph (F) or (J) of section 101(a)(15) of the Immigration and Nationality Act (8 U.S.C. 1101), and who is not engaged in trade or business within the United States, shall be deemed to be engaged in trade or business within the United States for purposes of section 871.

PAR. 6. Section 1.872 is amended by adding a paragraph (3) to section 872 (b) and by adding a historical note. These added provisions read as follows:

**§ 1.872 Statutory provisions; gross income.**

Sec. 872. *Gross income*—* * *

(b) *Exclusions.* * * *

(3) *Compensation of participants in certain exchange or training programs.* Compensation paid by a foreign employer to a nonresident alien individual for the period he is temporarily present in the United States as a nonimmigrant under subparagraph (F) or (J) of section 101(a)(15) of the Immigration and Nationality Act, as amended. For purposes of this paragraph, the term "foreign employer" means—

(A) A nonresident alien individual, foreign partnership, or foreign corporation, or

(B) An office or place of business maintained in a foreign country or in a possession of the United States by a domestic corporation.

[Sec. 872 as amended by sec. 110(c), Mutual Educational and Cultural Exchange Act 1961 (75 Stat. 536)]

PAR. 7. Section 1.872–2 is amended by redesignating paragraphs (b) and (c) as paragraphs (c) and (d), respectively, and by inserting a new paragraph (b). These amended provisions read as follows:

**§ 1.872–2 Exclusions from gross income of nonresident alien individuals.**

* * * * *

(b) *Compensation of participants in certain exchange or training programs.* For taxable years beginning after December 31, 1961, compensation paid to a nonresident alien individual for the period that the nonresident alien individual is temporarily present in the United States as a nonimmigrant under subparagraph (F) or (J) of section 101(a)(15) of the Immigration and Nationality Act (8 U.S.C. 1101) shall be excluded from gross income if the compensation is paid to such alien by his foreign employer. A nonresident alien individual who is temporarily present in the United States as a nonimmigrant under such subparagraph (J) includes a nonresident alien individual admitted to the United States as an "exchange visitor" under section 201 of the United States Information and Educational Exchange Act of 1948 (22 U.S.C. 1446). For purposes of this paragraph, a foreign employer means a nonresident alien individual, a foreign partnership, a foreign corporation, and an office or place of business maintained in a foreign country or in a possession of the United States by a domestic corporation. Thus, if a French citizen employed in the Paris branch of a banking company incorporated in the State of New York was admitted to the United States under section 101(a)(15)(J) of the Immigration and Nationality Act to study monetary theory and continued to receive a salary from such foreign branch while studying in the United States, such salary would not be includible in his gross income.

(c) *Tax conventions.* Income of any kind which is exempt from United States tax under the provisions of a tax convention or treaty to which the United States is a party shall not be included in the gross income of a nonresident alien individual. Income on which the tax is limited by tax convention shall, however, be included in the gross income of such an individual if it is not otherwise excluded from gross income. See paragraph (e) of §§ 1.871–7 and 1.894–1.

(d) *Other exclusions.* Income which is from sources without the United States, as determined under the provisions of part I (section 861 and following), subchapter N, chapter 1 of the Code, and the regulations thereunder, or under the provisions of an applicable tax convention, shall not be included in the gross income of a nonresident alien individual. To determine specific exclusions in the case of other items which are from sources within the United States, see the applicable sections of the Code.

(Sec. 7805 of the Internal Revenue Code of 1954, 68A Stat. 917; 26 U.S.C. 7805)

[F.R. Doc. 64–13240; Filed, Dec. 23, 1964; 8:46 a.m.]

[T.D. 6783]

## PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Annuity Contracts

On August 27, 1963, notice of proposed rule making with respect to amendment of the Income Tax Regulations (26 CFR Part 1) under sections 72, 101, 402, 403, and 404 of the Internal Revenue Code of 1954 to reflect the amendments made by section 23 (a), (b), (c), and (d) and section 24 of the Technical Amendments Act of 1958 (72 Stat. 1620 and 1623), by section 3 of the Act of October 4, 1961 (Pub. Law 87–370, 75 Stat. 801), was published in the FEDERAL REGISTER (28 F.R. 9389). After consideration of all such relevant matter as was presented by interested persons regarding the rules proposed, the amendment of the regulations as proposed is hereby adopted, subject to the changes set forth below. These regulations supersede § 18.1–5 of Treasury Decision 6335 (26 CFR Part 18), approved November 18, 1958 (23 F.R. 8979, 8980).

Section 1.403(b)–1, as set forth in the notice of proposed rule making, is revised.

[SEAL] BERTRAND M. HARDING,
*Acting Commissioner of Internal Revenue.*

Approved: December 21, 1964.

STANLEY S. SURREY,
*Assistant Secretary of the Treasury.*

The Income Tax Regulations (26 CFR Part 1) under sections 72, 101, 402, 403, and 404 of the Internal Revenue Code of 1954 are hereby amended to reflect the amendments made by section 23 (a), (b), (c), and (d) and section 24 of the Technical Amendments Act of 1958 (72 Stat. 1620 and 1623) and section 3 of the Act of October 4, 1961 (Pub. Law 87–370, 75 Stat. 801).

PARAGRAPH 1. Section 1.72–8 is amended by adding a new paragraph (d) at the end thereof. This amended provision reads as follows:

**§ 1.72–8 Effect of certain employer contributions with respect to premiums or other consideration paid or contributed by an employee.**

* * * * *

(d) *Amounts includible in gross income of employee when his rights under annuity contract change to nonforfeitable rights.* Any amount which, by reason of section 403(d) and after the application of paragraph (b) of § 1.403(b)–1, is required to be included in an employee's gross income for the year when his rights under an annuity contract change from forfeitable to nonforfeitable rights shall be considered an amount contributed by the employee and shall be aggregated with amounts, if any, to which paragraphs (a), (b), and (c) of this section apply for the purpose of determining the aggregate amount of premiums or other consideration paid or contributed by the employee for such annuity contract. In other words, if, under section 403(d), an employee of an organization exempt from tax under section 501(a) of 521(a) is required to include an amount in gross income by reason of his rights under an annuity contract changing from forfeitable to nonforfeitable rights, such amount, to the extent it is not excludable from gross income under paragraph (b) of § 1.403(b)–1, shall be considered an amount contributed by such employee for the annuity contract.

PAR. 2. Paragraph (a) of § 1.101–1 is amended to read as follows:

**§ 1.101–1 Exclusion from gross income of proceeds of life insurance contracts payable by reason of death.**

(a)(1) *In general.* Section 101(a)(1) states the general rule that the proceeds of life insurance policies, if paid by reason of the death of the insured, are excluded from the gross income of the recipient. Death benefit payments having the characteristics of life insurance proceeds payable by reason of death under contracts, such as workmen's compensation insurance contracts, endowment contracts, or accident and health insurance contracts, are covered by this provision. For provisions relating to death benefits paid by or on behalf of employers, see section 101(b) and § 1.101–2. The exclusion from gross income allowed by section 101(a) applies whether payment is made to the estate of the insured or to any beneficiary (individual, corporation, or partnership) and whether it is made directly or in trust. The extent to which this exclusion applies in cases where life insurance policies have been transferred for a valuable consideration is stated in section 101(a)(2) and in paragraph (b) of this section. In cases where the proceeds of a life insurance policy, payable by reason of the death of the insured, are paid other than in a single sum at the time of such death, the amounts to be excluded from gross income may be affected by the provisions of section 101(c) (relating to amounts held under agreements to pay interest) or section 101(d) (relating to amounts payable at a date later than death). See §§ 1.101–3 and 1.101–4. However, neither section 101(c) nor section 101(d) applies to a single sum payment which does not exceed the amount payable at the time of death even though such amount is actually paid at a date later than death.

(2) *Cross references.* For rules governing the taxability of insurance proceeds constituting benefits payable on the death of an employee—

(i) Under pension, profit-sharing, or stock bonus plans described in section 401(a) and exempt from tax under section 501(a), or under annuity plans described in section 403(a), see section 72(m)(3) and paragraph (c) of § 1.72–16; or

(ii) Under annuity contracts to which paragraph (a) or (b) of § 1.403(b)–1 applies, see paragraph (c)(3) of § 1.403(b)–1.

For the definition of a life insurance company, see section 801.

PAR. 3. Section 1.101–2 is amended (A) by revising the third sentence of paragraph (a)(3), (B) by revising the last sentence of paragraph (b), (C) by revising the first sentence of paragraph (d)(1), (D) by revising the first sentence of paragraph (d)(2), (E) by revising the first sentence of paragraph (d)(3)(i) and by adding a new sentence at the end of such paragraph, and (F) by adding a new subparagraph (4) at the end of paragraph (d). These revised and added provisions read as follows:

**§ 1.101–2 Employees' death benefits.**

(a) *In general.* * * *

(3) The total amount excludable with respect to any employee may not exceed $5,000, regardless of the number of employers or the number of beneficiaries. For allocation of the exclusion among beneficiaries, see paragraph (c) of this section. For rules governing the taxability of benefits payable on the death of an employee under pension, profit-sharing, or stock bonus plans described in section 401(a) and exempt under section 501(a), or under annuity plans described in section 403(a), or under annuity contracts to which paragraph (a) or (b) of § 1.403(b)–1 applies, see sections 72(m)(3), 402(a), and 403 and the regulations thereunder.

(b) *Payments under certain employee benefit plans*—(1) *In general.* Where a payment is made by reason of the death of an employee by an employer-provided welfare fund or a trust, including a stock bonus, pension, or profit-sharing trust described in section 401(a), or by an insurance company (if such payment does not constitute "life insurance" within the purview of section 101(a)), the payment shall be considered to have been made by or on behalf of the employer to the extent that it exceeds amounts contributed by, or deemed contributed by, the deceased employee.

(2) *Cross references.* For provisions governing the taxability of distributions payable on the death of an employee participant—

(i) Under a trust described in section 401(a) and exempt from tax under section 501(a), see paragraph (c) of § 1.72–16 and paragraph (a)(5) of § 1.402(a)–1;

(ii) Under an annuity plan described in section 403(a), see paragraph (c) of § 1.72–16 and paragraph (c) of § 1.403(a)–1;

(iii) Under annuity contracts to which paragraph (a) or (b) of § 1.403(b)–1 applies, see paragraph (c)(2) and (3) of § 1.403(b)–1.

* * * * *

(d) *Nonforfeitable rights.* (1) Except as provided in subparagraphs (3) and (4) of this paragraph, the exclusion provided by section 101(b) does not apply to amounts with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living. Section 101(b)(2)(B). For the purpose of section 101(b) and this paragraph, an employee shall be considered to have had a nonforfeitable right with respect to—

* * * * *

(2) The application of subparagraph (1) of this paragraph may be illustrated by the following examples, in which it is assumed that the plans are not "qualified" plans and that the employers are not organizations referred to in section 503(b)(1), (2), or (3) and exempt under section 501(a):

* * * * *

(3)(i) Notwithstanding the rule stated in subparagraph (1) of this paragraph and illustrated in subparagraph (2) of this paragraph, the exclusion from gross income provided by section 101(b) applies to the receipt of certain amounts, paid under "qualified" plans, with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living (see section 101(b)(2)(B)(i) and (ii)). The payments to which this exclusion applies are—

(*a*) "Total distributions payable" by a stock bonus, pension, or profit-sharing trust described in section 401(a) which is exempt from tax under section 501(a), and

(*b*) "Total amounts" paid under an annuity contract under a plan described in section 403(a),

provided such distributions or amounts are paid in full within one taxable year of the distributee (see example (3) of subdivision (ii) of this subparagraph). For the purposes of applying section 101(b), "total distributions payable" means the balance to the credit of an employee which becomes payable to a distributee on account of the employee's death, either before or after separation from the service (see section 402(a)(3)(C), the regulations thereunder, and examples (2) and (4) of subdivision (ii) of this subparagraph); and "total amounts" means the balance to the credit of an employee which becomes payable to the payee by reason of the employee's death, either before or after separation from the service (see section 403(a)(2)(B), the regulations thereunder, and example (1) of subdivision (ii) of this subparagraph). See subparagraph (4) of this paragraph relating to the exclusion of amounts which are received under annuity contracts purchased by certain exempt organizations and with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living.

* * * * *

(4)(i) Notwithstanding the rule stated in subparagraph (1) of this paragraph and illustrated in subparagraph (2) of this paragraph, the exclusion from gross income under section 101(b) also applies (but only to the extent provided in the next sentence) to amounts with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living—

(*a*) If such amounts are paid under an annuity contract purchased by an employer which is an organization referred to in section 503(b)(1), (2), or (3) and which is exempt from tax under section 501(a);

(*b*) If such amounts are paid as part of a "total payment" with respect to the deceased employee; and

(*c*) If such "total payment" is paid in full within one taxable year of the payee beginning after December 31, 1957.

However, the amount that is excludable under section 101(b) by reason of this subparagraph shall not exceed an amount which bears the same ratio to the amount which would be includible in the payee's gross income if it were not for the second sentence of section 101(b)(2)(B) and this subparagraph, as the amount contributed by the employer for the annuity contract that was excludable from the deceased employee's gross income under paragraph (b) of § 1.403(b)–1 bears to the total amount contributed by the employer for the annuity contract. See section 101(b)(2)(B)(iii). For purposes of this subparagraph, a "total payment" means a payment of the balance to the credit of an employee with re-

spect to all "section 403(b) annuities" purchased by the employer which becomes payable to the payee by reason of the employee's death, either before or after separation from the service. An annuity contract will be regarded as a "section 403(b) annuity" if any amount contributed (or considered as contributed under paragraph (b)(2) of § 1.403(b)-1) by the employer for such contract was excludable from the employee's gross income under paragraph (b) of § 1.403(b)-1. Under this definition, therefore, an annuity contract may be regarded as a "section 403(b) annuity" even though some of the employer's contributions for the contract were not excludable from the employee's gross income under paragraph (b) of § 1.403(b)-1 because, for example, the employer was not an exempt organization when such contributions were paid. For purposes of computing the ratio described in this subdivision in such a case, the total amount contributed by the employer for the contract includes the amounts contributed by the employer when it was not an exempt organization.

(ii) This subparagraph does not relate to any amounts with respect to which the deceased employee did not possess, immediately before his death, a nonforfeitable right to receive the amounts while living. Such amounts are excludable under the provisions of section 101(b) without regard to section 101(b)(2)(B) and this subparagraph. Thus, if a "total payment" received by a beneficiary of a deceased employee under an annuity contract purchased by an organization described in subdivision (i)(a) of this subparagraph consists both of amounts with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living and of amounts with respect to which the deceased employee did not possess such a nonforfeitable right, only those amounts with respect to which the deceased employee possessed such a nonforfeitable right are amounts to which this subparagraph applies. Therefore, for purposes of computing the ratio described in subdivision (i) of this subparagraph in such a case, there shall be taken into account only the employer contributions attributable to those amounts with respect to which the deceased employee possessed, immediately before his death, a nonforfeitable right to receive the amounts while living. See example (3) of subdivision (v) of this subparagraph. In no event, however, may the total amount excludable under section 101(b) with respect to any employee exceed $5,000 (see paragraph (a)(3) of this section).

(iii)(a) In any case when the deceased employee's interest in the employer's contributions for an annuity contract was forfeitable at the time the contributions were made but, at a subsequent date prior to his death, such interest changed to a nonforfeitable interest, then, for purposes of computing the ratio described in subdivision (i) of this subparagraph, the cash surrender value of the contract on the date of the change (except to the extent attributable to employee contributions) shall be considered as the amount contributed by the employer for the contract. In such a case, if only part of the deceased employee's interest in the annuity changed from a forfeitable to a nonforfeitable interest, then only the corresponding part of the cash surrender value of the contract on the date of the change shall be considered as the amount contributed by the employer for the contract. Similarly, if part of the deceased employee's interest in the annuity contract changed from a forfeitable to a nonforfeitable interest on a particular date and another part of his interest so changed on a subsequent date, it is necessary, in order to compute the amount contributed by the employer for the contract, to first determine (under the rules in the preceding sentence) the amount that is considered as the amount contributed by the employer with respect to each change, and then to add these amounts together. For purposes of computing the ratio described in subdivision (i) of this subparagraph, the total amount contributed by X Organization for the annuity contract is $2,500 (½ of the cash surrender value of the annuity contract on the date of the change). To the extent such $2,500 was, under paragraph (b) of § 1.403(b)-1, excludable from A's gross income for the taxable year of the change, it is considered as the amount contributed by the employer that was excludable under paragraph (b) of § 1.403(b)-1.

*Example (3).* Assume the same facts as in example (1) except that one-half of A's interest in the annuity contract changed to a nonforfeitable interest on January 1, 1960, and the other half of his interest changed to a nonforfeitable interest on January 1, 1965. On January 1, 1965, the cash surrender value of the annuity contract was $6,000. For purposes of the ratio described in subdivision (i) of this subparagraph, the total amount contributed by X organization for the annuity contract is $5,500 (*i.e.*, ½ x $5,000 plus ½ x $6,000). The amount contributed by the employer that was excludable from A's gross income under paragraph (b) of § 1.403(b)-1 is an amount equal to the sum of the amount that was, under such paragraph, excludable from A's gross income for the taxable year during which the first change occurred and the amount that was, under such paragraph, excludable from A's gross income for the taxable year in which the second change occurred.

(iv) For purposes of this subparagraph, an annuity contract will be considered to have been purchased by an employer which is an organization referred to in section 503(b)(1), (2), or (3) and which is exempt from tax under section 501(a), if any of the contributions paid toward the purchase of such contract by the employer were paid at a time when the employer was such an organization referred to in section 503(b)(1), (2), or (3) and exempt from tax under section 501(a). Thus, an annuity contract may be regarded as purchased by an organization referred to in section 503(b)(1), (2), or (3) and exempt from tax under section 501(a) even though part of the organization's contributions for such annuity contract were paid at a time when the organization was not such an exempt organization.

(v) The application of this subparagraph may be illustrated by the following examples:

*Example (1).* The widow of A, a deceased employee, elects, under an annuity contract purchased for A by X Organization, to receive in a lump sum the present value of such annuity contract as of the date of A's death. Such present value is $6,000 and is received by the widow in a taxable year beginning after December 31, 1957. X Organization contributed $3,000 toward the purchase of the annuity contract and A contributed $2,000 toward such purchase. A's interest in X Organization's contributions was nonforfeitable at the time such contributions were made. Thus, just before his death, A's entire interest in the annuity contract was a nonforfeitable interest and, if he had retired at that time, he could have received the present value of $6,000. The whole amount of the $3,000 contributed by X Organization for the annuity contract was excludable from A's gross income under paragraph (b) of § 1.403(b)-1. This annuity contract was the only annuity contract purchased by X Organization for A and was not purchased as part of a qualified plan. However, all the contributions paid by X Organization were paid at a time when X Organization was an organization referred to in section 503(b)(1) and exempt from tax under section 501(a). The amount that A's widow may exclude from gross income (assuming no other death benefits) is computed in the following manner:

| | |
|---|---|
| (a) Amount includible in gross income without regard to second sentence of section 101(b)(2)(B) ($6,000 minus $2,000 contributed for contract by A) | $4,000 |
| (b) Total employer contributions for the contract | $3,000 |
| (c) Amount of employer contributions for the contract that was excludable under paragraph (b) of § 1.403(b)-1 | $3,000 |

| | |
|---|---|
| (d) Percent of total employer contributions for the contract that were excludable under paragraph (b) of § 1.403(b)-1 ((c) ÷ (b)) | 100% |
| (e) Amount to which section 101(b) exclusion applies ((d) × (a)) | $4,000 |

*Example (2).* The facts are the same as in example (1) except that only $2,000 of X Organization's contributions for the annuity contract was excludable from A's gross income under paragraph (b) of § 1.403(b)-1 and that the remaining $1,000 was includible in A's gross income for the taxable years during which such amounts were contributed by X Organization. The amount that A's widow may exclude from gross income (assuming no other death benefits) is computed in the following manner:

| | |
|---|---|
| (a) Amount includible in gross income without regard to second sentence of section 101(b)(2)(B) ($6,000 minus $2,000 contributed for contract by A and $1,000 of X Organization's contributions includible in A's gross income) | $3,000 |
| (b) Total employer contributions for the contract | $3,000 |
| (c) Amount of employer contributions for the contract that was excludable under paragraph (b) of § 1.403(b)-1 | $2,000 |
| (d) Percent of total employer contributions for the contract that were excludable under paragraph (b) of § 1.403(b)-1 ((c) ÷ (b)) | 67% |
| (e) Amount to which section 101(b) exclusion applies ((d) × (a)) | $2,000 |

*Example (3).* The widow of B, a deceased employee, elects, under an annuity contract purchased for B by Y Organization, to receive in a lump sum the present value of such annuity contract as of the date of B's death. Such present value is $6,000 and is received by the widow in a taxable year beginning after December 31, 1957. Y Organization contributed $4,000 toward the purchase of the contract; whereas B made no contributions toward the purchase of the contract. This annuity contract was the only annuity contract purchased by Y Organization for B and was not purchased as part of a "qualified" plan. However, all the contributions paid by Y Organization were paid at a time when it was an organization referred to in section 503(b)(1) and exempt from tax under section 501(a). B's interest in Y Organization's contributions was, at the time they were paid, forfeitable. However, prior to his death, one-half of B's interest in the annuity contract changed from a forfeitable to a nonforfeitable interest. Therefore, just before his death, B could have obtained $3,000 under the annuity contract if he had retired at that time. On the date of the change, the cash surrender value of the annuity contract was $5,000. As a result of the change, $1,500 was, under paragraph (b) of § 1.403(b)-1, excludable from B's gross income, and $600 was includible in his gross income for the taxable year in which the change occurred. Part of the value of the annuity contract on the date of the change was attributable to contributions made by Y Organization prior to January 1, 1958, and, consequently, was neither excludable from B's gross income under paragraph (b) of § 1.403(b)-1 nor includible in B's gross income (see paragraph (b) of § 1.403(d)-1. The amount that B's widow may exclude from gross income (assuming no other death benefits) is computed in the following manner:

| | |
|---|---|
| (a) Amount of "total payment" with respect to which A had a forfeitable right at time of death. (½ × $6,000) | $3,000 |
| (b) Amount includible in gross income without regard to second sentence of section 101(b)(2)(B) (½ × $6,000 less $600 includible in B's gross income for year when his rights changed to nonforfeitable rights) | $2,400 |
| (c) Total employer contributions for the contract (½ of cash surrender value of contract on date B's rights changed to nonforfeitable rights) | $2,500 |
| (d) Amount of employer contributions for the contract that was excludable under paragraph (b) of § 1.403(b)-1 | $1,500 |
| (e) Percent of total employer contributions for the contract that were excludable under paragraph (b) of § 1.403(b)-1 ((d) ÷ (c)) | 60% |
| (f) Amount to which setcion 101(b) exclusion applies by reason of the second sentence of section 101(b)(2)(B) ((e) × (b)) | $1,440 |
| (g) Total amount to which section 101(b) exclusion applies ((a) + (f)) | $4,440 |

PAR. 4. Paragraph (a)(2)(i) of § 1.402(b)-1 is amended to read as follows:

**§ 1.402(b)-1 Treatment of beneficiary of a trust not exempt under section 501(a).**

(a) *Taxation by reason of employer contributions.* • • •

(2)(i) An employee's beneficial interest in the contribution is nonforfeitable within the meaning of sections 402(b), 403(b), 403(c), and 404(a)(5) at the time the contribution is made if there is no contingency under the plan which may cause the employee to lose his rights in the contribution. Similarly, an employee's rights under an annuity contract purchased for him by his employer change from forfeitable to nonforfeitable rights within the meaning of section 403(d) at that time when, for the first time, there is no contingency which may cause the employee to lose his rights under the contract. For example, if under the terms of a pension plan, an employee upon termination of his services before the retirement date, whether voluntarily or involuntarily, is entitled to a deferred annuity contract to be purchased with the employer's contributions made on his behalf, or is entitled to annuity payments which the trustee is obligated to make under the terms of the trust instrument based on the contributions made by the employer on his behalf, the employee's beneficial interest in such contributions is nonforfeitable.

PAR. 5. Paragraph (a) of § 1.402(d)-1 is amended to read as follows:

**§ 1.402(d)-1 Effect of section 402(d).**

(a) If the requirements of section 402(d) are met, a contribution made by an employer on behalf of an employee to a trust which is not exempt under section 501(a) shall not be included in the income of the employee in the year in which the contribution is made. Such contribution will be taxable to the employee, when received in later years, as provided in section 72 (relating to annuities), except that section 72(e)(3) shall not apply. See paragraph (b) of § 1.403(c)-1. The intent and purpose of section 402(d) is to give those employees, covered under certain non-exempt trusts to which such section applies, essentially the same tax treatment as those covered by trusts described in section 401(a) and exempt under section 501(a), except that the capital gains treatment referred to in section 402(a)(2) does not apply.

PAR. 6. Section 1.403(a) is amended (A) by revising section 403(a)(1) and (B) by adding a historical note at the end thereof. These revised and added provisions read as follows:

**§ 1.403(a) Statutory provisions; taxation of employee annuities; qualified annuity plan.**

SEC. 403. *Taxation of employee annuities*—(a) *Taxability of beneficiary under a qualified annuity plan*—(1) *General rule.* Except as provided in paragraph (2), if an annuity contract is purchased by an employer for an employee under a plan which meets the requirements of section 404(a)(2) (whether or not the employer deducts the amounts paid for the contract under such section), the employee shall include in his gross income the amounts received under such contract for the year received as provided in section 72 (relating to annuities) except that section 72(e)(3) shall not apply.

• • • • •

[Sec. 403(a) as amended by sec. 23(b), Technical Amendments Act 1958 (72 Stat. 1622)]

PAR. 7. Paragraph (a) of § 1.403(a)-1 is amended to read as follows:

**§ 1.403(a)-1 Taxability of beneficiary under a qualified annuity plan.**

(a) An employee or retired or former employee for whom an annuity contract is purchased by his employer is not required to include in his gross income the amount paid for the contract at the time such amount is paid, whether or not his rights to the contract are forfeitable, if the annuity contract is purchased under a plan which meets the requirements of section 404(a)(2). For purposes of the preceding sentence, it is immaterial whether the employer deducts the amounts paid for the contract under such section 404(a)(2). See § 1.403(b)-1 for rules relating to annuity contracts which are not purchased under qualified plans but which are purchased by organizations described in section 501(c)(3) and exempt under section 501(a) or which are purchased for employees who perform services for certain public schools.

PAR. 8. Section 1.403(b) is amended to read as follows:

**§ 1.403(b) Statutory provisions; taxation of employee annuities; taxability of beneficiary under annuity purchased by section 501(c)(3) organization or public school.**

SEC. 403. *Taxation of employee annuities.* • • •

(b) *Taxability of beneficiary under annuity purchased by section 501(c)(3) organization or public school*—(1) *General rule.* If—

(A) An annuity contract is purchased—

(i) For an employee by an employer described in section 501(c)(3) which is exempt from tax under section 501(a), or

(ii) For an employee (other than an employee described in clause (i)), who performs services for an educational institution (as defined in section 151(e)(4)), by an employer which is a State, a political subdivision of a State, or an agency or instrumentality of any one or more of the foregoing,

(B) Such annuity contract is not subject to subsection (a), and

(C) The employee's rights under the contract are nonforfeitable, except for failure

**§ 1.403(b)-1 Taxability of beneficiary under annuity purchased by a section 501(c)(3) organization or public school.**

sion allowance for such taxable year, they are not required to be included in the gross income of such employee for such taxable year, if at the time of the

to the extent such amounts are earned by the employee after the agreement becomes effective. Such an agreement must be legally binding and irrevocable

his employer for two or more annuity contracts for such employee, such two or more annuity contracts shall, for such taxable year, be considered a single con-

contract to which paragraph (a) or (b) of this section applies. For the rules as to nontransferability of such contracts issued after December 31, 1962, see

(B) Such annuity contract is not subject to subsection (a), and

(C) The employee's rights under the contract are nonforfeitable, except for failure to pay future premiums,

then amounts contributed by such employer for such annuity contract on or after such rights become nonforfeitable shall be excluded from the gross income of the employee for the taxable year to the extent that the aggregate of such amounts does not exceed the exclusion allowance for such taxable year. The employee shall include in his gross income the amounts received under such contract for the year received as provided in section 72 (relating to annuities) except that section 72(e)(3) shall not apply.

(2) *Exclusion allowance.* For purposes of this subsection, the exclusion allowance for any employee for the taxable year is an amount equal to the excess, if any, of—

(A) The amount determined by multiplying (i) 20 percent of his includible compensation, by (ii) the number of years of service, over

(B) The aggregate of the amounts contributed by the employer for annuity contracts and excludable from the gross income of the employee for any prior taxable year.

(3) *Includible compensation.* For purposes of this subsection, the term "includible compensation" means, in the case of any employee, the amount of compensation which is received from the employer described in paragraph (1)(A), and which is includible in gross income (computed without regard to sections 105(d) and 911) for the most recent period (ending not later than the close of the taxable year) which under paragraph (4) may be counted as one year of service. Such term does not include any amount contributed by the employer for any annuity contract to which this subsection applies.

(4) *Years of service.* In determining the number of years of service for purpose of this subsection, there shall be included—

(A) One year for each full year during which the individual was a full-time employee of the organization purchasing the annuity for him, and

(B) A fraction of a year (determined in accordance with regulations prescribed by the Secretary or his delegate) for each full year during which such individual was a part-time employee of such organization and for each part of a year during which such individual was a full-time or part-time employee of such organization.

In no case shall the number of years of service be less than one.

(5) *Application to more than one annuity contract.* If for any taxable year of the employee this subsection applies to 2 or more annuity contracts purchased by the employer, such contracts shall be treated as one contract.

(6) *Forfeitable rights which become nonforfeitable.* For purposes of this subsection and section 72(f) (relating to special rules for computing employees' contributions to annuity contracts), if rights of the employee under an annuity contract described in subparagraphs (A) and (B) of paragraph (1) change from forfeitable to nonforfeitable rights, then the amount (determined without regard to this subsection) includible in gross income by reason of such change shall be treated as an amount contributed by the employer for such annuity contract as of the time such rights become nonforfeitable.

[Sec. 403(b) as added by sec. 23(a), Technical Amendments Act 1958 (72 Stat. 1620) and amended by sec. 3, Act of October 4, 1961 (Pub. Law 87-370, 75 Stat. 801)]

PAR. 9. Section 1.403(b)-1 is amended to read as follows:

**§ 1.403(b)-1 Taxability of beneficiary under annuity purchased by a section 501(c)(3) organization or public school.**

(a) *Amounts paid by employer during taxable years beginning before January 1, 1958*—(1) *In general.* If an amount is paid during a taxable year of an employee (or a retired or former employee) beginning before January 1, 1958, toward the purchase for such employee of an annuity contract and such purchase is not part of an annuity plan which meets the requirements of section 404(a)(2), then such amount is not required to be included in the gross income of such employee for such taxable year—

(i) If such amount is paid by an employer which, at the time of the payment, is an organization described in section 501(c)(3) and exempt from tax under section 501(a), and

(ii) If the purchase of the annuity contract is merely a supplement to the past or current compensation of such employee (within the meaning of subparagraph (2) of this paragraph).

For purposes of this paragraph, it is immaterial whether or not the employee's rights to the annuity contract are forfeitable.

(2) *Supplement to past or current compensation.* For purposes of this paragraph, whether the purchase of an annuity contract is merely a "supplement to past or current compensation" is to be determined by all the surrounding facts and circumstances. One of the pertinent facts to be taken into consideration is the ratio of the consideration paid by the employer for an employee's contract to the amount of his past or current compensation. For example, if the annual premium paid for an employee's contract is $1,000 and his annual salary is $10,000, the ratio indicates that the premium paid for the contract is merely a supplement to the employee's current compensation. If, however, an employee receives no current compensation, or the annual premiums paid for his annuity contract approximate his annual salary, the amount paid for his contract will be considered to be current compensation and taxable to the employee in the year in which it is paid by the employer. Other pertinent considerations are whether the annuity contract is purchased as a result of an agreement for a reduction of the employee's annual salary, or whether it is purchased at his request in lieu of an increase in current compensation to which he otherwise might be entitled. In such cases, the amount paid for the contract shall also be considered to be current compensation.

(b) *Amounts paid by employer during taxable years beginning after December 31, 1957*—(1) *In general.* If amounts are contributed by an employer during a taxable year of an employee (or a retired or former employee) beginning after December 31, 1957, toward the purchase for such employee of an annuity contract and such purchase is not part of an annuity plan which meets the requirements of section 404(a)(2), then, to the extent such amounts do not exceed the exclusion allowance for such taxable year, they are not required to be included in the gross income of such employee for such taxable year, if at the time of the contribution—

(i) The employer is an organization described in section 501(c)(3) and exempt from tax under section 501(a), or

(ii) The employer is a State, a political subdivision of a State, or an agency or instrumentality of any one or more of the foregoing, and the employee is performing (or has performed) services for an educational institution (as defined in section 151(e)(4)), and

(iii) The employee's rights under the annuity contract are nonforfeitable except for failure to pay future premiums.

See paragraph (d) of this section for rules relating to the computation of an employee's exclusion allowance for a taxable year.

(2) *Forfeitable rights which change to nonforfeitable rights.* If an employee's rights under an annuity contract change from forfeitable to nonforfeitable rights, the amount which, under section 403(d), is includible in the gross income of such employee by reason of such change (computed without regard to subparagraph (1) of this paragraph) shall, for purposes of subparagraph (1) of this paragraph, be considered an amount contributed by the employer for such annuity contract as of the time the employee's rights under the contract change to nonforfeitable rights. Such amount will, therefore, be excludable from the employee's gross income for the taxable year in which the change occurs to the extent that it is so excludable under the rules contained in this section. In determining the extent to which such amount is excludable, this section shall be applied in the same manner as in the case of current employer contributions. Thus, no part of such amount is excludable if the employer is not an employer described in subparagraph (1) of this paragraph at the time the employee's rights under the annuity contract change from forfeitable to nonforfeitable rights. In addition, such amount will be excludable only to the extent it does not exceed the employee's exclusion allowance for the taxable year in which the change occurs. Since such an amount is considered as an amount contributed by the employer at the time the change occurs, it is immaterial whether the employer was an employer described in subparagraph (1) of this paragraph at the time the actual contributions were made.

(3) *Agreement to take a reduction in salary or to forego an increase in salary.* (i) There is no requirement that the purchase of an annuity contract for an employee must be merely a "supplement to past or current compensation" in order for the exclusion provided by this paragraph to apply to employer contributions for such annuity contract. Thus, the exclusion provided by this paragraph is applicable to amounts contributed by an employer for an annuity contract as a result of an agreement with an employee to take a reduction in salary, or to forego an increase in salary, but only to the extent such amounts are earned by the employee after the agreement becomes effective. Such an agreement must be legally binding and irrevocable with respect to amounts earned while the agreement is in effect. The employee must not be permitted to make more than one agreement with the same employer during any taxable year of such employee beginning after December 31, 1963; the exclusion provided by this paragraph shall not apply to any amounts which are contributed under any further agreement made by such employee during the same taxable year beginning after such date. However, the employee may be permitted to terminate the entire agreement with respect to amounts not yet earned.

(ii) The rules of this subparagraph may be illustrated by the following example:

*Example.* A is an employee of X Organization (an employer described in section 501(c)(3) and exempt from tax under section 501(a)) for the entire calendar year 1964. A uses the calendar year as a taxable year. A's annual salary as of January 1, 1964, is $12,000. On February 1, 1964, A and his employer enter a binding and irrevocable agreement whereby A is to take a 10-percent reduction in salary (from $1,000 per month to $900 per month) and X Organization is to contribute $100 per month for an annuity contract described in section 403(b). The agreement also provides that A may terminate the entire agreement with respect to amounts not yet earned. Since the agreement to reduce A's salary and invest the amount of such reduction in an annuity contract was made after A earned his salary for January, A's current compensation for January is $1,000 even though the agreement may provide that X Organization shall contribute $100 with respect to January for the benefit of A for an annuity contract described in section 403(b). For February and subsequent months ending before July 1, 1964, X Organization contributes $100 per month for A's annuity. Thus, A's current compensation for each of these months is $900, and the $100 which is contributed during such months by X Organization for an annuity contract for A is an employer contribution to which the exclusion provided in this paragraph applies. On July 1, 1964, A becomes entitled to a salary increase of $200 per month and, pursuant to the agreement of February 1, 1964, X Organization contributes 10 percent of such increase or an additional $20 per month for a section 403(b) annuity. For July and subsequent months ending before October 1, 1964, X Organization contributes $120 per month for A's annuity. Thus, A's current compensation for each of these months is $1,080, and the $120 which is contributed during such months by X Organization for an annuity contract for A is an employer contribution to which the exclusion provided in this paragraph applies. On November 1, 1964, A terminates the entire agreement with respect to amounts not yet earned. Since the termination occurred after A earned his salary for the month of October, the contribution for October is an employer contribution to which the exclusion provided in this paragraph applies. For the months November and December, A's full salary of $1,200 per month is includible in his gross income whether or not his employer makes contributions for a section 403(b) annuity.

(4) *Two or more annuity contracts.* If, during a taxable year of an employee, this paragraph applies to amounts contributed (including amounts which are considered to be contributed under subparagraph (2) of this paragraph) by his employer for two or more annuity contracts for such employee, such two or more annuity contracts shall, for such taxable year, be considered a single contract for purposes of applying the rules contained in this paragraph.

(5) *Employees performing services for public schools.* For purposes of this section, a person shall be considered an employee who performs services for an educational institution (as defined in section 151(e)(4)) if he is performing services as an employee directly or indirectly for such an institution. Thus, for example, the principal, clerical employees, custodial employees, and teachers at a public elementary school are employees performing services directly for such an educational institution. An employee who performs services involving the operation or direction of a State's, or political subdivision's, education program as carried on through educational institutions (as defined in section 151(e)(4)) is an employee performing services indirectly for such institutions. An employee participating in an "in-home" teaching program is included since such program is merely an extension of the activities carried on by such educational institutions. On the other hand, a person occupying an elective or appointive public office is not an employee performing services for an educational institution unless such office is one to which an individual is elected or appointed only if he has received training, or is experienced, in the field of education. The term "public office" includes any elective or appointive office of a State, a political subdivision of a State, or an agency or instrumentality of any one or more of the foregoing. Thus, for example, a regent or trustee of a State university or a member of a board of education is not an employee performing services for an educational institution. On the other hand, a commissioner or superintendent of education will generally be considered an employee performing services for an educational institution.

(c) *Taxation of amounts received under annuity contracts*—(1) *In general.* The amounts received by or made available to any employee under an annuity contract to which paragraph (a) or (b) of this section applies shall be included in the gross income of the employee for the taxable year in which received or made available, as provided in section 72 (relating to annuities), except that section 72(e)(3) shall not apply.

(2) *Taxation of beneficiaries.* If, upon the death of an employee or of a retired employee, the widow or other beneficiary of such employee is paid, in accordance with the terms of the annuity contract relating to the deceased employee, an annuity or other death benefit, the extent to which the amounts received by or made available to the beneficiary must be included in the beneficiary's income under subparagraph (1) of this paragraph shall be determined in accordance with the rules presented in paragraph (a)(5) of § 1.402(a)-1.

(3) *Life insurance protection.* An individual contract issued after December 31, 1962, or a group contract, which provides incidental life insurance protection may be purchased as an annuity contract to which paragraph (a) or (b) of this section applies. For the rules as to nontransferability of such contracts issued after December 31, 1962, see § 1.401-9. For the rules relating to the taxation of the cost of the life insurance protection and the proceeds thereunder, see § 1.72-16. Section 403(b) is not applicable to premiums paid after October 26, 1956, for individual contracts which were issued prior to January 1, 1963, and which provide life insurance protection.

(d) *Exclusion allowance*—(1) *In general.* For purposes of paragraph (b) of this section, an employee's exclusion allowance for a taxable year is an amount equal to the excess, if any, of—

(i) The amount determined by multiplying (*a*) 20 percent of such employee's includible compensation in respect of such taxable year, by (*b*) such employee's total number of years of service as of the close of such taxable year, over

(ii) The aggregate of the amounts which have been contributed by the employer for annuity contracts for such employee and which were excludable from the gross income of the employee for any taxable year prior to the taxable year for which the exclusion allowance is being determined.

See paragraph (e) of this section for the definition of an employee's includible compensation in respect of a taxable year and paragraph (f) of this section for rules for computing an employee's total number of years of service for an employer.

(2) *More than one employer.* If, during a taxable year of an employee, amounts are contributed for annuity contracts for such employee by two or more employers described in paragraph (b)(1) (i) or (ii) of this section, a separate exclusion allowance shall be computed with respect to each employer. In such a case, therefore, there shall not be taken into account, in computing the exclusion allowance with respect to one employer, the "includible compensation" received by the employee from any other employer, the employee's years of service with any other employer, or amounts which have been contributed by any other employer for annuity contracts for such employee.

(3) *Amounts previously contributed by the employer which were excludable from the employee's gross income.* In computing, for purposes of subparagraph (1)(ii) of this paragraph, the aggregate of the amounts which have been contributed by an employer for annuity contracts for an employee and which were excludable from the gross income of the employee for any taxable year prior to the taxable year for which the exclusion allowance is being determined, there shall be included all contributions made by the employer for the benefit of the employee—

(i) Which, under section 402(a) or section 403(a), were excludable from the employee's gross income for any such prior taxable year by reason of being contributions to a trust described in section 401(a) and exempt from tax under section 501(a) or contributions toward

the purchase of an annuity contract under a plan which meets the requirements of section 404(a)(2) (whether forfeitable or nonforfeitable); or

(ii) Which, under section 405(d), were excludable from the employee's gross income for any such prior taxable year by reason of being contributions toward the purchase of United States bonds under a plan which meets the requirements of section 405(a)(1); or

(iii) Which were excludable from the employee's gross income for any such prior taxable year by reason of being contributions described in paragraph (a) or (b) of this section; or

(iv)(a) Which were excludable from the employee's gross income for the taxable year when made solely by reason of the fact that the employee's rights to such contributions were forfeitable at the time they were made (and not for any of the reasons described in subdivisions (i), (ii), and (iii) of this subparagraph);

(b) With respect to which the employee's rights changed to nonforfeitable rights prior to the taxable year for which the exclusion allowance is being determined; and

(c) Which were not, under section 403(d) and without regard to paragraph (b) of this section, includible in the employee's gross income for the taxable year in which his rights to such contributions changed from forfeitable to nonforfeitable rights.

For purposes of subdivisions (i) and (iii) of this subparagraph, all references to provisions of the Internal Revenue Code of 1954 and to provisions of the regulations under such Code shall also be considered references to the corresponding provisions of prior law and regulations. See subparagraph (4) of this paragraph for rules relating to the allocation of employer contributions to an employee where the actual contributions are not allocated among individual employees.

(4) *Determination of excludable amounts by allocation of contributions.* If, for any employee, the actual amounts of employer contributions described in subparagraph (3) of this paragraph are not known, such amounts shall be determined under the formula described in this subparagraph or under any other method utilizing recognized actuarial principles which are consistent with the provisions of the plan under which such contributions are made and the method adopted by the employer for funding the benefits under the plan. If the formula described in this subparagraph is to be used, the contributions made by the employer for the benefit of the employee as of the end of any taxable year shall be deemed to be the product of the quantities described in subdivisions (i), (ii), (iii), and (iv) of ths subparagraph. Such quantities are—

(i) The projected annual amount of the employee's pension (as of the end of the taxable year) to be provided at normal retirement age from employer contributions, based upon the provisions of the plan in effect at such time and upon the assumption of the employee's continued employment with his present employer at his then current salary rate.

(ii) The value, from Table I below, at normal retirement age of an annuity of $1.00 per annum payable in equal monthly installments during the life of the employee, based upon the employee's sex and the normal retirement age as defined in the plan.

(iii) The amount from Table II below (representing the level annual contribution which will accumulate to $1.00 at normal retirement age) for the sum of (*a*) the number of years remaining from the end of the taxable year to normal retirement age and (*b*) the lesser of the number of years of service credited through the end of the taxable year or the number of years that the plan has been in existence at such time.

(iv) The lesser of the number of years of service credited through the end of the taxable year or the number of years that the plan has been in existence at such time.

TABLE I

[Value at normal retirement ages of annuity of $1.00 per annum payable in equal monthly installments during life of employee based upon employee's sex]

| Normal retirement age | Value | |
|---|---|---|
| | Sex | |
| | Male | Female |
| 60 | $12.57 | $14.36 |
| 62 | 11.80 | 13.55 |
| 65 | 10.63 | 12.31 |

NOTE. If the normal form of retirement benefit under the plan is other than a straight life annuity, the value from Table I above should be divided by the figure set forth below opposite the normal form of retirement benefit provided by the plan:

| | |
|---|---|
| Annuity for 5 years certain and life thereafter | 0.97 |
| Annuity for 10 years certain and life thereafter | .90 |
| Annuity for 15 years certain and life thereafter | .80 |
| Annuity for 20 years certain and life thereafter | .70 |
| Life annuity with installment refund | .80 |
| Life annuity with cash refund [1] | .75 |

[1] The term "cash refund" refers to refund of accumulated employer contributions, and does not refer to refund of employee contributions only, often referred to as "modified cash refund".

TABLE II

[Level annual contribution which will accumulate to $1.00 at end of number of years]

| Number of years: | Amount | Number of years: | Amount |
|---|---|---|---|
| 1 | $1.0000 | 26 | $0.0242 |
| 2 | .4914 | 27 | .0229 |
| 3 | .3219 | 28 | .0216 |
| 4 | .2373 | 29 | .0204 |
| 5 | .1865 | 30 | .0194 |
| 6 | .1527 | 31 | .0184 |
| 7 | .1285 | 32 | .0174 |
| 8 | .1105 | 33 | .0166 |
| 9 | .0964 | 34 | .0158 |
| 10 | .0852 | 35 | .0150 |
| 11 | .0761 | 36 | .0143 |
| 12 | .0685 | 37 | .0136 |
| 13 | .0621 | 38 | .0130 |
| 14 | .0566 | 39 | .0124 |
| 15 | .0518 | 40 | .0118 |
| 16 | .0477 | 41 | .0113 |
| 17 | .0440 | 42 | .0108 |
| 18 | .0408 | 43 | .0103 |
| 19 | .0379 | 44 | .0099 |
| 20 | .0354 | 45 | .0095 |
| 21 | .0330 | 46 | .0091 |
| 22 | .0309 | 47 | .0087 |
| 23 | .0290 | 48 | .0083 |
| 24 | .0273 | 49 | .0080 |
| 25 | .0257 | 50 | .0076 |

(e) *Includible compensation*—(1) *In general.* For purposes of computing, under paragraph (d) of this section, an employee's exclusion allowance for a taxable year, such employee's includible compensation in respect of such taxable year means the amount of compensation from the employer—

(i) Which was earned during the most recent period (ending not later than the close of the employee's taxable year for which the exclusion allowance is being determined) that, under paragraph (f) of this section, may be counted as one-year of service,

(ii) Which is includible in the employee's gross income, and

(iii) In the case of an employee of an employer described in paragraph (b)(1)(ii) of this section, which is attributable to services performed for an educational institution (as defined in section 151(e)(4)).

See subparagraph (2) of this paragraph for special rules for determining the amount of compensation which is includible in the employee's gross income.

(2) *Special rules for determining the amount of compensation includible in the employee's gross income.* For purposes of subparagraph (1) of this paragraph, the amount of compensation which is includible in the employee's gross income shall be computed without regard to the exclusions allowed by section 105(d) (relating to wage continuation plans) and section 911 (relating to earned income from sources without the United States). Therefore, although amounts received by the employee from the employer while he is absent from work on account of personal injuries or sickness may be excludable from his gross income under section 105(d), such amounts are, nevertheless, considered as includible in his gross income for purposes of computing his includible compensation. On the other hand, in computing the amount which is includible in the gross income of the employee for purposes of subparagraph (1) of this paragraph, there shall not be included any amount which is contributed by the employer for an annuity contract to which paragraph (b) of this section applies. Thus, although the amount of any employer contributions for an annuity contract to which paragraph (b) of this section applies is, to the extent it exceeds in any taxable year the employee's exclusion allowance for such year, includible in the employee's gross income for that year, such amount is not considered as includible in the employee's gross income for purposes of computing his includible compensation for that year.

(3) *Period during which compensation must be earned.* For purposes of computing an employee's exclusion allowance for a taxable year, there may not be taken into account, as includible compensation, any compensation which was earned by the employee during a taxable year ending after the taxable year for which the exclusion allowance is being determined. On the other hand, an employee's includible compensation may include all or part of his compensation earned during a taxable year prior to the taxable year for which the exclusion allowance is being determined. Such a situation can occur, for example, when an employer purchases an annuity contract for a retired employee, or when an employer purchases an annuity contract for a part-time employee whose most recent one-year period of service (within the meaning of paragraph (f) of this section) extends over more than one taxable year of such employee. For purposes of this subparagraph, it is immaterial when the compensation is actually received by the employee or for what taxable year it is includible in his gross income.

(4) *Status of employer.* In computing an employee's exclusion allowance for a taxable year, there is not taken into account, as includible compensation, any compensation which was earned during a period when the employer was not an employer described in paragraph (b)(1)(i) or (ii) of this section since under paragraph (f)(2) of this section an employee is not considered to be in the service of the employer for any such period. On the other hand, it is immaterial whether the employer is an employer described in paragraph (b)(1)(i) or (ii) of this section at the time the compensation is actually received by the employee. Thus, if an employee receives compensation during his 1961 taxable year for services performed during his 1960 taxable year, such compensation can qualify as includible compensation if his employer was an employer described in paragraph (b)(1)(i) or (ii) of this section during 1960, even though such employer was not such an employer during 1961. See, also, paragraph (b) of this section which provides that the exclusion allowance is only applicable with respect to contributions which are made by an employer at a time when such employer is an employer described in paragraph (b)(1)(i) or (ii) of this section.

(f) *Years of service*—(1) *In general.* In computing an employee's exclusion allowance for a taxable year, it is necessary to determine such employee's number of years of service for the employer as of the close of such taxable year. For this purpose, the number of years of service of an employee for an employer shall be determined in accordance with the rules set forth in this paragraph. In addition, such rules are applicable in determining, for purposes of paragraph (e) of this section, an employee's most recent one-year period of service.

(2) *Exempt status requirement.* For purposes of determining an employee's number of years of service for an employer and his most recent one-year period of service for such employer, an employee shall not be considered to be employed by the employer, or to be in the service of the employer, during any period that the employer is not an employer described in paragraph (b)(1)(i) or (ii) of this section, or, in the case of an employee of an employer described in paragraph (b)(1)(ii) of this section, during any period when the employee is not performing services for an educational institution (as defined in section 151(e)(4)). The rule in this subparagraph may be illustrated by the following example: A was employed on a full-time basis by the X scientific organization during the whole of 1959 and 1960 and during half of 1961. Both A and the X Organization use the calendar year as their taxable year. The X Organization was an organization described in section 501(c)(3) and exempt from tax under section 501(a) during the years 1959 and 1961, but not during the year 1960. For purposes of determining A's exclusion allowance for 1961, he is considered to have 1½ years of service (his service during 1959 and 1961) and his most recent one-year period of service ending not later than the close of 1961 consists of his service during 1961 (which is equal to ½ year of service) and his service during the last half of 1959 (which is equal to another ½ year of service).

(3) *Service included.* For purposes of computing an employee's exclusion allowance for a taxable year, there may be taken into account, in determining his number of years of service, all service performed by him as of the close of such taxable year. Therefore, whenever possible, service performed during each of the employee's taxable years should be considered separately in arriving at his total number of years of service. For example, if an employee who reports his income on a calendar year basis is employed on a full-time basis on July 1, 1959, and continues on a full-time basis through December 31, 1960, his number of years of service as of the close of his 1960 taxable year should, if possible, be computed as follows:

| | |
|---|---|
| (*a*) Number of years of service performed during 1959 taxable year | ½ |
| (*b*) Number of years of service performed during 1960 taxable year | 1 |
| (*c*) Total number of years of service as of close of 1960 taxable year ((*a*)+(*b*)) | 1½ |

However, in determining what constitutes a full year of service, the employer's annual work period, and not the employee's taxable year, is the standard of measurement. For example, in determining whether a professor is employed full time, the number of months in the school's academic year shall be the standard of measurement.

(4) *Full-time employee for full year.* (i) Each full year during which an individual was employed full time shall be considered as one year of service. In determining whether an individual is employed full-time, the amount of work which he is required to perform shall be compared with the amount of work which is normally required of individuals holding the same position with the same employer and who generally derive the major portion of their personal service income from such position.

(ii) (*a*) In measuring the amount of work required of individuals holding a particular position, any method that reasonably and accurately reflects such amount may be used. For example, the number of hours of classroom instruction is only an indication of the amount of work required, but it may be used as a measure.

(*b*) In determining whether positions with the same employer are the same, all of the facts and circumstances concerning the positions shall be considered, including the work performed, the methods by which compensation is computed, and the descriptions (or titles) of the positions. For example, an assistant professor employed in the English department of a university will be considered a full-time employee if the amount of work that he is required to perform is the same as the amount of work normally required of assistant professors of English at that university who derive the main portion of their personal service income from such position.

(*c*) In case an individual's position is not the same as another with his employer, the rules of this paragraph shall be applied by considering the same position with similar employers or similar positions with the same employer.

(iii) A full year of service for a particular position means the usual annual work period of individuals employed full-time in that general type of employment at the place of employment. For example, if a doctor employed by a hospital works throughout the 12 months of a year except for a one-month vacation, such doctor will be considered as being employed for a full year, if the other doctors at that hospital work 11 months of the year with a one-month vacation. Similarly, if the usual annual work period at a university consists of the fall and spring semesters, an instructor at that university who teaches those semesters will be considered as working a full year.

(5) *Other employees.* (i) An individual shall be treated as having a fraction of a year of service for each year during which he was a full-time employee for part of the year or for each year during which he was a part-time employee for the entire year or for a part of the year.

(ii) In determining the fraction which represents the fractional year of service for an individual employed full time for part of a year, the numerator shall be the number of weeks (or months) during which the individual was a full-time employee in a position during that year, and the denominator shall be the number of weeks (or months) which is considered under subparagraph (4)(iii) of this paragraph as the usual annual work period for that position. For example, if an instructor is employed full time by a university for the 1959 spring semester (which lasts from February 1959 through May 1959), and the academic year of the university is 8 months long, beginning in October 1958, and ending in May 1959, then he is considered as having completed ⅝ of a year of service.

(iii) In determining the fraction which represents the fractional year of service of an individual who is employed part time for a full year, the numerator shall be the amount of work required to be performed by the individual, and the denominator shall be the amount of work normally required of individuals who hold the same position. The amount of work required to be performed by the individual and the amount of work normally required of individuals holding the same position shall be deter-

mined in accordance with the principles of subparagraph (4) of this paragraph. Thus, if a practicing physician teaches one course at a local medical school 3 consists of his service performed during January through May, 1960 (which is part of the 1959–1960 academic year) and his service performed during Octo-

(3) 20% x includible compensation ..... $600.00

(4) Number of years of service (although A was employed for less than a year, he is

§ 1.403(c) **Statutory provisions; taxation of employee annuities; taxability of beneficiary under a nonqualified annuity.**

(b) If an employer has purchased annuity contracts and transferred the same to a trust or if an employer has made contributions to a trust for the than an annuity contract purchased as part of a plan which meets the requirements of section 404(a)(2)) purchased for him by an employer which is exempt

mined in accordance with the principles of subparagraph (4) of this paragraph. Thus, if a practicing physician teaches one course at a local medical school 3 hours per week for two semesters and other faculty members at that medical school teach 9 hours per week for two semesters, then the practicing physician is considered as having completed ⅜ of a year of service.

(iv) In determining the fraction representing the fractional year of service of an individual who is employed part time for part of a year, it is necessary to compute the fractional year of service if the individual were a part-time employee for a full year, and the fractional year of service if the individual were a full-time employee for the part of a year. The two fractions shall be multiplied and the product is the fractional year of service of such individual who is employed part time for part of a year. For example, if an attorney who is a specialist in a subject teaches a course in that subject for 3 hours per week for one semester at a nearby law school, and the full-time instructors at that law school teach 12 hours per week for two semesters, then the fractional part of a year of service for such part-time instructor is computed as follows: The fractional year of service if the instructor were a part-time employee for a full year is 3/12 (number of hours employed divided by the usual number of hours of work required for that position); the fractional year of service if the instructor were a full-time employee for part of a year is ½ (period worked or one semester, divided by usual work period, or 2 semesters). These fractions are multiplied to obtain the fractional year of service: 3/12 times ½, or 3/24 (⅛).

(6) *Less than one year of service considered as one year.* If, at the close of a taxable year, an employee has, under the rules in this paragraph, a period of service of less than one year, such employee shall, nevertheless, be considered to have one year of service for purposes of computing his exclusion allowance for that taxable year. Such period of service of less than one year shall also be considered to be such employee's most recent one-year period of service for purposes of determining his includible compensation.

(7) *Most recent one-year period of service.* (i) In determining, for purposes of paragraph (e) of this section (relating to includible compensation), an employee's most recent one-year period of service, there is first taken into account all service performed by the employee during the taxable year for which the exclusion allowance is being determined. For this purpose, therefore, an employee's most recent one-year period of service may not be the same as his employer's most recent annual work period. The rule in this subdivision may be illustrated by the following example: A, a professor who reports his income on a calendar year basis, is employed by a university on a full-time basis during the university's 1959–1960 and 1960–1961 academic years (October through May). For purposes of computing A's exclusion allowance for his 1960 taxable year, his most recent one-year period of service consists of his service performed during January through May, 1960 (which is part of the 1959–1960 academic year) and his service performed during October through December 1960 (which is part of the 1960–1961 academic year).

(ii) In the case of a part-time employee or a full-time employee who is employed for only part of a year, it will be necessary to aggregate his most recent periods of service to determine his most recent one-year period of service. In such a case, there is first taken into account his service during the taxable year for which the exclusion allowance is being determined; then there is taken into account his service during his next preceding taxable year and so forth until his service equals, in the aggregate, one year of service. For example, if an employee, who reports his income on the calendar year basis, is employed on a full-time basis during the months July through December 1959 (½ year of service), July through December 1960 (½ year of service), and October through December 1961 (¼ year of service), his most recent one-year period of service for purposes of computing his exclusion allowance for 1961 consists of his service during 1961 (¼ year of service), his service during 1960 (½ year of service), and his service during the months October through December 1959 (¼ year of service).

(g) *Illustration of computation of exclusion allowance.* The exclusion provided under paragraph (b) of this section may be illustrated by the following example: A, a professor who reports his income on the calendar year basis, became a full-time employee of X University on October 1, 1958 (beginning of X University's 1958–1959 academic year) and continued as a full-time employee for the academic years 1958–1959, 1959–1960, and 1960–1961. X University was, during all such academic years, an organization described in section 501(c)(3) and exempt from tax under section 501(a). X University's academic year runs for a period of 8 months: October through May. A received an annual salary, all of which was includible in his gross income, of $8,000 for the 1958–1959 academic year, $8,800 for the 1959–1960 academic year, and $9,600 for the 1960–1961 academic year. Starting in 1958, X University contributed amounts toward the purchase of annuity contracts for A and such purchase was not part of a qualified annuity plan. X University paid, as premiums for such contracts, $1,000 in 1958, $2,000 in 1959, $2,400 in 1960, and $1,400 in 1961. The amount of such premiums which is excludable from A's gross income for the year in which paid is computed as follows:

*1958*

| | |
|---|---|
| (1) Amount contributed by employer for annuity contracts in 1958 | $1,000.00 |
| (2) Includible compensation for most recent one-year period of service (since A was employed for only ⅜ of a year at the close of 1958, this period is counted as most recent one-year period of service) ⅜ × $8,000 | $3,000.00 |
| (3) 20% x includible compensation | $600.00 |
| (4) Number of years of service (although A was employed for less than a year, he is considered to have one-year of service) | 1 |
| (5) Item (4) x item (3) | $600.00 |
| (6) Contributions excludable in prior taxable years of A | None |
| (7) Amount excludable from A's gross income for 1958 ((5)−(6)) | $600.00 |
| (8) Amount includible in A's gross income for 1958 ((1)−(7)) | $400.00 |

*1959*

| | |
|---|---|
| (9) Amount contributed by employer for annuity contracts in 1959 | $2,000.00 |
| (10) Includible compensation for most recent one-year period of service. (⅜ × $8,800 + ⅝ × $8,000) | $8,300.00 |
| (11) 20% x includible compensation | $1,660.00 |
| (12) Number of years of service | 1⅜ |
| (13) Item (12) x item (11) | $2,282.50 |
| (14) Contributions excludable in prior taxable years of A (item (7)) | $600.00 |
| (15) Amount excludable from A's gross income for 1959 ((13)−(14)) | $1,682.50 |
| (16) Amount includible in A's gross income for 1959 ((9)−(15)) | $317.50 |

*1960*

| | |
|---|---|
| (17) Amount contributed by employer for annuity contracts in 1960 | $2,400.00 |
| (18) Includible compensation for most recent one-year period of service (⅜ × $9,600 + ⅝ × $8,800) | $9,100.00 |
| (19) 20% x includible compensation | $1,820.00 |
| (20) Number of years of service | 2⅜ |
| (21) Item (20) x item (19) | $4,322.50 |
| (22) Contributions excludable in prior taxable years ((7)+(15)) | $2,282.50 |
| (23) Amount excludable from A's gross income for 1960 ((21)−(22)) | $2,040.00 |
| (24) Amount includible in A's gross income for 1960 ((17)−(23)) | $ 360.00 |

*1961*

| | |
|---|---|
| (25) Amount contributed by employer for annuity contracts in 1961 | $1,400.00 |
| (26) Includible compensation for most recent one-year period of service (⅜ × $9,600 + ¾ × $9,600) | $9,600.00 |
| (27) 20% x includible compensation | $1,920.00 |
| (28) Number of years of service | 3 |
| (29) Item (28) x item (27) | $5,760.00 |
| (30) Contributions excludable in prior taxable years ((7)+(15)+(23)) | $4,322.50 |
| (31) Amount excludable from A's gross income for 1961 (item (25) since it is less than (29)−(30)) | $1,400.00 |
| (32) Amount includable in A's gross income for 1961 ((25)−(31)) | None |

PAR. 10. There are inserted immediately after § 1.403(b)-1 the following new sections:

**§ 1.403(c) Statutory provisions; taxation of employee annuities; taxability of beneficiary under a nonqualified annuity.**

SEC. 403. *Taxation of employee annuities.* * * *

(c) *Taxability of beneficiary under a nonqualified annuity.* If an annuity contract purchased by an employer for an employee is not subject to subsection (a) and the employee's rights under the contract are nonforfeitable, except for failure to pay future premiums, the amount contributed by the employer for such annuity contract on or after such rights become nonforfeitable shall be included in the gross income of the employee in the year in which the amount is contributed. The employee shall include in his gross income the amounts received under such contract for the year received as provided in section 72 (relating to annuities) except that section 72(e)(3) shall not apply.

[Sec. 403(c) as relettered by sec. 23(a), Technical Amendments Act 1958 (72 Stat. 1620)]

**§ 1.403(c)-1 Taxability of beneficiary under a nonqualified annuity.**

(a) Except as provided in section 402(d), if an employer purchases an annuity contract and if the amounts paid for the contract are not subject to paragraph (a) of § 1.403(a)-1 or paragraph (a) of § 1.403(b)-1, the amount of such contribution shall, to the extent it is not excludable under paragraph (b) of § 1.403(b)-1, be included in the income of the employee for the taxable year during which such contribution is made if, at the time the contribution is made, the employee's rights under the annuity contract are nonforfeitable, except for failure to pay future premiums. If the annuity contract was purchased by an employer which is not exempt from tax under section 501(a) or section 521(a), and if the employee's rights under the annuity contract in such a case were forfeitable at the time the employer's contribution was made for the annuity contract, even though they become nonforfeitable later, the amount of such contribution is not required to be included in the income of the employee at the time his rights under the contract become nonforfeitable. On the other hand, if the annuity contract is purchased by an employer which is exempt from tax under section 501(a) or section 521(a), all or part of the value of the contract may be includible in the employee's gross income at the time his rights under the contract become nonforfeitable (see section 403(d) and the regulations thereunder). As to what constitutes nonforfeitable rights of an employee, see § 1.402(b)-1. The amounts received by or made available to the employee under the annuity contract shall be included in the gross income of the employee for the taxable year in which received or made available, as provided in section 72 (relating to annuities) except that section 72(e)(3) shall not apply. For rules relating to the treatment of employer contributions as part of the consideration paid by the employee, see section 72(f). See also section 101(b)(2)(D) for rules relating to the treatment of the limited exclusion provided thereunder as part of the consideration paid by the employee.

(b) If an employer has purchased annuity contracts and transferred the same to a trust or if an employer has made contributions to a trust for the purpose of providing annuity contracts for his employees as provided in section 402(d) (see paragraph (a) of § 1.402(d)-1), the amount so paid or contributed is not required to be included in the income of the employee, but any amount received by or made available to the employee under the annuity contract shall be includible in the gross income of the employee for the taxable year in which received or made available, as provided in section 72 (relating to annuities), except that section 72(e)(3) shall not apply. In such case the amount paid or contributed by the employer shall not constitute consideration paid by the employee for such annuity contract in determining the amount of annuity payments required to be included in his gross income under section 72 unless the employee has paid income tax for any taxable year beginning before January 1, 1949, with respect to such payment or contribution by the employer for such year and such tax is not credited or refunded to the employee. In the event such tax has been paid and not credited or refunded the amount paid or contributed by the employer for such year shall constitute consideration paid by the employee for the annuity contract in determining the amount of the annuity required to be included in the income of the employee under section 72.

(c) For taxable years beginning before January 1, 1958, the provisions contained in section 403(c) were included in section 403(b) of the Internal Revenue Code of 1954. Therefore, the regulations contained in this section shall, for such taxable years, be considered as the regulations under section 403(b) as in effect for such taxable years.

**§ 1.403(d) Statutory provisions; taxation of employee annuities; taxability of beneficiary under certain forfeitable contracts purchased by exempt organizations.**

SEC. 403. *Taxation of employee annuities* * * *

(d) *Taxability of beneficiary under certain forfeitable contracts purchased by exempt organizations.* Notwithstanding the first sentence of subsection (c), if rights of an employee under an annuity contract purchased by an employer which is exempt from tax under section 501(a) or 521(a) change from forfeitable to nonforfeitable rights, the value of such contract on the date of such change (to the extent attributable to amounts contributed by the employer after December 31, 1957) shall, except as provided in subsection (b), be included in the gross income of the employee in the year of such change.

[Sec. 403(d) as added by sec. 23(c), Technical Amendments Act 1958 (72 Stat. 1622)]

**§ 1.403(d)-1 Taxability of employee when rights under contracts purchased by exempt organizations change from forfeitable to nonforfeitable rights.**

(a) *In general.* If, during a taxable year of an employee beginning after December 31, 1957, the rights of such employee under an annuity contract (other than an annuity contract purchased as part of a plan which meets the requirements of section 404(a)(2)) purchased for him by an employer which is exempt from tax under section 501(a) or 521(a) change from forfeitable to nonforfeitable rights, then the value of such annuity contract on the date of such change shall, to the extent provided in paragraph (b) of this section, be included in the employee's gross income for such taxable year. For purposes of this section, the value of an annuity contract on the date the employee's rights change from forfeitable to nonforfeitable rights means the cash surrender value of such contract on such date. As to what constitutes nonforfeitable rights of an employee, see § 1.402(b)-1.

(b) *Extent to which value of annuity contract is includible in employee's gross income.* For purposes of paragraph (a) of this section, there shall be included in the gross income of an employee for his taxable year in which his rights under an annuity contract change from forfeitable to nonforfeitable rights only an amount equal to the portion of the value of such contract on the date of such change (1) that is attributable to contributions:

(i) Which were made by the employer while it was exempt from tax under section 501(a) or 521(a);

(ii) Which were made after December 31, 1957; and

(iii) Which were not, at the time they were made, excludable from the employee's gross income under paragraph (a) of § 1.403(b)-1;

and (2) that is not excludable from the employee's gross income under paragraph (b) of § 1.403(b)-1. Thus, although amounts are contributed by an employer after December 31, 1957, toward the purchase for an employee of an annuity contract and, at the time of the contribution, such employer is an organization described in section 501(c)(3) and exempt from tax under section 501(a), the value of such annuity contract attributable to such contributions would not be includible in the employee's gross income for the taxable year in which his rights under the contract change to nonforfeitable rights if such amounts were contributed during a taxable year of the employee beginning before January 1, 1958, and were, therefore, excludable from the employee's gross income under paragraph (a) of § 1.403(b)-1. Similarly, the value of such an annuity contract is not includible in the gross income of the employee for the year in which the change occurs to the extent that it is excludable under paragraph (b) of § 1.403(b)-1. See paragraph (b)(2) of § 1.403(b)-1 which provides that the amount otherwise includible in gross income under section 403(d) is considered to be a contribution by the employer for purposes of the exclusion provided in paragraph (b) of § 1.403(b)-1. In addition, the portion of the value of an annuity contract attributable to contributions made by the employer while it was not exempt from tax under either section 501(a) or 521(a) is not includible in the gross income of the employee at the time

his rights under the contract change to nonforfeitable rights even though the employer is exempt from tax under section 501(a) or 521(a) at the time of such change. On the other hand, the value of the annuity contract purchased by an organization exempt from tax under section 501(a) or 521(a) may be includible in the gross income of an employee for the year during which his rights under the contract change to nonforfeitable rights even though such organization is not exempt on the date of such change.

(c) *Partial vesting*—(1) *General rule.* If, during any taxable year of an employee, only part of his beneficial interest in an annuity contract changes from a forfeitable to a nonforfeitable interest, then only the corresponding part of the value of the annuity contract on the date of such change is includible in the employee's gross income for such taxable year. In such a case, it is first necessary to compute, under the rules in paragraphs (a) and (b) of this section but without regard to any exclusion allowable under paragraph (b) of § 1.403(b)-1, the amount which would be includible in the employee's gross income for the taxable year if his entire beneficial interest in the annuity contract had changed to a nonforfeitable interest during such year. The amount that is includible (without regard to any exclusion allowed by paragraph (b) of § 1.403(b)-1) in the gross income of the employee for the taxable year in which the change occurs is an amount equal to the amount determined under the preceding sentence multiplied by the percent of the employee's beneficial interest which changed to a nonforfeitable interest during the taxable year. If at the time the employee's interest changes to a nonforfeitable interest, the employer is an organization described in section 501(c)(3) and exempt from tax under section 501(a), then the amount that is includible in the employee's gross income under this subparagraph is considered as an employer contribution to which the exclusion provided in paragraph (b) of § 1.403(b)-1 applies (see paragraph (b)(2) of § 1.403(b)-1).

(2) *Example.* The provisions in subparagraph (1) of this paragraph may be illustrated by the following example:

X Organization purchased an annuity contract for A, one of its employees who reports his income on a calendar year basis. X contributed ½ of the amount necessary to purchase the contract before January 1, 1958, and the remaining ½ after December 31, 1957. At the time of the contributions, X was an organization exempt from tax under section 501(a) and A's rights under the contract were forfeitable. The annuity contract was not purchased as part of a qualified plan and A made no contributions toward the purchase of the contract. On December 31, 1965, 50 percent of A's interest in the contract changed from a forfeitable to a nonforfeitable interest, and on December 31, 1970, the remaining 50 percent of A's interest in the contract changed to a nonforfeitable interest. The cash surrender value of the contract was $9,900 on December 31, 1965, and $12,000 on December 31, 1970. The amount includible in A's gross income for 1965 and 1970 is computed as follows—

*1965*

| | |
|---|---|
| (i) Amount which would have been includible if A's entire interest had changed to a nonforfeitable interest (cash surrender value of contract on Dec. 31, 1965, attributable to contributions made after Dec. 31, 1957) ½×$9,900 | $6,600 |
| (ii) Percent of A's interest that changed to a nonforfeitable interest on Dec. 31, 1965 | 50% |
| (iii) Amount includible in A's gross income for 1965 ((i)×(i)) | $3,300 |

*1970*

| | |
|---|---|
| (iv) Amount which would have been includible if A's entire interest had changed to a nonforfeitable interest (cash surrender value of contract on Dec. 31, 1970, attributable to contributions made after Dec. 31, 1957) ½×$12,000 | $8,000 |
| (v) Percent of A's interest that changed to a nonforfeitable interest on Dec. 31, 1970 | 50% |
| (vi) Amount includible in A's gross income for 1970 ((v)×(iv)) | $4,000 |

If, on December 31, 1965, X is an organization described in section 501(c)(3) and exempt from tax under section 501(a), then only so much of the $3,300 as is not excludable under paragraph (b) of § 1.403(b)-1 is includible in A's gross income for 1965. Similarly, if, on December 31, 1970, X is an organization described in section 501(c)(3) and exempt from tax under section 501(a), then only so much of the $4,000 as is not excludable under paragraph (b) of § 1.403(b)-1 is includible in A's gross income for 1970.

PAR. 11. Section 1.404(a) is amended (A) by revising so much of section 404(a) as precedes paragraph (1) thereof and (B) by adding a historical note at the end thereof. These revised and added provisions read as follows:

**§ 1.404(a) Statutory provisions; deduction for contributions of an employer to an employees' trust or annuity plan and compensation under a deferred-payment plan; general rule.**

SEC. 404. *Deduction for contributions of an employer to an employees' trust or annuity plan and compensation under a deferred-payment plan*—(a) *General rule.* If contributions are paid by an employer to or under a stock bonus, pension, profit-sharing, or annuity plan, or if compensation is paid or accrued on account of any employee under a plan deferring the receipt of such compensation, such contributions or compensation shall not be deductible under section 162 (relating to trade or business expenses) or section 212 (relating to expenses for the production of income); but, if they satisfy the conditions of either of such sections, they shall be deductible under this section, subject, however, to the following limitations as to the amounts deductible in any year:

* * * * * *

[Sec. 404(a) as amended by sec. 24, Technical Amendments Act 1958 (72 Stat. 1623)]

(Sec. 7805 of the Internal Revenue Code of 1954; (68A Stat. 917; 26 U.S.C. 7805))

[T.D. 6784]

## PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Rents or Royalties Derived in the Active Conduct of a Trade or Business

On May 15, 1964, notice of proposed rule making was published in the FEDERAL REGISTER (29 F.R. 6403) regarding the amendment of the Income Tax Regulations (26 CFR Part 1) so as to provide specific cases in which rents or royalties will be considered to be derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A) of the Internal Revenue Code of 1954, as added by section 12(a) of the Revenue Act of 1962 (76 Stat. 1006). After consideration of all such relevant matter as was presented by interested persons regarding the rules proposed, § 1.954-2 of such regulations is amended by adding subdivisions (ii) and (iii) to paragraph (d)(1), effective for taxable years of foreign corporations beginning after December 31, 1962, and for taxable years of United States shareholders within which or with which such taxable years of such corporations end. These added provisions read as follows:

**§ 1.954-2 Foreign personal holding company income.**

* * * * * *

(d) *Certain income received from unrelated persons in the active conduct of a trade or business*—(1) *Rents and royalties*— * * *

(ii) *Rents*—(a) *Trade or business cases.* In every case rents will be considered for purposes of this subparagraph to be derived in the active conduct of a trade or business by a controlled foreign corporation which is a lessor of property if such rents are derived from the leasing of—

(1) Property which the lessor has manufactured or produced, or has acquired and added substantial value to, but only so long as the lessor is regularly engaged in the manufacture or production of, or in the acquisition and addition of substantial value to, and leasing of, property of such kind,

(2) Real property with respect to which the lessor performs active and substantial management and operational functions while the property is leased,

(3) Personal property ordinarily used by the lessor in the active conduct of a trade or business and such leasing occurs during a temporary period when the property would, but for such leasing, be idle in the active conduct of such trade or business, or

(4) Property which is leased as a result of the performance of marketing functions by such lessor and the lessor, through its own staff of employees located in a foreign country, maintains and operates an organization in such country which is regularly engaged in the business of marketing, or of marketing and servicing, the leased property

and which is substantial in relation to the amount of rents derived from the leasing of such property.

(b) *Special rules*—(1) *Adding substantial value.* For purposes of subdivision (a)(1) of this subdivision (ii), the performance of marketing functions will not be considered to add substantial value to property.

(2) *Substantiality of foreign organization.* Whether an organization in a foreign country will be considered substantial in relation to the amount of rents, for purposes of subdivision (a)(4) of this subdivision (ii), is to be determined from the facts and circumstances of each case. In every case involving the leasing of personal property, however, an organization in a foreign country will be considered substantial in relation to the amount of rents, for such purposes, if the sum of the deductions incurred by such organization of the lessor which are properly allocable to such rental income and which would be allowable under section 162 to the lessor (were the lessor a domestic corporation) other than—

(i) Deductions for compensation for personal services rendered by shareholders of, or related persons with respect to, the lessor,

(ii) Deductions for rents paid or accrued, and

(iii) Deductions which would be specifically allowable to the lessor under sections other than section 162 (were the lessor a domestic corporation)

equals or exceeds 25 percent of the amount by which the gross income of the lessor from such rental income exceeds the sum of the rents paid or accrued and the amounts which would be allowable to such lessor as deductions under section 167 (were the lessor a domestic corporation) with respect to such rental income.

(3) *Activities of an independent contractor.* (i) In determining under subdivision (a)(4) of this subdivision (ii) whether a lessor maintains and operates an organization in a foreign country which is regularly engaged in the business of marketing, or of marketing and servicing, leased property, the activities of an independent contractor shall not be taken into account.

(ii) Compensation for the services of an independent contractor may be taken into account under, and subject to the limitations imposed by, subdivision (2) of this subdivision (b) in determining whether the sum of deductions incurred equals or exceeds 25 percent of the amount by which the gross income exceeds certain deductions.

(c) *Illustrations.* The application of this subdivision may be illustrated by the following examples:

*Example (1).* Controlled foreign corporation A is regularly engaged in the production of office machines which it leases to others and services. The rental income of A Corporation from such leases is derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (2).* Controlled foreign corporation B leases to others motion picture films, some of which it acquires by purchase and some of which it acquires by lease. Corporation B, through its own staff of employees located in a foreign country, maintains and operates an office in such foreign country at which a complete sales force, composed of its own employees, actively solicits customers to lease such films, conducts advertising and sales promotion campaigns intended to increase attendance at the showing of films which it leases, and engages in other promotional activities directed at increasing its contracts for the leasing of such films to others. Corporation B maintains an inventory of films in such country from which its customers may make selections. Corporation B, by its office, sales force, and inventory, maintains and operates an organization in a foreign country which is regularly engaged in the business of marketing motion picture films. The deductions incurred by such organization abroad are such as to satisfy the 25-percent test of subdivision (b)(2) of this subdivision (ii); thus such organization is substantial in relation to the rents B Corporation receives from leasing the films. The rental income of B Corporation from such leases is derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (3).* Controlled foreign corporation D purchases motor vehicles which it leases to others. In the conduct of its short-term leasing of such vehicles in foreign country X, D Corporation owns a large number of motor vehicles in country X which it services and repairs, leases motor vehicles to customers on an hourly, daily, or weekly basis, maintains offices and service facilities in country X from which to lease and service such vehicles, and maintains therein a sizable staff of its own administrative, sales, and service personnel. Corporation D also leases in country X on a long-term basis, generally for a term of one year, motor vehicles which it owns. Under the terms of the long-term leases, D Corporation is required to repair and service, during the term of the lease, the leased motor vehicles without cost to the lessee. By the maintenance in country X of office, sales, and service facilities and its complete staff of administrative, sales, and service personnel, D Corporation maintains and operates an organization therein which is regularly engaged in the business of marketing and servicing the motor vehicles which are leased. Since such organization is substantial in relation to the rents D Corporation receives from leasing the motor vehicles, such rents are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (4).* Controlled foreign corporation E owns a complex of apartment buildings which it has acquired by purchase. Corporation E engages a real estate management firm to lease the apartments, manage the buildings and pay over the net rents to the owner. The rental income of E Corporation from such leases is not derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (5).* Controlled foreign corporation F owns a twenty-story office building in a foreign country, three floors of which it occupies and the rest of which it leases. Corporation F, which has acquired this property by purchase, acts as rental agent for the leasing of offices in the building and employs a substantial staff to perform other management and maintenance functions. The rents received by F corporation from such leasing operations are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (6).* Controlled foreign corporation G owns drilling equipment which it ordinarily uses to perform contracts in foreign countries to drill oil wells. For occasional temporary periods it is unable to obtain contracts requiring immediate performance sufficient to employ all such equipment. During such a period it sometimes leases such idle equipment temporarily. After the expiration of such temporary leasing of the property, G Corporation continues the use of such equipment in the performance of its own drilling contracts. Rents received from the temporary leasing of such idle equipment are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (7).* Controlled foreign corporation H is organized on January 1, 1963, to make and lease motion pictures. In January 1964, H Corporation completes its first picture and shortly thereafter begins to lease such picture. During the succeeding months, the company investigates several scripts, choosing a promising one in September 1964. Thereafter, the star planned for the leading role in the proposed motion picture is found to be unavailable, so the project is discontinued in January 1965. Another period of search for a suitable script is terminated in May 1965, by commissioning an author to write one. The writing requires 7 months, and thereafter H Corporation contracts with performers, prepares filming plans, and makes other preliminary arrangements for the filming of the script. The filming is done during the 6 months ending in January 1967, and leasing of the second completed picture begins shortly thereafter. Corporation H is regularly engaged in the production and leasing of motion pictures, and rents derived by such corporation during this period from the leasing of these two motion pictures are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

(iii) *Royalties*—(a) *Trade or business cases.* In every case royalties will be considered for purposes of this subparagraph to be derived in the active conduct of a trade or business by a controlled foreign corporation which is a licensor of property if such royalties are derived from the licensing of—

(1) Property which the licensor has developed, created, or produced, or has acquired and added substantial value to, but only so long as the licensor is regularly engaged in the development, creation, or production of, or in the acquisition and addition of substantial value to, and licensing of, property of such kind, or

(2) Property which is licensed as a result of the performance of marketing functions by such licensor and the licensor, through its own staff of employees located in a foreign country, maintains and operates an organization in such country which is regularly engaged in the business of marketing, or of marketing and servicing, the licensed property and which is substantial in relation to the amount of royalties derived from the licensing of such property.

(b) *Special rules*—(1) *Adding substantial value.* For purposes of subdivision (a)(1) of this subdivision (iii), the performance of marketing functions will not be considered to add substantial value to property.

(2) *Substantiality of foreign organization.* Whether an organization in a foreign country will be considered substantial in relation to the amount of royalties, for purposes of subdivision (a)(2) of this subdivision (iii), is to be determined from the facts and circumstances of each case. In every case involving the leasing of personal property, however, an organization in a foreign country will be considered substantial in relation to the amount of royalties, for

such purposes, if the sum of the deductions incurred by such organization of the licensor which are properly allocable to such royalty income and which would be allowable under section 162 to the licensor (were the licensor a domestic corporation) other than—

(i) Deductions for compensation for personal services rendered by shareholders of, or related persons with respect to, the licensor,

(ii) Deductions for royalties paid or accrued, and

(iii) Deductions which would be specifically allowable to the licensor under sections other than section 162 (were the licensor a domestic corporation)

equals or exceeds 25 percent of the amount by which the gross income of the licensor from such royalty income exceeds the sum of the royalties paid or accrued and the amounts which would be allowable to such licensor as deductions under section 167 (were the licensor a domestic corporation) with respect to such royalty income.

(3) *Activities of an independent contractor.* (i) In determining under subdivision (a)(2) of this subdivision (iii) whether a licensor maintains and operates an organization in a foreign country which is regularly engaged in the business of marketing, or of marketing and servicing, licensed property, the activities of an independent contractor shall not be taken into account.

(ii) Compensation for the services of an independent contractor may be taken into account under, and subject to the limitations imposed by, subdivision (2) of this subdivision (b) in determining whether the sum of deductions incurred equals or exceeds 25 percent of the amount by which the gross income exceeds certain deductions.

(c) *Illustrations.* The application of this subdivision may be illustrated by the following examples:

*Example (1).* Controlled foreign corporation A, through its own staff of employees, maintains and operates a research facility in foreign country X. At the research facility, owned by A Corporation, employees of such corporation who are full-time scientists, engineers, and technicians regularly perform experiments, tests, and other technical activities, which ultimately result in the issuance of patents which are licensed. Royalties received by A Corporation for the privilege of using patented rights which it develops as a result of such research activity are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (2).* Assume that A Corporation in example (1), in addition to receiving royalties for the use of patents which it develops, receives royalties for the use of patents which it acquires by purchase and licenses to others without adding any value thereto. Corporation A generally consummates royalty agreements on such purchased patents as the result of inquiries received by it from prospective licensees when the fact becomes known in the business community, as a result of the filing of a patent, advertisements in trade journals, announcements, and contacts by employees of A Corporation, that A Corporation has acquired rights under a patent and is interested in licensing its rights. Corporation A does not, however, maintain and operate an organization in a foreign country which is regularly engaged in the business of marketing the purchased patents. The royalties received by A Corporation for the use of the purchased patents are not derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (3).* Controlled foreign corporation B receives royalties for the use of patents which it acquires by purchase. The primary business of B Corporation, operated on a regular basis, consists of licensing patents which it has purchased "raw" from inventors and, through the efforts of a substantial staff of employees consisting of scientists, engineers, and technicians, made susceptible to commercial application. For example, B Corporation, after purchasing patent rights covering a chemical process, designs specialized production equipment required for the commercial adaptation of the process and, by so doing, substantially increases the value of the patent. Royalties received by B Corporation from the use of such patent are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (4).* Controlled foreign corporation D finances independent persons in the development of patented items in return for an ownership interest in such items from which it derives a percentage of royalty income, if any, subsequently derived from the use by others of the protected right. Corporation D also attempts to increase its royalty income from such patents by contacting prospective licensees and rendering to licensees advice which is intended to promote the use of the patented property. Corporation D does not, however, maintain and operate an organization in a foreign country which is regularly engaged in the business of marketing the patents. Royalties received by D Corporation for the use of such patents are not derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

*Example (5).* Controlled foreign corporation E, incorporated under the laws of foreign country X, is engaged in the music publishing business and derives substantially all of its income from the licensing and turning to account of musical compositions. The rights to exploit such compositions are acquired by license, some from related persons and some from unrelated persons. Corporation E, through its own staff of employees located in country X, maintains and operates an office at which is located its own staff of managerial, technical, administrative, and sales employees. The technical staff translates the lyrics into the language of country X or creates new and different lyrics if the original lyrics are unsuitable in such language or do not appeal to the tastes of the people of country X; the staff then prepares musical arrangements of the composition. The sales force has professional copies of the musical product printed for distribution to professional users; and, in many instances, popular copies printed for sale to the public. The sales force also advertises the musical composition, promotes its use by artists, orchestras, radio and television stations, and phonograph recording companies. Although some of its income is derived from the sale of sheet music, the bulk of its income is from its membership in the performing rights society of country X (from which E Corporation could not derive full benefit were it not incorporated in country X) and from royalties resulting from sales of records. Corporation E, by its staff of managerial, technical, administrative, and sales employees located in country X, maintains and operates an organization in such country which is regularly engaged in the business of marketing such compositions. Since such organization is substantial in relation to the royalties received by E Corporation from the licensing of such musical compositions, such royalties are derived in the active conduct of a trade or business for purposes of section 954(c)(3)(A).

# Title 41—PUBLIC CONTRACTS

## Chapter 11—Coast Guard, Department of the Treasury

[CGFR 64-69]

## PART 11-60—CONTRACT DISPUTE APPEALS

### Contract Dispute Appeal Requirements

This document revises the Coast Guard's contract dispute appeal regulations and supersedes the regulations published as 41 CFR Part 11-60, containing §§ 11-60.000 to 11-60.117, inclusive, in the FEDERAL REGISTER of May 26, 1964 (29 F.R. 6856 et seq.). The procurement of most items other than land by the Coast Guard is subject to the statutory provisions in Title 10, U.S. Code, sections 2301 to 2314, inclusive; 70A Stat. 127-133. Under the provisions in Title 40, U.S. Code, section 486(c), 63 Stat. 390, the Administrator, General Services Administration, has prescribed regulations concerning contracts. In addition, this law requires that "* * * the head of each executive agency shall cause to be

issued such orders and directives as such head deems necessary to carry out such regulations." The regulations for the Coast Guard in 41 CFR Part 11-60 give effect to the contract "disputes" clause in 41 CFR 1-7.101-12, which is also printed in Coast Guard contracts, and establishes the procedures for processing appeals on disputed questions arising out of Coast Guard contracts.

This document contains the detailed regulations regarding Coast Guard contract dispute appeals and does the following:

a. Establishes a permanent Coast Guard Board of Contract Appeals to serve in lieu of a panel from which individual boards are now selected by the Comptroller to hear assigned contractor dispute appeals.

b. Formalizes and clarifies appeals procedures.

c. Delegates to the Coast Guard Board of Contract Appeals the authority to take final action in contract dispute appeal cases in lieu of the present practice of having the Secretary of the Treasury review the Findings of Fact and Recommendations of individual boards and render decision on the appeal, in which he accepts or rejects, in whole or in part, the Findings and Recommendations of the Board.

Pursuant to the authority vested in the Secretary of the Treasury by Title 40, U.S. Code section 486(c), 63 Stat. 390, and other statutes, the Coast Guard contract dispute appeal regulations presently designated §§ 11-60.000 to 11-60.117, inclusive, are amended, as follows:

11-60.430 Decisions.
11-60.433 Motions for reconsideration.

AUTHORITY: The provisions of this Part 11-60 are prescribed by the Secretary of the Treasury pursuant to sec. 633, 63 Stat. 545, secs. 2301-2314, 70A Stat. 127-133, as amended; 14 U.S.C. 633, 10 U.S.C. 2301-2314. Interpret or apply sec. 205(c), 63 Stat. 390; 40 U.S.C. 486(c); and Treasury Department Orders 167-17 (20 F.R. 4976) and 167-50 (28 F.R. 530).

### Subpart 11-60.1—Introduction

**§ 11-60.100 Scope of part.**

This part establishes the rules, policies and procedures regarding the administrative review and determination of disputed questions arising under Coast Guard contracts.

**§ 11-60.103 Creation and authority of Coast Guard Board of Contract Appeals.**

(a) The Coast Guard Board of Contract Appeals, hereinafter referred to as the "Board", is hereby created and designated as the authorized representative of the Secretary of the Treasury in hearing, considering and determining, as fully and finally as might the Secretary, all appeals by contractors (hereinafter referred to as appellants), from final decisions by contracting officers (hereinafter referred to as appellees) on disputed questions pursuant to the "disputes" provisions of Coast Guard contracts requiring the determination of appeals by the head of the department or his duly authorized representatives.

(b) The Board shall function as an independent and impartial body.

(c) The Secretary of the Treasury shall appoint and terminate appointments of the members.

(d) The Board shall have authority to establish additional rules not inconsistent with the rules contained in this part.

**§ 11-60.106 Establishment and purpose.**

(a) The rules in this part shall govern the appeals procedure and the respective rights and duties of the Board and the parties, i.e., the appellants and appellees.

(b) Except as otherwise provided in a specific contract, any dispute concerning a question of fact arising under a contract, which is not disposed of by agreement between the contractor and the contracting officer, shall be decided by the contracting officer. In each instance the contracting officer shall reduce his decision to writing, state in the document that it is his final decision and forward it together with a copy of this part (Part 11-60) to the contractor. Should the contractor appeal that decision, the issues raised thereby shall be determined by the Board in an impartial manner consistent with principles of fairness and the rules in this part.

(c) It is the purpose of the rules in this part to facilitate resolution of disputes arising out of government contracts. It is impracticable to articulate a rule to fit every possible circumstance which may be encountered. Therefore, the rules will be interpreted so as to secure just and inexpensive determination of appeals without unnecessary delay.

(d) Whenever reference is made to the contractor or appellant, contracting officer or appellee, or parties, this shall include their respective counsel.

**§ 11-60.109 Effective date and applicability.**

(a) The regulations in this part become effective on the 30th day following the date of publication in the FEDERAL REGISTER and shall apply to all contract "dispute" cases wherein appeal from the contracting officer's decision is taken on and after such effective date. The superseded regulations,[1] i.e., the regulations in effect prior to the effective date of the regulations in this part, shall be applicable to all cases pending prior to said effective date except to the extent that the Board determines that the regulations in this part shall apply.

### Subpart 11-60.2—Coast Guard Board of Contract Appeals; Organization and Procedures

**§ 11-60.200 Appointment of Board members, alternate members and recorder.**

(a) The Secretary of the Treasury shall appoint as members of the Board; a chairman, two regular members, either of whom shall be designated vice chairman by the chairman for a particular case; and, two alternates to serve as members in the absence of regular members. He shall also designate a recorder who shall maintain a suitable docket of contract appeal cases and shall be charged with custody of all papers, documents, exhibits, and materials relating to appeal cases. The appointees shall be officers or employees of the Coast Guard.

(b) If for any reason other than malfeasance or misconduct in office an appointment shall be terminated, such termination shall not be effective to disqualify a member to render a decision in any case being considered by him on the record in accordance with section 11-60.336 or being heard by him, except that if an appointment shall terminate by reason of retirement or resignation of a regular member, a new member shall be appointed or an alternate member shall be qualified in accordance with § 11-60.209(c).

(c) The chairman, or, in his stead, the vice chairman for a particular case, shall preside at all hearings and executive sessions convened to deliberate on each con-

[1] Regulations published as 41 CFR Part 11-60, containing §§ 11-60.000 to 11-60.117, inclusive, in the FEDERAL REGISTER of May 26, 1964 (29 F.R. 6856, et seq.).

tract appeal case referred to the Board.

(d) The recorder shall not be a member of the Board.

**§ 11–60.203 Function and jurisdiction.**

(a) The Board shall hear, consider and determine contract appeals in accordance with the rules in this part. The Board shall, inter alia, have the authority to conduct hearings, take official notice of facts within general knowledge, dismiss proceedings and decide cases. Testimony shall be taken under oath or affirmation, except as otherwise provided in § 11–60.412. Cases shall be decided on the facts and on such questions of law as may be necessary to reach a determination.

(b) The Board shall not have jurisdiction to consider and determine claims which are not cognizable under the terms of the contract.

(c) Decisions of the Board shall be by a majority of the members. The Board's decision shall constitute the final administrative action in each case, except that those decisions may be reconsidered upon motion therefor pursuant to § 11–60.433.

**§ 11–60.206 Authority to call witnesses.**

(a) Either party, at his own expense, may invite witnesses to attend and testify.

(b) The Board may also invite such witnesses as it deems necessary.

**§ 11–60.209 Quorum.**

(a) Either party, at his own expense, or vice chairman for a particular case) and two members shall constitute a quorum.

(b) Should any member determine that he is unable to participate in a particular case due to some disability, he shall disqualify himself and the presiding officer shall designate an alternate to serve.

(c) If for any reason an alternate is designated or if a new member is appointed to a Board convened to hear an appeal case during the course of the appeal, that part of the record of the proceedings which was not attended by the new designee or appointee shall be read by him and he shall so certify in writing, which certification shall become a part of the case record. No member or alternate member of a Board shall participate in the decision in a particular case unless he has attended the hearing or has read or heard the entire record of the proceedings.

**§ 11–60.212 Appeals docket and public inspection of cases.**

(a) The appeals docket shall be maintained in the office of the Board. Each appeal shall be assigned a number in the order of filing. Appeals shall be heard in their order on the docket unless advanced or delayed pursuant to § 11–60.400.

(b) The docket and the decisions (except those required for good cause to be held confidential) on completed cases shall be available for public inspection at the Board's offices at Coast Guard Headquarters, Washington, D.C., during regular business hours.

(c) Appeals record files will be maintained for a period of 10 years from the date of the Board's decision.

## Subpart 11–60.3—General Rules

**§ 11–60.300 Preliminary procedures and time limitations.**

(a) Preliminary procedures shall be used to encourage full disclosure of relevant and material facts and to discourage unwarranted surprise.

(b) All time limitations specified herein for various procedural actions shall be considered as maximums. If the action described in this part can be or is accomplished in a lesser period, the Board shall take necessary action without waiting for such time period to lapse.

(c) On good cause shown, the Board shall have authority to extend the various time limits specified in this part, except that the time limit established for the filing of notices of appeals may not be extended. (See § 11–60.303.)

**§ 11–60.303 Appeals, how taken.**

(a) Notice of an appeal must be in writing, and the original, together with four copies, shall be filed with the office of the contracting officer from whose decision the appeal is taken.

(b) The notice of appeal must be mailed or otherwise filed within 30 days of receipt of the contracting officer's decision unless otherwise required by the contract or any provision of law.

**§ 11–60.306 Notice of appeal, contents of.**

(a) A notice of appeal should indicate that an appeal is thereby intended, and should identify the contract (by number), the name and duty station of the contracting officer cognizant of the dispute, and the decision from which the appeal is taken. The notice of appeal should be signed personally by the appellant or by an officer of the appellant corporation or member of the appellant firm, or by the appellant's duly authorized representative or attorney.

(b) The complaint referred to in § 11–60.318 may be filed with the notice of appeal, or the appellant may designate the notice of appeal as a complaint, if it otherwise fulfills the requirements of a complaint.

**§ 11–60.309 Forwarding of appeals.**

(a) When a notice of appeal in any form has been received by the contracting officer, he shall endorse thereon the date of mailing (or date of receipt, if otherwise conveyed) and within 20 days shall forward said notice of appeal to the Board.

(b) Following receipt by the Board of the original notice of an appeal the appellant and appellee will be promptly advised of its receipt, and a copy of any Board rules governing the conduct of hearings shall be furnished to the appellant.

**§ 11–60.312 Duties of the Contracting Officer (appellee).**

(a) Following the filing of a notice of appeal (§ 11–60.306) the appellee shall, within sixty days, transmit to the Board all documents (or copies thereof) pertinent to the appeal including the following:

(1) The findings of fact and the decision from which the appeal is taken, and the letter or letters or other documents of claim in response to which the decision was issued;

(2) The contract, and pertinent plans, specifications, amendments, and change orders;

(3) Correspondence between the parties pertinent to the appeal;

(4) Transcripts of any testimony taken and affidavits or statements of any witnesses on the matter in dispute made prior to the filing of the notice of appeal with the Board;

(5) Such additional information as may be considered material.

(b) Upon completion of the compilation of documents described in paragraph (a) of this section, and at least ten days prior to forwarding the documents to the Board, the appellee shall provide the appellant with a listing of the documents contained therein, and afford him an opportunity to examine the complete compilation at the office of the appellee, for the purpose of satisfying himself as to the contents, and furnishing or suggesting any additional documentation deemed pertinent to the appeal. Following receipt of this compilation, as it may be augmented, the Board shall promptly advise the parties of the docketing and such other information as may be necessary in the case.

**§ 11–60.315 Dismissal for lack of jurisdiction.**

(a) Any motion addressed to the jurisdiction of the Board shall be promptly filed. Hearing on the motion shall be afforded on application of either party, unless the Board determines that its decision on the motion should be deferred pending hearing on both the merits and the motion.

(b) The Board shall have the right at any time and on its own motion to raise the issue of its jurisdiction to proceed with a particular case, and shall do so by an appropriate order, affording the parties an opportunity to be heard thereon.

**§ 11–60.318 Pleadings.**

(a) Within 30 days after the date of the notice of docketing of the appeal, the appellant shall file with the Board an original and four copies of a complaint setting forth simple, concise and direct statements of each of his claims, alleging the basis, with appropriate reference to contract provisions, for each claim, and the dollar amount claimed. This pleading shall fulfill the generally recognized requirements of a complaint, although, no particular form or formality is required. Upon receipt thereof, the Recorder of the Board shall serve a copy upon the counsel for the appellee. Should the complaint not be received within 30 days, and if in the opinion of the Board the appellant's claims are sufficiently defined, the counsel for the appellee and the appellant shall be so notified.

(b) Within 45 days from receipt of said complaint, or the aforesaid notice from the Recorder of the Board, the counsel for the appellee shall prepare and file with the Board an original and four copies of an answer thereto, setting forth simple, concise, and direct statements of any defenses to each claim asserted by appellant. This pleading shall fulfill the generally recognized requirements of an answer, and shall set forth any affirmative defenses or counterclaims, as appropriate. Upon receipt thereof, the Recorder shall serve a copy upon appellant. Should the answer not be received within 45 days, it will be deemed that a general denial on behalf of the appellee has been entered and the appellant shall be so notified.

**§ 11–60.321 Amendments of pleadings or record.**

(a) The Board upon its own initiative or upon application by a party may, in its discretion, order a party to make a more definite statement of the complaint or answer, or to reply to an answer.

(b) The Board may, in its discretion, and within the proper scope of the appeal, permit either party to amend his pleading upon conditions just to both parties. When issues within the proper scope of the appeal, but not raised by the pleadings or the documentation described in § 11–60.312 are tried by express or implied consent of the parties, or by permission of the Board, they shall be treated in all respects as if they had been raised therein. In such instances motions to amend the pleadings to conform to the proof may be entered, but are not required. If evidence is objected to at a hearing on the ground that it is not within the issues raised by the pleadings or the § 11–60.312 documentation (which shall be deemed part of the pleadings for this purpose), it may be admitted within the proper scope of the appeal, provided, however, that the objecting party may be granted a continuance if necessary to enable him to meet such evidence.

**§ 11–60.324 Election between hearing and submission on the record.**

(a) Upon receipt of appellee's answer or the notice referred to in the last sentence of § 11–60.318(b), appellant shall advise whether he desires a hearing, as prescribed in Subpart 11–60.4 of this part, or whether in the alternative he elects to submit his case on the record without a hearing, as prescribed in § 11–60.336.

**§ 11–60.327 Pre-hearing briefs.**

(a) Based on an examination of the documentation described in § 11–60.312 and the pleadings, the Board may in its discretion require the parties to submit pre-hearing briefs in any case in which a hearing has been elected pursuant to § 11–60.324. In the absence of a Board requirement therefor either party may in its discretion, and upon appropriate and sufficient notice to the other party, furnish a pre-hearing brief to the Board. In any case where a pre-hearing brief is submitted, it shall be furnished so as to be received by the Board at least 15 days prior to the date set for hearing, and a copy shall simultaneously be furnished to the other party.

**§ 11–60.330 Preliminary review by Board.**

(a) In order to expedite the appeal and to eliminate unnecessary proceedings with respect thereto, the Chairman shall set a date for, and the Board, sitting in executive session, shall conduct a preliminary review of the case.

(b) The Board shall:

(1) Consider the appeal on the record, which shall include all pleadings, briefs, documents, exhibits and materials submitted by the parties.

(2) Determine which claims of the appellant in the Board's judgment find support in the record and are prima facie allowable and in what amount and submit preliminary findings with respect to those claims to the appellee and its counsel. Within 10 days appellee's counsel shall notify the Board whether or not the appellee accepts the Board's determination with respect to specific claims or whether the appellee believes that further proceedings thereon are required.

(3) Note whether certain claims require clarification.

(4) Notify the appellant in writing, with a copy to the appellee, regarding the following:

(i) Each claim referred to in subparagraph (2) of this paragraph and the amount thereof not contested by the appellee.

(ii) That further proceedings before the Board with respect to any particular claim allowed in full shall not be had unless the appellant is of the view that further proceedings thereon are relevant and pertinent to the appeal as a whole.

(iii) That certain issues are still in controversy.

**§ 11–60.333 Response to notification of results of pre-hearing review.**

(a) Upon receipt of the pre-hearing advice specified in § 11–60.330(b)(4), the parties shall:

(1) Advise the estimated length of time required for their presentations at an oral hearing before the Board.

(2) Furnish the names, addresses, and capacities of persons, including witnesses, expected to be present in their behalf.

(3) Provide any additional substantiating matter relative to the appeal which they may wish to have reviewed prior to a hearing.

**§ 11–60.336 Submission without a hearing.**

(a) The parties by agreement may elect to waive a hearing and to submit the case upon the Board record, as settled pursuant to § 11–60.339. In the event of such election to submit, the submission may be supplemented by oral argument (transcribed if requested), and/or by briefs.

**§ 11–60.339 Settling of the record.**

(a) A case submitted on the record pursuant to § 11–60.336 shall be ready for decision when the parties are so notified by the Board.

(b) A case which is heard shall be ready for decision 10 days after receipt of transcript, or upon receipt of post-hearing briefs when such briefs are to be submitted.

(c) At any time prior to the date that a case is ready for decision, either party upon notice to the other, may supplement the record with documents and exhibits deemed relevant and material by the Board. The Board upon its own initiative may call upon either party, with appropriate notice to the other, for evidence deemed by it to be relevant and material. The weight to be attached to any evidence of record shall rest within the sound discretion of the Board.

(d) At any time prior to the date that a case is ready for decision either party may at any stage of the proceeding, on notice to the other party, raise objection to material in the record or offered into the record, on the grounds of relevancy and materiality.

(e) The Board record shall consist of documentation described in § 11–60.312 and any additional material received by the Board pursuant to the rules in this part including pleadings, pre-hearing briefs, record of preliminary review or pre-submission conferences, depositions, interrogatories, admissions, transcripts of hearing, hearing exhibits, and post-hearing briefs.

(f) This record will at all times be available for inspection by the parties at the office of the Board at Coast Guard Headquarters, Washington, D.C. In the interest of convenience, prior arrangements for inspection of the record should be made with the Recorder of the Board. Copies of material in the record may, if practicable, be furnished to appellant at the cost of reproduction.

**§ 11–60.342 Depositions.**

(a) *When depositions may be taken.* After an appeal has been docketed the Board may, upon application of either party or upon agreement by the parties, permit the taking of the testimony of any person, by deposition upon oral examination or written interrogatories, for use as evidence in the appeal proceedings. Leave to take a deposition will ordinarily be granted when it appears that it is impracticable to present deponent's testimony at the hearing of the appeal, or when a hearing has been waived and the case submitted pursuant to § 11–60.336.

(b) *Before whom taken.* Depositions to be offered in evidence before the Board may be taken before and authenticated by any person authorized by the laws of the United States, or by the laws of the place where the deposition is taken, to administer oaths, or by a Coast Guard officer under authority in Article 10–1–9 of U.S. Coast Guard Regulations promulgated pursuant to section 636 of title 14 U.S. Code, 63 Stat. 545, and Article 136, Uniform Code of Military Justice, 10 U.S.C. 936, 70A Stat. 77.

(c) *By oral examinations.* When either party desires to take the testimony of any person by deposition upon oral examination, the moving party shall give the other party at least 15 days written notice of the time and place where such deposition is proposed to be taken, the name, address, and title of the person before whom it is proposed to be taken, and

the name and address of the witness. This notice is unnecessary in any case where the deposition has been scheduled by mutual agreement. If the party so served finds it impracticable to appear at the taking of the deposition, in person or by counsel, he shall promptly so notify the moving party who shall make available to him a copy of the evidence given at the deposition. Within 15 days after receipt of such copy, the proceedings shall be had thereon as provided in paragraph (d) of this section.

(d) *By written interrogatories.* When either party desires to take the testimony of any person by deposition upon written interrogatories, the moving party shall serve them upon the other party with a notice stating the name and address of the person who is to answer them and the name, address and title of the person before whom the deposition is to be taken. Within 15 days thereafter, the party so served may serve cross-interrogatories upon the moving party. A copy of the notice and copies of all interrogatories served shall be delivered by the moving party to the person before whom the deposition is to be taken, and the latter shall proceed promptly to take the testimony of the witness in response to the interrogatories.

(e) *Form and return of deposition.* Each deposition should show the docket number and the caption of the proceedings, the place and date of taking, the name of the witness, and the names of all persons present. The person taking the deposition shall certify thereon that the witness was duly sworn by him and that the deposition is a true record of the testimony given by the witness, and he shall enclose the original deposition and exhibits in a sealed package which he shall promptly forward at the expense of the moving party, to the Recorder, Coast Guard Board of Contract Appeals, Coast Guard Headquarters, Washington, D.C., 20226.

(f) *Introduction in evidence.* No testimony taken by deposition shall be considered as part of the evidence in the hearing of an appeal unless and until such testimony is offered and received in evidence at the hearing. It will not ordinarily be received in evidence if the deponent is present and can testify personally at the hearing. In such case, it can, however, be utilized to contradict or impeach the testimony of deponent as a witness. If the opportunity to be heard has been waived and the case submitted pursuant to § 11–60.336, the deposition shall be deemed to be part of the record before the Board.

**§ 11–60.345 Interrogatories to parties: inspection of documents; admission of facts.**

(a) Under appropriate circumstances, but not as a matter of course, the Board will entertain applications for permission to serve written interrogatories upon the opposing party, applications for an order to produce and permit the inspection of designated documents, and applications for permission to serve upon the opposing party a request for the admission of specified facts. Such applications shall be reviewed and approved only to the extent and upon such terms as the Board in its discretion considers to be consistent with the objective of securing just and inexpensive determination of appeals without unnecessary delay, and essential to the proper pursuit of the objective in the particular case.

**§ 11–60.348 Service of papers.**

(a) Service of papers in all proceedings pending before the Board, may be made personally, or by mailing the same in a sealed envelope, registered, or certified, postage prepaid, addressed to the party upon whom service shall be made and the date of delivery as shown by return receipt shall be the date of service. Waiver of the service of any papers may be noted thereon or on a copy thereof or on a separate paper, signed by the parties and filed with the Board.

## Subpart 11–60.4—Appeals Hearings

**§ 11–60.400 Where and when held.**

(a) Hearings will ordinarily be held in Washington, D.C., except that upon request seasonably made and upon good cause shown, the Board may in its discretion set the hearing at another location. Hearings will be scheduled at the discretion of the Board with due consideration to the regular order of appeals and other pertinent factors. However, the Board may, on its own motion, or on the motion of a party, advance or defer a scheduled hearing.

**§ 11–60.403 Notice of hearings.**

(a) The parties shall be given at least 15 days notice of the time and place set for hearings. In scheduling hearings, the Board will give due regard to the desires of the parties, and to the requirement for just and inexpensive determination of appeals without unnecessary delay.

**§ 11–60.406 Unexcused absence of a party.**

(a) The unexcused absence of a party at the time and place set for hearing will not be occasion for delay. In the event of such absence, the hearing will proceed and the case will be regarded as submitted by the absent party without a hearing, as provided in § 11–60.336.

**§ 11–60.409 Nature of hearings.**

(a) Hearings shall be as informal as may be reasonable and appropriate under the circumstances. Appellant and appellee may offer at a hearing on the merits such evidence as they deem appropriate, subject however, to the sound discretion of the Board. In general, admissibility will hinge on relevancy and materiality. Letters or copies thereof, affidavits, or other evidence not ordinarily admissible under the generally accepted rules of evidence, may be admitted in the discretion of the Board. The weight to be attached to evidence presented in any particular form will be with the discretion of the Board, taking into consideration all circumstances of the particular case.

(b) Stipulations of fact agreed upon by the parties may be regarded and used as evidence at the hearing. The parties may stipulate the testimony that would be given by a witness if the witness were present. The Board may in any case require evidence in addition to that offered by the parties.

**§ 11–60.412 Examination of witnesses.**

(a) Witnesses before the Board will be examined orally under oath or affirmation, unless the facts are stipulated, or the Board shall otherwise order.

(b) If the testimony of a witness is not given under oath, the Board may, if it seems expedient, warn the witness that his statements are subject to the provisions of Title 18, United States Code, sections 287 and 1001, and any other provisions of law imposing penalties for knowingly making false representations in connection with claims against the United States or in any matter within the jurisdiction of any department or agency thereof.

**§ 11–60.415 Copies of papers.**

(a) When books, records, papers, or documents have been received in evidence, a true copy thereof or of such part thereof as may be material or relevant may be substituted therefor, during the hearing or at the conclusion thereof.

**§ 11–60.418 Post-hearing briefs.**

(a) Post-hearing briefs may be submitted upon such terms as may be agreed upon by the parties and the Board at the conclusion of the hearing. Ordinarily they will be simultaneous briefs, exchanged within 20 days after receipt of transcript.

**§ 11–60.421 Transcript of proceedings.**

(a) Testimony and argument at hearings shall be reported verbatim, unless the Board otherwise orders. Transcripts of the proceedings shall be supplied to the appellant at such rates as may be fixed by contract between the Board and the independent reporter. If the proceedings are reported by an employee of the Government, the appellant may receive transcripts thereof under the conditions set forth in Subpart 1.25 of Title 33, Code of Federal Regulations.

**§ 11–60.424 Withdrawal of exhibits.**

(a) After a decision has become final the Board may, upon request and after notice to the other party, in its discretion permit the withdrawal of original exhibits, or any part thereof, by the party entitled thereto. The substitution of true copies of exhibits or any part thereof may be required by the Board in its discretion as a condition of granting permission for such withdrawal.

**§ 11–60.427 Representation of parties.**

(a) An individual appellant may appear before the Board in person, a corporation, by an officer thereof; a partnership or joint venture, by a member thereof; or any of these, by an attorney at law duly licensed in any State, Commonwealth, Territory, or in the District of Columbia.

(b) The appellee's counsel shall file notices of appearance with the Board, and notice thereof will be given appellant or his attorney in the form specified by the Board from time to time.

**§ 11–60.430 Decisions.**

(a) Decisions of the Board shall be made in writing and authenticated copies thereof will be forwarded simultaneously to both parties. The rules under which the Board functions and the Board's final orders and decisions (except those required for good cause to be held confidential and not cited as precedents) shall be open for public inspection at the offices of the Board, at Coast Guard Headquarters, in Washington, D.C.

(b) Decisions of the Board will be based upon the record.

(c) Whenever at any time it appears that the parties are in agreement as to the disposition of the controversy, the Board may in its discretion, dispose of the controversy in accordance with that agreement.

**§ 11–60.433 Motion for reconsideration.**

(a) A motion for reconsideration, if filed by either party, shall set forth specifically the ground or grounds relied upon to sustain the motion and shall be filed within 30 days from the date of the receipt of a copy of the decision of the Board by the party filing the motion.

Dated: December 17, 1964.

[SEAL] JAMES POMEROY HENDRICK,
*Acting Assistant Secretary of the Treasury.*

# Title 47—TELECOMMUNICATION

## Chapter I—Federal Communications Commission

[FCC 64–1149]

## PART 0—COMMISSION ORGANIZATION

### Delegation of Authority To Grant Requests for Waiver of Type Acceptance Requirements

Order. At a session of the Federal Communications Commission held at its offices in Washington, D.C. on the 16th day of December 1964:

In the matter of amendment of Part 0 of the Commission's rules to delegate authority to the staff to grant requests for waiver of the type acceptance requirements as set forth in § 89.117 for a period not to extend beyond January 1, 1967.

The Commission having under consideration an additional delegation of authority to the staff; and

It appearing, that it is desirable to delegate to the Chief, Safety and Special Radio Services Bureau the authority to grant requests for waiver of the type acceptance requirements of § 89.117 for a period not to extend beyond January 1, 1967; and

It further appearing, that such delegation of authority will result in a more efficient administration of the Commission's functions; and

It further appearing, that the amendment herein ordered is non-substantive in that it relates to organizational and procedural matters and, therefore, the Public Notice and effective date provisions of section 4 of the Administrative Procedure Act are not applicable; and

It further appearing, that the authority for the delegation herein ordered is contained in sections 4(i) and 5(d)(1) of the Communications Act of 1934, as amended:

*It is ordered,* Effective December 28, 1964, that Part 0 of the Commission's rules is amended as set forth below.

(Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interpret or apply sec. 5, 66 Stat. 713; 47 U.S.C. 155)

Released: December 18, 1964.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
*Secretary.*

Part 0 is amended as follows:

1. Section 0.331(b) is amended by adding a new subparagraph (17) as follows:

**§ 0.331 Authority delegated.**

• • • • • •

(b) • • •

(17) To grant waivers of the type acceptance requirements of § 89.117 of this chapter for a period not to extend beyond January 1, 1967, in cases substantially the same as those in which the Commission en banc has taken similar action.

• • • • • •

[F.R. Doc. 64–13309; Filed, Dec. 23, 1964; 8:49 a.m.]

[Docket No. 15512; FCC 64–1169]

## PART 73—RADIO BROADCAST SERVICES

### Miscellaneous Amendments

In the matter of amendment of § 73.606, Table of Assignments Television Broadcast Stations (Rhinelander, Wis.; Ironwood, Mich.); Docket No. 15512, RM–518.

Report and order. 1. On June 18, 1964, the Commission released a notice of proposed rule making which invited comments on the following alternative proposals to amend § 73.606 of the rules (the television table of assignments):

ALTERNATIVE NO. 1

| City | Channel No. | |
|---|---|---|
| | Present | Proposed |
| Ironwood, Mich. | 12+, 31– | 31– |
| Rhinelander, Wis. | 22 | 12+, 22 |

ALTERNATIVE NO. 2

| | | |
|---|---|---|
| Rhinelander, Wis. | 22 | 4+, 22 |

2. Alternative No. 1 derives from a petition for rule making (and amendment thereto) filed by Alvin E. O'Konski (petitioner), who holds a construction permit for Station WAEO–TV at Hurley, Wisconsin, using the Channel 12 assignment of Ironwood which is less than 15 miles from Hurley. The petition requested reassignment of Channel 12 from Ironwood to Rhinelander (located about 70 miles southeast of Hurley) and an order to show cause why his permit should not be modified to specify operation at the latter city instead of at Hurley. Alternative No. 2 was suggested by the M & M Broadcasting Company (M & M), licensee of Station WLUK–TV, Channel 11, Green Bay, Wisconsin, in a statement directed at petitioner's proposal. Comments and reply comments have been duly filed,[1] and the matter is now before the Commission for decision.

3. In his comments, petitioner states that he was diligent in his plans to construct Station WAEO–TV, until he learned from a thorough study that a TV station in Hurley would not be economically feasible. He says that he was in contact with every business and wholesale establishment in the area, which he states is classed as a deeply depressed one, and that the businessmen informed him that they could not undertake the additional expense of advertising costs sufficient to support a TV station. In addition, he mentions that all the networks stated that it was not practical to affiliate with a TV station that would serve only 8,000 TV sets or 28,417 persons in its coverage area.[2] Moreover, it is averred that twenty advertising representatives for regional and national businesses stated that it would be impossible to obtain business for a TV station with such coverage.

4. He further mentions that he has received several thousand letters from persons, most of whom reside in areas that would be served by a Rhinelander station (operating with antenna height of 1,000 feet and maximum power of 316 kw), stating that they do not obtain even fair television reception in spite of large expenditure for outdoor antennas, and requesting him to increase his facilities and locate Station WAEO–TV where they might get "their first primary, or at least Class B coverage."[3] Petitioner indicates that, in view of the foregoing, he explored the possibility of expanding the facilities specified in his construction permit and relocating the station so that he could make maximum use of the channel and bring the first acceptable television service to about 107,000 persons and 30,000 TV sets by means of a station that would be financially viable.

5. This study led to his subsequent petition for rule making to reassign Channel 12 to Rhinelander and his request for modification of his permit to

[1] Comments were filed by the following: Alvin E. O'Konski; Association of Maximum Service Telecasters, Inc. (AMST); The Journal Company, licensee of Station WTMJ–TV, Channel 4, Milwaukee, Wis.; Midwest Radio-Television, Inc. (Midwest), licensee of Station WCCO–TV, Channel 4, Minneapolis, Minn.; and M & M. Reply comments were filed by all of the foregoing except AMST.

[2] Petitioner's construction permit for WAEO–TV authorizes antenna height of 420 feet above average terrain and power of 1.7 kw; hence the small coverage area.

[3] The term "primary coverage" is not used in the television broadcast service. Whether the meaning here is that the persons writing desired to be within the Grade A contour of a television station or that they wished to receive a signal not less than that required over a principal community is not clear. In any event, it would appear that the thrust of their pleas was that they desired better service than they were receiving or would receive if Station WAEO at Hurley were ultimately to go on the air with the facilities mentioned in footnote 2.

specify operation there at antenna height of 1000 feet and maximum power of 316 kw. He states that such a facility would bring acceptable television to a "white" area of about 83,000 persons. His comments also incorporate by reference the statements of his amended petition for rule making concerning the Rhinelander area, which include the following: Statements of merchants in the area and of advertising representatives, plus the indications of two networks point to the fact that such a Rhinelander station might be successful. Rhinelander (population 9,200) is the county seat and largest city of Oneida County (population 22,600) which is situated in north-central Wisconsin. The city is a wholesale center for six counties in the proposed coverage area, as well as a center for forestry activity. It has numerous industrial, manufacturing, wholesale, and retail establishments, a daily newspaper, and a radio station. It is the hospital and medical center for northern Wisconsin, and is served by one airline and two railroads. In the summer, its population multiplies ten times. It is the focal point of all activities of northern Wisconsin and would be an ideal focal point of all activities for a television station, in an area which is largely underserved.

6. Engineering statements submitted by various parties show a wide area in which a transmitter may be located if Channel 12 is assigned to Rhinelander, whereas there is a limited area southeast of Rhinelander, roughly rectangular (about 60 miles from east to west and 15 miles from north to south), in which a Channel 4 transmitter would have to be located in order to meet Commission spacing requirements. Petitioner submitted an engineering statement which maintains that, because of air space problems, the nearest point at which a high tower could be built in that rectangle is located 25 miles from Rhinelander.[4]

7. M & M, The Journal Company, Midwest and AMST take no position on whether any channel should be added to Rhinelander. However, in the event that a VHF channel is assigned, M & M urges that it be Channel 4, and The Journal Company and Midwest urge that it be Channel 12. Regardless of the channel assigned, the single concern of AMST is the strict enforcement of the mileage spacing requirements of the rules. These parties state their arguments accordingly.

8. The principal line of argument followed by M & M, Midwest, and The Journal Company is directed at the amount of interference and resulting loss of service that a Rhinelander Channel 4 station would cause to viewers of co-channel Stations WCCO–TV and WTMJ–TV, or that a Rhinelander Channel 12 station would cause to viewers of adjacent channel Station WLUK–TV. Claims and counterclaims are made concerning the methods used by the parties in calculating loss of service, and by various lines of reasoning it is urged that it is in the public interest to assign Channel 4 or Channel 12 as the case may be. Because of our decision (see paragraphs 20–21) we find it unnecessary to evaluate the details of these arguments.

9. AMST urges that regardless of which channel may be assigned to Rhinelander, there should be strict enforcement of the Commission mileage spacing requirements. It observes that if Channel 4 were assigned to Rhinelander, there would be a co-channel short separation of about 4 miles between the Rhinelander reference point and the new transmitter site proposed by WCCO–TV, Channel 4, Minneapolis, in its pending application, File No. BPCT–3292, filed by Midwest Radio-Television, Inc. (on January 30, 1964). It urges that, although there is an area of substantial size east of Rhinelander in which a transmitter for a Channel 4 operation could be located, the Commission should not assign Channel 4 to Rhinelander unless and until it has determined that there would be no air space or other practical obstacles to the location of a Channel 4 transmitter in the area meeting all mileage requirements. It also argues that if Channel 4 is assigned to Rhinelander, the order assigning the channel should make clear that any application for use of the channel will be granted only on condition that the transmitter site meets the separation requirements with respect to all other stations and allocations including the new WCCO–TV transmitter site requested.

*The need for service in the area involved.* 10. As stated above, no party except petitioner has taken a position on the need of the area involved for an additional channel. Thus the only material in the record directed at this point is that supplied by petitioner, who has stated that it is not economically feasible to operate a station at Hurley, that it is economically feasible to operate one at Rhinelander, and that there is a need for service in the latter area. (See paragraphs 3–5, above.) We are of the opinion that there is a substantial need for a television service in the area which a Rhinelander station would serve. The numerous letters received by petitioner are additional evidence of this fact. Also, it is evident that there is a large "white area" to the north of Rhinelander that lies outside the Grade B contour of any television station, and Rhinelander itself lies within the Grade B contour of only one station—WSAU–TV, at Wausau.[5] Except for WSAU–TV, the television stations nearest to Rhinelander are WBAY–TV, WFRV, and WLUK–TV at Green Bay, Wisconsin, about 115 miles away; and WEAU–TV at Eau Claire, Wisc., and WLUC–TV, Marquette, Mich., both about 120 miles distant. Although there are four UHF translator broadcast stations at Rhinelander,[6] as well as a CATV system,[7] and a CATV system at Merrill[8] (which would lie within the Grade B contour of the proposed station at Rhinelander), these services are local to the communities named and serve only about 4,300 homes. Our determination of the need for service in the area is buttressed by the 1960 ARB Television Coverage Survey mentioned in the following paragraph.

11. The 1960 ARB Television Coverage Study shows the number of services received in 1960 by the counties that that would lie within the Grade B contour of the proposed VHF station at Rhinelander. Assuming that a station rendered "substantial service" to a county if it had a net weekly circulation of 75 percent or more within that county, 1960 ARB figures indicate that of all the TV households in the counties under consideration, 4 percent received no substantial service, 56 percent received 1 substantial service, 15 percent received 2 substantial services and 25 percent received 3 substantial services. Under this criterion, three-fourths of the TV households did not receive three substantial services.

12. Having determined a need, the question remains whether the public interest in satisfying that need would best be served by reassigning Channel 12 from Ironwood to Rhinelander, by leaving Channel 12 at Ironwood and assigning Channel 4 to Rhinelander, or by assigning neither of those channels to Rhinelander, leaving the community with its presently assigned Channel 22. An essential consideration in arriving at an answer is that of the impact which assignment of a VHF channel to Rhinelander would have on UHF development in the area.

*Impact of a VHF assignment on UHF development.* 13. It is the policy of the Commission to foster UHF development. Consistent with that policy, we stated in paragraph 15 of the Report and Order (FCC 63–501) in the "drop-in" cases (Docket Nos. 14231–8, Oklahoma City, etc.) released May 31, 1963, that all new VHF assignments and applications would be scrutinized as to their likely effect on UHF development. We therefore proceed to examine the impact that the assignment of a VHF channel at Rhinelander might have on UHF development in the area.

14. Rhinelander is the county seat and largest city of Oneida County. Neither the population of Rhinelander nor of the county has changed significantly since 1940 (county population: 1940—18,938; 1950—20,648; 1960—22,112; Rhinelander population: 1940—8,501; 1950—8,774; 1960—8,790). As previously stated, the nearest television stations are at Wausau (WSAU–TV, Channel 7) about 50 miles away; at Green Bay, about 115 miles away; and at Eau Claire about 120 miles away. The nearest UHF stations are at Madison and Milwaukee, some 180 miles and 200 miles from Rhinelander respectively.

15. Within the Grade B contour of the proposed Rhinelander station, the following situation prevails: There are four UHF assignments: Channel *18 at Park Falls, Channel 22 at Rhinelander, and Channels 16 and *46 at Wausau. All of these channels are unused. In Docket No. 14229 which is concerned with expanded use of UHF channels throughout the country, Channel 62 is proposed for Antigo, and Channel 73 for Merrill. In addition, VHF channels 7 and 9 are assigned at Wausau, the former being occupied by a licensee and the latter by a permittee.

16. Not counting new all-channel sets purchased recently, it would appear that, with the exception of Rhinelander and the area nearby, there is no UHF conversion in the area because of the great distances to the nearest UHF stations.[9] Commission license files indicate that there are four UHF television translator broadcast stations at Rhinelander (see footnote 5) with about 1,850 all-channel UHF converters being used by those who receive service from them. These converters are located in and near Rhinelander, almost entirely within Oneida County, because of the limited range of the translator signals. According to the Standard Rate & Data Service, Inc., 1963 estimate, there are 6,000 households in Oneida County, of which 5,800 are TV households. A VHF station operating at Rhinelander with a tower of 1,000 feet and maximum power (as proposed by petitioner) would serve the 5,800 households in Oneida County, and 74,200 TV households outside that county but within the Grade B contour of the station (based on Standard Rate & Data Service Inc., 1963 estimates), almost none of which apparently are UHF converted. Thus, it would appear that UHF conversion in Oneida County is 32 percent and that conversion in the Grade B contour of the proposed station is 2.3 percent.

17. It appears that while the UHF conversion within Oneida County is considerable, that county alone cannot support a television station. Since the UHF conversion within the general area of the proposed station is minimal, we believe that the chances of having a UHF station at Rhinelander or in the area in the fairly near future are small, and that there would therefore be no adverse impact on UHF in the near future if a VHF channel were assigned to the community. The possible adverse effect that assignment of a VHF channel might have on UHF development in the area in the more distant future is a matter of speculation. If eventually, when all-channel sets become prevalent in the area, the market would support two television stations, the existence of a VHF station would presumably not have an adverse impact on UHF. If the market at that time would only support one station, the existence of a VHF station which might be constructed as a result of a present VHF assignment would effectively preclude the establishment of a UHF station and to that extent would have an adverse impact on UHF development. As to the area generally other than Rhinelander, that substantial long-range impact on UHF development would occur is not sufficiently clear that we would be justified in withholding an otherwise desirable assignment on that basis alone.

*A VHF channel would fulfill the needs of the area sooner.* 18. We have seen that an immediate need for an additional service presently exists in the Rhinelander area. Although Channel 22 has been assigned to Rhinelander since the Sixth Report and Order, that channel has not been used to satisfy the need. Petitioner indicates a desire to fulfill it by use of a VHF channel. Whether he or someone else would fulfill it by use of Channel 22 in the immediate future if a VHF channel were not assigned to Rhinelander is questionable, especially to the extent that lack of UHF conversion in the area acts as a deterrent. It would appear that the best chance to satisfy the need would be by the assignment of a VHF channel to the community. We have found that such an assignment would not have an adverse impact on UHF development in the near future. Although it might have such an effect in the distant future, the matter is speculative, and we believe that, on balance, the public interest will be better served by assigning a VHF channel which shows promise of being used in the near future.

*Channel 12 is the better assignment.* 19. Such a channel could be assigned either by dropping in Channel 4 or by reassigning Channel 12 from Ironwood. The latter course would remove from Ironwood (to which Channel 31 is also assigned) a channel that was assigned to that community about 10 years ago. Two permits for its use have been granted. The first was deleted, and it now appears that the present permit, held by petitioner, will also not be used. Nor is there any evidence that the channel would be used at Ironwood in the foreseeable future. In fact, the statements of petitioner indicate that it would not be. Reassignment of the channel to Rhinelander would, therefore, not appear to be contrary to the public interest, especially since use of the channel at the latter community could also give considerable service in the Ironwood area, and since if in the distant future a station at Ironwood might be viable, Channel 31 remains available for use.

20. We believe that it is in the public interest to reassign Channel 12. This decision is based on the fact that although it is possible to assign either Channel 4 or 12 and meet the mileage spacing requirements of the rules, and provide the required field strength over the principal community, there is substantially more flexibility in the location of a transmitter site for a Channel 12 station than for a Channel 4 station, and this flexibility makes for a more efficient use of that channel than could be made of Channel 4. This greater flexibility also increases the possibility that a tall tower may be erected at a site reasonably close to Rhinelander and still not present air space problems. A transmitter location 25 miles or more from the principal community should be avoided if possible.

21. Two stations have filed comments urging the assignment of Channel 12. One urges the assignment of Channel 4. Their positions are based almost entirely on alleged loss of service to listeners of their stations. Arguments are raised about the amount of loss and the methods used in calculating alleged losses, but we base our selection of Channel 12 on the consideration of transmitter site flexibility. At best, the evidence given concerning losses of service is only fragmentary. If we were to give consideration to the matter of interference and loss of service, far more would have to be considered than loss of service of the three parties which filed comments herein. Interference and loss of service to all existing or potential co-channel and adjacent channel stations in the region, as well as the interference of the signals of such stations with the signal of a Rhinelander station, would have to be taken into account in arriving at a decision in the public interest concerning the proper channel to assign to Rhinelander. Consideration would also have to be given to the other services available to the interference areas. In any event, as we have stated before, our assignment table, which is subject to modification from time to time, is based on the concept of mileage separations, these separations representing a necessary compromise between protection from interference and the making of an adequate number of assignments. Stations are not protected from interference from assignments made in accordance with the separation rules. See § 73.612. Here, in fact, selection of Channel 12 does tend to cause less total interference than would a Channel 4 assignment, since the general degree of separations on the channel to all co-channel and adjacent-channel assignments is greater as shown by the much larger area available for transmitter location. Moreover, since the "interference" claimed is adjacent-channel, there will be substitution of service instead of the loss of service in the area which would be affected by co-channel interference from a Channel 4 assignment.

*Miscellaneous matters.* 22. Two matters mentioned in the comments may be disposed of briefly: (1) The arguments of AMST are directed primarily toward the possible assignment of Channel 4 to Rhinelander and need no consideration in view of our decision to assign Channel 12. (2) WLUK–TV suggests that we may wish to give consideration to the possibility of reserving a VHF channel at Rhinelander for educational use in view of the Commission decision in Docket Nos. 14933–4 on July 24, 1964 (37 F.C.C. 257), which granted applications

[4] Petitioner also states that a transmitter might be located about 16 miles from Rhinelander and give principal city service to both Rhinelander and Merrill, but that a question of antenna height exists because the site is close to the junction of two airways.

[5] When the permittee of Station WAOW–TV, Channel 9, at Wausau builds, Rhinelander will also lie within the Grade B contour of that station. WAOW–TV is the former WCWT (see par. 22).

[6] W76AB, W71AC, W80AC, and W73AD. One of these picks up the signal of the Wausau station. Each of the others picks up the signals of one of the three Green Bay stations.

[7] Television Factbook, 1964 Edition, No. 34, p. 144–c.

[8] Information from FCC Survey of CATV Systems.

[9] The 1960 ARB Television Study showed no UHF conversion in any of the counties involved except for 100 UHF homes in Lincoln County contiguous to Oneida County. Except with respect to Rhinelander and Oneida County, there is no reason to believe that this has substantially changed.

of Central Wisconsin Television, Inc., for assignment of its construction permit for Station WCWT (Channel 9, Wausau) to Midcontinent Broadcasting Company and for extension of time in which to construct the station. Those actions had been opposed by an educational group which has pending before the Commission a petition for rule making (RM-321) to reserve Channel 9 in "central Wisconsin" for educational use. Since comments herein were not addressed to the question of need for an educational reservation at Rhinelander, and there has therefore been no showing of need in this respect, we give no consideration to it here, but will deal with it elsewhere. Educational groups are of course free to apply for Channel 12.

*Request for order to show cause.* 23. Petitioner has requested an order to show cause why his construction permit should not be modified to specify operation at Rhinelander on Channel 12 rather than at Hurley, tower height of 1,000 feet, and power of 316 kw. Under special circumstances in one of the "drop-in" cases mentioned above, we have reassigned a channel from one city to another and modified the license of a station operating on that channel accordingly. In the instant case, however, the record shows that the petitioner holds a construction permit for a station of very low power and low antenna height, and that there has been no construction. We therefore believe that no order to show cause should issue. The channel will accordingly be open to all applicants including petitioner.

24. As stated in the notice herein, since Rhinelander is within 250 miles of the U.S.-Canadian border, concurrence of the Canadian authorities in accordance with the provisions of the U.S.-Canadian Agreement of 1952 was necessary before final action on either proposal could be taken. Such concurrence to assignment of Channel 12+ to Rhinelander has been obtained.

25. Authority for the adoption of the amendment herein is contained in sections 4(i), 303, and 307(b) of the Communications Act of 1934, as amended.

26. In view of the foregoing: *It is ordered*, Effective January 25, 1965, that the Table of Assignments contained in § 73.606 of the Commission rules and regulations is amended insofar as the communities named are concerned, to read as follows:

| City | Channel No. |
|---|---|
| Ironwood, Mich. | 31— |
| Rhinelander, Wis. | 12+, 22 |

27. *It is further ordered*, That the request of Alvin E. O'Konski for an order to show cause why the construction permit for Station WAEO-TV, Hurley, Wis., should not be modified to specify operation on Channel 12 at Rhinelander, Wis., with antenna height of 1,000 feet and power of 316 kilowatts is denied.

28. *It is further ordered*, That this proceeding is terminated.

Adopted: December 16, 1964.

Released: December 18, 1964.

NOTE: Rules changes herein will be covered by T.S. III(64)-5.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
*Secretary.*

[FCC 64-1168]

## PART 73—RADIO BROADCAST SERVICES

### Multiple Ownership

In the matter of amendment of §§ 73.35, 73.240, and 73.636 of the Commission's rules relating to multiple ownership of standard, FM and television broadcast stations.

*Order.* At a session of the Federal Communications Commission held at its offices in Washington, D.C., on the 16th day of December, 1964;

On June 9, 1964, we released our Report and Order in Docket No. 14711 amending the so-called "duopoly" sections of the multiple ownership rules. In the Report and Order, we stated that the rules would apply to assignments and transfers but that "pro-forma transfers and other transfers coming about by operation of law" would be exempted.[1] However, the rules as finally adopted (Sections 73.35, 73.240 and 73.636) specifically exempted only those pro-forma transfers listed in § 1.540(b) of the Commission's rules and failed to provide a specific exemption for other transfers coming about by operation of law. (See § 1.541(b).)

The revised rules contained in the attached Appendix are intended to remedy this omission. As revised, the rules will now provide additional exemptions for involuntary assignments or transfers made necessary by reason of death or legal disability, and for assignments or transfers to beneficiaries under a will or by intestacy where no new or increased overlap would be created between commonly owned stations. Thus, stations with presently overlapping service contours will be able to pass at the death of the owner without coming into conflict with the rules—so long as no new overlap problems are created involving other stations owned by the beneficiaries.

The rule changes adopted here are intended solely to grant an exemption we had intended to create in the original Report and Order in Docket 14711. For this reason and because they relax existing restrictions, we find that formal rule making proceedings described in section 4(a) of the Administrative Procedure Act are unnecessary and that the effective date provisions of section 4(c) are inapplicable.

In view of the foregoing: *It is ordered*, That Part 73 of the Commission's rules and regulations is amended as set forth below.

*It is further ordered*, That the amended sections shall be effective on December 28, 1964.

[1] FCC 64-445, p. 11, footnote 20; 2 Pike & Fischer R.R. 2d 1588, 1602.

Authority for the adoption of the above-amended rules is contained in sections 4(i) and (j), and 303 of the Communications Act of 1934, as amended.

(Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interprets or applies sec. 303, 48 Stat 1082, as amended; 47 U.S.C. 303)

Released: December 18, 1964.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
*Secretary.*

1. Note 3 to § 73.35 is amended to read as follows:

**§ 73.35 Multiple ownership.**

* * * * *

NOTE: 1. * * *

3. Paragraph (a) of this section will not be applied so as to require divestiture, by any licensee, of existing facilities. Said paragraph will not apply to applications for increased power for Class IV stations, to applications for assignment of license or transfer of control filed in accordance with §§ 1.540(b) or 1.541(b) of this chapter, or to applications for assignment of license or transfer of control to heirs or legatees by will or intestacy where no new or increased overlap would be created between commonly owned stations. Said paragraph will apply to all applications for new stations, to all other applications for assignment or transfer, and to all applications for major changes in existing stations except major changes that will result in overlap no greater than that already existing. (The resulting overlap areas in such major change cases may consist partly or entirely of new terrain. However, if the population in the resulting overlap areas substantially exceeds that in the previously existing overlap areas, the Commission will not grant the application if it finds that to do so would be against the public interest, convenience, and necessity.) Commonly owned stations with overlapping contours prohibited by paragraph (a) of this section may not be assigned or transferred to a single person, group, or entity, except as provided in this Note.

2. Note 3 to § 73.240 is amended to read as follows:

**§ 73.240 Multiple ownership.**

* * * * *

NOTE: 1. * * *

3. Paragraph (a)(1) of this section will not be applied so as to require divestiture, by any licensee, of existing facilities. Said paragraph will not apply to applications for assignment of license or transfer of control filed in accordance with §§ 1.540(b) or 1.541(b) of this chapter, or to applications for assignment of license or transfer of control to heirs or legatees by will or intestacy where no new or increased overlap would be created between commonly owned stations. Said paragraph will apply to all applications for new stations, to all other applications for assignment or transfer, and to all applications for major changes in existing stations except major changes that will result in overlap no greater than that already existing. (The resulting overlap areas in such major change cases may consist partly or entirely of new terrain. However, if the population in the resulting overlap areas substantially exceeds that in the previously existing overlap areas, the Commission will not grant the application if it finds that to do so would be against the public interest, convenience, and necessity.) Commonly owned stations with overlapping contours prohibited by paragraph (a)(1) of this section may not be assigned or transferred to a single person, group, or entity, except as provided in this Note.

3. Note 3 to § 73.636 is amended to read as follows:

**§ 73.636 Multiple ownership.**

* * * * *

NOTE: 1. * * *

3. Paragraph (a)(1) of this section will not be applied so as to require divestiture, by any licensee, of existing facilities. Said paragraph will not apply to applications for assignment of license or transfer of control filed in accordance with §§ 1.540(b) or 1.541(b) of this chapter, or to applications for assignment of license or transfer of control to heirs or legatees by will or intestacy where no new or increased overlap would be created between commonly owned stations. Said paragraph will apply to all applications for new stations, to all other applications for assignment or transfer, and to all applications for major changes in existing stations except major changes that will result in overlap no greater than that already existing. (The resulting overlap areas in such major change cases may consist partly or entirely of new terrain. However, if the population in the resulting overlap areas substantially exceeds that in the previously existing overlap areas, the Commission will not grant the application if it finds that to do so would be against the public interest, convenience, and necessity.) Commonly owned stations with overlapping contours prohibited by paragraph (a)(1) of this section may not be assigned or transferred to a single person, group, or entity, except as provided in this Note.

[Docket No. 14524; FCC 64-1148]

## PART 87—AVIATION SERVICES

### Frequencies Available

In the matter of amendment of Part 87 (formerly Part 9), § 87.293 (formerly § 9.432), to reflect discontinuance of the use of high frequencies for aeronautical mobile (R) communications in the Domestic Service within the continental United States; docket No. 14524.

*Order.* At a session of the Federal Communications Commission held at its offices in Washington, D.C., on the 16th day of December 1964;

The Commission having under consideration action taken by the Report and Order (FCC 62-919) in this Docket which was adopted September 5, 1962, with respect to the determination whether a limited number of high frequencies should be retained for emergency or back-up use; and,

It appearing, that such determination was to be made by January 1, 1965, which would have allowed the Commission to take into consideration information gathered in preparation for an Aeronautical Extraordinary Administrative Radio Conference, tentatively scheduled to convene in January 1965; and,

It further appearing, that the next session of the ITU Extraordinary Administrative Radio Conference (EARC) to consider the Aeronautical Mobile Allotment Plan is now scheduled to be held early in 1966 and information gathered in preparation for this Conference will be helpful in determining whether a limited number of high frequencies for aeronautical mobile (R) communications should be retained; and,

It further appearing, that any selection of frequencies that may be made should be in accordance with the new plan; and,

It further appearing, that the note following § 87.293(f) should reflect a date that will allow sufficient time for Commission action after the Conference and should make provision for emergency and back-up use until a final determination is made; and,

It further appearing, that authority for this action is contained in sections 4(i), 303 (c), (f) and (r), of the Communications Act of 1934, as amended:

*It is ordered*, That effective December 31, 1964, Part 87 of the Commission's rules is amended as set forth below.

(Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interprets or applies sec. 303, 48 Stat. 1082, as amended; 47 U.S.C. 303)

Released: December 18, 1964.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
*Secretary.*

The Note following Section 87.293(f) is amended to read as follows:

**§ 87.293 Frequencies available.**

* * * * *

NOTE: The Commission in Docket 14524 provided for discontinuance of the use of HF for aeronautical mobile (R) communications in the Domestic Service within the continental U.S. (excluding Alaska) as of January 1, 1965. However, it will be determined, prior to June 1, 1966, if a limited number of high frequencies should be retained for Domestic use. It should be noted that if certain frequencies are retained, their use will not be on a regular basis. Until final determination is made, the high frequencies presently provided for use in the domestic operation in the aeronautical mobile (R) service may continue to be authorized in this service for emergency and back-up use.

## PART 95—CAR SERVICE

### Appointment of Embargo Agent

DECEMBER 18, 1964.

At a session of the Interstate Commerce Commission, Safety and Service Board No. 1, held in Washington, D.C., on the 16th day of December A.D. 1964.

Upon further consideration of Service Order No. 935 (25 F.R. 6760, 26 F.R. 12166, 28 F.R. 263, 13936), and good cause appearing therefor:

*It is ordered*, That:

Section 95.935 *Appointment of embargo agent.* Service Order No. 935, be and it is hereby amended by substituting the following paragraph (f) for paragraph (f) thereof.

**§ 95.935 Appointment of embargo agent.**

* * * * *

(f) *Expiration date.* This order shall expire at 11:59 p.m., December 31, 1965, unless otherwise modified, changed, suspended or annulled by order of this Commission.

Effective date: This amendment shall become effective at 11:59 p.m., December 31, 1964.

(Secs. 1, 12, 15, 24, Stat. 379, 383, 384, as amended; 49 U.S.C. 1, 12, 15. Interprets or applies sec. 1(10-17), 15(4), 40 Stat. 101, as amended, 54 Stat. 911; 49 U.S.C. 1(10-17), 15(4))

*It is further ordered*, That a copy of this order and direction shall be served upon each State railroad regulatory body, the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and per diem agreement under the terms of that agreement; and the American Short Line Railroad Association; and that notice of this order be given to the general public by depositing a copy in the office of the Secretary of the Commission at Washington, D.C., and by filing it with the Director, Office of the Federal Register.

By the Commission, Safety and Service Board No. 1.

# Proposed Rule Making

## DEPARTMENT OF THE TREASURY

### Internal Revenue Service

### [ 26 CFR Part 170 ]

### MISCELLANEOUS REGULATIONS RELATING TO LIQUOR

### Notice of Proposed Rule Making

Notice is hereby given, pursuant to the Administrative Procedure Act, approved June 11, 1946, that the regulations set forth in tentative form below are proposed to be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury or his delegate. Prior to final adoption of such regulations, consideration will be given to any data, views, or arguments pertaining thereto which are submitted in writing, in duplicate, to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington, D.C., 20224, within the period of 30 days from the date of publication of this notice in the FEDERAL REGISTER. Any person submitting written comments or suggestions who desires an opportunity to comment orally at a public hearing on these proposed regulations should submit his request, in writing, to the Director within the 30-day period. In such a case, a public hearing will be held and notice of the time, place, and date will be published in a subsequent issue of the FEDERAL REGISTER. The proposed regulations are to be issued under the authority contained in section 7805 of the Internal Revenue Code of 1954 (68A Stat. 917; 26 U.S.C. 7805).

[SEAL] BERTRAND M. HARDING, *Acting Commissioner of Internal Revenue.*

The purpose of this Treasury decision is to revise the regulations in Subpart B of 26 CFR Part 170 to change the requirements for the submission by surety companies of authorizations for agents and officers to execute bonds on their behalf. The provisions for submission of continuing authorizations are changed to provide for separate submission of authority with each bond and each consent to changes in the terms of a bond. Subpart B, 26 CFR Part 170, is revised to read as follows:

Sec.
170.21 Scope of subpart.
170.22 General.
170.23 Filing of powers of attorney.
170.24 Execution of powers of attorney.

§ 170.21 Scope of subpart.

This subpart relates to the submission of powers of attorney given in support of bonds required or provided for by regulations prescribed in this part, and in Parts 197 to 245, inclusive, and in Part 252 of this chapter, authorizing agents and officers to execute bonds or to consent to changes in the terms of bonds on behalf of corporate sureties.

§ 170.22 General.

Notwithstanding any other provisions of the regulations in this part, or in Parts 197 to 245, inclusive, and in Part 252 of this chapter, powers of attorney authorizing agents or officers to execute bonds or to consent to changes in the terms of bonds on behalf of corporate sureties shall be submitted and passed on as provided in this subpart.

§ 170.23 Filing of powers of attorney.

Each bond, and each consent to changes in the terms of a bond, shall be accompanied by a power of attorney authorizing the agent or officer who executed the bond or consent to so act on behalf of the surety. The assistant regional commissioner, alcohol and tobacco tax, who is authorized to approve the bond, may, when he deems it necessary, require additional evidence of the authority of the agent or officer to execute the bond or consent. (61 Stat. 648; 6 U.S.C. 6, 7)

§ 170.24 Execution of powers of attorney.

The power of attorney shall be prepared on a form provided by the surety company and executed under the corporate seal of the company. If the power of attorney submitted is other than a manually signed original, it shall be accompanied by certification of its validity. (61 Stat. 648; 6 U.S.C. 6, 7)

[F.R. Doc. 64–13250; Filed, Dec. 23, 1964; 8:46 a.m.]

### [ 26 CFR Part 296 ]

### MISCELLANEOUS REGULATIONS RELATING TO TOBACCO MATERIALS, TOBACCO PRODUCTS, AND CIGARETTE PAPERS AND TUBES

### Notice of Proposed Rule Making

Notice is hereby given, pursuant to the Administrative Procedure Act, approved June 11, 1946, that the regulations set forth in tentative form below are proposed to be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury or his delegate. Prior to final adoption of such regulations, consideration will be given to any data, views, or arguments pertaining thereto which are submitted in writing, in duplicate, to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington, D.C., 20224, within the period of 30 days from the date of publication of this notice in the FEDERAL REGISTER. Any person submitting written comments or suggestions who desires an opportunity to comment orally at a public hearing on these proposed regulations should submit his request, in writing, to the Director within the 30-day period. In such a case, a public hearing will be held, and notice of the time, place, and date will be published in a subsequent issue of the FEDERAL REGISTER. The proposed regulations are to be issued under the authority contained in section 7805 of the Internal Revenue Code of 1954 (68A Stat. 917; 26 U.S.C. 7805).

[SEAL] BERTRAND M. HARDING, *Acting Commissioner of Internal Revenue.*

The purpose of this Treasury decision is to revise the regulations in Subpart D of 26 CFR Part 296 to change the requirements for the submission by surety companies of authorizations for agents and officers to execute bonds on their behalf. The provisions for submission of continuing authorizations are changed to provide for separate submission of authority with each bond and each extension of coverage of bond. Subpart D, 26 CFR Part 296, is revised to read as follows:

Sec.
296.91 Scope of subpart.
296.92 General.
296.93 Filing of powers of attorney.
296.94 Execution of powers of attorney.

§ 296.91 Scope of subpart.

This subpart relates to the submission of powers of attorney given in support of bonds required or provided for by regulations prescribed in this part, and in Parts 270, 280, 285, and 290 of this chapter, authorizing agents and officers to execute bonds or extensions of coverage of bonds on behalf of corporate sureties.

§ 296.92 General.

Notwithstanding any other provisions of the regulations in this part, or in Parts 270, 280, 285, and 290 of this chapter, powers of attorney authorizing agents or officers to execute bonds or extensions of coverage of bonds on behalf of corporate sureties shall be submitted and passed on as provided in this subpart.

§ 296.93 Filing of powers of attorney.

Each bond, and each extension of coverage of bond, shall be accompanied by a power of attorney authorizing the agent or officer who executed the bond or extension of coverage of bond to so act on behalf of the surety. The assistant regional commissioner, alcohol and tobacco tax, who is authorized to approve the bond, may, when he deems it necessary, require additional evidence of the authority of the agent or officer to execute the bond or extension of coverage of bond. (61 Stat. 648; 6 U.S.C. 6, 7)

§ 296.94 Execution of powers of attorney.

The power of attorney shall be prepared on a form provided by the surety company and executed under the corporate seal of the company. If the power of attorney submitted is other than a manually signed original, it shall be ac-

companied by a certification of its validity. (61 Stat. 648; 6 U.S.C. 6, 7)

[F.R. Doc. 64-13239; Filed, Dec. 23, 1964; 8:46 a.m.]

# POST OFFICE DEPARTMENT

## [ 39 CFR Part 96 ]

## INTERNATIONAL AIR TRANSPORTATION

### Notice of Proposed Rule Making

The Post Office Department has determined that the principles and procedures applicable to the dispatch and division of airmail in overseas and foreign air transportation should be restated in the form of rules and regulations which will provide for the expeditious carriage of airmail by aircraft. Accordingly, the memorandum issued by the Assistant Postmaster General, Bureau of Transportation and International Services, dated May 7, 1964, subject: Dispatch of mail by air to other countries, has been rescinded.

The Post Office Department desires to afford to interested persons an opportunity to present data, views, or arguments for consideration in formulating rules and regulations setting forth the principles and procedures to be applicable in the future in the dispatch and division of airmail to be transported by aircraft in overseas or foreign transportation. In this connection the Department tentatively proposes to amend paragraph (d) of § 96.30 of Title 39, Code of Federal Regulations, to read as follows:

**§ 96.30 Authority.**

• • • • •

(d) *Dispatch and division of airmail.* (1) United States air carriers shall have first priority to traffic whenever practicable.

(2) Airmail shall be dispatched by the most expeditious service to the airport of destination.

(3) Airmail for competitive points shall be divided equally between competitive flights if such flights arrive at the airport of destination within one hour of each other. When one carrier operates multiple competitive flights scheduled to arrive at an airport within one hour of a competitive flight or flights of another carrier, the airmail shall be divided equally between air carriers rather than by flights.

(4) The use of a flight or flights may be suspended in the event of cancellation, unduly delayed departure, frequent failure of schedule performance, abnormal mail backlog, or other unusual or unanticipated condition which would otherwise delay the dispatch of airmail or impair the service to be accorded the mail.

• • • • •

Accordingly, notice is hereby given that interested persons may submit in writing to the Assistant Postmaster General, Bureau of Transportation and International Services, Post Office Department, Washington, D.C., 20260, at any time prior to January 25, 1965, data, views, or arguments concerning the proposed rules and regulations. All statements submitted in writing pursuant to this notice will be made available for inspection at Room 5000, Post Office Department, after the closing date for submission thereof. Not later than February 5, 1965, interested persons may submit in writing to the Assistant Postmaster General, Bureau of Transportation and International Services, Post Office Department, Washington, D.C., 20260, data, views, or arguments limited in scope to rebuttal of any data, views, or arguments initially presented in writing pursuant to this notice.

The original and 11 copies of any paper or document containing data, views, or arguments shall be furnished for use of the Post Office Department.

(R.S. 161, as amended; sec. 405 (a), (d), 72 Stat. 760, 761; 5 U.S.C. 22, 39 U.S.C. 501, 49 U.S.C. 1375 (a), (d))

LOUIS J. DOYLE,
*General Counsel.*

# DEPARTMENT OF AGRICULTURE

## Agricultural Marketing Service

## [ 7 CFR Part 1135 ]

[Docket No. AO-300-A8]

## MILK IN COLORADO SPRINGS-PUEBLO MARKETING AREA

### Notice of Recommended Decision and Opportunity To File Written Exceptions on Proposed Amendment to Tentative Marketing Agreement and to Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), notice is hereby given of the filing with the Hearing Clerk of this recommended decision with respect to a proposed amendment to the tentative marketing agreement and order regulating the handling of milk in the Colorado Springs-Pueblo marketing area. Interested parties may file written exceptions to this decision with the Hearing Clerk, United States Department of Agriculture, Washington, D.C., 20250, by the 5th day after publication of this decision in the FEDERAL REGISTER. The exceptions should be filed in quadruplicate. All written submissions made pursuant to this notice will be made available for public inspection at the office of the Hearing Clerk during regular business hours (7 CFR 1.27(b)).

*Preliminary statement.* The hearing on the record of which the proposed amendment as hereinafter set forth, to the tentative marketing agreement and to the order as amended, was formulated, was conducted at Colorado Springs, Colorado, on December 2, 1964, pursuant to notice thereof which was issued November 21, 1964 (29 F.R. 15656).

The material issue on the record of the hearing relates to continuing the Class I price at its present level.

*Findings and conclusions.* The following findings and conclusions on the material issue are based on evidence presented at the hearing and the record thereof:

The present Class I pricing provisions of the order should be continued. These provide for a differential of $2.10 over the basic formula price (Minnesota-Wisconsin price series) subject to a supply-demand adjustor. The $2.10 Class I price differential has been in the order since November 1, 1961. Prior to that date the differential was $2.20. The supply-demand adjustor was incorporated in the order, effective August 1, 1963.

The Class I pricing provisions expire on January 31, 1965. This termination date was provided as a means of insuring that the pricing mechanism would be reviewed after the supply-demand adjustor had been in effect for a sufficient period of time to judge its effect on marketing conditions.

The principal cooperative association supplying the market proposed that the present Class I pricing provisions be continued without change. Handlers supported this position as it applied to the immediate future. They noted, however, that they have requested that a hearing be held at which consideration would be given to a substantial revision of the Colorado Springs-Pueblo order. They indicated that when such a hearing was held, it would be desirable to review again the level of the Class I price.

In recent years, the market generally has been supplied with an adequate, but not excessive, quantity of milk to meet its fluid requirements. In 1962, producer receipts were 122.4 percent of the Class I utilization, and in 1963 were 121.4 percent. During the first 10 months of 1964, receipts were 119.4 percent of Class I utilization. This compares favorably to percentages of 120.9 and 121.3 percent in like periods of 1962 and 1963, respectively.

A supply-demand adjustor was incorporated in the order on August 1, 1963. It is designed to increase the Class I price automatically whenever the supplies of producer milk available to the three Colorado markets (Eastern Colorado, Colorado Springs-Pueblo, and Western Colorado) are insufficient for the fluid needs plus a reasonable reserve, and to decrease the Class I price if supplies become excessive. Since its adoption, the supply-demand adjustor has been operative in only three months. It increased the Class I price by two cents per hundredweight in each of the months of February, March and April 1964. The Class I price under the Colorado Springs-Pueblo order is directly related to the Class I prices in the Eastern Colorado and Western Colorado markets. Thus it is clear that the present Class I differential has tended to maintain supplies in balance with the needs of the Colorado markets.

The present Class I pricing provisions have also maintained appropriate price alignment with markets in surrounding states. The differences in price that have existed between the Colorado Springs-Pueblo market and surrounding markets have been insufficient to cause any appreciable intermarket shift of producers. Few, if any, producers have transferred to the Colorado Springs-Pueblo market from surrounding milksheds. Likewise, the market has experienced little or no loss of producers to surrounding areas. The loss of producers which has occurred in recent months is due to their having given up dairying rather than to their having transferred to other markets.

The Class I price herein provided is necessary to maintain an adequate, but not excessive, supply of milk for the Colorado Springs-Pueblo marketing area. At the same time it will maintain an appropriate price alignment between the Colorado Springs-Pueblo market and surrounding markets.

No briefs or proposed findings and conclusions were filed on behalf of interested parties.

*General findings.* The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) The tentative marketing agreement and the order, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The tentative marketing agreement and the order, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

*Recommended marketing agreement and order amending the order.* The following order amending the order as amended regulating the handling of milk in the Colorado Springs-Pueblo marketing area is recommended as the detailed and appropriate means by which the foregoing conclusions may be carried out. The recommended marketing agreement is not included in this decision because the regulatory provisions thereof would be the same as those contained in the order, as hereby proposed to be amended:

In § 1135.51(a), delete the following: "During the period of August 1, 1963, through January 31, 1965, the Class I price shall be".

Signed at Washington, D.C., on December 21, 1964.

CLARENCE H. GIRARD,
*Deputy Administrator.*

## [ 7 CFR Part 1137 ]

[Docket No. AO-326-A6]

## MILK IN EASTERN COLORADO MARKETING AREA

### Notice of Recommended Decision and Opportunity To File Written Exceptions on Proposed Amendment to Tentative Marketing Agreement and to Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), notice is hereby given of the filing with the Hearing Clerk of this recommended decision with respect to a proposed amendment to the tentative marketing agreement and order regulating the handling of milk in the Eastern Colorado marketing area. Interested parties may file written exceptions to this decision with the Hearing Clerk, United States Department of Agriculture, Washington, D.C., 20250, by the 5th day after publication of this decision in the FEDERAL REGISTER. The exceptions should be filed in quadruplicate. All written submissions made pursuant to this notice will be made available for public inspection at the office of the Hearing Clerk during regular business hours (7 CFR 1.27(b)).

*Preliminary statement.* The hearing on the record of which the proposed amendment as hereinafter set forth, to the tentative marketing agreement and to the order as amended, was formulated, was conducted at Denver, Colo., on December 1, 1964, pursuant to notice thereof which was issued November 21, 1964 (29 F.R. 15656).

The material issue on the record of the hearing relates to continuing the Class I price at its present level.

*Findings and conclusions.* The following findings and conclusions on the material issue are based on evidence presented at the hearing and the record thereof:

The present Class I pricing provisions of the order should be continued. These provide for a differential of $2.10 over the basic formula price (Minnesota-Wisconsin price series) subject to a supply-demand adjustor. The $2.10 Class I price differential has been in the order since its inception. The supply-demand adjustor was incorporated in the order effective August 1, 1963.

The Class I pricing provisions expire on January 31, 1965. This termination date was provided as a means of insuring that the pricing mechanism would be reviewed after the supply-demand adjustor had been in effect for a sufficient period of time to judge its effect on marketing conditions.

Cooperative associations supplying the market proposed that the present Class I pricing provisions be continued without change. Handlers supported this position as it applied to the immediate future. They noted, however, that they have requested that a hearing be held at which consideration would be given to a substantial revision of the Eastern Colorado order. They indicated that when such a hearing was held, it would be desirable to review again the level of the Class I price.

Since the inception of the order, the market generally has been supplied with an adequate, but not excessive, quantity of milk to meet its fluid requirements. In 1962, producer receipts were 134 percent of the Class I utilization, and in 1963 were 131 percent. During the first 10 months of 1964, receipts were 137 percent of Class I utilization. This compares favorably to percentages of 136 and 134 percent in like periods of 1962 and 1963, respectively.

A supply-demand adjustor was incorporated in the order on August 1, 1963. It is designed to increase the Class I price automatically whenever the supplies of producer milk available to the three Colorado markets (Eastern Colorado, Colorado Springs-Pueblo, and Western Colorado) are insufficient for the fluid needs plus a reasonable reserve, and to decrease the Class I price if supplies become excessive. Since its adoption, the supply-demand adjustor has been operative in only three months. It increased the Class I price by two cents per hundredweight in each of the months of February, March and April 1964. Class I prices in the Colorado Springs-Pueblo and Western Colorado markets are directly related to the Class I price in the Eastern Colorado market. Thus, it is clear that the present Class I differential has tended to maintain supplies in balance with the needs of the Colorado markets.

The present Class I pricing provisions have also maintained appropriate price alignment with markets in surrounding states. The differences in price that have existed between Eastern Colorado and surrounding markets have been insufficient to cause any appreciable intermarket shift of producers. Few, if any, producers have transferred to the Eastern Colorado market from surrounding milksheds. Likewise, the market has experienced little or no loss of producers to surrounding areas.

The Class I price herein provided is necessary to maintain an adequate, but not excessive, supply of milk for the Eastern Colorado marketing area. At the same time it will maintain an appropriate price alignment between Eastern Colorado and surrounding markets.

The only brief filed supported the findings and conclusions contained herein.

*General findings.* The findings and determinations hereinafter set forth are supplementary and in addition to the

findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) The tentative marketing agreement and the order, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The tentative marketing agreement and the order, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

*Recommended marketing agreement and order amending the order.* The following order amending the order as amended regulating the handling of milk in the Eastern Colorado marketing area is recommended as the detailed and appropriate means by which the foregoing conclusions may be carried out. The recommended marketing agreement is not included in this decision because the regulatory provisions thereof would be the same as those contained in the order, as hereby proposed to be amended:

In § 1137.51(a), delete the following: "During the period of August 1, 1963, through January 31, 1965, the Class I price shall be".

Signed at Washington, D.C., on December 21, 1964.

CLARENCE H. GIRARD,
*Deputy Administrator.*

# FEDERAL AVIATION AGENCY

## [ 14 CFR Part 71 [New] ]

[Airspace Docket No. 63-WE-95]

## CONTROL ZONE, CONTROL AREA, AND TRANSITION AREAS

### Proposed Alteration, Revocation, Extension and Designation

The Federal Aviation Agency is considering amendments to Part 71 [New] of the Federal Aviation Regulations which would alter the controlled airspace in the Boise, Idaho, terminal area.

The following controlled airspace is presently designated in the Boise, Idaho, terminal area:

1. The Boise control zone is designated as that airspace within a 5-mile radius of Boise Air Terminal (latitude 44°33'55'' N., longitude 116°13'35'' W.).

2. The Boise control area extension is designated as that airspace within a 25-mile radius of the Boise VORTAC, extending clockwise from the 319° to the 130° radials; within a 40-mile radius of the Boise VORTAC, extending clockwise from the 130° to the 319° radials; within 5 miles either side of the Boise VORTAC 291° radial, extending from the VORTAC to 67 miles NW, and within a 10-mile radius of the Ontario Municipal Airport, Oreg, (latitude 44°01'15'' N., longitude 117°00'43'' W.), excluding the portion which coincides with the Mountain Home, Idaho, control area extension.

The FAA, having completed a comprehensive review of the terminal airspace structure requirements in the Boise, Idaho, terminal area, including studies attendant to the implementation of the provisions of CAR Amendments 60-21/60-29, has under consideration the following airspace actions:

1. Redesignate the Boise control zone as that airspace within a 5-mile radius of Boise Air Terminal (latitude 44°33'55'' N., longitude 116°13'35'' W.); within 2 miles each side of the Boise VORTAC 302° True radial, extending from the 5-mile radius zone to 12 miles NW of the VORTAC and within 2 miles each side of the Boise VORTAC 130° True radial, extending from the 5-mile radius zone to 12 miles SE of the VORTAC.

2. Revoke the Boise, Idaho, control area extension.

3. Designate the Boise, Idaho, transition area as that airspace extending upward from 700 feet above the surface within an 8-mile radius of the Boise VORTAC; within 2 miles each side of the 295° True bearing from the ILS OM, extending from the 8-mile radius area to the Eagle fan marker, and within 2 miles each side of the Boise VORTAC 130° True radial, extending from 12 miles to 15 miles SE of the VORTAC; that airspace extending upward from 1,200 feet above the surface within a 25-mile radius of the Boise VORTAC, extending clockwise from a line 8 miles NE of and parallel to the Boise VORTAC 319° True radial to the Boise VORTAC 204° True radial; within a 40-mile radius of the Boise VORTAC, extending clockwise from the Boise VORTAC 204° True radial to a line 8 miles NE of and parallel to the Boise VORTAC 319° True radial; within 8 miles S and 7 miles N of the Boise 269° True radial, extending from the 40-mile radius area to 57 miles W of the VORTAC; within 8 miles NE and 11 miles SW of the Boise VORTAC 294° True radial, extending from the 40-mile radius area to 75 miles NW of the VORTAC; within 8 miles NE and 16 miles SW of the Boise VORTAC 319° True radial, extending from the 40-mile radius area to 55 miles NW of the VORTAC; and that airspace extending upward from 10,500 feet MSL SE of Victor 507, within 5 miles each side of the Rome, Oreg., VORTAC 056° True radial, extending from 46 miles NE of the VORTAC to the Boise 40-mile radius area.

The actions proposed herein would, in part, increase the size of the Boise control zone by the addition of control zone extension northwest and southeast.

The control zone extension northwest of Boise, based on the VORTAC 302° True radial, is required to provide protection for aircraft executing prescribed JAL-57-VOR and TACAN-1 instrument approach procedures when these aircraft are less than 1,000 feet above the surface.

The control zone extension southeast of Boise, based on the VORTAC 130° True radial, is required to provide protection for aircraft executing prescribed instrument departures until aircraft reach 700 feet above the surface.

The portion of the proposed Boise transition area with a floor of 700 feet above the surface would provide protection for aircraft executing the portions of the prescribed instrument approach and departure procedures conducted beyond the limits of the Boise control zone and below the floor of the proposed 1,200-foot floor area.

The portion of the proposed Boise transition area with a floor of 1,200 feet above the surface would provide protection for aircraft executing prescribed instrument holding, jet penetration, approach and departure procedures conducted within the Boise and Ontario terminal areas above 1,500 feet above the surface.

The additional controlled airspace, with a floor of 10,500 feet MSL SW of Boise, would provide protection for aircraft executing the higher portion of a prescribed departure procedure via the Rome, Oreg., VORTAC 056° True radial to the high altitude route structure.

4. Designate the Ontario, Oreg., transition area as that airspace extending upward from 700 feet above the surface within a 5-mile radius of Ontario Municipal Airport (latitude 44°01'15'' N., longitude 117°00'43'' W.); within 2 miles each side of the Ontario radio beacon 159° True bearing, extending from the 5-mile radius area to 8 miles S of the radio beacon, and within 2 miles each side of the Ontario radio beacon 025° True bearing, extending from the 5-mile radius area to 8 miles NE of the radio beacon.

The designation of a 700-foot transition area at Ontario, Oreg., would provide protection for aircraft executing prescribed instrument approach and departure procedures at the Ontario Airport.

The floors of the airways that traverse the transition areas proposed herein would automatically coincide with the floor of the transition areas.

Certain minor revisions to prescribed instrument procedures have accompanied the actions proposed herein, but operational complexities have not been increased nor have aircraft performance characteristics or established, landing minimums been adversely affected.

Interested persons may submit such written data, views or arguments as they may desire. Communications should be submitted in triplicate to the Director, Western Region, Attn: Chief, Air Traffic Division, Federal Aviation Agency, 5651 West Manchester Avenue, Post Office Box 90007, Airport Station, Los Angeles, Calif., 90009.

All communications received within forty-five days after publication of this notice in the FEDERAL REGISTER will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Agency officials may be made by contacting the Regional Air Traffic Division Chief. Any data, views or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received.

A public Docket will be available for examination by interested persons in the office of the Regional Counsel, Federal Aviation Agency, 5651 West Manchester Avenue, Los Angeles, Calif., 90045.

These amendments are proposed under the authority of section 307(a) of the Federal Aviation Act of 1958, as amended (72 Stat. 749; 49 U.S.C. 1348).

Issued in Los Angeles, Calif., on December 16, 1964.

JOSEPH H. TIPPETS,
*Director, Western Region.*

[F.R. Doc. 64-13200; Filed, Dec. 23, 1964; 8:45 a.m.]

## [ 14 CFR Part 71 [New] ]

[Airspace Docket No. 63-WE-98]

## CONTROL ZONE, TRANSITION AREA, AND CONTROL AREA EXTENSION

### Proposed Alteration, Designation, and Revocation

The Federal Aviation Agency is considering amendments to Part 71 [New] of the Federal Aviation Regulations which would alter the controlled airspace in the Cheyenne, Wyoming, terminal area.

1. The Cheyenne, Wyo., control zone is presently designated as that airspace within a 5-mile radius of the Cheyenne Municipal Airport (latitude 41°09'25'' N., longitude 104°48'25'' W.); within 2 miles each side of a 296° bearing from the Cheyenne RBN, extending from the 5-mile radius zone to 12 miles NW of the RBN; within 2 miles each side of a 090° bearing from the Cheyenne RBN, extending from the 5-mile radius zone to 11.5 miles E of the RBN; within 2 miles each side of the Cheyenne ILS localizer E course extending from the 5-mile radius zone to 10 miles E of the airport and within 2 miles each side of the Cheyenne VORTAC 032° radial, extending from the 5-mile radius zone to 10 miles NE of the VORTAC.

2. The Cheyenne control area extension is presently designated as that airspace within 5 miles each side of the Cheyenne VORTAC 032° radial, extending from the VORTAC to 25 miles NE; the airspace bounded on the N by V-6, on the SE by V-207, on the S by V-138 and on the W by V-89E alternate; the airspace SE of Cheyenne within a 25-mile radius of the Cheyenne RBN extending clockwise from a 090° bearing to a 181° bearing from the Cheyenne RBN; and the airspace SW of Cheyenne bounded on the N by V-118, on the E by V-19 and on the SW by V-4N alternate.

The FAA, having completed a comprehensive review of the terminal airspace structure requirements in the Cheyenne area, including studies attendant to the implementation of the provisions of CAR amendments 60-21/60-29, has under consideration the following airspace actions:

1. Alter the Cheyenne, Wyoming, control zone by redesignating it as that airspace within a 5-mile radius of Cheyenne Municipal Airport (latitude 41°09'20'' N., longitude 104°48'30'' W.) and within 2 miles each side of the Cheyenne ILS localizer E course, extending from the 5-mile radius zone to the outer marker.

2. Revoke the Cheyenne, Wyoming, control area extension and designate the Cheyenne transition area as that airspace extending upward from 700 feet above the surface within a 14-mile radius of the Cheyenne Municipal Airport (latitude 41°09'20'' N., longitude 104°48'30'' W.); and that airspace extending upward from 1,200 feet above the surface bounded on the NE by Victor 6, on the southeast by Victor 207, on the southwest by Victor 4N alternate and on the NW by Victor 524; and that airspace NW of Cheyenne within 7 miles NE and 10 miles SW of the Cheyenne VORTAC 305° True radial; extending from the VORTAC to 47 miles NW of the VORTAC, excluding the portions within the Laramie, Wyo., Transition Area.

The floors of the airways which would traverse the transition area proposed herein would automatically coincide with the floors of the transition area.

The actions proposed herein would, in part, reduce the overall size of the presently designated control zone at the Cheyenne Municipal Airport by reducing the east extension and revoking the northwest and northeast extensions.

The portion of the Cheyenne transition area with a floor of 700 feet above the surface would provide protection for aircraft executing the portions of prescribed instrument approach and departure procedures conducted beyond the limits of the Cheyenne control zone and below the floor of the proposed 1,200-foot area.

The designation of the 1,200-foot portion of the proposed transition area and the revocation of the Cheyenne control area extension would raise the floor of controlled airspace beyond a 14-mile radius of the Cheyenne Municipal Airport from 700 to 1,200 feet above the surface. The portions of controlled airspace released by these actions are no longer required for air traffic control purposes. The portion retained would provide protection for aircraft executing prescribed instrument transition, holding, arrival and departure procedures in the Cheyenne terminal area.

Certain minor revisions to prescribed instrument procedures have been made but operational complexities have not been increased nor have aircraft performance characteristics or established landing minimums been adversely affected.

Interested persons may submit such written data, views or arguments as they may desire. Communications should be submitted in triplicate to the Director, Western Region, Attention: Chief, Air Traffic Division, Federal Aviation Agency, 5651 West Manchester Avenue, Post Office Box 90007, Airport Station, Los Angeles, Calif., 90009. All communications received within forty-five days after publication of this notice in the FEDERAL REGISTER will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Agency officials may be made by contacting the Regional Air Traffic Division Chief. Any data, views or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received.

The official Docket will be available for examination by interested persons at the office of the Regional Counsel, Federal Aviation Agency, 5651 West Manchester Avenue, Los Angeles, Calif., 90045.

This amendment is proposed under the authority of section 307(a) of the Federal Aviation Act of 1958, as amended (72 Stat. 749; 49 U.S.C. 1348).

Issued in Los Angeles, Calif., on December 16, 1964.

A. E. HORNING,
*Acting Director, Western Region.*

## [ 14 CFR Part 71 [New] ]

[Airspace Docket No. 63-WE-127]

## CONTROL ZONE, CONTROL AREA EXTENSION, AND TRANSITION AREA

### Proposed Alteration, Revocation, and Designation

The Federal Aviation Agency is considering amendments to Part 71 [New] of the Federal Aviation Regulations which would alter the controlled airspace in the Mountain Home AFB, Idaho, terminal area.

The following controlled airspace is presently designated in the Mountain Home AFB, Idaho, terminal area:

1. The Mountain Home AFB control zone is designated as that airspace within a 5-mile radius of the Mountain Home AFB (latitude 43°02'35'' N., longitude 115°52'05'' W.), and within 2 miles either side of the 136° and 316° bearings from the AFB extending from the 5-mile radius zone to 8 miles NW and SE of the RR.

2. The Mountain Home control area extension is designated as that airspace within 5 miles either side of the Moun-

from the 35-mile radius area bounded on the E by longitude 115°39'00'' W., on the S by the arc of a 46-mile radius

Traffic Division, Western Region, Federal Aviation Agency, 5651 West Manchester Avenue, Los Angeles, Calif., 90045.

mission, having been advanced in comments filed herein by the Advisory Council on Educational Television of the Com-

4. In addition to Charlottesville Broadcasting[2] and the Advisory Council, Music Productions, Inc., permittee of

means of local expression. It avers that educational use of Channel 11 is important to Virginia's planned state-wide

2. The Mountain Home control area extension is designated as that airspace within 5 miles either side of the Mountain Home VOR 178° and 208° radials extending from the VOR to 61 miles S and SW and that airspace S, SE and W of Mountain Home bounded by a line beginning at the INT of the SW boundary of V–253 and a line 5 miles S of and parallel to the Twin Falls, Idaho, VOR 269° radial, thence W along this line to its INT with a line 5 miles NW of and parallel to the Mountain Home VOR 208° radial, thence NE along this line to its INT with the arc of a 35-mile radius circle centered on Mountain Home AFB (latitude 43°02'30" N., longitude 115°51'50" W.), thence clockwise along this arc to its INT with the SW boundary of V–253, thence SE along this boundary to the point of beginning.

The FAA, having completed a comprehensive review of the terminal airspace structure requirements in the Mountain Home AFB terminal area, including studies attendant to the implementation of CAR Amendments 60–21/60–29, has under consideration the following airspace actions:

1. Redesignate the Mountain Home AFB, Idaho, control zone as that airspace within a 5-mile radius of Mountain Home AFB (latitude 43°02'35" N., longitude 115°52'05" W.); within 2 miles each side of the extended centerline of Runway 12, extending from the 5-mile radius zone to 7.5 miles SE of the liftoff end of Runway 12; within 2 miles each side of the extended centerline of Runway 30, extending from the 5-mile radius zone to 7.5 miles NW of the liftoff end of Runway 30; within 2 miles each side of the Mountain Home TACAN 129° True radial, extending from the 5-mile radius zone to 7 miles SE of the TACAN, and within 2 miles each side of the Mountain Home TACAN 321° True radial, extending from the 5-mile radius zone to 7 miles NW of the TACAN.

2. Revoke the present Mountain Home, Idaho, control area extension.

3. Designate the Mountain Home, Idaho, transition area as that airspace extending upward from 700 feet above the surface within 10 miles NE and 9 miles SW of the Mountain Home TACAN 135° and 315° True radials, extending from 18 miles SE to 18 miles NW of the TACAN; that airspace extending upward from 1,200 feet above the surface bounded on the NE by the SW boundary of Victor 4, on the SE, S and SW by the arc of a 35-mile radius circle centered on Mountain Home AFB (latitude 43°02'35" N., longitude 115°52'05" W.), on the W by the Boise, Idaho, VORTAC 204° True radial, and on the NW by the arc of a 25-mile radius circle centered on the Boise VORTAC; that airspace SE of Mountain Home, extending upward from 6,500 feet MSL, extending from the 35-mile radius area bounded on the E by longitude 115°39'00" W., on the S by the arc of a 46-mile radius circle centered on Mountain Home AFB, and on the NW by a line 5 miles NW of and parallel to the Mountain Home VOR 208° True radial; and that airspace S of Mountain Home, extending upward from 10,500 feet MSL within 5 miles each side of the Mountain Home VOR 178° and 208° True radials, extending from the 46-mile radius circle to 61 miles S and SW of the VOR.

west and southeast, based on the extended centerline of Runway 12/30, are required for the protection of aircraft departing Mountain Home AFB until aircraft reach 700 feet above the surface. In addition, these extensions also provide protection for aircraft executing prescribed ADF and ILS approach procedures.

The control zone extension southeast, based on the Mountain Home TACAN 129° True radial, provides protection for the AL and JAL–323–TACAN–1 instrument approach procedures.

The control zone extension northwest, based on the Mountain Home TACAN 321° True radial, provides protection for AL and JAL–323–TACAN–2 instrument approach procedures.

The 700-foot portion of the transition area is to provide protection to aircraft arriving and departing Mountain Home AFB when those aircraft are maneuvering outside of the control zone at altitudes between 1,500 and 1,000 feet above the surface. Additionally, radar service at Mountain Home regularly vectors aircraft in this area at altitudes less than 1,500 feet above the surface.

The 1,200-foot portion of the transition area is to provide protection to approach, departure and holding procedures when the aircraft are maneuvering at altitudes 1,500 feet and above the surface. In addition to standard instrument departure procedures, air traffic control may authorize random departures. The entire area is under radar coverage and aircraft may be random vectored through any portion of the area.

The portions of the transition area floored at 6,500, 7,500, and 10,500 feet MSL would provide protection to aircraft executing the higher portions of approach, departure, holding and radar vectoring procedures within the Mountain Home terminal area.

It is planned that, at a future date, after adjacent terminal areas have been examined, the floors of low altitude airways adjacent to Mountain Home will be raised to 1,200 feet or higher above the surface.

Certain minor revisions to prescribed instrument procedures would accompany the actions proposed herein, but operational complexities would not be increased nor would aircraft performance characteristics or established landing minimums be adversely affected.

Specific details of the changes to procedures and minimum instrument flight rules altitudes that would be required may be examined by contacting the Chief, Airspace Utilization Branch, Air Traffic Division, Western Region, Federal Aviation Agency, 5651 West Manchester Avenue, Los Angeles, Calif., 90045.

Interested persons may submit such written data, views or arguments as they may desire. Communications should be submitted in triplicate to the Director, Western Region, Attn: Chief, Air Traffic Division, Federal Aviation Agency, 5651 West Manchester Avenue, Post Office Box 90007, Airport Station, Los Angeles, Calif., 90009. All communications received within forty-five days after publication of this notice in the FEDERAL REGISTER will be considered before action is taken on the proposed amendment. No public hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Agency officials may be made by contacting the Regional Air Traffic Division Chief. Any data, views or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received.

A public docket will be available for examination by interested persons in the office of the Regional Counsel, Federal Aviation Agency, 5651 West Manchester Avenue, Los Angeles, Calif., 90045.

This amendment is proposed under the authority of section 307(a) of the Federal Aviation Act of 1958, as amended (72 Stat. 749; 49 U.S.C. 1348).

Issued in Los Angeles, Calif., on December 16, 1964.

JOSEPH H. TIPPETS,
*Director, Western Region.*

# FEDERAL COMMUNICATIONS COMMISSION

## [ 47 CFR Part 73 ]

[Docket No. 15138; FCC 64–1165]

## TELEVISION BROADCAST STATIONS

### Proposed Table of Assignments

In the matter of amendment of § 73.606, Table of Assignments, Television Broadcast Stations (Staunton-Waynesboro, Virginia); Docket No. 15138, RM–262.

Report and order. 1. The Commission has under consideration the proposal of Charlottesville Broadcasting Corporation, licensee of Radio Stations WINA (AM) and WINA(FM), Charlottesville, Virginia, to assign Channel 11+ as a "drop-in" first VHF television assignment to Staunton-Waynesboro, Virginia, for commercial use, which involves a proposed change in the offset carrier requirement for Channel 11, Durham, North Carolina (WTVD), from 11+ to 11 even, with respect to which the Notice of Proposed Rule Making (FCC 63–725), released July 29, 1963, invited comments. A conflicting proposal to reserve this proposed assignment for noncommercial educational use is also before the Commission, having been advanced in comments filed herein by the Advisory Council on Educational Television of the Commonwealth of Virginia, a statutory agency within the office of the Governor of Virginia, create[d] and organized in 1962 to plan and further the development of educational television facilities and service on a state-wide basis.

2. Staunton is now assigned Channel 36; Waynesboro (about 15 miles southeast of Staunton), Channel 42. Neither channel is in use. The only television station now operating or that has ever operated in the central Shenandoah Valley area of western Virginia where these cities are located is Station WSVA–TV, which, since 1953, has been operating on the Harrisonburg, Virginia, Channel 3 assignment. Harrisonburg is about 25 miles northeast of Staunton and 30 miles north of Waynesboro. This Shenandoah Valley area relies mainly upon Station WSVA–TV for service—Staunton and Waynesboro are well within its predicted Grade B contour—but also receives some service from more distant VHF stations at Roanoke, Lynchburg, Richmond, and Petersburg, Virginia. Some residents of Staunton, Harrisonburg, and also of Charlottesville (about 25 miles east of Waynesboro), are also served by local CATV systems.[1] The 1960 U.S. Census Reports show a population of 22,232 for Staunton, the county seat of Augusta County; a population of 15,694 for Waynesboro, also in Augusta County, which had a population of 37,363, exclusive of Waynesboro and Staunton; a population of 11,916 for Harrisonburg, and a population of 29,427 for Charlottesville.

3. The Harrisonburg Channel 3 assignment is the only VHF channel now assigned to this Shenandoah Valley area, and Channel 11 is the only other VHF channel available which could be assigned consistent with Commission mileage spacing requirements. While a Channel 11 Staunton-Waynesboro assignment would be technically feasible, in order to meet the required 170-mile spacing from Channel 11 stations at Durham, North Carolina, Baltimore, Maryland, and Pittsburgh, Pennsylvania, it would be necessary to use Channel 11 at a transmitter site in a very small, triangular area, some 25 miles west-southwest of Staunton-and-Waynesboro. This area is within the "National Radio Quiet Zone", the radio interference protection zone that was established in 1958 by Commission action, and by parallel action of the Interdepartment Radio Advisory Committee for Government operations, for radio astronomy observations and research at the National Radio Astronomy Observatory (NRAO), Green Bank, West Virginia, and at the Naval Radio Research Station (NRRS), then called the Naval Radio Research Observatory, Sugar Grove, West Virginia.

[1] The 1964 Television Factbook reports that the Staunton CATV system, in operation since 1952, has 1,300 subscribers; the Harrisonburg system, in operation since 1952, also, 2,300 subscribers; and the Charlottesville system, which commenced operation in 1963, 600 subscribers.

4. In addition to Charlottesville Broadcasting[2] and the Advisory Council, Music Productions, Inc., permittee of Radio Station WBVA (AM), Waynesboro, filed comments and reply comments supporting a Channel 11 Staunton-Waynesboro assignment. Those of the Advisory Council, as above stated, also request and support its designation as a reserved educational assignment. A number of letters endorsing the assignment proposal and, in main, its use for an educational station, were also received (some were filed with the comments of Charlottesville Broadcasting and the Advisory Council rather than directly by the writers) from, among others, the Commonwealth's Superintendent of Public Instruction, two members of the Virginia House of Delegates, and officials of public and private educational institutions in the area. From Charlottesville's calculations, it appears that a Channel 11 station with maximum facilities at its assumed site, some 16 miles southwest of Staunton and 26 miles west of Waynesboro, would serve no area and population not now within the Grade B contour of one or more existing VHF stations but that it would provide a first signal of Grade A intensity to approximately 133,000 people within an area of 3,140 square miles.

5. The thrust of the commercial proponents' argument is that a Channel 11 assignment presents the only realistic means to meet the need of Staunton, Waynesboro, and Augusta County for a viable, competitive, local outlet and to expand and improve television service in the area under existing conditions (presence of VHF signals only, no UHF set conversion, the Staunton CATV system) which make UHF operation infeasible. Music Productions doubts that UHF can ever provide a full commercial service in this area. Charlottesville Broadcasting believes that sound UHF development in the area will be possible in the foreseeable future when, spurred by the all-channel receiver legislation, UHF conversion is sufficiently large to make UHF operations economically possible, and that, with large scale UHF conversion, a VHF Staunton-Waynesboro station would not materially deter UHF development. The Advisory Council urges that the Staunton-Waynesboro area's need for a VHF educational station is more pressing than for a VHF commercial station, arguing that it could best meet local educational needs, would be a vital link in a state-wide educational television system, and could equally serve as a means of local expression. It avers that educational use of Channel 11 is important to Virginia's planned state-wide educational television network because of VHF transmission advantages in the difficult Shenandoah Valley terrain and the savings that can be made in using one VHF Staunton-Waynesboro educational station instead of two UHF educational stations, which will otherwise be required, to serve the area.

[2] On September 28, 1964, Charlottesville Broadcasting also filed a petition requesting leave to file an accompanying "Additional Statement" in which it brings to the Commission's attention and April 1964, Report of the Comptroller General to the United States Congress, entitled "Unnecessary Costs Incurred for the Naval Radio Research Station Project" at Sugar Grove, West Virginia, which concerns the 600-foot radio telescope project at the NRRS which the Navy cancelled in July of 1962. A responsive pleading was filed October 12, 1964, by Shenandoah Valley. While the Report has no decisional significance herein, it is of interest and concerns a relevant factor. Both it and the responsive pleading have been considered.

6. With regard to a Channel 11 station's impact upon research operations at the NRAO, Green Bank, and the NRRS, Sugar Grove, the commercial proponents and the Advisory Council argue that a Channel 11 signal at both Green Bank and Sugar Grove would be comparable to that now received from the Harrisonburg VHF station, to which there has been no complaint; that the NRAO, Green Bank, interests do not oppose the Channel 11 assignment proposal; and that the opposing letters received by the Commission from the Department of the Navy and other governmental agencies concerned with research operations at the NRRS were not accompanied by supporting data or facts. They urge that, in these circumstances, and since a need exists for additional television service in the area, and the "Quiet Zone" was not established to hamper needed broadcast service development, it would not be in the public interest, or consistent with the standards laid down by the Commission in establishing the "Quiet Zone", to reject this proposal.

7. Comments and reply comments opposing a Channel 11 Staunton-Waynesboro assignment were filed by Shenandoah Valley Broadcasting (WSVA–TV and Staunton Video Corporation, which operates the Staunton CATV system. They urge that the public interest requires its rejection because of the protection needed for vital governmental research in the "Quiet Zone" and the harmful and aborting effect a Channel 11 assignment would have upon UHF development in this area. Shenandoah Valley also contends that this area cannot support two maximum facility VHF stations and that its Harrisonburg VHF station would suffer economic injury from a VHF Staunton-Waynesboro commercial station, but that, a VHF educational station would not be subject to these latter objections. An opposing letter was also filed by Havens & Martin, Inc., licensee of Station WTVR, Channel 6, Richmond, and an applicant for Channel 11 translators at Staunton, Waynesboro and Harrisonburg. It urges that the public interest would be better served by authorizing low power translators in these cities since their impact upon research in the "Quiet Zone" would be minor as compared to a high power VHF station, and they could make multiple new services available to them without retarding UHF development. Comments filed by WIIC, Inc., licensee of Station WIIC, Channel 11, Pittsburgh, give notice of its opposition to any change in the subject Channel 11 proposal which would cause objectionable interference to Station WIIC.

8. Comments filed by Associated Universities, Inc. (AUI), the private corporation that operates the NRAO at Green

Bank, report on the measurement studies AUI made on the interference effect of

Bank, report on the measurement studies AUI made on the interference effect of the proposed Channel 11 assignment upon its operations at the NRAO and indicate that AUI does not oppose a Channel 11 assignment and operation in the zoned area if certain conditions respecting harmonic radiation are met, none of which would deter effective broadcast use of the channel.

9. The Office of Emergency Planning (OEP), Executive Office of the President, by letter to the Chairman, dated August 22, 1963 and filed herein the next day, has advised that the Executive Branch of the Government remains opposed to a Channel 11 assignment in the "National Radio Quiet Zone" and that its position is still represented by the letter, dated April 12, 1963, from the OEP's Director of Telecommunications Management to the Chairman, and its enclosure, a copy of a letter, of the same date, to the OEP from the Department of Defense—both of which oppose the assignment. In its August 22, 1963 letter, the OEP states that those April 12, 1963, OEP and Department of Defense letters "emphasized the great scientific importance placed by the Executive Branch of the Government on radio astronomy and scientific research in the 'National Radio Quiet Zone'; the adverse effect of granting the petition and stated the criteria applied for protection within the Quiet Zone" and that "we wish to reaffirm the substance of that letter and its enclosure (The OEP and Department of Defense April 12, 1963 letters)". This August 22, 1963, OEP letter constitutes a firm, official statement which reaffirms the opposition of the OEP, Department of Defense and the Navy to a Channel 11 assignment in the "Quiet Zone" and their position that cancellation of the 600-foot radio telescope project at the NRRS, Sugar Grove, provides no valid reason for reducing the degree of protection required for governmental research in the protection zone.

10. These April 12, 1963, OEP and Department of Defense letters, the substance of which was given in the rule making notice herein, manifest that the Navy Sugar Grove site is uniquely suited and still essential to the Navy for scientific research to meet its planned and future requirements, including research in the field of low level radio signal detection "to meet highest priority national requirements". They also represent that the cumulative interference from a second VHF station, operating on Channel 11 in the restricted zone, is considered critical to the effectiveness of research essential to the national interest required in the "Quiet Zone", so much so, that the Department of Defense states that a Channel 11 station in the zoned area "is not considered to be in the best interests of the Navy or the United States". Considering the representations of the Department of Defense, and the backing accorded them by the Executive Office of the President, we believe it reasonable to conclude that a Channel 11 assignment has considerable potential for circumscribing and possibly doing irreparable harm to governmental research required in the restricted zone to implement national policies and objectives of benefit to the nation and the public at large. In these circumstances, and particularly since the "Quiet Zone" was established in light of the NRRS's special interference protection requirements for research, we could not reasonably decide that the paramount public interest nevertheless requires the assignment of Channel 11 for use in the zoned area.

11. While no UHF signals are presently received in this Shenandoah Valley area, there is today real prospect for the establishment of a first UHF station and service there in the near future, for on June 18, 1964, the Commission granted the application of Virginia Broadcasting Corporation for a first local Charlottesville station on Channel 64. Other evidence of developing interest in and demand for UHF assignments and facilities in this area exists. An application is pending for Channel 36 at Staunton, filed by Shenandoah Valley Broadcasting, Inc., the licensee of the Harrisonburg Channel 3 station. Virginia's Advisory Council on Educational Television also requests a number of new UHF educational assignments, and also a reserved Channel 11 Staunton-Waynesboro assignment, in a pending rule making petition (RM-494) for components of its planned educational television network for Virginia. If the VHF proposal is rejected, two additional UHF assignments, one each at Harrisonburg and Lexington, are alternatively requested. It is noted that components of the planned network include UHF educational stations at Charlottesville, Winchester and Roanoke, Virginia, whose service areas would be overlapped extensively by that of the planned Channel 11 educational station.

12. The Commission is therefore of the view that to authorize a second VHF channel assignment in this area for either commercial or educational use, would be a short-sighted approach to the problem of satisfying this area's need for additional local television outlets and services and would be at cross-purposes with the Commission's goal of fostering expanded use of UHF channels and optimum conditions for UHF growth. With the present all-VHF character of signals and receivers in this Shenandoah Valley area, a VHF channel has recognized advantages for bringing an immediate, additional local television service to the area. But it could not even meet the demand and need shown in the record for one commercial and one educational outlet at Staunton and Waynesboro, and no other VHF channels could be assigned to this area. One of the other needs would have to be met by UHF, as will all other developing needs for local commercial and educational television outlets and services in this area.

13. In view of the foregoing: *It is ordered,* That the proposal of Charlottesville Broadcasting Corporation for the assignment of Channel 11 to Staunton-Waynesboro, Virginia, and the conflicting proposal of the Advisory Council on Educational Television of the Commonwealth of Virginia for the reservation of Channel 11 at Staunton-Waynesboro for educational use, are denied; *And it is further ordered,* That this proceeding is terminated.

Adopted: December 16, 1964.

Released: December 18, 1964.

FEDERAL COMMUNICATIONS COMMISSION,[3]
[SEAL] BEN F. WAPLE,
*Secretary.*

# SECURITIES AND EXCHANGE COMMISSION

## [ 17 CFR Part 240 ]

[Release 34-7481]

## PROXY RULES

### Notice of Proposed Rule Making

Notice is hereby given that the Securities and Exchange Commission has under consideration certain proposed amendments to its proxy rules contained in Regulation 14 under the Securities Exchange Act of 1934 (CFR 240.14a-1 to 240.14a-11). That regulation (which would be redesignated "Regulation 14A") is applicable to the solicitation of proxies, authorizations and consents with respect to securities registered on a national securities exchange. Rules adopted under the Public Utility Holding Company Act of 1935 and the Investment Company Act of 1940 make the regulation applicable also to the solicitation of proxies, authorizations and consents with respect to the securities of certain companies subject to those statutes.

Certain amendments to the proxy rules are needed in order to make such rules applicable to solicitations with respect to securities registered under new section 12(g) of the Act. The proposed amendments accomplish this objective. It also appears desirable to include in the proposed amendments certain changes for the purposes of clarification and to embody in the rules certain long-standing practices of the Commission. A limited number of additional substantive changes in the rules are proposed, principally proposed amendments to Rule 14a-4 (17 CFR 240.14a-4) and to Item 7(f) of Schedule 14A.

On September 15, 1964, the Commission adopted its Rule 12g-1 (17 CFR 240.12g-1, 29 F.R. 13461), paragraph (b) of which exempts from the proxy rules any solicitation of proxies from the holders of any class of securities registered under section 12(g) of the Act, prior to the expiration of two months after the last date on which the registration statement is due, or December 31, 1965, whichever is earlier. Exception is made for solicitations from security holders of a holding company registered under the Public Utility Holding Company Act of 1935 or any subsidiary thereof. It should be emphasized that the exemption will not apply to solicitations of holders of any class of security registered on a national securities exchange pursuant to section 12(b) of the Act.

Persons soliciting proxies with respect to a class of equity security should be aware that any such solicitation commenced before the proxy rules are applicable to such class constitutes a continuing solicitation and proxies received may not be voted after the proxy rules are applicable unless the solicitation was made in accordance with the proxy rules.

The changes involved are briefly described below. It is contemplated that the proposed amendments will be adopted sufficiently in advance of their effective date to give adequate notice to issuers who may be affected by the amended requirements.

*Rule 14a-2 (17 CFR 240.14a-2).* The amendment to this rule would provide that Regulation 14A shall also apply to solicitations with respect to securities registered pursuant to the new section 12(g) of the Act, as well as to those registered on a national securities exchange pursuant to section 12(b) of the Act.

*Rule 14a-4 (17 CFR 240.14a-4).* This rule, which sets forth certain requirements with respect to the form of proxy, would be amended to require that where a proxy is solicited for elections to office and for other specified matters, provision shall be made whereby the security holder may grant or withhold authority to vote for elections to office. This provision would not apply, however, in cases of a merger or consolidation involving elections to office where such elections are part of the plan and are not to be separately voted upon. The purpose of the new provision is to enable security holders to vote upon proposals submitted to them without authorizing the use of the proxy for elections to office.

*Rule 14a-9 (17 CFR 240.14a-9).* This rule, which relates to false or misleading statements in proxy solicitations, would be amended to state specifically that the filing of proxy material with the Commission or the examination of such material by the Commission is not to be deemed a finding by the Commission that such material is accurate or complete or not false or misleading or that the Commission has passed upon the merits of the statements contained therein or any matter to be acted upon by security holders. Representations to the contrary would be prohibited. The purpose of the new requirement would be to forestall representations that the Commission by its review and "clearing" of proxy material has approved the material or the proposals contained therein. The new provision merely makes explicit the Commission's longstanding construction of the proxy rules.

*Rule 14a-11 (17 CFR 240.14a-11).* This rule contains special provisions applicable to election contests. Under the existing rule, any person who takes the initiative in organizing, directing or financing any committee or group which solicits proxies is deemed to be a participant in the solicitation. It is proposed to amend this provision to include in the definition of "participant" any person who engages in organizing, directing or financing such a committee or group, even though such person may not have taken the initiative in so doing.

*Rule 14a-12 (17 CFR 240.14a-12).* The proxy rules provide, in general, that no solicitation may be made prior to furnishing to security holders a written proxy statement containing certain specified information pertinent to the solicitation. However, Rule 14a-11 which relates to contests involving elections to office permits such prior solicitations under certain conditions. The new Rule 14a-12 would permit such prior solicitations under similar conditions in the case of contests involving matters other than elections to office.

*Schedule 14A.* Schedule 14A specifies the information required to be set forth in the proxy statement required by Rule 14a-3 (17 CFR 240.14a-3). It is proposed to amend the following items of the schedule in the respects indicated below.

*Item 2.* This item requires a description of dissenters' rights of appraisal in connection with any matter to be acted upon. It is proposed to add an instruction which would require an indication whether a security holder's failure to vote against a proposal will constitute a waiver of his appraisal rights. This instruction would codify current administrative practice in requiring such information.

*Item 5.* This item requires certain information as to the voting securities of the issuer and the principal holders thereof. It is proposed to amend this item to require the disclosure of a change in control of the issuer and with respect to the pledging of or granting of options on securities which may result in a change in control of the issuer. The purpose of these requirements is to inform security holders, prior to their giving proxies, of changes or potential changes in control of the issuer which may not have been previously disclosed to them.

*Item 7.* It is proposed to amend Item 7(a) to provide that in initial filings under the proxy rules by new registrants under section 12 of the Act, the individual remuneration of directors and officers who ceased to be such prior to the time of filing for such registration would not have to be disclosed unless the same information must otherwise be disclosed in other material filed with the Commission. The item would also be clarified in certain respects and would provide that in showing the aggregate remuneration of all directors and officers as a group the number of persons in the group be stated.

Item 7(f) calls for a description of any material interest, direct or indirect, of directors, officers, nominees for election as directors and certain other specified persons in material transactions with the issuer or its subsidiaries. The item as presently in effect requires disclosure of an interest in a transaction only if both the interest and the transaction are material. The Commission's experience in recent years has indicated the need for clarification of the item and that it has fallen short of requiring adequate disclosure in some cases where insiders have had significant dealings with the issuer or its subsidiaries or have had a significant interest in dealings between third persons and the issuer or its subsidiaries.

It is proposed to amend this item to require disclosure with respect to a material interest of the insider in any transaction with the issuer or its subsidiaries. Where the amount involved in any such transaction does not exceed $30,000, the instructions would eliminate the requirement of disclosure. (Previously, the $30,000 amount was related to the interest of the insider rather than to the transaction.) Interpretation of the item is made easier and its scope reduced by eliminating the use of the term "associate" and limiting the categories of persons to whom the item would apply. Previously, by reason of the language of the item requiring disclosure of an indirect material interest of an "associate", the item might require disclose of transactions between a company and an associate of an associate of an insider.

It is contemplated that changes similar to those proposed for Item 7 would, in due course, be made in the corresponding requirements of the registration and reporting forms under both the Securities Act of 1933 and the Securities Exchange Act of 1934.

*Items 9, 10 and 11.* These items specify the information to be furnished where the matter to be acted upon pursuant to the proxy is a bonus, profit sharing or other remuneration plan, a pension or retirement plan or the granting of options, warrants or rights. It is proposed to amend these items to provide that in describing provisions already made for similar benefits for directors, officers and employees, information is to be given not only with respect to plans currently in effect but also with respect to benefits under plans in effect within the last five years. In the past, some persons have construed these items to relate only to plans currently in effect. Where security holders are asked to vote upon a proposed plan providing benefits for directors, officers or employees, the amended items would provide information as to the over-all benefits which have been provided under other plans in recent years.

Item 11(a) would be amended to require, in the case of options, warrants or rights to be granted or extended, a statement as to the tax consequences of the issuance and exercise thereof to the recipient and to the issuer. This proposed amendment codifies current administrative practice in requiring such disclosure.

*Item 12.* This item specifies the information to be furnished where proxies are solicited with respect to the authorization or issuance of securities. Among other things, the item requires a description of the transaction in which the securities are to be issued. It is proposed to amend the item to provide that where it is impracticable to describe the transaction there shall be stated the reason for the claimed impracticability, the purpose of the authorization and whether further authorization for the issuance will be submitted to a vote of security holders prior to the time the securities are issued.

[3] Commissioner Bartley concurring in the result.

*Item 14.* This item specifies the information to be furnished where proxies are solicited in regard to a proposed merger, consolidation, acquisition or similar matter. The item requires certain information to be furnished with respect to each person, other than the issuer, involved in the proposed transaction. It is proposed to amend this item to codify present administrative practice in requiring that such information be furnished for the issuer also in order that security holders may have a complete picture of the nature and effect of the proposed transaction. The amended item would also codify present administrative practice in requiring information with respect to the existing pro forma capitalization and appropriate summaries of earnings on an historical and pro forma basis for the persons involved in the proposed transaction.

*Item 15.* This item requires the furnishing of certified financial statements of the issuer and its subsidiaries, and uncertified statements for other persons involved in proposed transactions to be voted upon by security holders. It is proposed to amend this item to require that the financial statements furnished for persons other than the issuer shall also be certified where practicable. This is in accord with the present administrative practice of asking for certified statements of such persons where they are available or can be furnished without undue effort or expense.

It is also proposed to amend Item 15 to provide more flexibility in permitting the omission of required financial statements or in requiring additional financial statements where they are necessary to the exercise of prudent judgment in regard to any matter to be acted upon.

*Item 17.* This item specifies the information to be furnished when proxies are solicited with respect to a restatement of the accounts of the issuer. It would be amended to require a tabular presentation of amounts when appropriate, particularly in the case of a recapitalization. Such presentation would be required in the interest of greater clarity.

*Item 22.* It is proposed to amend Items 12(d), 13(c), 14(a) and 20 to delete the requirement for stating the voting needed for approval of the matter to be acted upon. This information would be required by a new Item 22 which would call for the vote required for approval of each matter to be submitted to a vote of security holders, other than elections to office. The new item would codify the current administrative practice of calling for such information with respect to all proposals, other than elections to office.

*Schedule 14B.* Schedule 14B specifies the information to be included in statements required by Rule 14a–11 to be filed for each participant in a contest involving elections to office. It is proposed to add a new general instruction to this schedule which would require that where the participant filing the schedule is a partnership, corporation, association or other business entity, the information required by certain items of the schedule shall be given with respect to each partner, officer and director of the organization and each person controlling the organization who is not a participant and is not required to file a schedule. The purpose of this instruction is to penetrate the organizational "veil" and require information with respect to the persons connected with the organization.

*Item 3.* This item calls for information with respect to a participant's interests in securities of the issuer. Among other things, this item requires information as to whether the participant is a party to any contract, arrangement or understanding with any person with respect to any securities of the issuer. It is proposed to amend this item to inquire also whether the participant was a party to any such contract, arrangement or understanding within the past year, the purpose being to obtain information as to transactions which may have been completed at the time of filing the schedule.

*Item 4.* This item calls for a description of certain additional matters involving the participant. It is proposed to amend the item to call also for a statement of the total amount contributed or proposed to be contributed in furtherance of the solicitation if such amendment exceeds or will exceed $500 in the aggregate. The purpose of this requirement is to reveal the extent to which participants are financing the solicitation.

The proposed amendments would be adopted pursuant to section 14(a) of the Securities Exchange Act of 1934, as amended (48 Stat. 895, as amended, 15 U.S.C. 78n(a)). The text of the proposed amendments are attached hereto.

All interested persons are invited to submit their views and comments on the proposed amendments, in writing, to the Securities and Exchange Commission, Washington, D.C. 20549, on or before January 4, 1965. Except where it is requested that such communications not be disclosed, they will be considered available for public inspection.

By the Commission.

[SEAL] ORVAL L. DUBOIS, *Secretary.*

DECEMBER 7, 1964.

SOLICITATIONS OF PROXIES

**§ 240.14a–2 Solicitations to which §§ 240.14a–1 to 240.14a–12 apply.**

Sections 240.14a–1 to 240.14a–12 apply to every solicitation of a proxy with respect to securities registered pursuant to section 12 of the Act, whether or not trading in such securities has been suspended, except the following:

* * * * *

**§ 240.14a–4 Requirements as to proxy.**

(b) (1) Means shall be provided in the form of proxy whereby the person solicited is afforded an opportunity to specify by ballot a choice between approval or disapproval of each matter or group of related matters referred to therein as intended to be acted upon, other than elections to office. A proxy may confer discretionary authority with respect to matters as to which a choice is not so specified provided the form of proxy states in bold-face type how it is intended to vote the shares represented by the proxy in each such case.

(2) A form of proxy which provides both for elections to office and for action on other specified matters shall be prepared so as to enable the security holder to grant or withhold authority to vote for elections to office. Any such form of proxy which is executed by the security holder in such manner as not to withhold authority to vote for elections to office shall be deemed to grant such authority, provided the form of proxy so states in bold-face type.

NOTE: Paragraph (2) does not apply in the case of a merger or consolidation involving the issuer if the elections to office are an integral part of the plan and are not to be separately voted upon.

* * * * *

**§ 240.14a–9 False or misleading statements.**

(a) No solicitation subject to §§ 240.14a–1 to 240.14a–12 shall be made by means of any proxy statement, form of proxy, notice of meeting or other communication, written or oral, containing any statement which, at the time and in the light of the circumstances under which it is made, is false or misleading with respect to any material fact, or which omits to state any material fact necessary in order to make the statements therein not false or misleading or necessary to correct any statement in any earlier communication with respect to the solicitation of a proxy for the same meeting or subject matter which has become false or misleading.

(b) The fact that a proxy statement, form of proxy or other soliciting material has been filed with or examined by the Commission shall not be deemed a finding by the Commission that such material is accurate or complete or not false or misleading, or that the Commission has passed upon the merits of or approved any statement contained therein or any matter to be acted upon by security holders. No representation contrary to the foregoing shall be made.

NOTE: * * *

**§ 240.14a–11 Special provisions applicable to election contests.**

* * * * *

(b) *Participant or participant in a solicitation.* For purposes of this rule the terms "participant" and "participant in a solicitation" include the following:

* * * * *

(3) any committee or group which solicits proxies, any member of such committee or group, and any person whether or not named as a member who, acting alone or with one or more other persons directly or indirectly takes the initiative, or engages, in organizing, directing, or financing in excess of $500, any such committee or group;

* * * * *

**§ 240.14a–12 Solicitation prior to furnishing required proxy statement.**

(a) Notwithstanding the provisions of § 240.14a–3(a), a solicitation (other than one subject to § 240.14a–11) may be made prior to furnishing security holders a written proxy statement containing the information specified in Schedule 14A with respect to such solicitation if:

(1) The solicitation is made in opposition to a prior solicitation:

(2) No form of proxy is furnished to security holders prior to the time the written proxy statement required by § 240.14a–3(a) is furnished to security holders: *Provided, however,* That this subparagraph (2) shall not apply where a proxy statement then meeting the requirements of Schedule 14A has been furnished to security holders;

(3) The nature of the interest of the person or persons making the solicitation is set forth in each communication sent or given to security holders in connection with the solicitation; and

(4) A written proxy statement meeting the requirements of this regulation is sent or given to security holders at the earliest practicable date.

(b) Three copies of any soliciting material proposed to be sent or given to security holders prior to the furnishing of the written proxy statement required by § 240.14a–3(a) shall be filed with the Commission in preliminary form at least five business days prior to the date definitive copies of such material are first sent or given to security holders, or such shorter period as the Commission may authorize upon a showing of good cause therefor.

NOTE: For the purpose of paragraph (a)(1), the term "prior solicitation" shall include an invitation for tenders or other publicized activity, which if successful, could reasonably have the effect of defeating the action proposed to be taken at the meeting.

SCHEDULE 14A—INFORMATION REQUIRED IN PROXY STATEMENT

*Item 2. Dissenters' rights of appraisal.* Outline briefly the rights of appraisal or similar rights of dissenters with respect to any matter to be acted upon and indicate any statutory procedure required to be followed by dissenting security holders in order to perfect such rights. Where such rights may be exercised only within a limited time after the date of adoption of a proposal, the filing of a charter amendment or other similar act, state whether the persons solicited will be notified of such date.

*Instruction.* Indicate whether a security holder's failure to vote against a proposal will constitute a waiver of his appraisal or similar rights and whether a vote against a proposal will be deemed to satisfy and notice requirements under State law with respect to appraisal rights.

*Item 5. Voting securities and principal holders thereof.* * * *

(e) If a change in control of the issuer has occurred since the beginning of its last fiscal year, state the name of the person or persons who acquired such control, the basis of such control, the date and a description of the transaction or transactions in which control was acquired and the percentage of voting securities of the issuer now owned by such person or persons.

*Instruction.* Include a description of any financing arrangements, the operation of the terms of which may at a subsequent date affect control of the registrant, directly or indirectly, including any pledge of securities of the issuer or any of its parents or subsidiaries.

* * * * *

*Item 7. Remuneration and other transactions with management and others.* * * *

(a) Furnish the following information in substantially the tabular form indicated below as to all direct remuneration paid by the issuer and its subsidiaries during the issuer's last fiscal year to the following persons for services in all capacities:

(1) Each director of the issuer whose aggregate direct remuneration exceeded $30,000, and each of the three highest paid officers of the issuer whose aggregate direct remuneration exceeded that amount, naming each such director and officer.

(2) All directors and officers of the issuer as a group, stating the number of persons in the group without naming them.

| (A) Name of individual or number of persons in group | (B) Capacities in which remuneration was received | (C) Aggregate direct remuneration |
|---|---|---|
| | | |

*Instructions.* 1. Except as provided in Instruction 2, paragraph (a) of this item applies to any person who was a director or officer of the issuer at any time during the period specified. However, information need not be given for any portion of the period during which such person was not a director or officer of the issuer.

2. Paragraph (a)(1) of this item does not apply to any person who was not named as a director or officer of the issuer in the first application for registration or registration statement filed on Form 10 for the registration of a class of securities pursuant to section 12 of the Act, provided (i) such person has not been a director or officer of the issuer since the filing of such application or statement and (ii) the same information is not otherwise required to be disclosed in material filed with the Commission.

3. The information is to be given on an accrual basis if practicable. The tables required by this paragraph (a) and paragraph (b) below may be combined if the issuer so desires.

4. Do not include remuneration paid to a partnership to which any director or officer was a partner, but see paragraph (f) below.

* * * * *

(f) Describe briefly any transactions since the beginning of the issuer's last fiscal year or any proposed transactions, to which the issuer or any of its subsidiaries was or is to be a party, in which any of the following persons had or is to have a direct or indirect material interest, naming such person and stating his relationship to the issuer, the nature of his interest in the transaction and, where practicable, the amount of such interest:

(1) Any director or officer of the issuer;

(2) Any nominee for election as a director;

(3) Any security holder named in answer to Item 5(d); or

(4) Any relative or spouse of any of the foregoing persons, or any relative of such spouse, who has the same home as such person or who is a director or officer of any parent or subsidiary of the issuer.

*Instructions.* 1. This Item 7(f) applies to any person who held any of the positions or relationships specified at any time during the period specified. However, information need not be given for any portion of the period during which such person did not hold any such position or relationship.

2. No information need be given in answer to this Item 7(f) as to any remuneration or other transaction reported in response to Item 7(a), (b), (c), (d), or (e).

3. No information need be given in answer to this Item 7(f) as to any transaction where—

(a) The rates or charges involved in the transaction are fixed by law or determined by competitive bids;

(b) The transaction involves services as a bank depositary of funds, transfer agent, registrar, trustee under a trust indenture, or similar services;

(c) The amount involved in the transaction, including all periodic installments in the case of any lease or other agreement providing for periodic payments or installments, does not exceed $30,000;

(d) The transaction involves only the purchase of products or services from the issuer or its subsidiaries in the ordinary course of business on terms not more favorable than those available to persons other than those specified in subparagraphs (1) through (4) above and the aggregate amount of such purchases during the issuer's last fiscal year did not exceed 15 percent of the total sales of the particular class of products or services by the issuer and its subsidiaries during such fiscal year; or

(e) the interest of the specified person arises solely from the ownership of securities of the issuer, the specified person receives no extra or special benefit not shared on a pro rata basis by all holders of securities of the class, and not more than 25 percent of the outstanding securities of such class is owned beneficially, in the aggregate by all of the persons specified in subparagraph (1) through (4) of this Item 7(f).

4. It should be noted that this item calls for disclosure of indirect, as well as direct, material interests in transactions. A person who has a position or relationship with a firm, corporation, or other entity, which engages in a transaction with the issuer or its subsidiaries may have an indirect interest in such transaction by reason of such position or relationship. However, a person shall be deemed not to have a material indirect interest in a transaction within the meaning of this Item 7(f) where:

(a) The interest arises only (i) from such person's position as a director of another corporation which is a party to the transaction, or (ii) from the direct or indirect ownership by such person and all other persons specified in subparagraphs (1) through (4) above, in the aggregate, of less than a 10 percent interest in another person which is a party to the transaction, or (iii) from both such position and ownership; or

(b) The interest of such person arises solely from an interest in another person which is a party to the transaction with the issuer of any of its subsidiaries and the transaction is not material to such other person.

5. The amount of the interest of any specified person shall be computed without regard to the amount of the profit or loss involved in the transaction. Where it is not practicable to state the approximate amount of the interest, the approximate amount involved in the transaction shall be indicated.

6. In describing any transaction involving the purchase or sale of assets by or to the issuer or any of its subsidiaries, otherwise than in the ordinary course of business, state the cost of the assets to the purchaser and, if acquired by the seller within two years prior to the transaction, the cost thereof to the seller.

*Item 9. Bonus, profit sharing and other remuneration plans.* If action is to be taken with respect to any bonus, profit sharing or other remuneration plan, furnish the following information:

* * * * *

(d) Describe the benefits received or to be received pursuant to all remuneration or incentive plans, now in effect or in effect

within the last five years, by (1) each director or officer named in answer to Item 7(a) who may participate in the plan to be acted upon; (2) all directors and officers as a group, if any of such directors or officers may participate in the plan; and (3) all employees, if employees may participate in the

*Instructions.* 1. The term "plan" as used in this item means any plan as defined in Instruction 1 to Item 7(b).

2. Paragraphs (b) and (c) do not apply to warrants or rights to be issued to security holders as such on a pro rata basis.

3. Instruction 2 to Item 9 shall also apply

by the issuer of any other going business or of the assets thereof, (iv) the sale or other transfer of all or any substantial part of the assets of the issuer, or (v) the liquidation or dissolution of the issuer:

(a) Outline briefly the material features of the plan. State the reasons therefor and

exercise of prudent judgment in regard to any matter to be acted upon. In the usual case, financial statements are deemed material to the exercise of prudent judgment where the matter to be acted upon is the authorization or issuance of a material

within the last five years, by (1) each director or officer named in answer to Item 7(a) who may participate in the plan to be acted upon; (2) all directors and officers as a group, if any of such directors or officers may participate in the plan; and (3) all employees, if employees may participate in the plan.

• • • • •

*Instructions.* 1. The term "plan" as used in this item means any plan as defined in Instruction 1 to Item 7(b).

2. Paragraph (d) applies to all bonus, profit sharing, pension, retirement, stock option, stock purchase, deferred compensation or other remuneration or incentive plans.

3. If the plan is set forth in a written document, three copies thereof shall be filed with the Commission at the time preliminary copies of the proxy statement and form of proxy are filed pursuant to paragraph (a) of § 240.14a–6.

*Item 10. Pension and retirement plans.* If action is to be taken with respect to any pension or retirement plan, furnish the following information:

• • • • •

(d) Describe the benefits received or to be received pursuant to all remuneration or incentive plans, now in effect or in effect within the last five years, by (1) each director or officer named in answer to Item 7(a) who may participate in the plan to be acted upon; (2) all directors and officers as a group, if any of such directors or officers may participate in the plan; and (3) all employees, if employees may participate in the plan.

• • • • •

*Instructions.* 1. The term "plan" as used in this item means any plan as defined in Instruction 1 to Item 7(b).

2. The information called for by paragraph (b)(3) or (c)(2) need not be given as to payments made on an actuarial basis pursuant to any group pension plan which provides for fixed benefits in the event of retirement at a specified age or after a specified number years of service.

3. Instruction 2 to Item 9 shall apply to paragraph (d) of this item.

4. Copies of the plan described in answer to this item, if set forth in a written document, shall be filed in accordance with Instruction 3 to Item 9.

*Item 11. Options, warrants or rights.* If action is to be taken with respect to the granting or extension of any options, warrants or rights to purchase securities of the issuer or any subsidiary, furnish the following information:

(a) State (i) the title and amount of securities called for or to be called for by such options, warrants or rights; (ii) the prices, expiration dates and other material conditions upon which the options, warrants or rights may be exercised; (iii) the consideration received or to be received by the issuer or subsidiary for the granting or extension of the options, warrants or rights; (iv) the market value of the securities called for or to be called for by the options, warrants or rights as of the latest practicable date; and (v) in the case of options, the tax consequences of the issuance and exercise of such options to the recipient and to the issuer.

• • • • •

(c) Describe the benefits received or to be received pursuant to all remuneration or incentive plans, now in effect or in effect within the last five years, by (i) each director or officer named in answer to Item 7(a) who may participate in the plan to be acted upon; (2) all directors and officers as a group, if any of such directors or officers may participate in the plan; and (3) all employees, if employees may participate in the plan.

*Instructions.* 1. The term "plan" as used in this item means any plan as defined in Instruction 1 to Item 7(b).

2. Paragraphs (b) and (c) do not apply to warrants or rights to be issued to security holders as such on a pro rata basis.

3. Instruction 2 to Item 9 shall also apply to paragraph (c) of this item.

4. Include in the answer to paragraph (c) as to each director or officer named in answer to Item 7(a) and as to all directors and officers as a group (i) the amount of securities acquired during the past five years through the exercise of options granted during the period of prior thereto, (ii) the amount of securities sold during such period of the same class as those acquired through the exercise of such options, and (iii) the amount of securities subject to all unexercised options held as of the latest practicable date.

5. Copies of the plan described in answer to this item, if set forth in a written document, shall be filed in accordance with Instruction 3 to Item 9.

NOTE. The Commission should be informed, as supplemental information, when the proxy statement in preliminary form is filed, as to when the options, warrants or rights and the shares called for thereby will be registered under the Securities Act of 1933, or if such registration is not contemplated the section of the Act or rule of the Commission under which exemption from such registration is claimed and the facts relied upon to make the exemption available.

*Item 12. Authorization or issuance of securities otherwise than for exchange.* If action is to be taken with respect to the authorization or issuance of any securities otherwise than for exchange for outstanding securities of the issuer, furnish the following information:

• • • • •

(c) Describe briefly the transaction in which the securities are to be issued, including a statement as to (1) the nature and approximate amount of consideration received or to be received by the issuer, and (2) the approximate amount devoted to each purpose so far as determinable for which the net proceeds have been or are to be used. If it is impracticable to describe the transaction in which the securities are to be issued, state the reason, indicate the purpose of the authorization of the securities, and state whether further authorization for the issuance of the securities by a vote of security holders will be solicited prior to such issuance.

(d) If the securities are to be issued otherwise than in a general public offering for cash, state the reasons for the proposed authorization or issuance and the general effect thereof upon the rights of existing security holders.

*Item 13. Modification or exchange of securities.* If action is to be taken with respect to the modification of any class of securities of the issuer, or the issuance or authorization for issuance of securities of the issuer in exchange for outstanding securities of the issuer, furnish the following information:

• • • • •

(c) State the reasons for the proposed modification or exchange and the general effect thereof upon the rights of existing security holders.

• • • • •

*Item 14. Mergers, consolidations, acquisitions and similar matters.* Furnish the following information if action is to be taken with respect to any plan for (1) the merger or consolidation of the issuer into or with any other person or of any other person into or with the issuer, (ii) the acquisition by the issuer or any of its security holders of securities of another issuer, (iii) the acquisition by the issuer of any other going business or of the assets thereof, (iv) the sale or other transfer of all or any substantial part of the assets of the issuer, or (v) the liquidation or dissolution of the issuer:

(a) Outline briefly the material features of the plan. State the reasons therefor and the general effect thereof upon the rights of existing security holders. If the plan is set forth in a written document, file three copies thereof with the Commission at the time preliminary copies of the proxy statement and form of proxy are filed pursuant to § 240.14a–6(a).

(b) Furnish the following information as to the issuer and each person (other than totally-held subsidiaries of the issuer) which is to be merged into the issuer or into or with which the issuer is to be merged or consolidated or the business or assets of which are to be acquired or which is the issuer of securities to be acquired by security holders of the issuer. What is required is information essential to an investor's appraisal of the action proposed to be taken.

• • • • •

(4) Furnish a tabulation in columnar form showing the existing and the pro forma capitalization.

(5) Furnish in columnar form for each of the last five fiscal years a historical summary of earnings and show per share amounts of net earnings, dividends declared for each year and book value per share at the end of the latest year.

(6) Furnish in columnar form for each of the last five fiscal years a combined pro forma summary of earnings, as appropriate in the circumstances, indicating the aggregate and per-share earnings for each such year and the pro forma book value per share. If the transaction establishes a new basis of accounting for assets of any of the persons included therein, the pro forma summary of earnings shall be furnished only for the most recent fiscal year.

• • • • •

*Item 15. Financial statements.* • • •

(b) If action is to be taken with respect to any matter specified in Item 14(b), furnish financial statements for each person specified therein, other than the issuer whose financial statements are required by Item 15(a), such as would currently be required in an original application by such person for registration of securities under the Act. Such statements shall be certified if practicable, but all schedules other than the schedules of supplementary profit and loss information may be omitted. However, such statements may be omitted for (1) a totally-held subsidiary of the issuer which is included in the consolidated statement of the issuer and its subsidiaries, or (ii) a person which is to succeed to the issuer and one or more of its totally-held subsidiaries under such circumstances that Form 8–B would be appropriate for registration of securities of such person issued in exchange for listed securities of the issuer.

*Instruction.* Such statements shall be prepared in accordance with Regulation S–X and, if certified, shall be certified in accordance with that regulation.

(c) The Commission may upon the request of the issuer, permit the omission of any of the statements herein required where such statements are not necessary for the exercise of prudent judgment in regard to any matter to be acted upon, or may permit the filing in substitution therefor of appropriate statements of comparable character. The Commission may also require the filing of other statements in addition to, or in substitution for, the statements herein required in any case where such statements are necessary or appropriate for an adequate presentation of the financial condition of any person whose financial statements are required, or whose statements are otherwise material for the

exercise of prudent judgment in regard to any matter to be acted upon. In the usual case, financial statements are deemed material to the exercise of prudent judgment where the matter to be acted upon is the authorization or issuance of a material amount of senior securities, but are not deemed material where the matter to be acted upon is the authorization or issuance of common stock, otherwise than in an exchange, merger or consolidation.

• • • • •

*Item 17. Restatement of accounts.* If action is to be taken with respect to the restatement of any asset, capital, or surplus account of the issuer, furnish the following information:

• • • • •

(c) State the name and amount of each account (including any reserve accounts) affected by the restatement thereon. Tabular presentation of the amounts shall be made when appropriate, particularly in the case of recapitalizations.

• • • • •

*Item 20. Amendment of charter, bylaws or other documents.* If action is to be taken with respect to any amendment of the issuer's charter, bylaws or other documents as to which information is not required above, state briefly the reasons for and general effect of such amendment.

*Item 22. Vote required for approval.* As to each matter which is being submitted to a vote of security holders, other than elections to office, state the vote required for its approval.

SCHEDULE 14B

*Instructions.* 1. The item numbers and captions of the items shall be included but the text of the items may be omitted if the answers thereto are so prepared as to indicate clearly the coverage of the items. Answer every item. If an item is inapplicable or the answer is in the negative, so state. The information called for by Items 2(a) and 3(a) or a fair summary thereof is required to be included in all preliminary soliciting material by § 240.14a–11(d)(3).

2. If the participant is a partnership, corporation, association or other business entity, the information called for by Items 2, 3 and 4 shall be given with respect to each partner, officer and director of such entity, and each person controlling such entity, who is not a participant.

*Item 3. Interests in securities of the issuer.* • • •

(e) State whether or not you are, or were within the past year, a party to any contract, arrangements or understandings with any person with respect to any securities of the issuer, including, but not limited to joint ventures, loan or option arrangements, puts or calls, guarantees against loss or guarantees of profit, division of losses or profits, or the giving or withholding of proxies. If so, name the parties to such contracts, arrangements or understandings and give the details thereof.

• • • • •

*Item 4. Further matters.* • • •

(d) State the total amount contributed and proposed to be contributed by you in furtherance of the solicitation, directly or indirectly, if such amount exceeds or will exceed $500 in the aggregate.

### Agency for International Development

### CHRISTIAN REFORMED WORLD RELIEF COMMITTEE, INC.

### Register of Voluntary Foreign Aid Agencies

In accordance with the regulations of the Agency for International Development concerning Registration of Agencies for Voluntary Foreign Aid (A.I.D. Regulation 3) 22 CFR, Part 203, promulgated pursuant to section 621 of the Foreign Assistance Act of 1961, as amended, notice is hereby given that a certificate of registration as a voluntary foreign aid agency has been issued by the Advisory Committee on Voluntary Foreign Aid of the Agency for International Development to the following agency:

Christian Reformed World Relief Committee, Inc.
2417 Eastern Avenue, Southeast
Grand Rapids, Michigan 49507

Dated: December 15, 1964.

WILLIAM S. GAUD,
*Acting Administrator.*

[F.R. Doc. 64-13221; Filed, Dec. 23, 1964; 8:45 a.m.]

[Delegation of Authority No. 57]

### DELEGATION OF AUTHORITY

### Miscellaneous Amendments

By virtue of the authority delegated to me by Delegation of Authority No. 104, as amended, dated November 3, 1961, from the Secretary of State (26 F.R. 10608), I hereby direct that Delegation of Authority Nos. 19 and 27 be, and they are hereby amended, as follows:

SECTION 1. Delegation of Authority No. 19: Insert the following new paragraph immediately preceding the last paragraph: "The Assistant Administrator for Latin America, notwithstanding the preceding limitation with respect to entering into agreements with agencies which do not have a basic agreement with A.I.D., may enter into and implement, agreements with any agency of the United States Government to undertake specific projects or programs financed in whole or in part by A.I.D., subject to the concurrence of the Assistant Administrator for Administration".

SEC. 2. Delegation of Authority No. 27: (a) Amend paragraph 12 of Section II by inserting before the semicolon the following: ", except that the Assistant Administrator for Latin America may detail or assign Foreign Service Reserve and Foreign Service Staff personnel of the Regional Bureau to the Bureau for Latin America, A.I.D./W". (b) Add the following new paragraph following paragraph 4 of Section III: "The Assistant Administrator for Latin America may exercise the following authorities, notwithstanding the foregoing limitations, for the countries or areas within his region: (1) approve the assignment or reassignment of persons employed as Chief of Mission, Deputy Chief of Mission and AID Representatives, subject to the concurrence of the Administrator, and (2) set or approve the grades of the positions of Mission Director, Deputy Director or AID Representative within the standards and criteria prescribed for the classification of such positions as agreed to between State and A.I.D. on April 22, 1963 and subject to the concurrence of the Assistant Administrator for Administration".

The foregoing authorities are to be exercised in accordance with the policies, procedures and regulations of the Agency including those which require the clearance of other offices prior to taking administrative action and those which require consultation with other offices.

This Delegation of Authority shall be effective immediately.

Dated: December 8, 1964.

DAVID E. BELL,
*Administrator.*

### NEW MEXICO

### Order Providing for Opening of Public Lands

DECEMBER 15, 1964.

1. In exchange of lands made under the provisions of section 8 of the Act of June 28, 1934 (48 Stat. 1269), as amended June 26, 1936 (49 Stat. 1976; 43 U.S.C. 315g), the following-described lands have been reconveyed to the United States:

NEW MEXICO PRINCIPAL MERIDIAN

T. 10 N., R. 1 E.,
Sec. 4, lots 1 to 8, inclusive;
Sec. 5, lots 1 to 8, inclusive;
Sec. 6, lots 1 and 2.
T. 11 N., R. 1 E.,
Sec. 17, lots 2, 3, 4, 5;
Sec. 21;
Sec. 29, lots 1, 2, 3, E½, NE¼NW¼;
Sec. 31, lot 1;
Sec. 33.
T. 23 N., R. 8 W.,
Sec. 16.
T. 23 N., R. 9 W.,
Sec. 2, lots 1, 2, 3, 4, S½N½, SW¼.
T. 29 N., R. 10 W.,
Sec. 16, NE¼NE¼, S½NE¼, NW¼, S½.
T. 19 N., R. 12 W.,
Sec. 32.
T. 18 N., R. 13 W.,
Sec. 2, W½SE¼;
Sec. 16, W½SE¼, SE¼SE¼.
T. 19 N., R. 13 W.,
Sec. 2, lots 1, 2, 3, 4, S½N½, S½;
Sec. 36.

The areas described aggregate 5,758.15 acres.

2. The lands in Tps. 10 and 11 N., R. 1 E., have been classified for recreational and public purposes pursuant to the Act of June 14, 1926 (44 Stat. 741) as amended by the Act of June 4, 1954 (68 Stat. 173), and under authority of section 7 of the Taylor Grazing Act of June 28, 1934, as amended. This classification segregates the land from all appropriation under the public land laws, including location under the mining laws except as to applications under the Recreation and Public Purposes Act by qualified State and local governments.

3. The lands in Tps. 10 and 11 N., R. 1 E., are located 5 miles west of the City of Albuquerque, and are accessible from U.S. Highway 66 and unimproved dirt roads. The elevation is about 6,000 feet and the precipitation is approximately 8 inches. The lands are gently sloping and the west portion extends into the Rio Puerco drainage. The lands are not suitable for irrigation because of the lack of a known source of irrigation water. The lands in T. 23 N., Rs. 8 and 9 W. are rolling to rough; the vegetation is mostly sage-grass with a number of desert shrub species occurring at various intervals and scattered low-value pinon-juniper in limited amounts. The soil is sandy to sandy-loam in the upland portions and sandy-clay to heavy clay in the lower elevations. The elevation is from 6,700 to 6,800 feet. The land in T. 29 N., R. 10 W., is located about 4½ miles east of Bloomfield, New Mexico and is accessible over an improved dirt road. The terrain is rolling to hilly with gravel outcroppings along the slopes of the higher elevations. Sheet and rill erosion is evident over the entire area. Vegetation consists of annual grasses, scattered juniper and sparse browse. The lands in T. 19 N., R. 12 W. and Tps. 18 and 19 N., R. 13 W., are generally rolling at an elevation of approximately 5,000 feet; the average rainfall is 12 inches. The vegetation consists principally of blue gramma and blue grass with some stipa, rice grass, galleta and other grass types in lesser amounts.

4. Pursuant to authority delegated to me by Order No. 701 of July 23, 1964, section 1.5c, the land affected by this order is hereby restored to the operation of the public land laws, subject to any valid rights, the provisions of existing withdrawals, and the requirements of applicable law, rules and regulations, as of 10:00 a.m., January 20, 1965.

5. The United States did not acquire minerals in the lands described above.

6. Inquiries and applications concerning the lands above described shall be addressed to the Manager, Land Office, Bureau of Land Management, P.O. Box 1449, Santa Fe, New Mexico, 87501.

W. J. ANDERSON,
*Acting State Director.*

[BLM 080188; Survey Group 95]

### MINNESOTA

### Notice of Filing of Plat of Survey

DECEMBER 18, 1964.

The plat of survey of an island in sec. 1, T. 46 N., R. 19 W., fourth principal meridian, Minnesota, containing 1.28 acres, accepted on November 23, 1964, will be officially filed in this office effective at 10 a.m., on January 22, 1965.

The character of the island and the timber growth thereon indicate its existence when Minnesota was admitted into the Union and at the time of the original survey. It is therefore determined to be public land.

The island is upland in character within the meaning of the swamp land acts.

Except for valid existing rights, the island will not be subject to use and/or disposition under the public land laws, including the mineral leasing and mining laws, until a further order is issued.

All inquiries relating to the island should be sent to the Manager, Eastern States Land Office, Bureau of Land Management, Washington, D.C., 20240.

DORIS A. KOIVULA,
*Manager, Land Office.*

## Bureau of Reclamation

[No. 83]

### YUMA IRRIGATION PROJECT, ARIZONA-CALIFORNIA RESERVATION DIVISION, CALIFORNIA

### Public Notice of Annual Operation and Maintenance Charges and Annual Water Rental Charges

NOVEMBER 30, 1964.

1. *Annual operation and maintenance charges for lands under public notice, Reservation Division.* The minimum annual operation and maintenance charge for the Calendar Year 1965 and thereafter until further notice against all lands of the Reservation Division under public notice shall be $13.00 per irrigable acre, whether water is used or not, payment of which will entitle the water user to 7 acre-feet of water per acre on certain sandy areas shown on the list attached to Public Notice No. 72 dated December 1, 1955, as amended February 16, 1956, and to 5 acre-feet of water per irrigable acre on all other lands of the Division under public notice. Additional water, if available, will be furnished at the rate of $2.75 per acre-foot payable in advance. Credit equivalent to the amount paid for additional water unused prior to the end of any calendar year will be applied against the minimum charges for water for the following calendar year. No credit will be given for water purchased during any calendar year at the minimum charge but undelivered at the end of said calendar year.

The minimum annual operation and maintenance charge per calendar year for each parcel of land under public notice containing less than one acre shall be $13.00.

Where in the opinion of the Project Manager, Yuma Projects Office, it may be done without interference with other project requirements, upon written request filed in advance by a water user who is not delinquent in the payment of any operation and maintenance charges, water will be furnished free of charge for reclaiming lands by the usual methods: *Provided, however,* That lands for which free water was served during the preceding calendar year will not again be served free water in the absence of evidence satisfactory to the Project Manager that although the water so served free of charge during such preceding year was applied to the land in sufficient quantities over a period of not less than 3 months, the results accomplished during such preceding year were not satisfactory.

All minimum annual operation and maintenance charges shall be due and payable on January 1, 1965, and on January 1 of each year thereafter.

2. *Annual water rental charges for other lands, Reservation Division.* Irrigation water will be furnished during the Calendar Year 1965 and thereafter until further notice for lands in the Reservation Division not under public notice which can be irrigated from the present distribution system without further construction expense by the Bureau, upon a rental basis under approved applications for temporary water service, at the following rates: The minimum annual charge shall be $13.00 per irrigable acre, payment of which will entitle the applicant to 5 acre-feet of water per acre. Additional water, if available, will be furnished at the rate of $2.75 per acre-foot. All charges shall be payable in advance of the delivery of water. Credit will be given for additional water paid for but not used.

3. *Penalties.* On all payments not made on or before the due dates, there shall be added on the following day a penalty of one-half of one percent of the amount unpaid and a like penalty of one-half of one percent of the amount unpaid on the first day of each calendar month thereafter so long as such default shall continue.

4. *Place of payment.* All payments should be made to the Bureau of Reclamation, Marine Corps Auxiliary Air Station, or mailed to Bureau of Reclamation, Bin 151, Yuma, Arizona.

(Act of June 17, 1902, 32 Stat. 388, as amended or supplemented)

A. B. WEST,
*Regional Director.*

DECEMBER 18, 1964.

# DEPARTMENT OF AGRICULTURE

## Office of the Secretary

## TEXAS

### Designation of Areas for Emergency Loans

For the purpose of making emergency loans pursuant to section 321 of the Consolidated Farmers Home Administration Act of 1961 (7 U.S.C. 1961), it has been determined that in the hereinafter-named county in the State of Texas a natural disaster has caused a need for agricultural credit not readily available from commercial banks, cooperative lending agencies, or other responsible sources.

TEXAS

Hockley

Pursuant to the authority set forth above, emergency loans will not be made in the above-named county after June 30, 1965, except to applicants who previously received emergency or special livestock loan assistance and who can qualify under established policies and procedures.

Done at Washington, D.C., this 21st day of December 1964.

ORVILLE L. FREEMAN,
*Secretary.*

# DEPARTMENT OF COMMERCE

## Bureau of International Commerce

[Case No. 338]

### JOSE LUIS MUSSOT AND YAMIL AMADO HARON KOURI Y PEREZ

### Order Denying Export Privileges

In the matter of Jose Luis Mussot, Mexicali No. 53-2, Mexico City, Mexico, and Yamil Amado Haron Kouri y Perez, also known as Yamil Kouri, % Centro Nacional Cubano De Investigaciones Cientificas, Calle 21 No. 454, Vedado, Havana, Cuba, respondents; Case No. 338.

Separate charging letters were issued against the above named respondents by the Director of the Investigations Division, Office of Export Control, Bureau of International Commerce. The charging letter against Mussot is dated October 12, 1964 and that against Kouri is dated November 6, 1964. As to each respondent it is charged that in May 1964 he acted in concert with other persons in the execution of a scheme to obtain and ship to Cuba approximately $48,000 worth of U.S.-origin scientific research equipment obtained from a Mexican subsidiary of the U.S. supplier of the equipment. The manner in which each respondent participated is set forth in the respective charging letters.

Prior to the issuance of the charging letters a temporary denial order was issued against each respondent. The temporary order against Mussot for sixty days was issued on September 29, 1964 (29 F.R. 13615). On October 21, 1964 this was extended until the completion of compliance proceedings (29 F.R. 14757). The temporary order against Kouri for sixty days was issued on October 27, 1964 (29 F.R. 14861) and this expires on December 26, 1964.

Kouri has not responded to the charging letter and he is held to be in default. Mussot replied to the temporary denial order and also to the charging letter but he did not request a hearing. In accordance with the usual practice the cases were referred to the Compliance Commissioner. He reported that for the most part the evidence to support the charges against each respondent was identical. He combined the cases, held a joint informal hearing, and issued a single report covering the charges against both respondents.

The Compliance Commissioner has considered the evidence in the cases and has reported the facts to the undersigned with his recommendation that the sanctions hereinafter set forth be imposed against respondents. In the circumstances I consider it appropriate to issue a single order covering charges against both respondents.

After reviewing the facts in the cases and considering the Compliance Commissioner's report and recommendations I hereby make the following findings of fact:

1. The respondent Jose Luis Mussot was a resident of Mexico City, Mexico, and was a registered commission agent. For some months prior to May 1964, and thereafter, he was an active commercial representative of the Cuban Embassy in Mexico City. The respondent Yamil Amado Haron Kouri y Perez, also known as Yamil Kouri, was a resident of Havana, Cuba. He holds a doctors degree and was an official in Centro Nacional Cubano de Investigaciones Cientificas (Cuban National Center of Scientific Research). In May 1964 Dr. Kouri was in Mexico City for the purpose of procuring equipment for use in the institution with which he was connected. He also visited other countries for this purpose.

2. The particular transactions in question took place in the period from May 20, 1964 through May 28, 1964. During this period, on several occasions, the respondent Kouri, accompanied by other individuals, visited the offices of a supplier of scientific research equipment in Mexico City. Said supplier was a subsidiary company of the U.S. supplier of such equipment. The respondent Kouri made arrangements with the Mexican supplier to purchase a wide variety of items of equipment for use in scientific research. He represented to employees of the Mexican supplier that the equipment was to be used in an educational institution in Mexico. These representations were false and Kouri knew them to be false. It was his purpose and intent to procure said equipment for exportation to Cuba.

3. At the time that Kouri was making the arrangements to purchase the equipment in question he knew that many of the items, including some of the most costly, were of U.S.-origin. He also knew that reexportation of U.S.-origin equipment from Mexico to Cuba without prior express approval of the United States Government was in contravention of U.S. laws and regulations.

4. The respondent Kouri purchased the equipment in question and the invoice price was approximately $48,000. On May 27, 1964 Kouri made a partial payment of $25,000 to the Mexican supplier and informed the company that Jose Mussot would pick up the merchandise on the following day and pay the balance due.

5. On May 28, 1964 the respondent Mussot called at the office of the Mexican supplier, paid the balance which was due for the merchandise and took delivery thereof. Mussot knew or had reason to know that many many of the items were of U.S.-origin and that reexportation of U.S.-origin equipment from Mexico to Cuba without prior express authorization from the United States Government was in contravention of U.S. laws and regulations.

6. Mussot arranged for the hire of two trucks to transport the goods from the warehouse of the Mexican supplier to the Cuban Embassy in Mexico City. Such transportation and delivery to the Cuban Embassy was accomplished under the supervision of said Mussot on May 28, 1964. Mussot knew or had reason to know that the goods were intended to be reexported from Mexico to Cuba. Such reexportation did in fact take place at a later date.

Based on the foregoing I have concluded that the respondents violated the U.S. Export Regulations in the following manner: Knowingly aided and abetted in the procurement of U.S.-origin commodities and in their reexportation to an unauthorized destination, in violation of § 381.2; acted in concert together and with other persons for the purpose of bringing about violations of said regulations, in violation of § 381.3; the respondent Kouri ordered, bought, financed, and otherwise serviced commodities exported from the United States with knowledge that a violation of said regulations was about to and intended to occur with respect to such transaction, in violation of § 381.4; the respondent Mussot received, transported, forwarded, and otherwise serviced commodities exported from the United States with knowledge that a violation of said regulations was about to and intended to occur with respect to such transaction, in violation of § 381.4.

As to the sanctions that should be imposed the Compliance Commissioner said:

> Kouri is a resident of Cuba and an official in a research institution there. He has visited various countries outside of the United States for the purpose of obtaining supplies and equipment, some of U.S.-origin, for reexportation to Cuba. To the extent that we can we should prevent him from obtaining U.S.-origin goods in violation of our regulations. I recommend that he be denied U.S. export privileges for the duration of export controls. Mussot is a resident of Mexico City and is a commercial representative of the Cuban Embassy there. He knowingly participated in a transaction in violation of the U.S. Export Regulations. I also recommend that he be denied U.S. export privileges for the duration of export controls. However, if he terminates whatever connection he has with the Cuban Embassy and is able to demonstrate after two years that he has complied with the terms of the order and discloses such details of his activities as may be necessary to determine such compliance and to show that he can be trusted to deal in U.S.-origin commodities, consideration can be given to an application for restoration of privileges under such conditions as may be considered appropriate.

On consideration of the foregoing and based on the entire record, and being of the view that the following order is calculated to achieve effective enforcement of the law and the purposes thereof: *It is hereby ordered:*

I. The restrictions of the temporary denial orders which were entered against the respondent Jose Luis Mussot on September 29, 1964 (29 F.R. 13615) and extended on October 21, 1964 (29 F.R. 14757), and against the respondent Yamil Amado Haron Kouri y Perez, also known as Yamil Kouri, on October 27, 1964 (29 F.R. 14861) are hereby continued in full force and effect.

II. So long as export controls are in effect the respondents, and each of them, are hereby denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or which are otherwise subject to the Export Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transaction, either in the U.S. or abroad, shall include participation, directly or indirectly, in any manner or capacity: (a) As parties or as representatives of a party to any validated export license application; (b) in the preparation or filing of any export license application or reexportation authorization, or any document to be submitted therewith; (c) in the obtaining or using of any validated or general export license or other export control document; (d) in the carrying on of negotiations with respect to, or in the receiving, ordering, buying, selling, delivering, storing, using, or disposing of any commodities or technical data in whole or in part exported or to be exported from the United States; and (e) in the financing, forwarding, transporting, or other servicing of such commodities or technical data.

III. Such denial of export privileges shall extend not only to the respondents, but also to their agents, employees, representatives, partners, and to any firm, corporation, or business organization with which they now or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of trade or services connected therewith.

IV. Two years after the effective date of this order the respondent Mussot may apply to have the effective denial of his export privileges held in abeyance while he remains on probation. Such application shall be supported by evidence showing compliance with the terms of this order and such disclosure of details of his activities during said two years as may be necessary to determine his compliance with this order and whether he may be trusted to participate in transactions involving U.S.-origin commodities and technical data. The application will be considered on its merits and in the light of conditions and policies existing at that time. His export privileges may be restored under such terms and conditions as appear to be appropriate.

V. No person, firm, corporation, partnership or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Bureau of International Commerce, shall do any of the following acts, directly or indirectly, or carry on negotiations with respect thereto, in any manner or capacity, on behalf of or in any association with any such respondents or related party, or whereby any such respondent or related party may obtain any benefit therefrom or have any inter-

est or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, shipper's export declaration, bill of lading, or other export control document relating to any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States, by, to, or for any such respondent or related party denied export privileges; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, finance, or otherwise service or participate in any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

Dated: December 16, 1964.

[File No. 23-992]

## SHEPHERD EXPORT & TRADING CO. AND DENIS H. SHEPHERD

### Order Denying Export Privileges for an Indefinite Period

In the matter of Shepherd Export & Trading Company, and Denis H. Shepherd also known as D. H. Shepherd, 6 Chichester Road and 19 Chepstow Road, Croydon, Surrey, England, respondents; File No. 23-992.

The Director, Investigations Division, Office of Export Control, Bureau of International Commerce, U.S. Department of Commerce, has applied for an order denying to the above named respondents all export privileges for an indefinite period because of the failure of said respondents to furnish responsive answers to interrogatories without good cause being shown. This application was made pursuant to § 382.15 of the Export Regulations (Title 15, Chapter III, Subchapter B, Code of Federal Regulations). A temporary denial order has been in effect against the above respondents since October 28, 1964 (29 F.R. 14897).

In accordance with the usual practice, the application for an indefinite denial order was referred to the Compliance Commissioner, Bureau of International Commerce, who after consideration of the evidence has recommended that the application be granted.

The report of the Compliance Commissioner and the evidence in support of the application have been considered. The evidence presented shows that Shepherd Export & Trading Company is a business organization with places of business in Croydon, Surrey, England; that said company is engaged in the import-export business; that Denis H. Shepherd, also known as D. H. Shepherd is the individual primarily responsible for the conduct and operations of said company; that the aforesaid Investigations Division is conducting an investigation into the respondents' receipt and disposition of U.S. origin commodities. It is impracticable to subpoena the respondents and relevant and material interrogatories were served on them pursuant to § 382.15 of the Export Regulations. Said respondents have failed to furnish responsive answers to said interrogatories as required by said section and they have not shown good cause for such failure. I find that an order denying export privileges to said respondents for an indefinite period is reasonably necessary to protect the public interest and to achieve effective enforcement of the Export Control Act of 1949, as amended.

*Accordingly, it is hereby ordered:*

I. This order supersedes the temporary denial order entered against the above named respondents on October 28, 1964.

II. The respondents, their successors or assigns, partners, directors, representatives, agents, and employees hereby are denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or which are otherwise subject to the Export Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transaction, either in the United States or abroad, shall include participation, directly or indirectly, in any manner or capacity: (a) As a party or as a representative of a party to any validated export license application; (b) in the preparation or filing of any export license application or reexportation authorization, or any document to be submitted therewith; (c) in the obtaining or using of any validated or general export license or other export control document; (d) in the carrying on of negotiations with respect to, or in the receiving, ordering, buying, selling, delivering, storing, using, or disposing of any commodities or technical data in whole or in part exported or to be exported from the United States; and (e) in the financing, forwarding, transporting, or other servicing of such commodities or technical data.

III. Such denial of export privileges shall extend not only to the respondents, but also to their agents and employees and to any successor and to any person, firm, corporation, or business organization with which they now or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of trade or services connected therewith.

IV. This order shall remain in effect until the respondents provide responsive answers, written information and documents in response to the interrogatories heretofore served upon them or give adequate reasons for failure to do so, except insofar as this order may be amended or modified hereafter in accordance with the Export Regulations.

V. No person, firm, corporation, partnership or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Bureau of International Commerce, shall do any of the following acts, directly or indirectly, or carry on negotiations with respect thereto, in any manner or capacity, on behalf of or in any association with the respondents or any related party, or whereby the respondents or related party may obtain any benefit therefrom or have any interest or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, shipper's export declaration, bill of lading, or other export control document relating to any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States, by, to, or for any such respondent or related party denied export privileges; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, finance, or otherwise service or participate in any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

VI. A copy of this order shall be served on respondents.

VII. In accordance with the provisions of § 382.15 of the Export Regulations, the respondents may move at any time to vacate or modify this indefinite denial order by filing with the Compliance Commissioner, Bureau of International Commerce, U.S. Department of Commerce, Washington, D.C., 20230, an appropriate motion for relief, supported by substantial evidence, and may also request an oral hearing thereon, which, if requested shall be held before the Compliance Commissioner at Washington, D.C. at the earliest convenient date.

This order shall become effective on publication in the FEDERAL REGISTER.

Dated: December 15, 1964.

WILSON E. SWEENEY,
*Acting Director,*
*Office of Export Control.*

[Case No. 337]

## P. J. MURPHY AND MURPHY BROTHERS, LTD.

### Order Denying Export Privileges

In the matter of P. J. Murphy, Murphy Brothers, Ltd., Thurmaston, Liecester, England, respondents; Case No. 337.

By charging letter dated September 4, 1964 the Director, Investigations Division, Office of Export Control, Bureau of International Commerce, charged the above respondents with violations of the Export Control Act of 1949, as amended, and regulations thereunder. The respondents were served with the charging letter and have not responded or filed an answer and, in accordance with § 382.4 of the Export Regulations are held in default.

In accordance with the usual practice the case was referred to the Compliance Commissioner. He held an informal hearing on October 29, 1964, at which time counsel for the Investigations Division present evidence in support of the charges. The record was reopened on November 30, 1964 for the receipt of additional evidence.

It was charged that on or about March 7 or 8, 1964 respondents exported from England to Cuba three U.S.-origin motor scrapers and two U.S.-origin bulldozers and that respondents knew or had reason to know that the items were of U.S.-origin and that U.S. law prohibited their reexportation from England to Cuba without first obtaining authorization from the United States Government.

The Compliance Commissioner has reported the findings of fact and findings that violations have occurred and has recommended that sanctions, as hereinafter set forth be imposed.

After considering the entire record and the report and recommendations of the Compliance Commissioner, I hereby make the following findings of fact:

1. The respondent Murphy Brothers, Ltd. is a corporation with a place of business in Thurmaston, Leicester, England. The company is engaged in building and civil engineering and is also in the bulk transport and haulage business. The respondent Patrick J. Murphy, also known as P. J. Murphy, is an officer of Murphy Brothers, Ltd. and he acted for the company in the transaction in question.

2. Shortly before March 7, 1964 Murphy Brothers, Ltd. acquired title to two bulldozers located in England. Each bulldozer consisted of a tractor and bulldozer attachment. The tractors were manufactured in the United States. Bulldozer attachments of the make and type in question were manufactured in the United States and certain foreign countries and it is not established by the evidence that the attachments were of U.S.-origin. The tractor of each unit represented approximately 87 percent of the value of the combination.

3. Shortly before March 7, 1964 Murphy Brothers, Ltd. acquired title to three motor scrapers located in England. Each motor scraper consisted of a tractor and scraper attachment. The tractors were manufactured in the United States. Scraper attachments of the make and type in question were manufactured in the United States and certain foreign countries and it is not established by the evidence that the attachments were of U.S.-origin. The tractor of each unit represented approximately 60 percent of the value of the combination.

4. The respondent P. J. Murphy endeavored to obtain a certificate of origin showing that the tractors above referred to were manufactured in the United Kingdom and his request for such certificate was denied. The respondents knew or had reason to know that the said tractors were of U.S.-origin.

5. On or about March 7 or 8, 1964 the respondents exported from England to Cuba the bulldozers and motor scrapers referred to in Findings of Fact 2 and 3. The respondents knew or had reason to know that U.S. law prohibited such exportation without first obtaining authorization from the United States Government.

Based on the foregoing I have concluded that the respondents in violation of § 381.6 of the United States Export Regulations, without specific authorization from the United States Department of Commerce, Office of Export Control, knowingly reexported, transshipped, and diverted U.S.-origin commodities from England to Cuba contrary to the provisions of said regulations.

I have concluded that the recommendation of the Compliance Commissioner as to the sanction that should be imposed against the respondents is fair and just and necessary to achieve effective enforcement of the law.

*Accordingly it is hereby ordered:*

I. All outstanding validated export licenses in which respondents appears or participates in any manner or capacity are hereby revoked and shall be returned forthwith to the Bureau of International Commerce for cancellation.

II. Except as qualified in Part IV hereof, the respondents for the duration of export controls, are hereby denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or which are otherwise subject to the Export Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transaction, either in the United States or abroad, shall include participation: (a) As a party or as a representative of a party to any validated export license application; (b) in the preparation or filing of any export license application or reexportation authorization, or document to be submitted therewith; (c) in the obtaining or using of any validated or general export license or other export control documents; (d) in the carrying on of negotiations with respect to, or in the receiving, ordering, buying, selling, delivering, storing, using, or disposing of any commodities or technical data; (e) in the financing, forwarding, transporting, or other servicing of such commodities or technical data.

III. Such denial of export privileges shall extend not only to the respondents, but also to their representatives, agents, partners, and employees, and also to any person, firm, corporation, or other business organization with which they now or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of trade or services connected therewith.

IV. Two years after the date hereof, without further order of the Bureau of International Commerce, the respondents shall have their export privileges restored to them conditionally, the condition for such restoration being that, during the said two years following the date hereof, the said respondents shall comply in all respects with this order, and thereafter shall comply with all requirements of the Export Control Act of 1949, as amended, and all regulations, licenses and orders issued thereunder.

V. The privileges so conditionally permitted to the respondents herein under Part IV hereof may be revoked summarily and without notice upon a finding by the Director of the Office of Export Control, or such other official as may at that time be exercising the duties now exercised by him, that any respondent has knowingly failed to comply with the conditions applicable to him or it as set forth in Part IV hereof, in which event Part II hereof, insofar as it shall apply to such respondent, shall then be and become effective as to him or them without thereby precluding the Bureau of International Commerce from taking such other and further action based on such violation or violations as it shall deem warranted. In the event that such supplemental order is issued, such respondents as are involved therein shall have a right to review thereof, as provided in the Export Regulations.

VI. During the time when any respondent or other person within the scope of this order is prohibited from engaging in any activity within the scope of Part II hereof, no person, firm, corporation, partnership, or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Bureau of International Commerce, shall do any of the following acts, directly or indirectly, in any manner or capacity, on behalf of or in any association with any respondent or other person denied export privileges within the scope of this order, or whereby any such respondent or such other person may obtain any benefit therefrom or have any interest or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, shipper's export declaration, bill of lading, or other export control document relating to any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States, by, to, or for any such respondent or other person denied export privileges within the scope of this order; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, finance, or otherwise service or participate in any exportation, reexportation, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

This order shall become effective on December 22, 1964.

Dated: December 14, 1964.

WILSON E. SWEENEY,
*Acting Director,*
*Office of Export Control.*

## VHF STATIONS IN MAJOR MARKETS

### Notice of Designation for Hearing of Applications To Acquire Interests

DECEMBER 18, 1964.

For many years the Commission has been concerned about the ownership or control of large numbers of broadcast facilities by a single person or entity. The reasons for this concern have been set forth many times, and need not be detailed at length here. Briefly, our purpose is to prevent undue concentration of control in the broadcasting industry, and to encourage the development of the greatest diversity and variety in the presentation of information, opinion, and broadcast material generally. In our actions in this area, we are guided by the Congressional policy against monopoly in the communications field (e.g., as expressed in section 313 of the Communications Act), and the concept (recognized by the courts) that the broadcasting business is, and should be, one of free competition. In the light of these considerations, in 1954 we adopted the present numerical limitations on broadcast holdings permitted a single individual or group—7 AM stations, 7 FM stations, and 7 television stations of which no more than 5 may be VHF stations.

In recent years, however, there has been a marked increase in the extent of multiple ownership, especially in television. This has been particularly true in the VHF, the older and more extensive service on which the great majority of the nation's viewers rely. Particularly evident is the concentration of such multiple ownership in the largest markets where the numbers of viewers reached are greatest and where diversity of interests and viewpoints should be maximized. Overall, the number of multiple TV station owners increased from 81 to 134 between 1956 and 1964, representing 23.3 and 40.9 percent, respectively, of all station owners. The number of TV stations owned by multiple owners increased from 203 to 372 during the same period, or from 43.4 to 65.7 percent of all stations, while the number of individually owned stations declined (265 to 194). There was an increase in the number of owners of six stations (3 to 5), of five stations (4 to 11), of 4 stations (5 to 20), of 3 stations (22 to 32), and of two stations (46 to 65).

The congealing of multiple ownership interests in the major centers can be summarized as follows:

The top 10 markets include almost 40 percent of all TV households (roughly 20 million homes). Within these markets are 40 VHF stations, of which 37 are held by multiple owners and the remaining 3 are licensed to companies owning daily newspapers in the same cities. Similarly, the top 50 markets include almost 75 percent of all TV homes: Within these markets are 156 VHF stations, of which 111 (71 percent) are licensed to multiple ownership interests while 17 of the remaining 45 stations have joint interests with daily newspapers in the same markets. Moreover, there is a clearly discernible pattern of the largest multiple owners concentrating their holdings in the largest markets. Thus, the eight multiple owners holding the maximum allowable number of 5 VHF stations have 40 VHF stations, of which 22 are located in the top 10 markets, 32 in the top 25 markets, and 38 in the top 50 markets.

We do not believe that this degree of multiple ownership concentration in the largest population centers is desirable.

While we do not now propose a divestiture of existing interests, we have determined that the trend toward concentration in the VHF service is sufficiently serious to require the immediate adoption of an interim policy. We are presently con-

of certain cotton textiles and cotton textile products to specified annual amounts. The second year of the agreement will commence on January 1, 1965, and extend through December 31, 1965. The categories which are subject to specific

through December 31, 1964, has been exhausted by previous entries, such goods shall be subject to the directives set forth in this letter.

A detailed description of Categories 32, 39, 45, 50, 51, 60, 61 and 64, in terms of T.S.U.S.A. numbers was published in the FEDERAL REG-

October 1, 1964, but pursuant to its terms, the contract cannot be assigned.

The application states that pursuant to the Fund's by-laws, the next annual meeting of the stockholders of the Fund is scheduled for February 23, 1965, and

While we do not now propose a divestiture of existing interests, we have determined that the trend toward concentration in the VHF service is sufficiently serious to require the immediate adoption of an interim policy. We are presently conducting an overall review of the problem of concentration and diversification of the broadcast media and of allied interests in other public opinion media. Pending the formulation of more comprehensive proposals, we are today adopting the following policy with respect to VHF stations:

Absent a compelling affirmative showing, we will designate for hearing any application filed after December 18, 1964 for the acquisition of a VHF station in one of the top 50 television markets, if the applicant or any party thereto already owns or has interests in one or more VHF stations in the top 50 markets; we shall treat likewise any application to acquire interests in two or more VHF stations in these markets if the applicant now has no interests in VHF stations in these 50 markets. We are adopting this policy because, under presently existing circumstances, we cannot normally make the required finding that grant of an application for a second VHF station in the top 50 markets will serve the public interest without giving the proposal the detailed scrutiny of a hearing.

In listing the largest 50 markets (See Att. 1) we have used the 1963 American Research Bureau ranking based on net weekly circulation.[1] Any party believing that this ranking describes his particular circumstances inaccurately, or wishing to suggest another ranking, may do so and such suggestions will be considered on their merits.

In emphasizing one particular aspect of the concentration problem, we do not mean to suggest lack of concern about others. We shall continue to give close examination to other applications presenting substantial multiple ownership considerations.

[1] Based on the circulation of the largest station in each market, the net weekly circulation in these markets ranges from over 5 million to 332,000 homes; assuming 3.3 persons per household, the 332,000 homes would include about 1 million persons.

[2] Commissioner Ford absent.

DISSENTING STATEMENT OF COMMISSIONER ROSEL H. HYDE

I dissent to the issuance of Public Notice No. 60894. The stated purpose of the notice is to prevent undue concentration of control in the broadcast industry and to encourage the development of diversity and variety in presentation of information. I am concerned that the impact of the proposed new policy will have just the opposite effect.

The issues raised will, of course, be subject to further consideration in the light of the information and arguments submitted in response to a Notice of Proposed Rule Making which presumably will be issued. However, on the basis of present information it would appear that the new approach would tend to limit the effectiveness of the competition of other broadcast interests as against the national networks, the dominant forces in the industry. I see no reason why the Commission should feel that larger units should not be permitted to compete in the larger markets where the number of facilities is the greatest and the competition is the strongest. If the percentage of population theory now being advanced is to be followed to its logical conclusion, how can national networks, national publications, and other national services be justified?

I believe that there are serious questions which should receive further consideration before adoption of a policy to designate for hearing all applications for acquisition of VHF stations in the top 50 TV markets where the applicant or any party thereto already owns or has interest in one or more TV stations in the top 50 markets. I think the effect of this pronouncement is to establish what in operation will constitute a freeze against timely consideration of applications filed in accordance with substantive rules and policy.

# FEDERAL RESERVE SYSTEM

## SUMMIT TRUST CO.

### Order Approving Merger of Banks

In the matter of the application of The Summit Trust Company for approval of merger with The Elizabethport Banking Company.

There has come before the Board of Governors, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by The Summit Trust Company, Summit, New Jersey, a State member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and The Elizabethport Banking Company, Elizabeth, New Jersey, under the charter of the former and the title of Summit and Elizabeth Trust Company. As an incident to the merger, the three offices of each bank would become offices of the resulting bank. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Department of Justice on the competitive factors involved in the proposed merger:

*It is hereby ordered*, For the reasons set forth in the Board's Statement[1] of this date, that said application be and hereby is approved, provided that said merger shall not be consummated (a) within seven calendar days after the date of this Order or (b) later than three months after said date.

Dated at Washington, D.C., this 17th day of December 1964.

By order of the Board of Governors.[2]

[SEAL] MERRITT SHERMAN,
*Secretary.*

# INTERAGENCY TEXTILE ADMINISTRATIVE COMMITTEE

## CERTAIN COTTON TEXTILES AND COTTON TEXTILE PRODUCTS PRODUCED OR MANUFACTURED IN THE REPUBLIC OF THE PHILIPPINES

### Restraint Levels

DECEMBER 22, 1964.

On February 24, 1964 the United States Government, in furtherance of the objectives of, and under the terms of, the Long Term Arrangement Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962, concluded a bilateral agreement with the Republic of the Philippines concerning exports of cotton textiles from the Republic of the Philippines to the United States over a four-year period (TIAS 5519). Under this agreement the Republic of the Philippines has undertaken to limit its exports to the United States of certain cotton textiles and cotton textile products to specified annual amounts. The second year of the agreement will commence on January 1, 1965, and extend through December 31, 1965. The categories which are subject to specific export limitation under the agreement are as follows: 32, 39, 45, 50, 51, 60, 61, and 64.

There is published below a letter of December 22, 1964, from the Chairman of the President's Cabinet Textile Advisory Committee to the Commissioner of Customs directing that the amounts of cotton textiles and cotton textile products in Categories 32, 39, 45, 50, 51, 60, 61, and 64 produced or manufactured in the Republic of the Philippines which may be entered, or withdrawn from warehouse, for consumption in the United States from January 1, 1965, through December 31, 1965, be limited to certain designated levels. The levels set forth in this letter are those designated under the bilateral agreement for the second calendar year with certain adjustments agreed to in subsequent arrangements between the United States and the Republic of the Philippines.

THOMAS JEFF DAVIS,
*Acting Chairman, Interagency Textile Administrative Committee and Acting Deputy to the Secretary of Commerce for Textile Programs.*

THE SECRETARY OF COMMERCE
PRESIDENT'S CABINET TEXTILE ADVISORY COMMITTEE

*Washington 25, D.C., December 22, 1964.*

COMMISSIONER OF CUSTOMS,
DEPARTMENT OF THE TREASURY
*Washington, D.C.*

DEAR MR. COMMISSIONER: Under the terms of the Long Term Arrangement Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962, and in accordance with the procedures outlined in Executive Order 11052 of September 28, 1962, you are directed to prohibit, effective January 1, 1965, and for the period extending through December 31, 1965, entry into the United States for consumption, and withdrawal from warehouse for consumption, of cotton textiles and cotton textile products in Categories 32, 39, 45, 50, 51, 60, 61, and 64, produced or manufactured in the Republic of the Philippines in excess of the following levels of restraint:

| Category: | 12-month level of restraint |
|---|---|
| 32 | 3,307,500 dozen. |
| 39 | 236,250 doz. pair. |
| 45 | 23,615 dozen. |
| 50 | 15,750 dozen. |
| 51 | 15,750 dozen. |
| 60 | 7,350 dozen. |
| 61 | 1,260,000 dozen. |
| 64 | 159,784 pounds. |

In carrying out this directive, entries of cotton textiles and cotton textile products in Categories 32, 39, 45, 50, 51, 60, 61, and 64, produced or manufactured in the Republic of the Philippines, which have been exported to the United States from the Republic of the Philippines prior to January 1, 1965, shall, to the extent of any unfilled balances, be charged against the levels of restraint established for such goods during the period January 1, 1964, through December 31, 1964. In the event that the level of restraint established for the period January 1, 1964, through December 31, 1964, has been exhausted by previous entries, such goods shall be subject to the directives set forth in this letter.

A detailed description of Categories 32, 39, 45, 50, 51, 60, 61 and 64, in terms of T.S.U.S.A. numbers was published in the FEDERAL REGISTER on October 1, 1963 (28 F.R. 10551), and amendments thereto on March 24, 1964 (29 F.R. 3679).

In carrying out the above directions, entry into the United States for consumption shall be construed to include entry for consumption into the Commonwealth of Puerto Rico.

The actions taken with respect to the Government of the Republic of the Philippines and with respect to imports of cotton textiles and cotton textile products from the Republic of the Philippines have been determined by the President's Cabinet Textile Advisory Committee to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of Customs, being necessary to the implementation of such actions, fall within the foreign affairs exception to the notice provisions of section 4 of the Administrative Procedure Act. This letter will be published in the FEDERAL REGISTER.

Sincerely yours,

LUTHER H. HODGES,
*Secretary of Commerce, and Chairman, President's Cabinet Textile Advisory Committee.*

# SECURITIES AND EXCHANGE COMMISSION

[File No. 812-1723]

## DOMINICK FUND, INC., ET AL.

### Notice of Application for Temporary Exemption

DECEMBER 18, 1964.

Notice is hereby given that The Dominick Fund, Inc. ("Fund"), a Delaware corporation and a closed-end investment company registered under the Investment Company Act of 1940 ("Act"), Dominick & Dominick ("Dominick Partnership"), a New York limited partnership which has been the investment adviser of the Fund, and Dominick & Dominick, Incorporated ("Dominick Corporation"), 14 Wall Street, New York, N.Y., a Delaware corporation which proposes to become the investment adviser of the Fund, have filed an application pursuant to section 6(c) of the Act for an order exempting the Fund and Dominick Corporation from the provisions of sections 15(a) and 15(c) of the Act during the period from October 1, 1964, until the date of the annual meeting of the stockholders of the Fund scheduled to be held on February 23, 1965. All interested persons are referred to the application on file with the Commission for a complete statement of applicants' representations which are summarized below.

Dominick Partnership has served the Fund as investment adviser pursuant to a written contract dated February 19, 1945, which contract has been continued annually since that time. The contract provides that it will automatically terminate in the event of its assignment by Dominick Partnership. Dominick Partnership has proposed to transfer its business to Dominick Corporation on October 1, 1964, but pursuant to its terms, the contract cannot be assigned.

The application states that pursuant to the Fund's by-laws, the next annual meeting of the stockholders of the Fund is scheduled for February 23, 1965, and that it would be expensive to call a special meeting solely for the purpose of approving a new contract with Dominick Corporation. Therefore, Dominick Corporation proposes to serve the Fund as investment adviser without a written contract and without being paid any fee, except for regular and customary brokerage commissions on securities sold or purchased for the Fund, until the next annual meeting of the Fund's stockholders on February 23, 1965.

The application states that the persons who have been general partners of Dominick Partnership are officers and stockholders of Dominick Corporation, and that at the inception of Dominick Corporation's operations each of such persons will have substantially the same equity and voting power in Dominick Corporation as he had as a general partner in Dominick Partnership.

Notice is further given that any interested person may, not later than January 11, 1965, at 5:30 p.m. submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon applicants at the address set forth above. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) shall be filed contemporaneously with the request. At any time after said date, as provided by Rule 0-5 of the rules and regulations promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application be issued upon request or upon the Commission's own motion.

For the Commission (pursuant to delegated authority).

[SEAL] ORVAL L. DUBOIS,
*Secretary.*

[F.R. Doc. 64-13225; Filed, Dec. 23, 1964; 8:46 a.m.]

[File No. 812-1722]

## RIDC INDUSTRIAL DEVELOPMENT FUND

### Notice of Filing of Application for Order Declaring Company Exempt From Act

DECEMBER 18, 1964.

Notice is hereby given that RIDC Industrial Development Fund ("Develop-

ment Fund"), 471 Union Trust Building, Pittsburgh 19, Pa., a Pennsylvania corporation organized under the Pennsylvania Business Development Credit Corporation Law, has filed an application pursuant to section 6(c) of the Investment Company Act of 1940 ("Act") for an order exempting Development Fund from the provisions of the Act. All interested persons are referred to the application, which is on file with the Commission, for a full statement of the representations therein, which are summarized below.

Development Fund's represents that the Business Development Credit Corporation Law of Pennsylvania has as its purpose, as part of an overall program, the encouragement of the location of new business in the State and the expansion of existing businesses. Its primary purpose is to provide money and credit to new and existing businesses located in 9 counties in the State by means of secured or unsecured loans or advances to a business unable to obtain desired financial assistance from financial institutions on reasonable terms, and, on a limited scale, the purchase of equity securities of such companies.

The authorized capital of Development Fund is $1,000,000 represented by its currently outstanding 100,000 shares of common stock, par value $10 per share. Development Fund obtained its capital through the sale of capital stock to 23 knowledgeable business organizations and has not sold, or offered to sell, and will not sell, or offer to sell, securities to individuals. Development Fund will also obtain funds through term loans from financial institutions within the region pursuant to lending agreements as contemplated by the Pennsylvania Business Development Credit Corporation Law. Development Fund has also obtained letters of commitment from approximately 33 financial institutions to enter into lending agreements under which they agree to loan Development Fund sums totaling $3,295,000. Under the lending agreements, Development Fund has the right to make pro-rata calls on the participating financial institutions for loans to it to be evidenced by promissory notes payable in five years at an interest rate expected to be the prime rate plus one-quarter per cent. Development Fund represents that the business organizations and financial institutions which have purchased the capital stock and entered into lending agreements are sophisticated in security matters and have purchased for investment only and not for resale.

Under the provisions of the Pennsylvania Business Development Credit Corporation Law, six of the fifteen members of the Board of Directors of Development Fund are elected by the shareholders, eight members by the financial institutions who are parties to loan agreements (with each such financial institution being given one vote for each $1,000 of loan obligation under its lending agreement with Development Fund), and the remaining director is ex officio the Secretary of Commerce of the Commonwealth of Pennsylvania.

Since Development Fund will be engaged in the business of investing and since it proposes to acquire investment securities having a value exceeding 40 percent of its total assets, Development Fund is an investment company within the definition of section 3(a)(3) of the Act and is required to register unless exempted pursuant to section 6(c) of the Act.

In support of its application, Development Fund states it will conduct its operations and business so as to implement the public purposes of the Pennsylvania Business Development Credit Corporation Law by seeking to alleviate a critical and chronic condition of unemployment which exists in various areas of the State; by promoting, attracting, stimulating, rehabilitating, and revitalizing commerce, industry, and manufacturing in such areas; and by providing to deserving borrowers financial assistance otherwise unavailable from conventional financial institutions. It also states that the Commonwealth of Pennsylvania will be involved in the management of Development Fund through membership of the Pennsylvania Secretary of Commerce on the board of directors; that neither Development Fund nor any of those to whom it offers its securities is motivated primarily by profit making prospects, but their interest is primarily one of civic responsibility and community service in fulfillment of the public purposes of the Pennsylvania Business Development Credit Corporation Law. The securities of Development Fund have been and will be sold only to corporations, financial institutions and other knowledgeable business entities for whom, it is alleged, the protections of the Act are not designed, and, in addition, Development Fund will be supervised by the State Department of Banking and is required to make annual reports of its condition to the Governor, Legislature, and Secretary of Banking.

Notice is further given that any interested person may, not later than January 6, 1965, at 5:30 p.m. submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon Development Fund. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) shall be filed contemporaneously with the request. At any time after said date, as provided by Rule 0–5 of the rules and regulations promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application shall be issued upon request or upon the Commission's own motion.

By the Commission.

[SEAL] ORVAL L. DUBOIS, *Secretary.*

[F.R. Doc. 64–13226; Filed, Dec. 23, 1964; 8:46 a.m.]

[File No. 812–1735]

## NUCLEONICS, CHEMISTRY & ELECTRONICS SHARES, INC., AND RESEARCH INVESTING CORP.

### Notice of Filing of Application for Order Exempting Proposed Transactions Between Affiliated Persons

DECEMBER 21, 1964.

Notice is hereby given that Nucleonics, Chemistry & Electronics Shares, Inc. ("Nucleonics") and Research Investing Corp. ("Research"), 163 Engle Street, Englewood, N.J., both registered diversified management open-end investment companies, have filed a joint application pursuant to section 17(b) of the Investment Company Act of 1940 ("Act") for an order exempting from the provisions of section 17(a) of the Act the proposed merger of Nucleonics into Research. All interested persons are referred to the application on file with the Commission for a complete statement of the applicants' representations therein, which are summarized below.

The proposed merger for accounting purposes will be treated as a "pooling of interests". Accordingly, the assets, liabilities and equity accounts of the merging companies will be carried forward on the books of Research at the amounts theretofore carried on the books of the constituent companies, except that the excess of par value of capital stock issued over that previously outstanding will be charged to paid-in surplus.

The application states that where a shareholder holds certificates for his shares of Nucleonics stock, upon surrender of such Nucleonics share certificates, stock certificates of Research will be issued to him for the largest whole number of Research shares to which he thus shall become entitled, plus a check for the value of any fractional Research share. Where the stockholder's shares are held for him in a contractual or voluntary plan or dividend reinvestment account, shares of Research will be credited to such plan or account for the entire number of whole and fractional Research shares to which he thus shall become entitled. The exchange will be made on the basis of the adjusted per share net asset values of Nucleonics and Research and without any sales load. The purpose is to adjust as between the shareholders of each Fund for an increased or decreased possible tax liability by reason of the value of their holdings in the merged Fund having a higher or lower ratio of unrealized appreciation or depreciation or realized capital gains or losses, as well as to adjust for losses or gains, if any, which may be realized if securities in the portfolio of Nucleonics are sold as not being considered suitable to achieve the policies of Research. The adjustments to the net asset value of the two Funds will be 6½ percent of each Fund's unrealized appreciation or depreciation and 10 percent of each Fund's realized gains or losses.

In the opinion of counsel for both Funds no taxable gain or loss under the United States Internal Revenue Code will result to either of the Funds by reason of the merger or to the stockholders of Nucleonics upon the exchange of their stock for stock of Research, except that the amount of any check received in lieu of fractional shares will be taxed as a dividend. The cost basis of the Research shares for Federal tax purposes will be the same as the cost basis for Nucleonics' shares previously held by each shareholder, adjusted for any fractional share cash distribution. The cost basis of the Nucleonics portfolio assets acquired by Research will remain the same as when such assets were held by Nucleonics.

The agreement of merger has been approved by the Board of Directors of both companies subject to certain conditions, including approval of two-thirds (⅔'s) or more of the outstanding shares of stock of each Fund. The valuation date will be the first full business day on which the New York Stock Exchange is open following the day upon which the merger has been approved by the shareholders of both Funds.

Research and Nucleonics have Templeton, Damroth Security Managers, Inc. as their investment adviser and principal underwriter; Templeton, Dobbrow & Vance, Inc. as their supplementary investment adviser; Renyx Field & Co., Inc. as their principal distributor to handle retail sales; and certain common officers and directors who are also directors and/or officers of the above-named companies as well as of Templeton, Damroth Corp., the parent company of some of such companies. The application represents that no person owns beneficially, directly or indirectly, 25 percent of the voting securities of either Nucleonics or Research; consequently, it is applicants' view that the two Funds are presumed not to be under common control. However, in view of the above-mentioned relationships, applicants have filed the present application, pursuant to section 17(b) of the Act, requesting an exemption from the provisions of section 17(a).

Notice is further given that any interested person may, not later than December 30, 1964, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon applicant at the address stated above. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) shall be filed contemporaneously with the request. At any time after said date, as provided by Rule 0–5 of the rules and regulations promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application shall be issued upon request or upon the Commission's own motion.

For the Commission (pursuant to delegated authority).

## APPLICATIONS FOR MOTOR CARRIER "GRANDFATHER" CERTIFICATE OF REGISTRATION

DECEMBER 18, 1964.

The following applications are filed under section 206(a)(7) of the Interstate Commerce Act, as amended October 15, 1962. These applications are governed by Special Rule 1.244, of the Commission's rules of practice published in the FEDERAL REGISTER, issue of December 8, 1962, page 12188, which provides, among other things, that protests to the granting of an application may be filed with the Commission within 30 days after the date of notice of filing of the application is published in the FEDERAL REGISTER. Failure seasonably to file a protest will be construed as a waiver of opposition and participation in the proceeding. Protests shall set forth specifically the grounds upon which they are made and contain a concise statement of the interest of the protestant in the proceeding. Protests containing general allegations may be rejected. A protest filed under these special rules shall be served upon applicant's representative (or applicant, if no practitioner representing him is named). The original and six copies of the protests shall be filed with the Commission.

The Special Rules do not provide for publication of the operating authority, but the applications are available at the Commission's office in Washington, D.C., and the field offices.

Applications not included in this publication will be published at a later date.

CALIFORNIA

No. MC 99818 (Sub-No. 1) (REPUBLICATION), filed January 18, 1963, published in FEDERAL REGISTER issue of June 12, 1963, and republished this issue. Applicant: ARTHUR R. BENNETT, doing business as B-LINE EXPRESS, 5105 East Eighth Street, Oakland, Calif., and COAST DRAYAGE, 615 Cedar Street, Berkeley, Calif., joint applicants, California certificates granted by Decisions Nos. 59294 and 59504. Applicant's attorney: Scott Elder, 200 Bush Street, San Francisco 4, Calif.

NOTE: The purpose of this republication is to show Coast Drayage as joint applicant in so far as California certificates granted by Decisions Nos. 59294 and 59504 are concerned.

MASSACHUSETTS

No. MC 120748 (Sub-No. 1) (REPUBLICATION), filed February 6, 1963, published in FEDERAL REGISTER issue of October 2, 1963, and republished this issue. Applicant: SANTUCCI TRUCKING CO., INC., 118 Main Street, Milford, Mass., and JOHN J. MINUTOLI, doing business as JAY JAY FORWARDING SERVICE, 167 Milk Street, Boston, Mass., joint applicants.

NOTE: The purpose of this republication is to show John J. Minutoli, doing business as Jay Jay Forwarding Service, as joint applicant.

OHIO

No. MC 96995 (Sub-No. 1) (REPUBLICATION), filed February 1, 1963, published in FEDERAL REGISTER issue of June 12, 1963, and republished this issue. Applicant: MIKE MERCURE, Route No. 1, New Waterford, Ohio, and MIKE MERCURE TRUCKING, INC., Route No. 1, New Waterford, Ohio, joint applicants. Applicant's attorney: James M. Burtch, 44 East Broad Street, Columbus 15, Ohio.

NOTE: The purpose of this republication is to show Mike Mercure Trucking, Inc. as joint applicant.

No. MC 120064 (Sub-No. 1) (REPUBLICATION), filed February 6, 1963, published in FEDERAL REGISTER issue of June 12, 1963, and republished this issue. Applicant: WHITE MOVING & STORAGE CO., 630 South Second Street, Greenfield, Ohio, and HILLSBORO TRANSPORTATION CO., 131½ West Walnut Street, Hillsboro, Ohio, joint applicants, Ohio Certificate Nos. 3010 and 8146. Applicant's representative: Earl J. Thomas, Thomas Building, Post Office

Drawer 70, 5844–5866 North High Street, Worthington, Ohio.

NOTE: The purpose of this republication is to show Hillsboro Transportation Co., as joint applicant in so far as Ohio Certificate Nos. 3010 and 8146 are concerned.

By the Commission.

[SEAL] HAROLD D. McCOY, *Secretary.*

[Notice 333]

## MOTOR CARRIER ALTERNATE ROUTE DEVIATION NOTICES

DECEMBER 18, 1964.

The following letter-notices of proposals to operate over deviation routes for operating convenience only have been filed with the Interstate Commerce Commission, under the Commission's Deviation Rules Revised, 1957 (49 CFR 211.1 (c)(8)) and notice thereof to all interested persons is hereby given as provided in such rules (49 CFR 211.1(d)(4)).

Protests against the use of any proposed deviation route herein described may be filed with the Interstate Commerce Commission in the manner and form provided in such rules (49 CFR 211.1(e)) at any time, but will not operate to stay commencement of the proposed operations unless filed within 30 days from the date of publication.

Successively filed letter-notices of the same carrier under the Commission's Deviation Rules Revised, 1957, will be numbered consecutively for convenience in identification and protests, if any, should refer to such letter-notices by number.

MOTOR CARRIERS OF PROPERTY

No. MC 20824 (Deviation No. 4), COMMERCIAL MOTOR FREIGHT, INC., OF INDIANA, 111 East McCarty Street, Indianapolis, Ind., 46255, filed December 9, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over deviation routes as follows: (1) From Columbus, Ohio, over Interstate Highway 71 to junction Interstate Highway 275, thence over Interstate Highway 275 to junction Interstate Highway 75, thence over Interstate Highway 75 to Cincinnati, Ohio, and (2) from Dayton, Ohio, over Interstate Highway 75, to Cincinnati, and return over the same routes, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over pertinent service routes as follows: (1) From Columbus, over U.S. Highway 40 to Springfield, Ohio, thence over Highway 4 to Dayton, thence over unnumbered highway (formerly U.S. Highway 25), south of Franklin, Ohio, to junction Ohio Highway 73, thence over Ohio Highway 73 to Middletown, Ohio, thence over Ohio Highway 4 to junction Ohio Highway 63, thence over Ohio Highway 63 to Monroe, Ohio, thence over U.S. Highway 25 to Cincinnati, (2) from Dayton, over U.S. Highway 35 to Eaton, Ohio, thence over U.S. Highway 127 to Cincinnati, (3) from Eaton, over Ohio Highway 122 to Middletown, thence over Ohio Highway 4 to junction Ohio Highway 63, thence over Ohio Highway 63 to Monroe, thence over U.S. Highway 25 to Cincinnati, (4) from Hamilton, Ohio, over Ohio Highway 4 to Cincinnati, and (5) from Eaton, over Ohio Highway 122 to Middletown, thence over Ohio Highway 25 to Cincinnati, and return over the same routes.

No. MC 26739 (Deviation No. 3), CROUCH BROS., INC., Transport Building, St. Joseph, Mo., 64501, filed December 7, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: From junction U.S. Highways 36 and 54, 4 miles west of Pittsfield, Ill., over U.S. Highway 54 to junction Interstate Highway 70, thence over Interstate Highway 70 to Kansas City, Mo., and return over the same route, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over pertinent service routes as follows: (1) From Chicago, Ill., over U.S. Highway 66 to Springfield, Ill., thence over U.S. Highway 36 to Monroe City, Mo., thence over U.S. Highway 24 to Kansas City, and (2) from Chicago, over U.S. Highway 66 to Springfield, thence over U.S. Highway 36 to Cameron, Mo., thence over U.S. Highway 69 to Kansas City, and return over the same routes.

No. MC 29130 (Deviation No. 8), THE ROCK ISLAND MOTOR TRANSIT COMPANY, 2744 SE. Market Street, Post Office Box 1355, Des Moines, Iowa, filed December 7, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions over a deviation route as follows: From Davenport, Iowa, over U.S. Highway 61 to Muscatine, Iowa, and return over the same route, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over a pertinent service route as follows: From Davenport over U.S. Highway 61 (now Iowa Highway 22) to Muscatine, and return over the same route.

No. MC 29988 (Deviation No. 16), DENVER CHICAGO TRUCKING COMPANY, INC., 45th and Jackson Streets, Denver, Colo. Carrier's attorney: Edw. G. Bazelon, 39 South La Salle Street, Chicago 3, Ill., filed December 8, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: From Denver, Colo., over Interstate Highway 70 via Kansas City and St. Louis, Mo., to junction Interstate Highway 70S at or near Washington, Pa., thence over Interstate Highway 70S to junction Pennsylvania Turnpike, thence over Pennsylvania Turnpike to junction New Jersey Turnpike at or near the Pennsylvania-New Jersey State line, thence over the New Jersey Turnpike to junction New York Highway 3 at the Lincoln Tunnel Interchange No. 16, approximately 3 miles from New York City, N.Y., and return over the same route, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over pertinent service routes as follows: From Denver over U.S. Highway 85 to Greeley, Colo., thence over U.S. Highway 34 to junction U.S. Highway 6, thence over U.S. Highway 6 to Sterling, Colo. (also from Denver over U.S. Highway 6 to Sterling), thence over U.S. Highway 138 to junction U.S. Highway 30, thence over U.S. Highway 30 to junction Alternate U.S. Highway 30, thence over Alternate U.S. Highway 30 to Chicago, Ill., (2) from Denver over U.S. Highway 40 to Limon, Colo., thence over U.S. Highway 24 to Halford, Kans., thence over U.S. Highway 83 to Oakley, Kans., thence over U.S. Highway 40 to Topeka, Kans., thence over U.S. Highway 24 to Kansas City (also from Topeka over U.S. Highway 40 to Kansas City), thence over U.S. Highway 40 to St. Louis, and (3) from Chicago over U.S. Highway 20 to junction U.S. Highway 62, approximately 4 miles north of Hamburg, N.Y., thence over U.S. Highway 62 to Buffalo, N.Y., thence over New York Highway 130 to junction U.S. Highway 20, thence over U.S. Highway 20 via Avon, Auburn, and Lafayette, N.Y., to Albany, N.Y. (also from Buffalo over New York Highway 5 to Albany), and thence over U.S. Highway 9 (also over U.S. Highway 9W), to New York, and return over the same routes.

No. MC 43654 (Deviation No. 10), DIXIE OHIO EXPRESS, INC., Post Office Box 750, Akron, Ohio, 44309, filed December 10, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: From Columbus, Ohio, over Interstate Highway 71 to junction Interstate Highway 275, thence over Interstate Highway 275 to junction Interstate Highway 75, thence over Interstate Highway 75 via Cincinnati, Ohio, to Lexington, Ky., and return over the same route, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over a pertinent service route as follows: From Columbus, over U.S. Highway 62 to junction U.S. Highway 68, thence over U.S. Highway 68 to Lexington, and return over the same route.

No. MC 43654 (Deviation No. 11), DIXIE OHIO EXPRESS, INC., Post Office Box 750, Akron, Ohio, 44309, filed December 10, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: Between Akron, Ohio, and junction Interstate Highway 80S and Ohio Highway 46, over Interstate Highway 80S, for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over pertinent service routes as follows: (1) From Akron over Ohio Highway 18 to junction Ohio Highway 45, thence over Ohio Highway 45 to junction Interstate Highway 80S, and (2) from Akron, over Ohio Highway 18 to junction Ohio Highway 46, thence over Ohio Highway 46 to junction Interstate Highway 80S, and return over the same routes.

MOTOR CARRIER OF PASSENGERS

No. MC 1515 (Deviation No. 210) (Cancels Deviation No. 192), GREYHOUND LINES, INC. (Southern Division), 219 East Short Street, Lexington, Ky., 40507, filed December 7, 1964. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *passengers and their baggage*, over deviation routes as follows: (1) From Chattanooga, Tenn., over Interstate Highway 75 to junction Georgia Highway 53, thence over Georgia Highway 53 to junction U.S. Highway 41, 3 miles south of Calhoun, Ga., with access roads as follows: (a) From junction Interstate Highway 75 and Georgia Highway 2 over Georgia Highway 2 to Ringgold, Ga., thence over Georgia Highway 151 to junction Interstate Highway 75, (b) from junction Interstate Highway 75 and U.S. Highway 41 over U.S. Highway 41 to Dalton, Ga., and (c) from junction Interstate Highway 75 and U.S. Highway 41, over U.S. Highway 41 to Calhoun, thence over Georgia Highway 156 to junction Interstate Highway 75, and return over the same routes for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and their baggage over a pertinent service route as follows: From Chattanooga over U.S. Highway 41 via Macon, Ga., to Lake City, Fla., thence over U.S. Highway 90 to Jacksonville, Fla., and return over the same route.

No. MC 1515 (Deviation No. 211) GREYHOUND LINES, INC. (Western Division), Greyhound Building, Market and Fremont Streets, San Francisco 5, Calif., filed December 4, 1964. Carrier's attorney: W. T. Meinhold (same address as carrier). Carrier proposes to operate as a *common carrier*, by motor vehicle, of *passengers and their baggage*, over deviation routes as follows: (1) From junction unnumbered highway and U.S. Highway 99 (North Merced Junction), over U.S. Highway 99 to junction unnumbered highway (South Merced Junction), (2) from Fresno over U.S. Highway 99 to junction unnumbered highway (South Kingsburg Junction), serving the points of Malaga, Fowler, Selma and Kingsburg via available access highways to U.S. Highway 99, (3) from junction unnumbered highway and U.S. Highway 99 (North Bakersfield Junction), over U.S. Highway 99 to junction unnumbered highway (South Bakersfield Junction), serving the points of Bakersfield and Greenfield Corners via available access highways to U.S. Highway 99, and (4) from junction Business Route U.S. Highway 99 and Interstate Highway 5 (San Fernando Junction), over Interstate Highway 5 to Los Angeles, serving the points of San Fernando, Burbank and Glendale via available access highways to Interstate Highway 5, and return over the same routes, for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and their baggage over a pertinent service route as follows: From San Francisco over San Francisco-Oakland Bay Bridge to Oakland, thence over unnumbered highway via San Leandro and Hayward to junction U.S. Highway 50 northeast of Hayward (Hayward Junction), thence over U.S. Highway 50 to junction California Highway 120 (San Joaquin Bridge), thence over California Highway 120 to junction unnumbered highway (Manteca), thence over unnumbered highway to junction U.S. Highway 99 south of Manteca (South Manteca), thence over U.S. Highway 99 to Los Angeles, and return over the same route.

By the Commission.

## NOTICE OF FILING OF MOTOR CARRIER INTRASTATE APPLICATIONS

DECEMBER 18, 1964.

The following applications for motor common carrier authority to operate in intrastate commerce seek concurrent motor carrier authorization in interstate or foreign commerce within the limits of the intrastate authority sought, pursuant to section 206(a)(6) of the Interstate Commerce Act, as amended October 15, 1962. These applications are governed by Special Rule 1.245 of the Commission's rules of practice, published in the FEDERAL REGISTER, issue of April 11, 1963, page 3533, which provides, among other things, that protests and requests for information concerning the time and place of State Commission hearings or other proceedings, any subsequent changes therein, and any other related matters shall be directed to the State Commission with which the application is filed and shall not be addressed to or filed with the Interstate Commerce Commission.

State Docket No. 46498, filed April 13, 1964. Applicant: POLSLEY TRANSPORTATION SERVICE, Post Office Box, 39, Covelo, Calif. Applicant's attorney: Edward M. Berol, 100 Bush Street, San Francisco, Calif. Certificate of public convenience and necessity sought to operate a freight service as follows: Transportation of *general commodities* ((a) except used household goods and personal effects not packed in accordance with the crated property requirements as set forth in paragraphs (a)(1) and (a)(2), Item 20 of Minimum Rate Tariff No. 4–B; (b) liquids, compressed gases, commodities in semi-plastic form nor commodities in suspension; liquids in bulk in tank trucks, tank trailers, or tank and semi trailers or a combination of such highway vehicles; (c) commodities when transported in motor vehicles equipped for mechanical mixing in transit; (d) articles of extraordinary value; and (e) automobiles, trucks or buses, new or used, finished or unfinished, namely; passenger automobiles (including jeeps); ambulances; hearses; taxis; freight automobiles; automobile chassis; truck trailers; trucks and trailers combined; buses or bus chassis), between Willits, on the one hand, and, on the other hand, Dos Rios and Covelo and intermediate points between Dos Rios and Covelo along the county road between said points, service to be restricted to the movement of traffic interlined with the Northwestern Pacific Railroad, Pacific Motor-Trucking Company and Pacific Motor Transport and interchanged with said carriers at Willits, Calif.

NOTE: Applicant states the proposed route of service will be from Willits to Longvale via U.S. Highway 101, thence over county roads from Longvale to Covelo and Dos Rios, returning from Covelo via the same route.

*HEARING:* Date, time and place assigned for hearing this application, not specified.

Requests for procedural information, including the time for filing protests concerning this application should be addressed to the California Public Utilities Commission, State Building, Civic Center, San Francisco 2, Calif., and should not be directed to the Interstate Commerce Commission.

By the Commission.

[SEAL] HAROLD D. McCOY, *Secretary.*

## CENTRAL RAILROAD COMPANY OF NEW JERSEY AND ERIE-LACKAWANNA RAILROAD CO.

### Vacation of Order

Upon further consideration of Taylor's Car Distribution Order No. 7 (The Central Railroad Company of New Jersey; Erie-Lackawanna Railroad Co.) and good cause appearing therefor:

*It is ordered*, That: Taylor's Car Distribution Order No. 7 be, and it is hereby vacated.

*It is further ordered*, That this amendment shall become effective at 12:01 a.m., December 18, 1964, and that this order shall be served upon the Association of American Railroads, Car Service Division, as agent of all railroads subscribing to the car service and per diem agreement under the terms of that agreement, and by filing it with the Director, Office of the Federal Register.

Issued at Washington, D.C., December 17, 1964.

INTERSTATE COMMERCE COMMISSION,
[SEAL] CHARLES W. TAYLOR, *Agent.*

[S.O. 947; Second Rev. Taylor's Car Distribution Order 9–A]

## BALTIMORE AND OHIO RAIL ROAD CO. AND CHICAGO, ROCK ISLAND AND PACIFIC RAILROAD CO.

### Shortage of Freight Cars

Pursuant to section 1 (15) and (17) of the Interstate Commerce Act and authority vested in me by paragraph (5) (b) of Interstate Commerce Commission Service Order No. 947 (28 F.R. 12127, 29 F.R. 6014 and 9670).

I find that there exists a shortage of freight cars in certain areas because of inequitable distribution and, because

of such emergency, notice and public procedure on this order would be impracticable and contrary to the public interest, and this order shall be made effective upon less than 30 days' notice.

*Therefore, it is ordered,* That:

(a) The Baltimore and Ohio Rail Road Co. shall deliver to the Chicago, Rock Island and Pacific Railroad Co. a daily average of 25 plain serviceable boxcars inside length less than 44'8".

(b) Cars received by the Chicago, Rock Island and Pacific Railroad Co. under this order will be delivered to the Union Pacific Railroad.

*It is further ordered,* That The Baltimore and Ohio Rail Road Co. shall prepare empty car cards, tickets or movement slips for all cars delivered to the Chicago, Rock Island and Pacific Railroad Co. Such cards, tickets or slips to accompany cars and be delivered with cars to the Union Pacific Railroad.

(c) *Effective date.* This order shall become effective at 12:01 a.m., December 18, 1964.

(d) *Expiration date.* This order shall expire at 11:59 p.m., December 22, 1964, unless otherwise ordered.

*It is further ordered,* That this order shall be served upon the Association of American Railroads, Car Service Division, as agent of all railroads subscribing to the car service and per diem agreement under the terms of that agreement and by filing it with the Director, Office of the Federal Register.

Issued at Washington, D.C., December 17, 1964.

INTERSTATE COMMERCE COMMISSION,

[S.O. 947; Rev. Taylor's Car Distribution Order 14]

## PENNSYLVANIA RAILROAD CO. AND ILLINOIS CENTRAL RAILROAD CO.

### Vacation of Order

Pursuant to section 1 (15) and (17) of the Interstate Commerce Act and authority vested in me by paragraph (5) (b) of Interstate Commerce Commission Service Order No. 947 (28 F.R. 12127, 29 F.R. 6014 and 9670).

I find that there exists a shortage of freight cars in certain areas because of inequitable distribution and, because of such emergency, notice and public procedure on this order would be impracticable and contrary to the public interest, and this order shall be made effective upon less than 30 days' notice.

*Therefore, it its ordered,* That:

(a) The Pennsylvania Railroad Co. shall deliver to the Illinois Central Railroad Co. a daily average of 25 plain serviceable boxcars inside length less than 44'8".

(b) Cars received by the Illinois Central Railroad Co. under this order will be delivered to the Union Pacific Railroad.

*It is further ordered,* That The Pennsylvania Railroad Co. shall prepare empty car cards, tickets or movement slips for all cars delivered to the Illinois Central Railroad Co. Such cards, tickets or slips to accompany cars and be delivered with cars to the Union Pacific Railroad.

(c) *Effective date.* This order shall become effective at 12:01 a.m., December 18, 1964.

(d) *Expiration date.* This order shall expire at 11:59 p.m., December 22, 1964, unless otherwise ordered.

*It is further ordered,* That this order shall be served upon the Association of American Railroads, Car Service Division, as agent of all railroads subscribing to the car service and per diem agreement under the terms of that agreement and by filing it with the Director, Office of the Federal Register.

Issued at Washington, D.C., December 17, 1964.

## FOURTH SECTION APPLICATIONS FOR RELIEF

DECEMBER 21, 1964.

Protests to the granting of an application must be prepared in accordance with Rule 1.40 of the general rules of practice (49 CFR 1.40) and filed within 15 days from the date of publication of this notice in the FEDERAL REGISTER.

LONG-AND-SHORT HAUL

FSA 39474: *Iron or steel articles to Nashville, Tenn.* Filed by O. W. South, Jr., agent (No. A4611), for interested rail carriers. Rates on iron or steel articles, in carloads, from Gulf, south Atlantic and Virginia ports to Nashville, Tenn.

Grounds for relief: Port equalization and rate relationship.

Tariff: Supplement 22 to Southern Freight Association, Agent, tariff I.C.C. S-398.

FSA 39475: *Liquid caustic soda to La Grange, Ga.* Filed by O. W. South, Jr., agent (No. A4610), for interested rail carriers. Rates on liquid caustic soda, in tank carloads, from Charleston, W. Va., group points to La Grange, Ga.

Grounds for relief: Market competition.

Tariff: Supplement 151 to Traffic Executive Association-Eastern Railroads, Agent, tariff I.C.C. C-102.

FSA 39476: *Liquid caustic soda to Jeffersonville, Ind.* Filed by O. W. South, Jr., agent (No. A4613), for interested rail carriers. Rates on liquid caustic soda, in tank carloads, from Calvert, Ky., to Jeffersonville, Ind.

Grounds for relief: Market competition.

Tariff: Supplement 4 to Southern Freight Association, Agent, tariff I.C.C. S-484.

FSA 39477: *Acetaldehyde from Norco, La.* Filed by O. W. South, Jr., agent (No. A4614), for interested rail carriers. Rates on Acetaldehyde, in tank carloads, from Norco, La., to Heyden, N.J., and Tottenville, N.Y.

Grounds for relief: Market competition.

Tariff: Supplement 50 to Southern Freight Association, Agent, tariff I.C.C. S-384.

FSA 39478: *T.O.F.C. rates from and to points in New Mexico.* Filed by Southwestern Freight Bureau, agent (No. B-8657), for interested rail carriers. Rates on property moving on class and commodity rates, loaded in trailers and transported on railroad flat cars, between Amarillo, El Paso and Lubbock, Tex., on the one hand, and points in New Mexico, on the other.

Grounds for relief: Short-line distance formula and grouping.

Tariff: Supplement 187 to Southwestern Freight Bureau, Agent, tariff I.C.C. 4353.

By the Commission.

HAROLD D. MCCOY,
[SEAL] *Secretary.*

[Notice 1099]

## MOTOR CARRIER TRANSFER PROCEEDINGS

DECEMBER 21, 1964.

Synopses of orders entered pursuant to section 212(b) of the Interstate Commerce Act, and rules and regulations prescribed thereunder (49 CFR Part 179), appear below:

As provided in the Commission's special rules of practice any interested person may file a petition seeking reconsideration of the following numbered proceedings within 20 days from the date of publication of this notice. Pursuant to section 17(8) of the Interstate Commerce Act, the filing of such a petition will postpone the effective date of the order in that proceeding pending its disposition. The matters relied upon by petitioners must be specified in their petitions with particularity.

No. MC-FC 35388. By order of December 16, 1964, the Transfer Board approved the lease for one year to Kansas City Western Express, Inc., Kansas City, Mo., of a portion of the operating rights in Certificate in No. MC 8803, and the entire operating rights in Certificate in No. MC 8803 Sub 2, issued November 25, 1942 and November 10, 1942, respectively, to The Topeka Transfer & Storage Company, a corporation, Topeka, Kans., authorizing the transportation of: General commodities, with the usual exceptions including household goods and commodities in bulk, between Topeka, Kans., and Kansas City, Mo.: From Topeka over U S. Highway 24 to Kansas City and return over the same route. Service is authorized to and from the intermediate and off-route points of Perry, Lawrence, Tonganoxie, and Kansas City, Kans., with service to and from points in the Kansas City, Mo., Kansas City, Kans., commercial zone; Lessors retained operating rights have been restricted against service from or to Perry, Lawrence, Tonganoxie, and Kansas City, Kans., or points in the Kansas City, Mo., Kansas City, Kans., commercial zone; Wentworth E. Griffin, 1221 Baltimore, Kansas City, 5, Mo., attorney for applicants.

No. MC-FC 67298. By order of December 16, 1964, the Transfer Board approved the transfer to Russell B. Hullfish, Inc., Plainsboro, N.J., of Permits Nos. MC 45784 and MC 45784 Sub 1, issued July 5, 1941 and August 11, 1949, respectively, to Russell B. Hullfish, Plainsboro, N.J., authorizing the transportation of dried manure fertilizer, in bags, in seasonal operations commencing September 1 and ending May 31, each year, over irregular routes, from Plainsboro, N.J., to points in Connecticut, New York, and Pennsylvania, within 150 miles of Plainsboro; and milk, cream, and milk products, and empty containers, over irregular routes, between Plainsboro, N.J., on the one hand, and, on the other, New York, N.Y., and points in Westchester County, N.Y., and those in Fairfield County, Conn. James C. Bennett, 6-8 Charlton Street, Princeton, N.J., representative for applicants.

No. MC-FC 67407. By order of December 16, 1964, the Transfer Board approved the transfer to Kay-Len Trans., Inc., Paterson, N.J., of the operating rights in Certificate No. MC 105822 Sub 1, issued October 26, 1948, to Charles N. Ged and Joseph C. Homcy, a partnership, doing business as G & H Motor Transportation Co., Paterson, N.J., authorizing the transportation, over irregular routes, of general commodities, excluding household goods, commodities in bulk, and other specified commodities, between points in Essex, Union, Morris, Passaic, Bergen, Monmouth, and Middlesex Counties, N.J., on the one hand, and, on the other, New York, N.Y., and tile and tile products, between points in Hudson and Essex Counties, N.J. George A. Olsen, 69 Tonnele Avenue, Jersey City, N.J., 07306, representative for applicants.

No. MC-FC 67417. By order of December 16, 1964, the Transfer Board approved the transfer to Earl M. Young, Inc., Lincoln, Nebr., of the Permits in Nos. MC 118431 and MC 118431 Sub 2, issued August 31, 1960 and August 15, 1962, respectively, to Earl M. Young, Lincoln, Nebr., authorizing the transportation of: Bananas, from New Orleans, La., to points in Nebraska, and from Gulfport, Miss., to points in Nebraska. Charles F. Noren, NSEA Building, 14th and J, Lincoln, Nebr., attorney for applicants.

No. MC-FC 67436. By order of December 16, 1964, the Transfer Board approved the transfer to Holland Clifton McHenry, doing business as Mac's Delivery, 219 Broadway, Sheridan, Wyo., of the operating rights in Certificate No. MC 27033, issued September 2, 1955, to Jack Sparks, doing business as Otter Freight, Post Office Box 274, Sheridan, Wyo., authorizing the transportation, over regular and irregular routes, of general commodities, except livestock, and the transportation of: Farm machinery, and parts, building materials, fencing materials, stock feed and stock salt, subject to certain restrictions, be-

tween specified points in Montana and Wyoming.

No. MC-FC 67439. By order of December 16, 1964, the Transfer Board approved the transfer to Connie's Incorporated, La Grande, Oreg., of the operating rights in Certificate No. MC 108296, issued June 28, 1961, to Olaf C. Braseth and Geraldine E. Braseth, doing business as La Grande Transfer & Warehouse Co., La Grande, Oreg., authorizing the transportation, over irregular routes, of: Household goods, as defined by the Commission in radial movements, between named counties in Oregon, and points in Idaho and Washington. Earl V. White, 2130 Southwest Fifth Avenue, Portland, Oreg., attorney for applicants.

[SEAL] HAROLD D. McCOY, *Secretary.*

**NEW CODIFICATION GUIDE**

**[January–November 1964]**

Published monthly on a cumulative basis. Lists titles, parts, and sections of the Code of Federal Regulations amended or otherwise affected by documents published in the Federal Register during 1964. Entries indicate the exact nature of all changes effected. [Mailed free to FR subscribers December 19.]

**Individually priced: 20 cents a copy**

Compiled by Office of the Federal Register, National Archives and Records Service, General Services Administration

Order from Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402

FEDERAL REGISTER

Area Code 202 Phone 963-3261

Published daily, Tuesday through Saturday (no publication on Sundays, Mondays, or on the day after an official Federal holiday), by the Office of the Federal Register, National Archives and Records Service, General Services Administration (mail address National Archives Building, Washington, D.C. 20408), pursuant to the authority contained in the Federal Register Act, approved July 26, 1935 (49 Stat. 500, as amended; 44 U.S.C., ch. 8B), under regulations prescribed by the Administrative Committee of the Federal Register, approved by the President (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $1.50 per month or $15.00 per year, payable in advance. The charge for individual copies (minimum 15 cents) varies in proportion to the size of the issue. Remit check or money order, made payable to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The regulatory material appearing herein is keyed to the CODE OF FEDERAL REGULATIONS, which is published, under 50 titles, pursuant to section 11 of the Federal Register Act, as amended. The CODE OF FEDERAL REGULATIONS is sold by the Superintendent of Documents. Prices of books and pocket supplements are listed in the first FEDERAL REGISTER issue of each month.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER or the CODE OF FEDERAL REGULATIONS.

# Rules and Regulations

## Title 7—AGRICULTURE

### Chapter IX—Agricultural Marketing Service (Marketing Agreements and Orders; Fruits, Vegetables, Tree Nuts), Department of Agriculture

[Navel Orange Reg. 66]

### PART 907—NAVEL ORANGES GROWN IN ARIZONA AND DESIGNATED PART OF CALIFORNIA

#### Limitation of Handling

**§ 907.366 Navel Orange Regulation 66.**

(a) *Findings.* (1) Pursuant to the marketing agreement, as amended, and Order No. 907, as amended (7 CFR Part 907), regulating the handling of navel oranges grown in Arizona and designated part of California, effective under the applicable provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), and upon the basis of the recommendations and information submitted by the Navel Orange Administrative Committee, established under the said amended marketing agreement and order, and upon other available information, it is hereby found that the limitation of handling of such navel oranges, as hereinafter provided, will tend to effectuate the declared policy of the act.

(2) It is hereby further found that it is impracticable and contrary to the public interest to give preliminary notice, engage in public rule making procedure, and postpone the effective date of this section until 30 days after publication hereof in the FEDERAL REGISTER (5 U.S.C. 1001–1011) because the time intervening between the date when information upon which this section is based became available and the time when this section must become effective in order to effectuate the declared policy of the act is insufficient, and a reasonable time is permitted, under the circumstances, for preparation for such effective time; and good cause exists for making the provisions hereof effective as hereinafter set forth. The committee held an open meeting during the current week, after giving due notice thereof, to consider supply and market conditions for navel oranges and the need for regulation; interested persons were afforded an opportunity to submit information and views at this meeting; the recommendation and supporting information for regulation during the period specified herein were promptly submitted to the Department after such meeting was held; the provisions of this section, including its effective time, are identical with the aforesaid recommendation of the committee, and information concerning such provisions and effective time has been disseminated among handlers of such navel oranges; it is necessary, in order to effectuate the declared policy of the act, to make this section effective during the period herein specified; and compliance with this section will not require any special preparation on the part of persons subject hereto which cannot be completed on or before the effective date hereof. Such committee meeting was held on December 23, 1964.

(b) *Order.* (1) The respective quantities of navel oranges grown in Arizona and designated part of California which may be handled during the period beginning at 12:01 a.m., P.s.t., December 27, 1964, and ending at 12:01 a.m., P.s.t., January 3, 1965, are hereby fixed as follows:

(i) District 1: 350,000 cartons;
(ii) District 2: 90,236 cartons;
(iii) District 3: 50,000 cartons;
(iv) District 4: Unlimited movement.

(2) As used in this section, "handled," "District 1," "District 2," "District 3," "District 4," and "carton" have the same meaning as when used in said amended marketing agreement and order.

(Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674)

Dated: December 23, 1964.

PAUL A. NICHOLSON,
*Deputy Director, Fruit and Vegetable Division, Agricultural Marketing Service.*

[F.R. Doc. 64–13377; Filed, Dec. 24, 1964; 8:49 a.m.]

[Lemon Reg. 144]

### PART 910—LEMONS GROWN IN CALIFORNIA AND ARIZONA

#### Limitation of Handling

**§ 910.444 Lemon Regulation 144.**

(a) *Findings.* (1) Pursuant to the marketing agreement, as amended, and Order No. 910, as amended (7 CFR Part 910; 27 F.R. 8346), regulating the handling of lemons grown in California and Arizona, effective under the applicable provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), and upon the basis of the recommendation and information submitted by the Lemon Administrative Committee, established under the said amended marketing agreement and order, and upon other available information, it is hereby found that the limitation of handling of such lemons as hereinafter provided will tend to effectuate the declared policy of the act.

(2) It is hereby further found that it is impracticable and contrary to the public interest to give preliminary notice, engage in public rule making procedure, and postpone the effective date of this section until 30 days after publication hereof in the FEDERAL REGISTER (5 U.S.C. 1001–1011) because the time intervening between the date when information upon which this section is based became available and the time when this section must become effective in order to effectuate the declared policy of the act is insufficient, and a reasonable time is permitted, under the circumstances, for preparation for such effective time; and good cause exists for making the provisions hereof effective as hereinafter set forth. The committee held an open meeting during the current week, after giving due notice thereof, to consider supply and market conditions for lemons and the need for regulation; interested persons were afforded an opportunity to submit information and views at this meeting; the recommendation and supporting information for regulation during the period specified herein were promptly submitted to the Department after such meeting was held; the provisions of this section, including its effective time, are identical with the aforesaid recommendation of the committee, and information concerning such provisions and effective time has been disseminated among handlers of such lemons; it is necessary, in order to effectuate the declared policy of the act, to make this section effective during the period herein specified; and compliance with this section will not require any special preparation on the part of persons subject hereto which cannot be completed on or before the effective date hereof. Such committee meeting was held on December 22, 1964.

(b) *Order.* (1) The respective quantities of lemons grown in California and Arizona which may be handled during the period beginning at 12:01 a.m., P.s.t., December 27, 1964, and ending at 12:01 a.m., P.s.t., January 3, 1965, are hereby fixed as follows:

(i) District 1: 41,850 cartons;
(ii) District 2: 83,700 cartons;
(iii) District 3: 46,500 cartons.

(2) As used in this section, "handled," "District 1," "District 2," "District 3," and "carton" have the same meaning as when used in the said amended marketing agreement and order.

(Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674)

Dated: December 23, 1964.

PAUL A. NICHOLSON,
*Deputy Director, Fruit and Vegetable Division, Agricultural Marketing Service.*

[F.R. Doc. 64–13378; Filed, Dec. 24, 1964; 8:49 a.m.]

### Chapter X—Agricultural Marketing Service (Marketing Agreements and Orders; Milk), Department of Agriculture

[Milk Order 36]

### PART 1036—MILK IN NORTHEASTERN OHIO MARKETING AREA

#### Order Amending Order

**§ 1036.0 Findings and determinations.**

The findings and determinations hereinafter set forth are supplementary

and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of the said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Northeastern Ohio marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

(b) *Additional findings.* It is necessary in the public interest to make this order amending the order effective not later than January 1, 1965. Any delay beyond that date would tend to disrupt the orderly marketing of milk in the marketing area.

The provisions of the said order are known to handlers. The recommended decision of the Associate Administrator was issued November 27, 1964, and the decision of the Assistant Secretary containing all amendment provisions of this order was issued December 15, 1964. The changes effected by this order will not require extensive preparation or substantial alteration in method of operation for handlers. In view of the foregoing, it is hereby found and determined that good cause exists for making this order amending the order effective January 1, 1965, and that it would be contrary to the public interest to delay the effective date of this amendment for 30 days after its publication in the FEDERAL REGISTER. (Section 4(c), Administrative Procedure Act, 5 U.S.C. 1001–1011.)

(c) *Determinations*—It is hereby determined that:

(1) The refusal or failure of handlers (excluding cooperative associations specified in section 8c(9) of the Act) of more than 50 percent of the milk, which is marketed within the marketing area, to sign a proposed marketing agreement, tends to prevent the effectuation of the declared policy of the Act;

(2) The issuance of this order, amending the order, is the only practical means pursuant to the declared policy of the Act of advancing the interests of producers as defined in the order as hereby amended; and

(3) The issuance of the order amending the order is approved or favored by at least two-thirds of the producers who during the determined representative period were engaged in the production of milk for sale in the marketing area.

*Order relative to handling.* It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Northeastern Ohio marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended, and as hereby further amended, as follows:

Subparagraphs (1) and (2) of § 1036.51(a) are revised to read as follows:

§ 1036.51 Class I milk prices.

* * * * *

(a) * * *

(1) Divide the total quantity of producer milk during the second and third months preceding by the gross quantity of milk utilized as Class I (adjusted to eliminate duplications due to interhandler transfers) at pool plants in the same two months, multiply the result by 100, and round to the nearest whole number. The result shall be known as the "current utilization percentage".

(2) Compute a "deviation percentage" by subtracting from the current utilization percentage as computed in subparagraph (1) of this paragraph, the "standard utilization percentage" shown below:

| Month for which the price is being computed: | *Standard utilization percentage* |
|---|---|
| January | 130 |
| February | 129 |
| March | 129 |
| April | 130 |
| May | 131 |
| June | 132 |
| July | 141 |
| August | 149 |
| September | 142 |
| October | 128 |
| November | 126 |
| December | 128 |

* * * * *

(Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674)

Effective date: January 1, 1965.

Signed at Washington, D.C., on December 21, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

[F.R. Doc. 64–13269; Filed, Dec. 24, 1964; 8:46 a.m.]

## PART 1046—MILK IN LOUISVILLE-LEXINGTON-EVANSVILLE MARKETING AREA

### Order Amending Order

§ 1046.0 Findings and determinations.

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Louisville-Lexington-Evansville marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

(4) All milk and milk products handled by handlers, as defined in the order as hereby amended, are in the current of interstate commerce or directly burden, obstruct, or affect interstate commerce in milk or its products; and

(5) It is hereby found that the necessary expense of the market administrator for the maintenance and functioning of such agency will require the payment by each handler, as his pro rata share of such expense, three cents per hundredweight or such amount not to exceed three cents per hundredweight as the Secretary may prescribe, with respect to: (i) Producer milk and milk received from a cooperative association as a handler pursuant to § 1046.8(c); (ii) Other source milk allocated to Class I pursuant to § 1046.46(a) (3) and (7) and the corresponding steps of § 1046.46(b); and (iii) Class I milk disposed of from a partially regulated distributing plant on routes in the marketing area that exceeds Class I milk received during the month at such plant from pool plants and other order plants.

(b) *Determinations*—It is hereby determined that:

(1) The refusal or failure of handlers (excluding cooperative associations specified in section 8c(9) of the Act) of more than 50 percent of the milk, which is marketed within the marketing area, to sign a proposed marketing agreement, tends to prevent the effectuation of the declared policy of the Act;

(2) The issuance of this order, amending the order, is the only practical means pursuant to the declared policy of the Act of advancing the interests of producers as defined in the order as herein amended; and

(3) The issuance of the order amending the order is approved or favored by at least two-thirds of the producers who participated in a referendum and who during the determined representative period were engaged in the production of milk for sale in the marketing area.

*Order relative to handling—It is therefore ordered,* That on and after the effective date hereof, the handling of milk in the Louisville-Lexington-Evansville marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended and as hereby amended, as follows:

1. Section 1046.6 is revised to read as follows:

§ 1046.6 Louisville-Lexington-Evansville marketing area.

The "Louisville-Lexington-Evansville marketing area", hereinafter called the "marketing area", means all the territory geographically within the counties listed below and all territory wholly or partly therein occupied by municipal corporations and institutions owned or operated by Federal, State or local governments:

2. Section 1046.14 is revised to read as follows:

§ 1046.14 Producer milk.

"Producer milk" means that skim milk and butterfat contained in milk of a producer which is:

(a) Received from producers at a pool plant for the account of the person operating such plant. When milk is withdrawn at more than one pool plant from the same load delivered by a farm tank pickup truck, the entire load shall be deemed to have been received at the first pool plant at which any of such milk was withdrawn unless:

(1) There is an agreement among the operators of the pool plants receiving such milk providing for other receiving handler(s) to report and pay for all or a portion of such milk; or

(2) The milk involved is that which is delivered to pool plants for the account of a cooperative association pursuant to § 1046.8(c).

(b) Diverted by a handler from a pool plant to another pool plant for any number of days of the month. Milk so diverted shall be deemed to have been received by the diverting handler at the location of the pool plant from which it is diverted.

(c) Diverted from a pool plant to a nonpool plant for the account of the operator of the pool plant or a cooperative association, subject to the following conditions:

(1) Milk so diverted shall be deemed to have been received at the pool plant from which it is diverted; and

(2) Producer milk pursuant to this paragraph shall not include the milk of any person during any of the months of October, November, January and February on days on which it is diverted by a handler to a nonpool plant in excess of 22 days (11 days in the case of every-other-day delivery) during the month.

(d) Received by a cooperative association in its capacity as a handler pursuant to § 1046.8(c).

3. Section 1046.15 is revised to read as follows:

§ 1046.15 Fluid milk product.

"Fluid milk product" means milk, skim milk, buttermilk, flavored milk, milk drinks (plain or flavored), reconstituted milk or skim milk, fortified milk or skim milk (including "diet" foods), cream (sweet or sour), half and half, or any mixture in fluid form of milk or skim milk and cream (except ice cream mix, frozen dessert mix, pancake mix, evaporated milk, condensed milk, aerated cream products, eggnog, and cultured sour mixtures not labeled as Grade A) which are neither sterilized nor packaged in hermetically sealed containers.

4. Section 1046.17 is revised to read as follows:

§ 1046.17 Route.

"Route" means delivery (including disposition from a plant store or from a distribution point and distribution by a vendor) of a fluid milk product(s) to a wholesale or retail outlet(s) other than to a milk plant(s). A delivery through a distribution point shall be attributed to the plant from which the Class I milk is moved through a distribution point to wholesale or retail outlets without intermediate movement to another milk plant.

5. In § 1046.41, paragraph (b) (4) and (7) is revised to read as follows:

§ 1046.41 Classes of utilization.

* * * * *

(b) * * *

(4) Disposed of for livestock feed, or in fluid milk products dumped if the market administrator has been notified in advance and afforded the opportunity to verify such dumping.

* * * * *

(7) In shrinkage of skim milk and butterfat, respectively, assigned pursuant to § 1046.42(b)(1), but not to exceed the following:

(i) Two percent of skim milk and butterfat, respectively, physically received directly from producers' farms and by diversion from other pool plants; plus

(ii) One and one-half percent of skim milk and butterfat, respectively, in milk received at a pool plant from a cooperative association in its capacity as a handler pursuant to § 1046.8(c), except that if the handler operating such pool plant files notice with the market administrator on or before the date he submits his monthly report applicable to such milk pursuant to § 1046.30 that he is purchasing such milk on the basis of weights determined at the farm from farm bulk tank measurements, the applicable percentage shall be two percent; plus

(iii) One and one-half percent of skim milk and butterfat, respectively, in fluid milk products received at a pool plant in bulk (except bulk cream) as a transfer from other pool plants; plus

(iv) One and one-half percent of receipts of fluid milk products in bulk from an other order plant, exclusive of the quantity for which Class II utilization was requested by the operator of such plant and the handler; plus

(v) One and one-half percent of receipts of fluid milk products in bulk from unregulated supply plants, exclusive of the quantity for which Class II utilization was requested by the handler; less

(vi) One and one-half percent of skim milk and butterfat, respectively, in fluid milk products transferred in bulk (except bulk cream) from a pool plant to other plants; and plus

(vii) One-half of one percent of skim milk and butterfat, respectively, in producer milk received by a cooperative association in its capacity as a handler pursuant to § 1046.8(c), unless the exception provided in subdivision (ii) of this subparagraph applies; and

6. In § 1046.44, paragraphs (a) and (b) are revised to read as follows:

§ 1046.44 Transfers.

* * * * *

(a) At the utilization reported pursuant to § 1046.30 by the operator(s) of both plants, otherwise as Class I milk, if transferred or diverted by the operator of a pool plant or a cooperative association

in its capacity as a handler pursuant to § 1046.8(c) to another pool plant, subject in either event to the following conditions:

(1) The skim milk or butterfat so assigned to either class shall be limited to the amount thereof remaining in such class in the transferee plant after computations pursuant to § 1046.46(a)(8) and the corresponding step of § 1046.46(b);

(2) If the transferor plant received during the month other source milk to be allocated pursuant to § 1046.46(a)(3) and the corresponding step of § 1046.46(b), the skim milk and butterfat so transferred or diverted shall be classified so as to allocate the least possible Class I utilization to such other source milk; and

(3) If the transferor handler received during the month other source milk to be allocated pursuant to § 1046.46(a)(7) or (8) and the corresponding steps of § 1046.46(b), the skim milk and butterfat so transferred or diverted up to the total of such receipts shall not be classified as Class I milk to a greater extent than would be applicable to a like quantity of such other source milk received at the transferee plant;

(b) If a specified utilization of skim milk and butterfat transferred or diverted to a pool plant of another handler by a cooperative association in its capacity as a handler pursuant to § 1046.8(c) is not claimed by both handlers pursuant to paragraph (a) of this section, such skim milk and butterfat shall be classified pro rata to the respective amounts remaining in each class at the pool plant of the receiving handler after making the assignment pursuant to § 1046.46(a)(8) and the corresponding step of § 1046.46(b), and after assignment of milk for which specified classification has been claimed by handlers pursuant to paragraph (a) of this section.

# Title 9—ANIMALS AND ANIMAL PRODUCTS

## Chapter I—Agricultural Research Service, Department of Agriculture

### SUBCHAPTER H—VOLUNTARY INSPECTION AND CERTIFICATION SERVICE

### PART 155—CERTIFIED PRODUCTS FOR DOGS, CATS, AND OTHER CARNIVORA; INSPECTION, CERTIFICATION, AND IDENTIFICATION AS TO CLASS, QUALITY, QUANTITY AND CONDITION

### Miscellaneous Amendments

On October 21, 1964, there was published in the FEDERAL REGISTER (29 F.R. 14441) a notice with respect to proposed amendments to the regulations for inspection and certification of products for dogs, cats, and other carnivora (9 CFR Part 155). After due consideration of all relevant material submitted in connection with such notice and pursuant to the provisions of sections 203 and 205 of the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1622, 1624), the regulations for inspection and certification of products for dogs, cats, and other carnivora are hereby amended in the following respects:

1. Paragraphs (p) and (q) are added to § 155.2 to read as follows:

**§ 155.2 Terms defined.**

When used in this part unless otherwise distinctly expressed or manifestly incompatible with the intent thereof:

* * * * *

(p) "Poultry" means any domesticated bird slaughtered in accordance with the Poultry Products Inspection Act, Public Law 85–172, 85th Congress, S. 1747, dated August 28, 1957 (21 U.S.C. 451 et seq.).

(q) "Poultry product" means any edible part of fresh poultry which have been slaughtered for human food and from which the blood, feathers, feet, head and viscera have been removed in accordance with rules and regulations promulgated by the Secretary of Agriculture.

2a. Section 155.29(a)(2), (b), and (c)(1) and (3) are amended to read as follows:

**§ 155.29 Composition of certified product for dogs, cats, and other carnivora.**

(a) *Composition of canned maintenance food.* * * *

(2) Not less than 30 percent of meat or animal food meat byproduct or both, or of horse meat or animal food horse meat byproduct or both, or of mule meat or animal food mule meat byproduct or both, or of poultry products, shall be used in the preparation of canned or semimoist certified maintenance food. Upon specific approval of the Director of the Division, combinations of the above specified ingredients may be used. The uncooked weight of the meat or animal food meat byproduct or both, or of the horse meat or animal food horse meat byproduct or both, or of the mule meat or animal food mule meat byproduct or both, or of the poultry products, or of the combinations thereof, shall be used in the calculation, and the percentage shall be obtained by relating this weight to the total weight of the certified maintenance food.

* * * * *

(b) *Composition of canned or fresh frozen certified supplemental animal foods.* (1) Certified animal protein supplement shall comply with the following requirements:

(i) Certified animal protein supplement shall contain not less than 95 percent of meat or animal food meat byproduct or both, or of horse meat or animal food horse meat byproduct or both, or of mule meat or animal food mule meat byproduct or both, or of poultry products. Upon specific approval of the Director of the Division, combinations of the above specified ingredients may be used;

(ii) Certified animal protein supplement shall have added thereto a sufficient amount of fresh ground bone or other acceptable agent to satisfy the requirements of the regulations promulgated under the Meat Inspection Act (34 Stat. 1260), as amended (21 U.S.C. 71 et seq.), and the Horse Meat Act (41 Stat. 241; 21 U.S.C. 96), in order to insure decharacterization of the product for human food purposes;

(iii) Certified animal protein supplement may contain not more than 3 percent wheat flour or other processing aid acceptable to the Director of the Division, which shall be of good quality, shall be free from insect infestation, and shall be otherwise fit for use as animal food;

(iv) Certified animal protein supplement shall contain not less than 15 percent protein; and

(v) Certified animal protein supplement shall contain not less than 3 percent fat.

(2) Certified pet food supplement shall comply with the following requirements:

(i) Certified pet food supplement shall contain not less than 50 percent of meat or animal food meat byproduct or both, or of horse meat or animal food horse meat byproduct or both, or of mule meat or animal food mule meat byproduct or both, or of poultry products. Upon specific approval of the Director of the Division, combinations of the above specified ingredients may be used;

(ii) Certified pet food supplement shall have added thereto a sufficient amount of fresh ground bone or other acceptable agent to satisfy the requirements of the regulations promulgated under the Meat Inspection Act (34 Stat. 1260), as amended (21 U.S.C. 71 et seq.), and the Horse Meat Act (41 Stat. 241; 21 U.S.C. 96), in order to insure decharacterization of the product for human food purposes;

(iii) Certified pet food supplement may contain various cereals, flours, vegetables, flavorings, seasonings and other processing aids acceptable to the Director of the Division which shall be of good quality, shall be free from discoloration, mold, smut, and insect infestation, and shall be otherwise fit for use as animal food;

(iv) Certified pet food supplement shall contain not less than 11 percent protein;

(v) Certified pet food supplement shall contain not less than 3 percent fat; and

(vi) Certified pet food supplement may not contain more than 74 percent moisture.

(c) *Composition of certified canned pet stew.* (1) Certified pet stew shall contain not less than 25 percent of meat or animal food meat byproduct or both, or of horse meat or animal food horse meat byproduct or both, or of mule meat or animal food mule meat byproduct or both, or of poultry products. Upon specific approval of the Director of the Division, combinations of the above specified ingredients may be used.

* * * * *

(3) Vegetables and grains and their derivatives used as ingredients of certified pet stews shall be of good quality, shall be free from discoloration, mold, smut, and insect infestation, and shall be otherwise fit for use as animal food.

* * * * *

2b. Subparagraphs (2), (4), (5), and (6) of paragraph (c) of § 155.29 are amended by adding the word "certified" before the word "pet" wherever the latter occurs in those subparagraphs.

(Sec. 203, 60 Stat. 1087, as amended, sec. 205, 60 Stat. 1090, as amended; 7 U.S.C. 1622, 1624; 19 F.R. 74, as amended)

*Effective date.* The foregoing amendments shall become effective upon publication in the FEDERAL REGISTER.

The amendments extend the voluntary animal food certification program by permitting the certification of canned and fresh frozen supplemental pet foods, and animal foods which contain poultry products, when such foods meet the requirements in Part 155, Title 9, Code of Federal Regulations. This action will probably make a greater variety of certified animal foods available to purchasers. Accordingly, it is found upon good cause under section 4(c) of the Administrative Procedure Act (5 U.S.C. 1003(c)), that the amendments may be made effective less than 30 days after publication in the FEDERAL REGISTER.

Done at Washington, D.C., this 22d day of December 1964.

GEORGE W. IRVING, JR.,
*Acting Administrator,*
*Agricultural Research Service.*

# Title 13—BUSINESS CREDIT AND ASSISTANCE

## Chapter I—Small Business Administration

[Revision 2, Amdt. 2]

### PART 120—LOAN POLICY

### Business Loans and Guarantees

The Small Business Administration Loan Policy Regulation, as revised in 28 F.R. 6675, and amended in 29 F.R. 2486, is hereby further amended by deleting in § 120.1(d)(10) all words following "investment" in the fifth line thereof. As so amended § 120.1(d)(10) shall provide in full as follows:

**§ 120.1 Business loans and guarantees.**

* * * * *

(d) * * *

(10) If the purpose of the financial assistance is to finance the acquisition, construction, improvement or operation of real property which is, or is to be, held primarily for sale or investment.

* * * * *

*Effective date.* This amendment shall be effective for all applicable loan applications filed on or after January 1, 1965.

Dated: December 17, 1964.

EUGENE P. FOLEY,
*Administrator.*

# Title 29—LABOR

## Subtitle A—Office of the Secretary of Labor

### PART 50—NEIGHBORHOOD YOUTH CORPS PROJECTS FOR UNEMPLOYED YOUTHS

Interim regulations of the Secretary of Labor and the Director of the Office of Economic Opportunity implementing Title I, Part B of the Economic Opportunity Act of 1964.

Pursuant to authority contained in section 602(n) of the Economic Opportunity Act of 1964 (78 Stat. 508) and Delegation No. 1–64 (29 F.R. 14764 (1964)), the Secretary of Labor and the Director of the Office of Economic Opportunity hereby amend Title 29 of the Code of Federal Regulations by establishing a new Part 50 to read as set forth below.

The provisions of section 4 of the Administrative Procedure Act (5 U.S.C. 1003) which require notice of proposed rule making, opportunity for public participation, and delay in effective date are not applicable because these rules involve matters that relate only to public benefits. We do not believe such procedures will serve a useful purpose here. Accordingly, these amendments shall become effective immediately.

Subpart A—General

Sec.
50.1 Definitions.

Subpart B—Enrollees

50.10 Determination of youth's employment and training needs.
50.11 Selection and referral of enrollees.
50.12 Enrollment in other programs.
50.13 Maximum duration of youth's enrollment.
50.14 Enrollee status.
50.15 Proof of age.

Subpart C—Neighborhood Youth Corps Projects

50.20 Types of projects.
50.21 Work-training agreements.
50.22 Standards for a project.
50.23 Work, training and education.
50.24 Supervision, counseling and job placement.
50.25 Community action programs.
50.26 Safety and workmen's compensation.
50.27 Work rules.
50.28 Length of project.
50.29 Non-discrimination.

Subpart D—Financing Neighborhood Youth Corps Projects

50.30 Effective period of Title I, Part B of the Act.
50.31 Allowable costs.
50.32 Limitations on Federal assistance.

Subpart E—Evaluation, Records and Disclosure

50.40 Evaluation of projects.
50.41 Records, reports and disclosure of information.

Subpart F—Disputes and Review

50.50 Disputes.
50.51 Review by Secretary.

AUTHORITY: The provisions of this Part 50 issued under sec. 602, 78 Stat. 528 (Pub. Law 88–452). Delegation of Director of Office of Economic Opportunity, 29 F.R. 14764.

### Subpart A—General

**§ 50.1 Definitions.**

As used in this part, unless the context clearly indicates otherwise, the term:

(a) "Act" means the Economic Opportunity Act of 1964.

(b) "Contribution in kind" means a contribution, in lieu of cash, of any item or service the purchase of which would be an allowable cost, including but not limited to the use of plant and equipment fairly evaluated.

(c) "Enrollee" means a youth employed in a project.

(d) "Low-income family" means any family whose income is insufficient to provide it with basic needs.

(e) "Neighborhood Youth Corps" means the agency established by the Secretary within the Department of Labor to administer Title I, Part B of the Act.

(f) "Permanent resident of the United States" means a person whose principal, actual dwelling place is within a State or any other place, continental or insular, including the Trust Territory of the Pacific Islands, which is subject to the jurisdiction of the United States and who is not a nonimmigrant alien as defined in section 101(a)(15) of the Immigration and Nationality Act.

(g) "Private nonprofit organization" means any institution, organization, corporation, or agency no part of whose earnings inures or lawfully may inure directly or indirectly to the benefit of any private member, shareholder, or other individual, other than as reasonable compensation for services rendered as an officer or employee, or as goods and services received as a bona fide part of its operations consistent with the purposes for which it was established. It shall be prima facie evidence of such status that an organization is organized as a nonprofit organization under Federal or State law, or is exempt from taxation under section 501(a) of the Internal Revenue Code of 1954.

(h) "Project" means a Neighborhood Youth Corps project, approved by the Secretary pursuant to section 113 of the Act, combining supervised employment of youth for remuneration and, as appropriate, related training, education and other essential services.

(i) "School" means an elementary or secondary school or its equivalent.

(j) "Secretary" means the Secretary of Labor, United States Department of Labor, or his authorized representatives.

(k) "Sponsor" means the State or local public agency, including Indian Tribal groups, or private nonprofit organization (other than political parties) with

which the Secretary has entered into a work-training agreement to undertake a project.

(l) "State" means a State, the Commonwealth of Puerto Rico, the District of Columbia, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

(m) "State agency" means the agency of the State which administers the employment security program.

(n) "Unemployed youth" means a youth who at the time of his selection for a project is not working regularly for remuneration in excess of 20 hours a week.

(o) "Wage" means money payments for services performed.

(p) "Youth" means a person, man or woman, who has attained age 16 but not age 22.

## Subpart B—Enrollees

### § 50.10 Determination of a youth's employment and training needs.

As a basis for the selection of a youth for a project, the Secretary shall first determine through the State agency or through such other public agency or private nonprofit organization, as the Secretary may designate, the employment and training needs of each youth with regard to the youth's interests and potentialities. This determination shall be based on a comprehensive evaluation of the individual's achievements, aptitudes and interests, abilities, personal and social adjustments, work experience, health, personal traits, financial resources and other pertinent data adequate to form the basis for (a) establishing that such person is in need of work-training experience to increase such person's employability or to enable such person to resume or continue in school and (b) selecting an employment objective commensurate with the individual's capacities and limitations. This may be done through interviewing, testing, counseling, and a medical examination as necessary. All prospective enrollees, prior to their selection for work-training, shall be encouraged to continue or resume school attendance where that is appropriate to their needs.

### § 50.11 Selection and referral of enrollees.

(a) A youth may be selected for a project which is commensurate with the individual's work-training needs, if at the time of selection, he or she is unemployed and is—

(1) Out of school and not planning to return to school, but needs work experience in order to prepare for skill training or for a job, or

(2) Out of school and needs paid work experience to resume school attendance, or

(3) In school, but needs paid work experience to continue in school, and

(4) A member of a low income family: *Provided*, That it shall be prima facie evidence that a family is a low-income family for purposes of this part if such family, without regard to State or local residence requirements, is eligible for receiving cash or other assistance on a needs basis under any public welfare program or from an approved private organization, and

(5) A permanent resident of the United States.

(b) The selection and referral of youths to projects shall be made by such public agencies, including the State agency and where appropriate the local school system, or such private nonprofit organizations, as the Secretary may designate.

### § 50.12 Enrollment in other programs.

(a) Where the circumstances warrant such action, a youth may be provided assistance from more than one of the programs available under Titles I and II of the Act and training programs under the Manpower Development and Training Act of 1962, as amended, and the Area Redevelopment Act. Such assistance may include, but is not limited to the following:

(1) A youth formerly enrolled in the Job Corps under the Act is eligible for enrollment in a project where enrollment in such project is for the purpose of enabling the youth to resume or maintain school attendance.

(2) A youth formerly enrolled in a program comprising only counseling and related services under the Manpower Development and Training Act is eligible for enrollment in a project.

(b) A youth formerly enrolled in a regular Institutional or On-the-Job Training program under the Manpower Development and Training Act may not be enrolled in a project: *Provided however*, That with the permission of the Secretary a youth may be enrolled in a project which is for the purpose of enabling the youth to resume or maintain school attendance.

### § 50.13 Maximum duration of youth's enrollment.

(a) A youth's enrollment in one or more projects designed to enable the youth to maintain school attendance shall not exceed the period necessary to enable said youth to complete high school.

(b) The period of enrollment of all other youths shall not exceed two years.

(c) In no event shall any youth's period of enrollment extend beyond the day immediately preceding the youth's twenty-second birthday.

### § 50.14 Enrollee status.

An enrollee in a project shall not be deemed an employee of the Federal government, and shall not be subject to the provisions of laws relating to Federal employees, including those relating to hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits.

### § 50.15 Proof of age.

Prior to enrollment in a project, each youth shall submit satisfactory evidence of his or her age. Such evidence of age may consist of:

(a) A birth certificate,

(b) A baptismal record,

(c) A bona fide record of the date and place of the youth's birth kept in the Bible in which the records of the births in the family of the child are preserved,

(d) A parent's, guardian's, or custodian's affidavit of age accompanied by a record of the age as given in the register of the school first attended by the youth, if obtainable, or in the earliest available school census, or

(e) Such other documentary evidence satisfactory to the Secretary.

## Subpart C—Neighborhood Youth Corps Projects

### § 50.20 Types of projects.

A project shall be designed to serve the employment needs of one or more of the groups of youth identified in § 50.11(a), and accordingly, may be either (a) an out-of-school project providing suitable employment for youths who need work experience and assistance in order to prepare for skill training or to increase their employability, or (b) an in-school project providing suitable employment for youths who need work experience and financial assistance to resume or maintain school attendance.

### § 50.21 Work-training agreements.

A project shall be undertaken upon execution of an agreement between a sponsor and the Secretary, on the basis of detailed specifications which meet the requirements set forth in this subpart.

### § 50.22 Standards for a project.

No project shall be approved under this part unless the Secretary has first determined that:

(a) The project will enable enrollees to resume or maintain school attendance, or will increase their employability in fields in which the Secretary finds there is a reasonable expectation of suitable full-time employment;

(b) The project will not provide training in occupations where there is a continuing and substantial surplus of qualified workers available for employment in such occupations;

(c) The employment of the enrollees on the project will not result in the displacement of employed workers or impair existing contracts for services;

(d) The employment of the enrollees will permit or contribute to an undertaking or service in the public interest that would not otherwise be provided, or will contribute to the conservation, development, or management of the natural resources of the State or community or to the development, management or protection of State or community recreational areas;

(e) Enrollees in the project will be employed either on publicly owned and operated facilities or projects, or on local projects sponsored by private nonprofit organizations, other than projects involving the construction, operation, or maintenance of so much of any facility used or to be used for sectarian instruction or as a place for religious worship;

(f) The project provides for standards and procedures which meet his approval for the selection of enrollees, which shall include, where appropriate, full coordination and cooperation with local and other authorities to encourage students to resume or maintain school attendance;

(g) The enrollees' rates of pay and other conditions of employment are appropriate and reasonable in the light of such factors as the type of work performed, the geographical region and the proficiency of the enrollee, and comply with all applicable Federal, State and local laws, rules and regulations dealing with or relating to employment conditions: *Provided*, That except as may be required by applicable Federal, State, or local law, starting rates of pay shall be set slightly below, and for enrollees performing their duties satisfactorily may be increased at appropriate intervals up to the prevailing entrance wage rate for inexperienced workers engaged in similar occupations in the labor area where the work will be performed and that, consistent with this section, the sponsor may set a uniform wage rate for all enrollees on the project: *Provided further*, That no enrollee shall be employed for more than 40 hours per week; and

(h) The project provides for work and, as appropriate, training, education, and other services in accordance with this subpart.

### § 50.23 Work, training and education.

(a) Each project shall furnish work for which the enrollee is paid wages: *Provided*, That enrollees under 18 years of age shall not be employed in any occupation which the Secretary, under section 3(l) of the Fair Labor Standards Act of 1938, as amended, has declared to be particularly hazardous for youth between the ages of 16 and 18 years. This work, in the case of an out-of-school project, shall be designed to increase the enrollee's employability in appropriate fields through the development of good work habits and attitudes and the acquisition of such skills as may be learned in the process of doing the work.

(b) Each project, in addition to the work provided in paragraph (a) of this section, shall provide, where necessary and as appropriate, supplementary training and remedial education. Accordingly, each project shall be coordinated to the maximum extent feasible with vocational training and educational services adapted to the special needs of enrollees in such project and sponsored by State or local educational agencies: *Provided, however*, That where such services are inadequate or unavailable, the Secretary may make provision for the enlargement, improvement, development, and coordination of such services with the cooperation of, or where appropriate pursuant to agreement with, the Secretary of Health, Education, and Welfare.

(c) In the development and approval of projects, priority shall be given to projects with high training potential.

(d) The sponsor shall provide enrollees instruction and training in safe work practices, such as proper lifting and handling of materials, working with handtools, and using personal protective equipment.

### § 50.24 Supervision, counseling and job placement.

(a) The sponsor shall provide competent work supervision of enrollees and such counseling and guidance as may be needed to assist enrollees in adjusting to the work situation and in planning their vocational goals.

(b) Enrollees in out-of-school projects shall be provided assistance in:

(1) Finding and developing post-project job opportunities;

(2) Referral, following completion of the project, for placement in suitable jobs or for further education or training; and

(3) Follow-up, as appropriate, to assist them in their adjustment on such jobs.

(c) The services referred to in paragraph (b) of this section shall be secured, wherever possible, through the State agency or other appropriate public agency.

### § 50.25 Community action programs.

Sponsors of projects shall assist, utilize and coordinate with, wherever practicable, community action programs authorized under Title II of the Act. In accordance with section 211 of the Act, preference shall be given, to the extent feasible, to a project proposal constituting a component of a community action program which has been approved pursuant to the provisions of Title II or, if not approved, whose approval is pending and is anticipated within the fiscal year.

### § 50.26 Safety and workmen's compensation.

(a) The sponsor shall provide safe conditions of work, including but not limited to safe equipment and machinery, personal protective equipment, safe transportation to and from the work site where provided, and fire prevention and protection.

(b) Acceptable workmen's compensation insurance which meets existing requirements under State law shall be provided for each enrollee and staff employee engaged on the project. Such insurance shall provide, notwithstanding the absence of such a requirement under State law, for the payment of medical, surgical, nursing, and hospital services, medical and surgical apparatus and appliances, and medicines which may be reasonably necessary to treat injury or disease arising out of and in the course of employment. Where the State law limits the liability of the employer in permanent total disability cases to a maximum dollar amount or to a specified period of time, such insurance shall provide benefits for the full period of such disability without regard to any maximum dollar limitation.

### § 50.27 Work rules.

(a) The sponsor shall establish rules, approved by the Secretary governing attendance, conduct, and grievances. Such rules shall set forth the grounds for suspension and termination of an enrollee. The enrollee shall be informed in writing of these rules, which, unless contrary to the purposes and policies of the Act, shall be consistent with any similar rules which are the subject of a collective bargaining contract covering these enrollees.

(b) Grievances of the enrollee which relate to the terms of the work-training agreement or the rules referred to in paragraph (a) of this section shall be resolved by the sponsor, or a duly appointed representative, and shall be subject to review by the Secretary upon request of the enrollee: *Provided however*, That grievances of an enrollee which relate to the terms of a work-training agreement or the rules referred to in paragraph (a) of this section and which are subject to processing under the grievance procedures of a collective bargaining contract covering the enrollees shall be processed in accordance with such procedures, consistent with the regulations in this part and the terms of the work-training agreement.

### § 50.28 Length of project.

Each project shall be for a period which is of sufficient duration to achieve its objective consistent with § 50.22(a), but shall not exceed the fiscal year in which the work-training agreement is executed, plus the following fiscal year, except that this shall not preclude the extension of the work-training agreement for subsequent periods.

### § 50.29 Non-discrimination.

(a) No person in the United States shall, on the grounds of race, creed, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance under Title I, Part B of the Act.

(b) In the administration of a project, the Sponsor shall not discriminate against any employee or applicant for employment because of race, creed, color, or national origin, and shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, creed, color, or national origin.

## Subpart D—Financing Neighborhood Youth Corps Projects

### § 50.30 Effective period of Title I, Part B of the Act.

No commitment of funds shall be made pursuant to the authority conferred upon the Secretary under Title I, Part B of the Act after June 30, 1967, unless by Act of Congress the Act is extended beyond that date.

### § 50.31 Allowable costs.

(a) The allowable costs of a project are those costs determined by the Secretary to be allowable in accordance with Part I–15 of the Federal Procurement Regulations (41 CFR 1–15) particularly Subpart 1–15.3 of said part unless otherwise specified in the work-training agreement, and may include the direct costs of the project, plus such indirect costs as are incurred by the sponsor as a result of his undertaking the project: *Provided however*, That the total costs payable shall not exceed an estimated cost for the project which shall be specified in the work-training agreement: *Provided further*, That direct or indirect costs may not include cost of major construction or renovation.

(b) No project shall be undertaken on a "cost-plus-fee" basis.

**§ 50.32 Limitations on Federal assistance.**

(a) Except as provided in paragraph (b) of this section, Federal assistance to any project pursuant to this part shall not exceed 90 per centum of the costs of such project, including costs of administration, for any period prior to August 20, 1966, and shall not exceed 50 per centum of such costs for periods thereafter. Non-federal contributions may be in kind as defined in § 50.1.

(b) Federal assistance to a project may exceed 90 per centum of the costs of such project if the project is sponsored by an Indian tribe whose public facilities (including but not limited to schools, hospitals and parks and other recreational facilities) are owned by the Federal government or receive more than 75 per centum of their revenues from the Federal government.

### Subpart E—Evaluation, Records, and Disclosure

**§ 50.40 Evaluation and projects.**

Pursuant to such standards and criteria as may be established by the Secretary, a continuing and systematic evaluation of the progress and results of a project shall be conducted by the Secretary for the purpose of determining overall effectiveness of projects. The Secretary may at all reasonable times have access to and the right to inspect the place of employment of enrollees in the project when necessary to evaluate the project or to determine compliance with the work-training agreement.

**§ 50.41 Records, reports and disclosure of information.**

(a) The sponsor shall maintain such records and make such reports as required by the Secretary for the purpose of administration of the Act. Such records shall be open for examination by the Secretary in accordance with the provisions of the work-training agreement.

(b) Disclosure of any information contained in the records of the project and secured from youths, sponsors, public agencies, or other persons or groups or organizations as an incident to the administration of the project, including selection of enrollees, shall be governed by the disclosure regulations promulgated by the Secretary. Each work-training agreement or other agreement entered into by the Secretary for the purpose of carrying out an activity under the Act shall contain a provision setting forth this requirement.

### Subpart F—Disputes and Review

**§ 50.50 Disputes.**

Any dispute between the parties to a work-training agreement concerning a question of fact arising under the work-training agreement which is not disposed of by agreement shall be decided by an authorized representative of the Secretary designated for this purpose, who shall reduce his decision to writing and mail or otherwise furnish a copy thereof to the sponsor.

**§ 50.51 Review by the Secretary.**

(a) The decision referred to in § 50.50 shall be final and conclusive unless within 30 days from the date of receipt of a copy of the decision, the sponsor mails or otherwise furnishes to the official rendering the decision a written appeal addressed to the Secretary of Labor, Washington, D.C. The decision of the Secretary shall be final and conclusive unless determined by a court of competent jurisdiction to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence: *Provided*, That the foregoing shall not preclude consideration of law questions, in connection with decisions provided for in § 50.50: *Provided further*, That nothing in this subpart shall be construed as making final the decision of any administrative official, representative, or board on a question of law. In connection with any appeal proceeding under this section, the sponsor shall be afforded an opportunity to be heard and to offer evidence in support of its appeal. Pending final decision of a dispute hereunder, the sponsor shall proceed diligently with the performance of the work-training agreement and in accordance with the decision rendered under § 50.50.

(b) The Secretary may on his own initiative review any determination made under Title I, Part B of the Act where review is not otherwise provided for under the regulations in this part, and if upon such review he determines the action taken was inconsistent with the rules, regulations and procedures promulgated, he may require an appropriate modification of such determination or action.

Signed at Washington, D.C., this 18th day of December 1964.

W. WILLARD WIRTZ,
*Secretary of Labor.*

R. SARGENT SHRIVER,
*Director, Office of Economic Opportunity.*

# Title 33—NAVIGATION AND NAVIGABLE WATERS

## Chapter II—Corps of Engineers, Department of the Army

## PART 203—BRIDGE REGULATIONS

## PART 207—NAVIGATION REGULATIONS

### Snohomish River, Wash.; Hampton Roads and Willoughby Bay, Va.

1. Pursuant to the provisions of section 5 of the River and Harbor Act of August 18, 1894 (28 Stat. 362; 33 U.S.C. 499), § 203.805 is hereby amended revoking the third undesignated paragraph of (e) (5) governing the operation of the Northern Pacific Railway Co. and the Great Northern Railway Co. bridges across the Snohomish River at Snohomish, Wash., effective on publication in the FEDERAL REGISTER, since the Secretary of the Army has granted the owners permission to maintain the bridges in a fixed position, as follows:

**§ 203.805 Snohomish River, Steamboat Slough, and Ebey Slough, Wash.; bridges.**

* * * * * *

(e) *Bridges where constant attendance of draw tenders is not required.* * * *

(5) The bridges to which this paragraph applies and the special regulations applicable in each case, are as follows:

* * * * * *

Snohomish River; bridges of the Northern Pacific Railway Co. and the Great Northern Railway Co. at Snohomish. [Revoked]

* * * * * *

[Regs., Dec. 9, 1964, 1502-32 (Snohomish River, Wash.)—ENGCW-ON] (Sec. 5, 28 Stat. 362; 33 U.S.C. 499)

2. Pursuant to the provisions of section 7 of the River and Harbor Act of August 8, 1917 (40 Stat. 266; 33 U.S.C. 1), § 207.156 governing the use of seaplane restricted and prohibited areas in Hampton Roads and Willoughby Bay, Norfolk, Va., is hereby amended with respect to paragraph (b) (1) and (2), to prohibit the public from swimming in these areas during seaplane operations, effective 30 days after publication in the FEDERAL REGISTER, as follows:

**§ 207.156 Hampton Roads and Willoughby Bay, Norfolk, Va.; seaplane restricted and prohibited areas.**

* * * * * *

(b) *The regulations.* (1) Persons may not enter and vessels may not operate in the prohibited area except on authorization of the Commanding Officer, Naval Air Station, Norfolk, Va.

(2) Intent to conduct seaplane operations in the restricted area will be indicated by any or all of the following: Crashboats showing flashing lights, sounding sirens, or hailing by voice; illumination of seadrome markers and float lights; or "buzzing" by low-flying aircraft. Whenever any of the above-named signals are observed by persons and vessels in the restricted area, they shall carry out such instructions as may be given by Naval crashboat personnel, clear the area promptly, and remain clear until seaplane operations are terminated. Persons and vessels shall give seaplanes the right-of-way in the restricted area.

* * * * * *

[Regs., Sept. 11, 1964, 1507-32 (Hampton Roads-Willoughby Bay, Va.)—ENGCW-ON] (Sec. 7, 40 Stat. 266; 33 U.S.C. 1)

J. C. LAMBERT,
*Major General, U.S. Army, The Adjutant General.*

# Title 43—PUBLIC LANDS: INTERIOR

## Chapter II—Bureau of Land Management, Department of the Interior

### APPENDIX—PUBLIC LAND ORDERS

[Public Land Order 3516]

[Fairbanks 010351]

[Anchorage 053359]

### ALASKA

### Partial Revocation of Certain Withdrawal Orders and Executive Order of January 7, 1903 (St. Lawrence Island)

By virtue of the authority vested in the President by section 2380 of the Revised Statutes (43 U.S.C. 711), and pursuant to Executive Order No. 10355 of May 26, 1952 (17 F.R. 4831), and by virtue of the authority contained in section 4 of the Act of May 24, 1928 (45 Stat. 729; 49 U.S.C. 214), it is ordered as follows:

1. The Departmental orders of March 17, 1941, and October 10, 1942, and Public Land Order No. 751 of August 29, 1951, so far as they withdrew the following-described lands for an air navigation site and for townsite purposes are hereby revoked:

SEWARD MERIDIAN

T. 5 N., R. 11 W.,
Sec. 5, lots 1 to 5 incl., and 12 to 19, incl.;
Sec. 6, lots 11 and 30, and NE¼NE¼NE¼;
U.S. Survey No. 2970A and No. 3025A, in secs. 5 and 6.
T. 6 N., R. 11 W.,
Sec. 28, W½;
Sec. 29, SE¼;
Sec. 32;
Sec. 33, W½.

The areas described aggregate 1,716.48 acres of nonpublic lands.

2. The Executive Order of January 7, 1903, withdrawing St. Lawrence Island as a reindeer station, is hereby revoked so far as it affects United States Survey No. 3728, containing 97.78 acres of nonpublic land.

JOHN A. CARVER, Jr.,
*Assistant Secretary of the Interior.*

DECEMBER 21, 1964.

# Title 47—TELECOMMUNICATION

## Chapter I—Federal Communications Commission

[Docket Nos. 14229, 15096; FCC 64-1166 corrected]

## PART 73—RADIO BROADCAST SERVICES

### Miscellaneous Amendments

In the matter of fostering expanded use of UHF television channels, Docket No. 14229; in the matter of amendment of § 73.606 table of assignments, television broadcast stations (Phoenix, Ariz.), RM-466; in the matter of amendment of § 73.606 table of assignments, television broadcast stations (Phoenix, Ariz.), Docket No. 15096, RM-382, RM-409; in the matter of amendment of § 73.606 table of assignments, television broadcast stations (Pittsburg, Cotati, and Concord, Calif.), RM-477; in the matter of amendment of § 73.606 table of assignments, television broadcast stations (Fort Dodge, Iowa), RM-610; in the matter of amendment of § 73.606 table of assignments, television broadcast stations, Greeneville, Tenn., RM-629.

*Supplement No. 2 to the Third Report and Order.* 1. Pursuant to the policy announced in the Third Report and Order in the above-entitled matter, in which the Commission said that it would attempt to provide UHF channels in selected places where prospective applicants have stated that they are prepared to proceed promptly with the construction and operation of new UHF television broadcast stations, if authorized, as soon as channels become available, we have completed a study of certain cities and have found that assignments may be made without significantly affecting the development of a national assignment plan. These assignments are discussed in the following paragraphs.

FORT DODGE, IOWA

2. Cowles Magazines and Broadcasting, Inc. (Cowles), licensee of KRNT-TV, Channel 8, Des Moines, Iowa, has operated a UHF television translator, K70CL, in Fort Dodge, Iowa, since May 16, 1962. Although Channel 70 is not assigned to Fort Dodge, its use under the UHF television translator rules requires that it meet all minimum geographic spacings with other UHF assignments. K70CL retransmits the signals of KRNT-TV to the Fort Dodge area with maximum effective radiated power of approximately 615 watts from a bi-directional antenna mounted at the 590 foot level of the KQTV tower. KQTV operates on Channel 21 in Fort Dodge and is licensed to Northwest TV Co.

3. On August 30, 1963, Cowles filed an application for authority to increase the power of K70CL by employing a 1 kilowatt transmitter and requested a waiver of § 74.735 (formerly § 4.735) which limits the transmitter power of UHF translators to 100 watts. KQTV supported the request for increased power with a statement that the people of Fort Dodge and the surrounding area would obtain better service and more use of all-channel TV receivers if K70CL employed higher power. There is some evidence which indicates that a second UHF service tends to increase the potential UHF audience and results in increased viewing of both stations. In view of our action herein with respect to Cowles' later application for regular assignment of Channel 70 to Fort Dodge, we need not pass on the requested waiver of the translator rules, and this application is dismissed.

4. On June 1, 1964, Cowles filed a petition (RM-610) to assign Channel 70 to Fort Dodge so that it could apply for a new UHF television broadcast station to operate as a satellite of KRNT-TV. Channel 70 may be assigned to Fort Dodge without any other change in the present Table of Assignments in § 73.606 of the rules. The assignment will conflict with the NAEB proposal to assign Channel 70 to Carroll, Iowa. However, there is considerable flexibility in the upper UHF channels in this area of the country and a suitable replacement could be found if the Commission should decide to adopt the NAEB proposal.

GREENEVILLE, TENN.

5. On July 1, 1964, the Commission received a petition from R. C. Bird, Jr. and Thomas G. Hull, requesting the assignment of Channel 25 or Channel 44 to Greeneville, Tenn. The petition stated that the parties are prepared to proceed promptly with the construction and operation of a new UHF television broadcast station in Greeneville, if a channel is made available and they are awarded a construction permit. On July 8, 1964, the Commission adopted the Third Report and Order in Docket No. 14229, assigning Channel 18 to Linville, N.C. Channel 25 at Greeneville will not meet the required 60 mile minimum separation to Channel 18 at Linville. In a letter dated July 27, 1964, the petitioner noted this conflict and requested that we limit our consideration to the assignment of Channel 44 to Greeneville.

6. Channel 44 may be assigned to Greeneville, Tenn., without any other change in the Table of Assignments in § 73.606 of our rules. The assignment conflicts with our proposal to assign Channel 44 to Johnson City, Tenn. However, the use of the channel at Greeneville will provide service to much of the area that would be served if the channel were used at Johnson City and in any event we do not anticipate too much difficulty in providing a suitable replacement in Johnson City if this is found to be desirable. The assignment also falls a few miles short to the NAEB proposed assignment of Channel 44 to Blacksburg, Va. Since Blacksburg is not in a particularly congested assignment area, we do not anticipate any difficulty in finding a suitable replacement there if the Commission should decide to adopt the NAEB proposal.

MURFREESBORO, TENN.

7. William R. Vogel of Murfreesboro, Tenn., filed a comment in Docket No. 14229, requesting the assignment of Channel 18 to Murfreesboro and stated that he plans to file an application for authority to construct and operate a new UHF television at Murfreesboro as soon as a channel becomes available. An engineering study accompanying the comment showed that the assignment would require deletion of Channel 18 at Chatsworth, Ga., where it is reserved for educational use. The comment proposed the substitution of Channel 14 at Chatsworth by moving it from Chattanooga, Tenn. Mr. Vogel further stated that Murfreesboro receives TV service from four VHF stations in Nashville, approximately 30 miles away and in order to successfully pioneer local TV service for Murfreesboro, he needs a

channel in the lower part of the UHF band. There is no TV channel assigned to Murfreesboro in the present Table of Assignments in Section 73.606 of our rules. Nashville is assigned Channels 2, 4, 5, 8, 30 and 36 with Channel 2 reserved for educational use.

8. On August 20, 1964, Mr. Vogel filed a petition requesting that since a construction permit had been issued for Channel 18 in Chatsworth, we consider in lieu of Channel 18, the assignment of Channel 30 to Murfreesboro. This would, in effect, amount to a shift of Channel 30 from Nashville to Murfreesboro. The Commission proposed, in Docket No. 14229, to assign Channels 52 and 73 to Murfreesboro with Channel 52 reserved for educational use. We also proposed to retain Channels 30 and 36 in Nashville and to add Channel 70 as a second educational reservation. NAEB proposed to assign Channels 20 and 30 to Murfreesboro with Channel 20 reserved for educational use and to replace Channels 30 and 36 in Nashville with Channels 28 and 39, and to reserve Channel 39 for educational use.

9. Channel 30 may be moved from Nashville to Murfreesboro with no other change in the present Table of Assignments in § 73.606 of the rules. There are no pending applications for Channel 30 in Nashville and we are not aware of any current interest in the establishment of a UHF operation on that channel in Nashville. No reply comments were filed opposing the NAEB proposal to move the channel to Murfreesboro. The Metropolitan Board of Education, licensee of WDCN–TV which operates on Channel 2 in Nashville, filed a comment supporting the NAEB proposal to assign and reserve Channel 39 in Nashville. The prospect of early inauguration of UHF television broadcast service on Channel 30 at Murfreesboro warrants favorable action on the request of Mr. Vogel. While this conflicts with the original proposal of the Commission, NAEB has shown that suitable replacement channels can be found for Nashville if necessary. Under the policy announced in the Third Report and Order in the subject proceeding, we are taking early action only with respect to those channels where prospective applicants have stated that they are prepared to proceed promptly with the construction and operation of new UHF stations if awarded a construction permit. Therefore, we are not making any decision at this time as to other channel assignments in Nashville and Murfreesboro.

PITTSBURG, CALIF.

10. On February 15, 1963, Channel 16 was moved from Pittsburg, Calif., to Cotati, Calif., and reserved for educational use, upon petition of the Sonoma State College Foundation, Inc. In the rule making proceeding that led to this action, no opposing comments were filed. On September 3, 1963, Jerry Bassett, Inc. filed a petition (RM–477) requesting the return of Channel 16 to Contra Costa County, specifically to Concord, Calif. The petitioner stated that at the time Sonoma College asked for the shift of Channel 16, it was not legally organized or otherwise fully positioned to apply for Channel 16 in Pittsburg, hence no opposition was filed to the proposed move. However, it was in the process of organizing and planning to apply for a TV channel in Contra Costa County and the removal of the channel dealt a harsh blow to its plans. The petitioner further stated that it was now prepared to apply for authority to construct and operate a new UHF television station on Channel 16 whenever the channel was moved back to Contra Costa County.

11. The petition of Jerry Bassett, Inc., along with a number of others was caught up in the proceeding in Docket No. 14229 which looked toward an overall revision of UHF assignments in the United States. In its comments filed in Docket No. 14229, we were again urged by Jerry Bassett to return Channel 16 to Concord since Sonoma College had made no move to utilize the assignment at Cotati. Comments were filed by a number of other groups and individuals in Contra Costa County, urging the return of the channel so that local TV service could be provided by Bassett. Among these were The Democratic Central Committee of Contra Costa County, Concord Area Chamber of Commerce, the City Council of the City of Pittsburg, the Superintendent, San Ramon School District, Vacaville Chamber of Commerce and Agriculture, Assemblyman, Jerome R. Waldie, of the California Legislature, Rio Vista Chamber of Commerce, Walnut Creek Chamber of Commerce, as well as a number of civic and fraternal orders and local businessmen. Sonoma State College Foundation, Inc. filed comments opposing the move of Channel 16 from Cotati. They referred to the Opposition to the Petition for Rule Making which they had filed, stating that the arguments against the return of Channel 16 to Pittsburg were fully documented therein. The arguments in brief, were that Contra Costa County receives excellent TV service from stations in the San Francisco Bay area, that an educational channel is needed for Sonoma County and adjacent Napa County because the only existing educational station in the area, KQED, San Francisco, provides neither direct instruction in specific college courses nor related supplementary information programming. They further pointed out that since the filing of their opposition, Jerry Bassett, Inc. had filed an application for a construction permit at Walnut Creek, Calif., on Channel 26 and that a transmitter located at Walnut Creek would serve the area that would be served by Channel 16 at Concord or Pittsburg. The Sonoma County public schools, Sonoma County Board of Education, California State Colleges and Santa Rosa Junior College filed letters supporting the opposition of Sonoma State College Foundation, Inc. In reply comments, Jerry Bassett, Inc. stated that the restoration of Channel 16 to Pittsburg would eliminate the need for a hearing involving another applicant for Channel 26 and would result in earlier inauguration of new UHF service in Contra Costa County.

12. While it is true that Sonoma State College Foundation, Inc. has made little progress toward the inauguration of educational TV service, we are not disposed to delete the educational reservation at this time, particularly since we are able to provide a suitable substitute channel at Pittsburg. Channel 42 may be shifted from Stockton to Pittsburg without other changes in the present Table of Assignments. Stockton is currently assigned VHF Channel 12 as well as UHF Channels 36, 42 and 64. Channel 42 is reserved for educational use. The Television Advisory Committee of the State of California, in comments filed in Docket No. 14229, stated that a full-scale study of the needs of the State for educational channels has not yet been made but the general objective will be to provide statewide coverage. They also foresee the need for additional channels but specific details are to be worked out later. The transfer of Channel 42 from Stockton to Pittsburg will not significantly impair our ability to provide the State of California with a fair and equitable share of available UHF channels and distribute them so as to provide for the future growth of both educational and commercial TV service. NAEB proposed to assign Channel 42 to Fairfield, California, approximately 20 miles from Pittsburg, as an unreserved channel. Therefore, the assignment to Pittsburg does not conflict with the NAEB proposal.

PHOENIX, ARIZ.

13. On November 5, 1962, Dwight Harkins filed a petition (RM–382) to assign Channel 20 to Phoenix, Ariz., so that an application for a subscription TV operation could be filed. On January 23, 1963, we received a petition from Power Television Incorporated (RM–409) to assign Channel 26 to Phoenix. Power proposed to construct and operate a conventional TV broadcast station on Channel 26. The two petitions were incorporated in a Notice of Proposed Rule Making (Docket 15096) issued by the Commission on June 6, 1963.

14. When the Commission initiated the proposal in Docket No. 14229 for an overall revision of the Table of Assignments for UHF channels, on October 24, 1963, this outstanding proceeding along with several others were incorporated by reference and the Table of Assignments proposed by the Commission included the assignment of Channels 20 and 26 to Phoenix. On July 25, 1963, e pluribus unum enterprises had filed a petition (RM–466) to also assign Channel 14 to Phoenix. However, the proposed Table of Assignments that was to be presented to the Commission had been completed and inclusion of the e pluribus unum enterprises request at that late date would have required a revision. Therefore, the petition was incorporated into Docket No. 14229 so that it could be considered before a final Table was adopted.

15. Except for one letter from a citizen opposing pay-TV and one letter from a citizen supporting pay-TV, the only comment filed in Docket No. 15096 was a vigorous opposition by Meredith Broadcasting Company, licensee of KPHO and KPHO–TV, in Phoenix. Meredith argued that Phoenix is served by one noncommercial educational TV station, four commercial TV stations, three of which are affiliated with the three national TV networks and that its station operates as an independent station. The size of the Phoenix market does not warrant the establishment of even a fifth TV station, much less a fifth and sixth, and all of the existing station and its station in particular will be adversely affected by the added competition. It is Meredith's position that the petitioners have made no adequate showing of need for the additional service and that in the absence of a specific and detailed showing, the Commission cannot properly weigh the adverse effect of the added competition against the needs of the area. Similar arguments were advanced by Meredith in its opposition to the petition of e pluribus unum enterprises and in comments filed in Docket No. 14229.

16. Comments filed in Docket No. 14229 by Richard A. Clark, a prospective applicant for a new UHF station in Phoenix; Welch, Mott & Morgan representing a local group in Phoenix which is interested in applying for a new UHF television station in Phoenix; and e pluribus unum enterprises, endorsed the proposal to add UHF channels to Phoenix. KTAR Broadcasting Company, licensee of KTAR–TV, Channel 12, Mesa, Ariz., suggested that instead of assigning additional UHF channels to Phoenix that we assign Channel 12 to Phoenix and that we use the proposed UHF channels to provide local outlets in Mesa and Glendale. Clark points to the phenomenal growth of Phoenix and the surrounding area, cites figures for the retail sales and effective buying income, and lists the steadily increasing broadcast revenue figures to show that additional channels are needed and are likely to be used. Welch, Mott & Morgan use similar arguments and point to the fact that the healthy economic climate is not the result of a single specialized industry but covers a broad spectrum and is therefore likely to continue. The three network affiliated stations have little time to devote to local interests and the single local independent station cannot adequately serve all of the varied local interests of the Phoenix market. The principal argument of e pluribus unum enterprises is that there is a pressing need for a TV station to serve the large Spanish-speaking population of Phoenix and its environs. The station it proposes would be programmed largely in the Spanish language and would provide service to an estimated 100,000 people who are inadequately served by the local TV stations because of the language difficulty. The object of such broadcasts would be to help the Spanish-speaking people make the transition to American life and society without losing the major elements of their own culture and heritage. Some English language broadcasts would be made but they too would be directed to the Spanish-speaking population to further that objective.

17. On April 3, 1964, the attorneys for Power Television Incorporated notified the Commission by letter that they were no longer interested in this proceeding and requested that their petition for rule making (RM–409) be dismissed. On August 4, 1964, e pluribus unum enterprises filed a request that we take final action with respect to their petition for the assignment of Channel 14 to Phoenix, stating that it stands ready to prepare and file an application for authority to construct a new UHF television station in Phoenix and that it will do so promptly when the requested assignment is made.

18. Channel 14 may be assigned to Phoenix under the current Table of Assignments in Section 73.606 of our rules, by deleting Channel 14 from Holbrook, Ariz. While the petitioner suggested replacing Channel 14 with Channel 19 at Holbrook, there is no immediate prospect of use of a UHF channel in Holbrook and we would prefer to complete the overall assignment plan before deciding upon a replacement. For the channels involved, the FCC proposal in Docket No. 14229 is identical with the present Table and Channel 14 may be assigned to Phoenix with the same change. The assignment of Channel 14 to Phoenix conflicts with the NAEB overall proposal which includes the assignment of Channel 14 to Winslow, Ariz., as an educational reservation and the assignment of Channels 15, 21, and 27 to Phoenix, with Channel 15 reserved for educational use. By adding Channel 14 to the outstanding proposal in Docket No. 14229 to add Channels 20 and 26 to Phoenix, we can closely parallel the NAEB proposal to assign Channels 15, 21, and 27 to Phoenix. In view of the specific requests for Channels 14 and 20 by parties who have indicated that they are prepared to proceed promptly with applications we believe that the requirement for a second educational channel in Phoenix can be satisfied by reserving Channel 26 for educational use. It should be noted that the addition of Channel 14 to Phoenix requires the concurrence of the Mexican Government under the terms of the United States-Mexican TV Agreement. The proposal to add Channels 20 and 26 has already been accepted. An examination of the assignment pattern in the border area shows no reason to anticipate an unfavorable response from Mexico.

CONCLUSION

19. In view of the representations made by the various petitioners which are discussed in the preceding paragraphs, that they are prepared to proceed promptly with the inauguration of new UHF television broadcast service as soon as suitable channels are made available and if they are awarded construction permits to do so, the adoption of the described changes in the Table of Assignments for UHF channels will assist materially in achieving the objective of Docket No. 14229, i.e., the expanded use of UHF channels, and is therefore in the public interest. The all-channel TV receiver legislation came into force on May 1 of this year and the number of such receivers in the hands of the public is increasing daily. We have a responsibility to eliminate any unnecessary delay in the inauguration of new UHF service so that service may be provided to the public on these channels. The action taken herein will provide channels for which there is an immediate need.

20. Under the authority contained in sections 4(i), 303, and 307(b) of the Communications Act of 1934, as amended: *It is ordered*, That effective January 25, 1965, § 73.606 of the Commission rules is amended insofar as the communities named are concerned, to read as follows:

| City | Channel No. |
|---|---|
| Pittsburg, Calif. | 42 |
| Stockton, Calif. | 13+, 36, 64 |
| Fort Dodge, Iowa | 21, 70 |
| Greeneville, Tenn. | 44− |
| Murfreesboro, Tenn. | 30+ |
| Nashville, Tenn. | *2−, 4+, 5, 8+, 36+ |
| Phoenix, Ariz. | 3+, 5−, *8+, 10−, 14−, 20, *26+ |

Delete the listing for Holbrook, Arizona.

Frequency assignments on Channels 14–83 inclusive are subject to change in accordance with the final outcome of Docket No. 14229. However, the Commission will endeavor to avoid changes in channel assignments where construction has been authorized and has been completed to a point where a change in channel assignment would result in substantial additional expense to the licensee or permittee. Lack of interest in implementing new UHF channel assignments adopted prior to the development of a revised over-all national assignment plan for UHF channels, may result in deletion of the assignments from the final Table.

(Sec. 4, 48 Stat. 1066, as amended; 47 U.S.C. 154. Interpret or apply secs. 303, 307, 48 Stat. 1082, 1083; 47 U.S.C. 303, 307)

Adopted: December 16, 1964.

Released: December 21, 1964.

## Chapter I—Interstate Commerce Commission

### SUBCHAPTER A—GENERAL RULES AND REGULATIONS

[No. 32153]

### PART 10—UNIFORM SYSTEM OF ACCOUNTS FOR RAILROAD COMPANIES

UNIFORM SYSTEM OF ACCOUNTS FOR RAILROAD COMPANIES

At a session of the Interstate Commerce Commission, division 2, held at its office in Washington, D.C., on the 17th day of December A.D. 1964.

The Commission having under consideration a notice of proposed rule making published in the FEDERAL REGISTER on November 19, 1964 (29 F.R. 15539) which proposed amendments of the Uniform System of Accounts for Railroad Companies pertaining to property retired from service, which property previously was subject to amortization accounting, and due consideration having been given to the responses pursuant to said notice and all other aspects of this matter;

*It is ordered*, That the amendments of the Uniform System of Accounts for Railroad Companies (49 CFR Part 10), which amendments appear below and made a part hereof, shall become effective January 1, 1965; and

*It is further ordered*, That notice of this order shall be given to railroad companies hereby affected and to the general public by depositing a copy of said order in the Office of the Secretary of the Commission in Washington, D.C., and by filing the order with the Director, Office of the Federal Register.

By the Commission, division 2.

[SEAL] HAROLD D. McCOY, *Secretary.*

ITEM NO. 1. EQUIPMENT

*Account 330, Retirements—Equipment.* In the text of this account eliminate paragraph (a) pertaining to equipment previously subject to amortization accounting and substitute therefor the following revised paragraph (a); also add new paragraph (b) set forth below and change present paragraph (b) to paragraph (c):

330 Retirements; equipment.

(a) When equipment previously subject to amortization accounting (pursuant to rules in effect during the period 1941–1951 consistent with section 124, "Amortization deductions," of the Internal Revenue Code) is retired the difference between (1) the service value (ledger value less value of salvage and insurance recovered) thereof, and (2) the balance in account 736, "Amortization of defense projects—Road and equipment," after appropriate adjustment for any depreciation accrued thereon, shall be included in this account, except for a difference, material in amount, as covered by paragraph (b) of this account.

(b) When the difference referred to in paragraph (a) of this account or the aggregate of all such differences for retirements is so material that inclusion in this account would distort and impair the significance of net income for the year the amount shall be credited to retained income account 606, "Other credits to retained income." (See General Instructions 1–2(d).)

* * * * *

ITEM NO. 2. ROAD PROPERTY

*Account 267, Retirements—Road.* In the text of this account eliminate paragraph (b), pertaining to road property previously subject to amortization accounting; add the following revised paragraph (b); also add new paragraph (c) set forth below and change present paragraph (c) to paragraph (d). (Retain unchanged present paragraph (a) and the Note in this account.)

267 Retirements; road.

* * * * *

(b) When road property previously subject to amortization accounting (pursuant to rules in effect during the period 1941–1951 consistent with section 124, "Amortization deductions," of the Internal Revenue Code) is retired the difference between (1) the service value (ledger value less salvage value and insurance recovered) thereof, and (2) the balance in account 736, "Amortization of defense projects—Road and equipment," after appropriate adjustment for any depreciation accrued thereon, shall be included in this account, except for a difference, material in amount, as covered by paragraph (c) of this account.

(c) When the difference referred to in paragraph (b) of this account or the aggregate of all such differences for retirements is so material that inclusion in this account would distort and impair the significance of net income for the year the amount shall be credited to retained income account 606, "Other credits to retained income." (See General Instructions 1–2(d).)

# Proposed Rule Making

## DEPARTMENT OF AGRICULTURE

### Agricultural Marketing Service

[ 7 CFR Part 1004 ]

[Milk Order 4]

### MILK IN DELAWARE VALLEY MARKETING AREA

### Termination of Proceeding To Suspend Certain Provision of Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), notice of proposed rule making was issued by the Deputy Administrator, Agricultural Marketing Service, on December 8, 1964, with respect to suspension of certain provision of the order regulating the handling of milk in the Delaware Valley marketing area. Interested persons were invited to submit their views, data or arguments to the hearing clerk not later than December 14 in connection with the proposed suspension.

The provision in § 1004.50(a)(4) proposed to be suspended reads "and shall be an additional 20 cents more if the percentage of such receipts to such disposition is less than 126". Such provision relates to the supply-demand adjustment mechanism in the Class I pricing formula which increases the Class I price level when the 12-month average ratio of producer receipts to Class I sales drops below the standard ratio of 126.

Cooperative associations representing a substantial proportion of producers serving the market and fluid milk handlers regulated under the terms of the order requested the suspension to prevent a 20-cent increase in the Class I price for the forthcoming quarter (January–March) over the price level of the current quarter (October–December). Petitioners stated that the higher Class I price would be contraseasonal and would jeopardize their markets because of price disparities between the Delaware Valley and adjacent Federal order markets.

The anticipated price increase which prompted the request for suspension action was based on market information then available to the market administrator and interested parties. Handler reports filed for the month of November revealed that the provision in question will not affect the expected 20-cent increase in the Class I price for the January–March quarter.

Because the requested suspension action would accomplish no useful purpose, it is found and determined that the proposed suspension for the period December 1, 1964 through March 31, 1965, of the aforesaid provision of the order relating to the supply-demand adjustor should not be effectuated; and the proceeding begun in this matter on December 8 is hereby terminated.

Signed at Washington, D.C., on December 21, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

[F.R. Doc. 64-13257; Filed, Dec. 24, 1964; 8:45 a.m.]

[ 7 CFR Part 1098 ]

[Docket No. AO-184-A20]

### MILK IN NASHVILLE, TENN., MARKETING AREA

### Decision on Proposed Amendments to Tentative Marketing Agreement and to Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held at Nashville, Tenn., on July 28–30, 1964, pursuant to notice thereof issued on June 19, 1964 (29 F.R. 8106).

Upon the basis of the evidence introduced at the hearing and the record thereof, the Deputy Administrator on November 17, 1964 (29 F.R. 15651; F.R. Doc. 64-11910) filed with the Hearing Clerk, United States Department of Agriculture, his recommended decision containing notice of the opportunity to file written exceptions thereto.

The material issues on the record of this hearing relate to:

1. Expansion of the marketing area;
2. Location differentials to handlers and producers;
3. Providing a Class II classification for certain designated outlets;
4. Requiring a handler to settle with the market administrator for all producer milk delivered to his pool plant; and
5. Computing the producer butterfat differential to the nearest fifth of a cent.

*Findings and conclusions.* The following findings and conclusions on the material issues are based on evidence presented at the hearing and the record thereof:

1. *Expansion of the marketing area.* The Nashville, Tenn., marketing area, which now contains 17 Tennessee counties, three Kentucky counties and the Fort Campbell military reservation, should be expanded by adding the 18 Tennessee counties of Cannon, Clay, Coffee, DeKalb, Fentress, Giles, Jackson, Lawrence, Lewis, Maury, Marshall, Overton, Perry, Pickett, Putnam, Warren, Wayne and White; and the three Kentucky counties of Barren, Metcalf and Monroe. The expanded marketing area will comprise a contiguous area in which both wholesale and retail routes of milk handlers doing business in the area are interspersed. The handling of milk in this proposed marketing area is in the current of interstate commerce and directly burdens, obstructs or affects interstate commerce in milk and its products.

The minimum sanitary requirements applicable to Grade A milk throughout the present and proposed marketing area are those of the States of Tennessee and Kentucky, which are patterned after the U.S. Public Health Ordinance and Code. In the case of some local health authorities, there may be minor variations. Such variations, however, do not materially affect the procurement or distribution of milk within the area.

With the advent of new and better highways, improved and larger transportation equipment, better refrigeration facilities for storing and moving milk, and the shifting by consumers from home delivery to store purchases of fluid milk products, the area serviced by handlers has been expanded. The present marketing area does not constitute the proper marketing area under current marketing conditions. For this reason several Nashville regulated handlers and the principal cooperative association of producers in the market proposed that the present marketing area be expanded by adding the 21 counties enumerated above and Hardin County, Tenn.

One plant in each of the Tennessee counties of Coffee, Giles, Maury, and Warren would become fully regulated because of the marketing area expansion. The plants of two other unregulated distributors with sales in some counties proposed to be added to the marketing area are in Lincoln County, Tenn., and Wayne County, Ky. It was indicated that the Wayne County handler would become fully regulated under the Louisville-Lexington-Evansville order if the marketing area of that order were expanded as proposed at a recent hearing. It is not clear from the record, however, whether or not the Lincoln County handler would become fully regulated under the Nashville order as a result of this marketing area expansion.

More than half the Class I distribution in the 13 counties of Cannon, DeKalb, Jackson, Lawrence, Lewis, Marshall, Overton, Perry, Putnam, Wayne, and White in Tennessee and Barren and Metcalf in Kentucky is made by presently regulated Nashville order handlers. In two of these counties, Lewis and Perry, all milk sold is now regulated under the Nashville order. In the Tennessee counties of Jackson, Overton and Putnam and in the Kentucky counties of Barren and Metcalf, all milk sold is regulated under either the Nashville, Louisville-Lexington-Evansville (assuming the Wayne County, Ky., plant would be regulated under that order) or the Knoxville order. In the six remaining counties mentioned above, one or more presently unregulated handlers also sell fluid milk products.

The addition of Clay, Fentress, and Pickett Counties, Tenn., and Monroe County, Ky., to the marketing area will not subject any additional handlers to regulation under the Nashville order. Practically all Class I distribution in these counties is from the plants of handlers subject to the Nashville, Louisville-Lexington-Evansville and Knoxville orders. Presently, the only unregulated distribution in these counties is the relatively limited sales by the Wayne County, Ky., handler. As indicated above, this handler would become subject to the Louisville-Lexington-Evansville order if the marketing area of that order is expanded as proposed in a recent hearing.

Distributors operating unregulated plants in the Tennessee counties of Coffee, Giles, Maury, and Warren claimed they have the major proportion of the sales of fluid milk products in their respective counties. The cooperative association serving the Nashville market and the regulated handlers, however, presented statistical data showing that in Coffee and Maury Counties, Nashville handlers have about 70 and 65 percent, respectively, of the sales. The operator of the unregulated plant in Coffee County estimated he has slightly over 50 percent of the total sales in that county. The operator of the unregulated plant in Giles County estimated his firm has about two-thirds of the total sales in the county and that his major Nashville competitor had 20 percent of the sales. The operator of the unregulated plant in Maury County estimated he has 60 percent of the wholesale business and 75 percent of the retail business in the county. The operator of the unregulated plant in Warren County estimated he has about 80 percent of the sales in the county. Although there was a conflict in the testimony as to whether Nashville regulated handlers or the unregulated distributors had the major proportion of the sales in these counties, the information presented by the regulated handlers and the cooperative association serving the Nashville market contained detailed statistical data for each county of the sales by all competing handlers. No such detailed summary was presented by these four distributors and, accordingly, greater reliability must be placed upon the testimony presented by the Nashville regulated handlers and the cooperative association.

A substantial proportion of the sales of the three presently unregulated distributors in Coffee, Giles and Warren Counties is within these counties. Nashville regulated handlers also have Class I sales in all three counties. Whether or not Coffee, Giles and Warren Counties are included in the marketing area, the three unregulated handlers would be subject to full regulation because of their sales in other counties in the proposed marketing area. To exclude these counties from the marketing area could place these distributors at a disadvantage in competing with milk from unregulated sources for Class I sales within the counties wherein their plants are located and in which they are among the principal distributors. In view of the above, it would be inappropriate to exclude these counties from the proposed enlarged marketing area.

Nashville regulated handlers have the majority of the sales in Maury County as well as in most adjacent counties and it is an integral part of their sales area. Adding this county to the marketing area will maintain contiguity with the other counties herein to be added. Its omission would create a hiatus in the geographic expanse of the marketing area.

By including Coffee, Giles, Maury and Warren Counties in the marketing area, the major portion of the Class I sales of the four distributors located in these counties would be within the proposed marketing area and inclusion of these counties would not result in the regulation of any other known distributor, either wholly or partially.

Hardin County, Tenn., should not be added to the marketing area at this time. Presently, there is only one handler subject to the Nashville order distributing milk in this county. Of the two other regulated handlers with Class I sales in this county, one is subject to the Memphis order and the other to the Paducah order. Together, these three handlers distribute about 65 percent of the fluid milk products sold in the county. There are two unregulated handlers who also distribute milk in this county. These two handlers, however, have their principal sales in competition with handlers who would not be required to pay the specified minimum prices or account for the use of their milk under the Nashville order.

Five presently unregulated distributors testified at the hearing in opposition to extension of the marketing area. They maintained that regulated handlers are not at a competitive disadvantage when distributing milk in these unregulated counties because the unregulated distributors pay their producers a price that is competitive with the Nashville market price. The dairy farmers delivering milk to the distributors who would become regulated by the Nashville order under this proposal, except the distributor whose plant is located in Giles County, receive payment for their milk without regard to its use. These distributors pay their producers a price based on the Nashville order blend price. In most cases, these distributors use a larger percentage of their milk receipts in Class I than is reflected by the blend price for the Nashville market. To the extent that such distributors have a higher Class I utilization and do not purchase milk on a class-use basis, they do have a competitive advantage over the Nashville handlers who are required to pay class prices according to the use value of their milk.

The dairy farmers who deliver milk to the Giles County distributor sell their milk under a pricing plan described as similar to the plan prescribed by the Nashville order. There is no agency, however, to supervise and enforce this plan. These producers have no means for obtaining an impartial audit of the handler's records to determine whether they are, in fact, receiving the full class utilization value of milk as it would be computed under the Federal order.

These unregulated handlers gave as one of their reasons for opposing regulation that the dairy companies in Nashville would force them out of business. Federal milk orders give assurance to all regulated handlers that their competitors in the marketing area are purchasing their milk supplies at the same prices and upon the same class-use basis. There is no basis for the charge that the proposed extension of the marketing area would force these unregulated handlers out of business.

These same unregulated handlers also argued that the expense of keeping the extra records that would be required by the order would be prohibitive. They did admit, however, that the only extra records involved would be records which show their utilization of milk in Class I and II outlets and that the maintenance of such records would not be burdensome.

A further argument presented by these unregulated handlers was that if they became regulated, they would lose their producers to the producer association in the market and thereby lose control over them. One handler, who operates a Grade A fluid milk plant and a cheese plant at which he received ungraded milk presented an additional argument. At the present time, all the milk of Grade A producers is picked up in cans and is transported to his plant on the same truck with the milk from ungraded milk producers. This milk is transported on the same truck because it would not be economically feasible to haul the ungraded milk on a separate truck since the ungraded milk producers average about 60 pounds of milk per pickup. This handler maintained that if his fluid milk plant became regulated under the order, his Grade A producers would install bulk tanks. This would make it necessary for him to give up over 250 ungraded producers who are presently having their milk delivered on the same trucks as the Grade A producers. Federal milk orders may neither require producers to join cooperative associations nor force producers to deliver their milk in either bulk tanks or cans. Also, there are no restrictions placed on handlers as to where or from whom they may purchase their milk.

Three dairy farmers who produce milk for two of the unregulated handlers also testified against the expansion of the marketing area. These dairy farmers claimed that if they came under the order, they would receive less for their milk.

The prices received by these three dairy farmers for their milk are based upon the Nashville blend prices. The handlers to whom they deliver stated on the record that the price they pay their producers is about the same price as Nashville producers receive for their milk and is not based upon the handler's utilization of their milk. The Class I utilization of the handlers to whom they deliver is somewhat higher than the average for the Nashville market; therefore, regulating these handlers will have a tendency to increase the Nashville blend price and to that extent these producers would realize an increase in the price they receive for their milk.

The representative of the producers' association also claimed that the great majority of dairy farmers in the counties proposed to be added to the marketing area desire the same protection and pricing arrangements as producers delivering to Nashville. Dairy farmers in those counties, it was further stated, want the same checking procedure on weights and tests that are afforded producers who have the benefit of Federal regulation.

It would not be practicable to consider including in the marketing area all territory wherein handlers who would be regulated because of their sales in the expanded marketing area have Class I sales. Neither would it be feasible under this order to attempt to differentiate for the purpose of regulation between Class I sales by such handlers inside and outside the marketing area. It is necessary that all producer milk be fully regulated regardless of where it is sold. Otherwise, the effect of the order would be nullified and the orderly marketing process would be jeopardized.

If only a pool handler's "in area" milk is subject to classification, pricing and pooling, a handler with sales outside the marketing area could assign any value he chose to such sales and thereby reduce the average cost of his Class I milk below that of other regulated handlers having all, or substantially all, of their Class I sales within the marketing area. In short, unless all milk of such handler is fully regulated, he would not, in fact, be subject to effective price regulation at all. The absence of effective classification, pricing and pooling of such milk would disrupt orderly marketing conditions within the regulated marketing area and lead to a complete breakdown of the order.

As noted in three decisions issued June 19, 1964 (29 F.R. 9001, 9109 and 9213, official notice of which is taken) regarding amendments to 75 Federal milk orders, there is no way to treat unregulated milk equally with regulated milk other than to regulate it fully. In the case of plants having insufficient association with the market to meet pool plant requirements, it was concluded that the inequalities resulting from pricing only the small percentage of the milk at such plants which was disposed of in the marketing area would not be serious enough to jeopardize the marketing conditions within the regulated marketing area.

However, in the case of plants which have sufficient association with the market to meet the pool plant requirements, permitting them to dispose of a portion of their receipts outside the marketing area completely free of regulation would, because of the volume of milk they dispose of in the marketing area, disrupt orderly marketing processes within the regulated market and render ineffective the classification and pricing provisions of the order. With a handler free to value a portion of his milk at any price he chose (zero if he desired) it would be impossible to enforce uniform prices to all regulated handlers or a uniform basis of payments to the producers who supply the market.

It is absolutely essential, therefore, that the order price all the producer milk received at a pool plant regardless of the point of disposition.

The marketing area expansion herein proposed requires no change in the maximum administrative assessment of 4 cents per hundredweight now provided in the order. Although, as a result of this decision, about four or five additional distributors would become subject to regulation, the additional quantities of milk involved should not materially alter the maintenance and functioning of the market administrator's office. If it appears at any time that a lower rate will cover administration expenses, the Secretary may set the actual rate at a lower level without the necessity of amending the order.

2. *Location differentials to handlers and producers.* The location differential provisions of the order should not be changed at this time.

For plants located outside the State of Tennessee and more than 50 miles from the State Capitol in Nashville, the order now provides for the Class I price and the blend price paid to producers (except for excess milk) to be reduced by 10 cents with an additional reduction of 1.5 cents for each 10 miles or fraction thereof that such distance exceeds 70 miles.

The two proposals at the hearing to revise the location differential provisions were concerned only with the basing point from which the mileages from the plant where milk was received from producers would be determined. No proposals were made to change the location adjustment rates. A cooperative association proposal would replace Nashville as the basing point with the nearest of the cities of Nashville, Clarksville, Tenn., and Bowling Green, Ky. A proposal made by four Nashville based handlers would establish "the nearest point in the boundary of the marketing area" as the basing point.

Three Nashville regulated handlers whose plants are in Kentucky and more than 50 miles from Nashville, are subject to a location adjustment on milk they receive from producers. A location differential of 10 cents is applicable to the milk received at the plants of two handlers in Bowling Green, which is 65 miles from Nashville. The plant of the third handler, in Hiseville, Ky., is between 100–110 miles from Nashville and the location differential credit of 16 cents is applicable to milk received from producers there.

The Nashville based handlers claim that they are at a disadvantage in competing for sales with these three handlers because of the location adjustment credit that the latter receive. They contend that marketing conditions in the area have changed significantly since the present location differential provisions were incorporated in the order in November 1960. Although the express purpose of the proposals is to require these handlers to pay the same price for Class I milk as Nashville handlers, proponents neither showed that these Kentucky handlers have any cost advantage on Class I milk nor justified the proposed new basing points.

These three handlers in the northern fringe of the present marketing area have their principal distribution in the Kentucky portion of the marketing area. They compete for Class I sales with Louisville-Lexington-Evansville order (Order 46) regulated handlers. No location adjustment is applicable under Order 46 on milk received at plants in Bowling Green, Hiseville, or in the area where these handlers have their principal distribution. On an annual basis, the Order 46 Class I price (before adjustment for supply-demand) is 9 cents below the Nashville order Class I price. However, when the Nashville price is adjusted by the present applicable location differential for plants in the Bowling Green vicinity, it approximates the Order 46 price at that location. Hence, if the Nashville order location differential adjustments now applicable in the Bowling Green area were removed as proposed, these three Nashville regulated handlers would be at a disadvantage in competing with Order 46 handlers for Class I sales in the area where they have their principal distribution.

The three Kentucky based handlers are located in an outlying part of the marketing area north from Nashville. They are nearer to their sources of supply than Nashville handlers and it hence costs farmers less to deliver milk to these locations than the average cost of delivering milk to Nashville. Moreover, because these handlers are located north of Nashville, they are generally closer to alternative sources of supply at lower prices than handlers whose plants are located in Nashville. These factors should be reflected in the location pricing for the plants in the Kentucky area and it appears the present location differentials contained in the Nashville order appropriately reflect these conditions.

The purpose of establishing location differentials is to achieve uniformity in prices to all handlers for milk which is received from producers at plants located at varying distances from the principal consumption area. Nashville is the principal city in the marketing area and is centrally located with respect to the overall marketing area. It is the point where the major portion of producer milk for the market is received and from which milk is distributed to consumers throughout the marketing area. Accordingly, it is appropriate that the mileages for determining location differential adjustments continue to be measured from Nashville, and the proposals to establish other basing points for determining location differential adjustments are denied.

3. *Providing a Class II classification for certain designated outlets.* (a) Skim milk and butterfat in fluid milk products dumped should be classified as Class II. Presently, only the skim milk portion of fluid milk products dumped may be so classified.

Nashville handlers have certain amounts of fluid milk products that they are unable to dispose of for Class I uses. Allowing a Class II classification for both the skim milk and butterfat contained in dumped fluid milk products will recognize the impracticability of

Nashville handlers' recovering the butterfat in route returns and other fluid milk products that are not salable as Class I.

The order now provides as a condition for obtaining a Class II classification for fluid milk products dumped that the market administrator be notified prior to such disposition and afforded the opportunity for verification. Retaining this condition will insure the practical application of the dump provision.

(b) The proposal to classify as Class II sour cream mixtures to which cheese or any food substance other than a milk product has been added which are not labeled Grade A should be adopted. Products that are blends of cultured sour milk and cream with cheese and nondairy food ingredients are known as dip speciality products. These products are not labeled Grade A and compete with similar products distributed in the marketing area that are not subject to the Nashville order.

Since Class I milk should include products which are required to be made from Grade A milk, sour cream mixtures which are labeled Grade A should remain in Class I. Sour cream mixtures sold in the marketing area as Grade A products must be made from Grade A milk. However, if they are not labeled Grade A, they may be made from non-Grade A milk. Since such dip speciality products may be, and are, sold in the marketing area as non-Grade A products, they should not be included in Class I unless labeled Grade A.

(c) Class II classification should be provided for skim milk and butterfat disposed of in bulk fluid milk products to bakeries, candy factories, soup factories and similar establishments at which the fluid milk products are used in the manufacture of food products other than milk products. A Class II classification of such fluid milk products will price them competitively with alternative supplies, such as nonfat dried milk and condensed milk, which are available for the manufacture of food products. Such classification should be limited to disposition of milk products in bulk form, however, to minimize the administrative burden of verifying its ultimate utilization. This limitation is appropriate under the circumstances where packaged fluid milk products sold to bakeries and similar establishments easily may be retailed in this same form to consumers for fluid consumption either on or off the premises.

4. *Requiring a handler to settle with the market administrator for all producer milk delivered to his pool plant.* Pool plant operators should be required to pay the market administrator at the applicable class prices for all producer milk delivered to their plants including the bulk tank deliveries from producers' farms for which a cooperative association is the handler.

The order now specifies that a handler shall pay the market administrator the class prices for milk delivered to his pool plant by producers. The market administrator then pays the uniform price to each producer either directly or through a cooperative association of which the producer is a member.

There is one exception to the above procedure. This involves bulk tank milk that is received at pool plants from a cooperative which elects to be the handler on its producer members' milk that is delivered from the farm to the pool plant of another handler in a tank truck. This milk is considered to be received by the cooperative at the pool plant. Under this arrangement, each handler pays the cooperative the class prices on this milk and the cooperative transmits these payments directly to the market administrator. The cooperative then receives payment from the market administrator at the uniform price on this milk and producer-member milk for which the cooperative is not the handler. This procedure results in extra handling of the money and does not serve any useful purpose.

The cooperative proposed that handlers receiving bulk tank milk from the cooperative in its capacity as a handler on such milk pay the classified value directly to the market administrator. It was claimed that this would expedite payments to producers and simplify the reporting and bookkeeping for all handlers, the cooperative and the market administrator.

Requiring handlers to make payments at the class prices directly to the market administrator on this milk will eliminate the unnecessary involvement of the cooperative in transactions which involve only the market administrator and the pool plant handlers. Handlers who operate the pool plants at which this milk is received are the persons who maintain records which show the quantities of milk utilized in Class I and Class II and report this utilization to the market administrator.

5. *Computing the producer butterfat differential to the nearest fifth of a cent.* The computation of the producer butterfat differential should specify that the differential be rounded to the nearest one-fifth cent.

Presently, the producer butterfat differential is rounded to the nearest one-tenth cent. Also, producers' butterfat tests are adjusted to half-points. It was claimed that when the butterfat differential ends with an odd number (e.g., 7.1 cents) and a producer's average butterfat test contains a half-point (e.g., 3.65 percent) the adjusted price in computing the payment due the producer yields a series of fractions. To prevent the computing of this series of fractions, it was proposed at the hearing that the butterfat differential be rounded to the nearest even mill, i.e., one-fifth cent. There was no opposition to this proposal.

In the interest of marketing efficiency and convenience to the cooperative association and handlers in the market, it is appropriate that the order provide for the rounding of the producer butterfat differential to the nearest one-fifth cent.

*Rulings on proposed findings and conclusions.* Briefs and proposed findings and conclusions were filed on behalf of certain interested parties. These briefs, proposed findings and conclusions and the evidence in the record were considered in making the findings and conclusions set forth above. To the extent that the suggested findings and conclusions filed by interested parties are inconsistent with the findings and conclusions set forth herein, the requests to make such findings or reach such conclusions are denied for the reasons previously stated in this decision.

*General findings.* The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) The tentative marketing agreement and the order, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order, as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(c) The tentative marketing agreement and the order, as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held;

(d) All milk and milk products handled by handlers, as defined in the order as hereby amended, are in the current of interstate commerce or directly burden, obstruct or affect interstate commerce in milk or its products; and

(e) It is hereby found that the necessary expense of the market administrator for the maintenance and functioning of such agency will require the payment by each handler, as his pro rata share of such expense, 4 cents per hundredweight or such amount not to exceed 4 cents per hundredweight as the Secretary may prescribe with respect to receipts during the month of (1) Producer milk (including such handler's own farm production), (2) Other source milk allocated to Class I pursuant to § 1098.46(a) (3) and (7) and the corresponding steps of § 1098.46 (b), and (3) Class I milk disposed of from a partially regulated distributing plant on routes in the marketing area that exceeds Class I milk received during the month at such plant from pool plants and other order plants.

*Rulings on exceptions.* In arriving at the findings and conclusions, and the regulatory provisions of this decision, each of the exceptions received was carefully and fully considered in conjunction with the record evidence pertaining thereto. To the extent that the findings and conclusions, and the regulatory provisions of this decision are at variance with any of the exceptions, such exceptions are hereby overruled for the reasons previously stated in this decision.

*Marketing agreement and order.* Annexed hereto and made a part hereof are two documents entitled respectively, "Marketing Agreement Regulating the Handling of Milk in the Nashville, Tennessee, Marketing Area", and "Order Amending the Order Regulating the Handling of Milk in the Nashville, Tennessee, Marketing Area", which have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

*It is hereby ordered,* That all of this decision, except the attached marketing agreement, be published in the FEDERAL REGISTER. The regulatory provisions of said marketing agreement are identical with those contained in the order as hereby proposed to be amended by the attached order which will be published with this decision.

*Referendum order; determination of representative period; and designation of referendum agent.* It is hereby directed that a referendum be conducted to determine whether the issuance of the attached order, as amended and as hereby proposed to be amended, regulating the handling of milk in the Nashville, Tenn., marketing area, is approved or favored by the producers, as defined under the terms of the order, as amended and as hereby proposed to be amended, and who, during the representative period, were engaged in the production of milk for sale within the aforesaid marketing area.

The month of November 1964, is hereby determined to be the representative period for the conduct of such referendum. J. B. McCroskey is hereby designated agent of the Secretary to conduct such referendum in accordance with the procedure for the conduct of referenda to determine producer approval of milk marketing orders (15 F.R. 5177), such referendum to be completed on or before the 30th day from the date this decision is issued.

Signed at Washington, D.C., on December 22, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

*Order [1] Amending the Order Regulating the Handling of Milk in the Nashville, Tennessee, Marketing Area*

**§ 1098.0 Findings and determinations.**

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Nashville, Tenn., marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

(4) All milk and milk products handled by handlers, as defined in the order as hereby amended, are in the current of interstate commerce or directly burden, obstruct, or affect interstate commerce in milk or its products; and

(5) It is hereby found that the necessary expense of the market administrator for the maintenance and functioning of such agency will require the payment by each handler, as his pro rata share of such expense 4 cents per hundredweight or such amount not to exceed 4 cents per hundredweight as the Secretary may prescribe, with respect to receipts during the month of (1) Producer milk (including such handler's own farm production), (2) Other source milk allocated to Class I pursuant to § 1098.46(a) (3) and (7) and the corresponding steps of § 1098.46(b), and (3) Class I milk disposed of from a partially regulated distributing plant on routes in the marketing area that exceeds Class I milk received during the month at such plant from pool plants and other order plants.

*Order relative to handling.* It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Nashville, Tenn., marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended and as hereby amended, as follows:

1. Section 1098.6 is revised to read as follows:

**§ 1098.6 Nashville, Tennessee, marketing area.**

"Nashville, Tennessee, marketing area" hereinafter called the "marketing area" means all the territory within the boundaries of the following:

(a) Tennessee counties of:

| | |
|---|---|
| Bedford. | Maury. |
| Cannon. | Montgomery. |
| Cheatham. | Overton. |
| Clay. | Perry. |
| Coffee. | Pickett. |
| Davidson. | Putnam. |
| DeKalb. | Robertson. |
| Dickson. | Rutherford. |
| Fentress. | Smith. |
| Giles. | Stewart. |
| Hickman. | Sumner. |
| Houston. | Trousdale. |
| Humphreys. | Warren. |
| Jackson. | Wayne. |
| Lawrence. | White. |
| Lewis. | Williamson. |
| Macon. | Wilson. |
| Marshall. | |

(b) Kentucky counties of:

| | |
|---|---|
| Allen. | Monroe. |
| Barren. | Simpson. |
| Metcalf. | Warren. |

(c) Fort Campbell military reservation.

2. Section 1098.8(c) is revised to read as follows:

**§ 1098.8 Handler.**

* * * * *

(c) A cooperative association with respect to the milk of its producer members which is delivered from the farm to the pool plant(s) of another handler in a tank truck owned, operated by or under contract to, such cooperative association for the account of the cooperative association if the cooperative association has notified in writing, prior to delivery, both the market administrator and the handler to whom the milk is delivered that it wishes to be the handler for such milk. Such milk shall be considered as having been received at the location of the plant to which it was delivered;

* * * * *

3. Section 1098.13 is revised to read as follows:

**§ 1098.13 Producer milk.**

"Producer milk" means only that skim milk or butterfat contained in milk:

(a) Received at a pool plant directly from a dairy farmer or a handler pursuant to § 1098.8(c); or

(b) Diverted from a pool plant to any other milk plant (except a plant at which such milk is fully subject to the pricing provisions of another order issued pursuant to the Act) in accordance with the provisions of § 1098.7.

4. Section 1098.15 is revised to read as follows:

**§ 1098.15 Fluid milk product.**

"Fluid milk product" means milk, skim milk, buttermilk, flavored milk, flavored milk drinks, yogurt, cream (sweet and sour), or any mixture in fluid form of skim milk and butterfat components of milk (except sterilized products packaged in hermetically sealed containers, eggnog, ice cream mix,

[1] This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.

aerated cream and sour cream mixtures to which cheese or any food substance other than a milk product has been added and which is not disposed of under a Grade A label).

**§ 1098.30 [Amended]**

5. In the introductory text of § 1098.30, the reference "§ 1098.8(e) is revised to read "§ 1098.8 (c) or (e)".

6. The introductory text in § 1098.31 (a) is revised to read as follows:

**§ 1098.31 Payroll reports.**

(a) Each handler pursuant to § 1098.8 (a), (b), or (c) shall report to the market administrator in the detail and on forms prescribed by the market administrator as follows:

* * * * *

7. Section 1098.32 is revised to read as follows:

**§ 1098.32 Other reports.**

(a) On or before the 6th day after the end of each month, each handler pursuant to § 1098.8(c) shall report to the market administrator, in detail and on forms prescribed by him, the quantities of skim milk and butterfat in producer milk delivered to each pool plant in such month.

(b) On or before the 21st day of each month, each handler pursuant to § 1098.8 (c) shall report to the market administrator in detail and on forms prescribed by him, the quantities of producer milk delivered to each pool plant for the first 15 days of such month.

(c) Each producer-handler and each handler exempt pursuant to § 1098.91 shall make reports to the market administrator at such time and in such manner as the market administrator may request.

**§ 1098.35 [Amended]**

8. In § 1098.35, the language, ", except that milk for which the association is the handler," is revoked.

9. Section 1098.41 (a) (1) (ii) and (b) (3) is revised and a new paragraph (b) (3–a) is added to read as follows:

**§ 1098.41 Classes of utilization.**

* * * * *

(a) * * *

(1) * * *

(ii) Products classified pursuant to paragraphs (b) (3) or (3–a) of this section;

* * * * *

(b) * * *

(3) Disposed of and used for livestock feed or dumped after prior notification to, and opportunity for verification by, the market administrator;

(3–a) Disposed of in bulk fluid milk products to bakeries, candy factories, soup factories and similar establishments at which the fluid milk products were used in the manufacture of food products other than milk products;

* * * * *

**§ 1098.44 [Amended]**

10. In the introductory text of § 1098.44(a), the language "or a cooperative association as a handler pursuant to § 1098.8(c)" is revoked.

**§ 1098.46 [Amended]**

11. In § 1098.46(a), subparagraph (4) (i) (b), the language "and from a cooperative association as a handler pursuant to § 1098.8(c)" is revoked and in subparagraph (9), the language "and from a cooperative association in its capacity as a handler pursuant to § 1098.8(c)" is revoked.

**§ 1098.70 [Amended]**

12. In the introductory text of § 1098.70, the reference "§ 1098.8 (a), (b), and (c)" is revised to read "§ 1098.8 (a) and (b)".

13. Section 1098.81(a) is revised to read as follows:

**§ 1098.81 Payments to market administrator.**

(a) On or before the 25th day of each month, each handler receiving milk from producers or from a handler pursuant to § 1098.8(c) shall pay to the market administrator for deposit into the producer-settlement fund an amount of money calculated by multiplying the hundredweight of producer milk received by him during the first 15 days of such month by the Class II price for the preceding month;

* * * * *

14. In § 1098.82, paragraph (d) is revoked and paragraph (c) is revised to read as follows:

**§ 1098.82 Payments to producers.**

* * * * *

(c) In making payments to producers pursuant to paragraphs (a) and (b) of this section, the market administrator shall pay, on or before the second day prior to the date payments are due to individual producers, to a cooperative association which is authorized to collect payment for milk of its members and from which a written request for such payments has been received, a total amount equal to the sum of the individual payments otherwise payable to such producers pursuant to this section.

15. Section 1098.83(a) is revised to read as follows:

**§ 1098.83 Butterfat and location differentials to producers and on nonpool milk.**

(a) The applicable uniform price to be paid each producer shall be increased or decreased for each one-tenth percent which the average butterfat content of his milk is above or below 3.5 percent, respectively, at a rate, rounded to the nearest one-fifth cent, determined by multiplying by 0.12 the average of the daily wholesale prices (using the midpoint of any price range as one price) of 92-score bulk creamery butter per pound at Chicago, as reported by the Department during the previous month.

* * * * *

16. Section 1098.85 is revised to read as follows:

**§ 1098.85 Expense of administration.**

As his pro rata share of the expense of administration of the order, each handler shall pay to the market administrator on or before the 15th day after the end of the month, 4 cents per hundredweight or such lesser amount as the Secretary may prescribe, with respect to receipts during the month of:

(a) Producer milk (including such handler's own production);

(b) Other source milk allocated to Class I pursuant to § 1098.46(a) (3) and (7) and the corresponding steps of § 1098.46(b); and

(c) Class I milk disposed of from a partially regulated distributing plant on routes in the marketing area that exceeds Class I milk received during the month at such plant from pool plants and other order plants.

## [7 CFR Part 1126]

[Docket No. AO–231–A23]

## MILK IN NORTH TEXAS MARKETING AREA

### Decision on Proposed Amendments to Tentative Marketing Agreement and to Order

Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held at Dallas, Tex., on August 26, 1964, pursuant to notice thereof issued on August 18, 1964 (29 F.R. 11974).

Upon the basis of the evidence introduced at the hearing and the record thereof, the Associate Administrator on November 27, 1964 (29 F.R. 16198; F.R. Doc. 64–12365) filed with the Hearing Clerk, United States Department of Agriculture, his recommended decision containing notice of opportunity to file written exceptions thereto.

The material issues on the record of the hearing related to:

1. The need for an emergency increase in the Class I milk prices established by the order regulating the handling of milk in the above designated marketing areas;

2. Class II classification of dumped milk, half and half, coffee cream and whipping cream;

3. Revision of the method for computing producer butterfat differentials; and

4. Whether an emergency exists concerning Issue No. 1 which requires the omission of a recommended decision and opportunity for interested persons to file exceptions thereto and the immediate issuance of a final decision.

A final decision containing the findings and conclusions on Issue No. 1 and Issue No. 4 was issued September 24, 1964 (29 F.R. 13397) and a final order on September 28, 1964 (29 F.R. 13475). This concluded action on all issues affecting orders other than that for the North Texas marketing area (Part 1126). This decision is concerned with the remaining issues, all of which relate to the North Texas order only.

*Findings and conclusions.* The following findings and conclusions on the remaining material issues (No. 2 and No. 3) are based on evidence presented at the hearing and the record thereof:

2. *Classification in the North Texas order of (a) half and half, coffee cream and whipping cream; and (b) dumped milk.* (a) Half and half, coffee cream and whipping cream should not be classified as Class II milk under the North Texas order.

A handler contended that his firm is meeting adverse competition in the distribution of coffee cream and half and half. The testimony was that substitute products made from mixtures of nonfat dry milk and vegetable fat have caused the handler to lose a substantial volume of the restaurant business for these products in the Dallas portion of the North Texas market.

Sales data for the three products were introduced in evidence. The utilization of butterfat in half and half increased 2.2 percent during the 12-month period ending July 1964 as compared with the same period a year earlier. At the same time, its utilization in coffee cream decreased 26 percent, and in whipping cream remained the same for the periods compared. The total utilization of butterfat in the three products decreased 9.1 percent as compared with a year earlier. About 40 percent of the butterfat used in the three products is disposed of in half and half, 31 percent in coffee cream, and 29 percent in whipping cream.

It may be that coffee cream sales have been lost to substitute products. The data indicate the probability that some of the decrease in butterfat used for coffee cream has been absorbed by the increased utilization of butterfat in half and half. Coffee cream and half and half are interchangeable as dairy products for "creaming" beverages and cereals.

The most important consideration, however, is that health authorities require that the three products be made from inspected milk. So long as this requirement is in effect, the fact that substitute products that do not have to be made from inspected milk may be sold at lower prices is not a convincing reason for changing the classification.

Producers should continue to receive the Class I price for milk sold in these products under the Grade A label, rather than the Class II price which they receive for reserve milk disposed of in dairy products which do not require health department inspection. Under present marketing conditions, the Class II classification of skim milk and butterfat in half and half, coffee cream and whipping cream is unwarranted and is therefore denied.

(b) Class II classification should be provided for milk that is dumped because buttermilk has not been produced from skim milk to which buttermilk culture or "starter" has been added. Class II classification for other fluid milk products dumped should not be provided on the basis of this record.

A handler proposed that "dumped" milk be classified as Class II milk. There is presently no specific provision for classification of milk so disposed of. It is therefore treated as unaccounted for milk, or "shrinkage" for which amounts within specified limits may be accounted for as Class II milk, but amounts in excess of such limits are Class I milk.

Two situations were described in which "dumping" (pouring down the drain) of fluid milk products have reached proportions exceeding the shrinkage limits of the order. One such problem was the failure of buttermilk to "set-up". For three months of the past year, the proponent handler's allowable plant shrinkage was insufficient to accommodate the volume dumped from this cause.

Cultured buttermilk is produced by the addition of culture or "starter" to pasteurized skim milk, which is then held at an appropriate temperature until the desired acidity results. When this degree of acidity is achieved, the buttermilk has "set". At this point the product normally contains less than one percent butterfat.

Buttermilk sometimes fails to set because of improper temperature, substances in the skim milk which inhibit the growth of bacteria (such as antibiotics), bad starter and improper sterilization and cleaning of equipment. Laboratory tests made on buttermilk which fails to set do not reveal conclusively which of these causes may be responsible for such failure in a given situation. Whatever the cause, the resulting product frequently must be dumped because it has no commercial value and must be disposed of promptly. For this reason, it should be provided that when starter has been added to skim milk and the buttermilk fails to set, Class II classification should apply to the product if dumped.

Since the amount of fat contained in the product at this point in processing is normally less than one percent, it would be unreasonable to charge handlers Class I for the fat included in the dumped milk on the supposition that it can be salvaged and used again in a Class I product. It is concluded that the butterfat as well as the skim milk dumped under the conditions described should be classified as Class II.

Dumped milk involves the disappearance of product from the pool accounting problem. Provision is needed to preclude the use of self-serving records by handlers in claiming Class II classification for dumped milk. For this reason it should be provided that the handler give prior notification to and opportunity for verification by the market administrator in such manner as he may require.

Another problem described concerned off-flavored milk. During June and July 1964, about 20 percent of the milk delivered to a North Texas handler's plant was rejected because of bad flavor, and shipped to manufacturing plants. About 40 percent of all milk received is carried over to the next day for processing. The plant runs tests for acidity, butterfat, bacteria and added moisture. Even so, rancidity sometimes develops between the time the milk is received and the time it is processed. It is apparent that this problem results most often from errors made in accepting milk that should have been rejected during the receiving operation.

Ordinarily, the proponent handler's plant shrinkage is about one percent per month, including dumped milk, and is well within the allowable plant shrinkage provided in the order. This being the case, the proposal to extend Class II classification for dumped milk beyond the provision for buttermilk which does not "set" is unnecessary and is therefore denied.

3. *Butterfat differentials.* The producer butterfat differential should be calculated as an average of the Class I and Class II handler butterfat differentials weighted by the proportion of butterfat in producer milk in each class during the month, and should be calculated to the nearest one-tenth cent.

The North Texas order adjusts the uniform price to producers for milk above and below 3.5 percent butterfat content on the basis of a schedule of butterfat differentials directly related to a designated range of butter prices. The butter prices are those which are reported by the Department each month for 92-score bulk creamery butter at Chicago. This method of computation, however, does not relate the producer butterfat differential to the class-use of butterfat in the North Texas market.

Fluid milk products must meet more exacting health standards than milk for manufacturing purposes. The value of butterfat in Class I milk is higher in the North Texas market than is the value of butterfat in Class II milk. It would be more appropriate, therefore, to compute the producer butterfat differential on the basis of a weighted average of the Class I and Class II utilization of butterfat in producer milk. This technique is similar to the one which is followed in computing the uniform price paid to producers. Producers will be more appropriately compensated by adjusting their uniform prices in relation to the class-use of butterfat in producer milk.

The present producer butterfat differential has been relatively inflexible. During the 28 months ending with July 1964, it remained constant at six cents for each one-tenth of one percent butterfat content. The method recommended herein for computing the producer butterfat differential will reflect the relative utilization of butterfat in Class I and Class II milk. It will also be more responsive to changes in the price of butter. It will be consistent with the provisions of most Federal orders which adjust uniform prices to producers with producer butterfat differentials based on a weighted average of the handler butterfat differentials.

*Rulings on proposed findings and conclusions.* Briefs and proposed findings and conclusions were filed on behalf of certain interested parties. These briefs, proposed findings and conclusions and the evidence in the record were considered in making the findings and conclusions set forth above. To the extent that the suggested findings and conclusions filed by interested parties are inconsistent with the findings and conclusions set forth herein, the requests to make such findings or reach such conclusions are denied for the reasons previously stated in this decision.

*General findings.* The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) The tentative marketing agreement and the order as hereby proposed to be amended, and all of the terms and conditions thereof will tend to effectuate the declared policy of the Act;

(b) The parity prices of milk as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreement and the order as hereby proposed to be amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(c) The tentative marketing agreement and the order as hereby proposed to be amended, will regulate the handling of milk in the same manner as, and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, a marketing agreement upon which a hearing has been held.

*Rulings on exceptions.* In arriving at the findings and conclusions, and the regulatory provisions of this decision, each of the exceptions received was carefully and fully considered in conjunction with the record evidence pertaining thereto. To the extent that the findings and conclusions, and the regulatory provisions of this decision are at variance with any of the exceptions, such exceptions are hereby overruled for the reasons previously stated in this decision.

*Marketing agreement and order.* Annexed hereto and made a part hereof are two documents entitled, respectively, "Marketing Agreement Regulating the Handling of Milk in the North Texas Marketing Area" and "Order Amending the Order Regulating the Handling of Milk in the North Texas Marketing Area", which have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

*It is hereby ordered,* That all of this decision, except the attached marketing agreement, be published in the FEDERAL REGISTER. The regulatory provisions of said marketing agreement are identical with those contained in the order as hereby proposed to be amended by the attached order which will be published with this decision.

*Determination of representative period.* The month of October 1964 is hereby determined to be the representative period for the purpose of ascertaining whether the issuance of the attached order, as amended and as hereby proposed to be amended, regulating the handling of milk in the North Texas marketing area, is approved or favored by producers, as defined under the terms of the order, as amended and as hereby proposed to be amended, and who, during such representative period, were engaged in the production of milk for sale within the aforesaid marketing area.

Signed at Washington, D.C., on December 21, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

*Order[1] Amending the Order Regulating the Handling of Milk in the North Texas Marketing Area*

**§ 1126.0 Findings and determinations.**

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the North Texas marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

*Order relative to handling.* It is therefore ordered, That on and after the effective date hereof the handling of milk in the North Texas marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended, and as hereby further amended, as follows:

1. In § 1126.41, a new subparagraph (b)(8) is added to read as follows:

**§ 1126.41 Classes of utilization.**

* * * * * * *

(b) * * *

(8) Dumped because buttermilk is not produced from skim milk to which buttermilk culture has been added, if the handler gives prior notification to and opportunity for verification by the market administrator in such manner as the market administrator may require.

2. In § 1126.91, paragraph (a) is revised to read as follows:

**§ 1126.91 Butterfat and location differentials to producers.**

(a) In making payments to producers pursuant to § 1126.90 (a) or (c), the uniform prices shall be increased or decreased by each one-tenth of one percent which the butterfat content of his milk is above or below 3.5 percent, respectively, at the rate determined by multiplying the total pounds of butterfat in the producer milk allocated to Class I and Class II milk during the month pursuant to § 1126.46 by the respective butterfat differential in each class, dividing the sum of such values by the total pounds of such butterfat, and rounding the resultant figure to the nearest one-tenth of a cent.

* * * * * * *

[F.R. Doc. 64-13271; Filed, Dec. 24, 1964; 8:46 a.m.]

[1] This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.

## UNIFORM SYSTEM OF ACCOUNTS FOR RAILROAD COMPANIES

### Notice of Proposed Rule Making

DECEMBER 17, 1964.

Notice is hereby given, pursuant to Section 4 of the Administrative Procedure Act, that the Commission has under consideration amendment of the uniform system of accounts for railroad companies with regard to accounting for revenues receivable by railroad companies as direct grants or aid for providing passenger commuter or other passenger service. Complete statement of the amendment is set forth in the detailed statement of proposed rule below.

DETAILED STATEMENT OF PROPOSED RULE

*Account 108, Other Passenger-train.* In the text of this account 108, add the following to the list of items:

(d) Revenues receivable from states, cities, and other governmental agencies as direct grants or aid for providing passenger commuter or other passenger-train service. The term "revenues," as used herein, does not apply to aid in the form of abatement or forgiveness of taxes, assumption by local governments of station maintenance costs, and other similar special indirect benefits contributed by governmental agencies.

*Responses.* Railroad companies affected by the proposed rule herein and other interested parties who desire to do so should present written views or comments for our consideration as soon as practicable and not later than January 15, 1965. The Commission will consider all such responses and presentations before deciding the matter herein, after which such order as may be found appropriate will be entered. An original and three copies of any such responses should be submitted.

Notice shall be given to railroad companies hereby affected and to the general public by depositing this Notice in the Office of the Secretary of the Commission at Washington, D.C., and by filing this Notice with the Director, Office of the Federal Register.

(Sec. 20, 24 Stat. 386, as amended; 49 U.S.C. 20)

By the Commission, Division 2.

## CIVIL AERONAUTICS BOARD

[Docket No. 15725; Order E-21599]

### TRANS WORLD AIRLINES, INC.

### Order Granting Temporary Suspension of Service

Issued under delegated authority, December 21, 1964.

Application of Trans World Airlines, Inc., for authority to suspend service temporarily at the co-terminal point Detroit, Mich., on its international route; Docket 15725.

Trans World Airlines, Inc., (TWA) filed an application on December 1, 1964, pursuant to Part 205 of the Board's Economic Regulations, for authority to temporarily suspend its air service at Detroit, Mich., from December 29, 1964, until March 8, 1965.

In support of its application, TWA alleges that the low volume of traffic which can be generated at Detroit for the winter months would result in an uneconomical operation for TWA;[1] that the small number of transatlantic passengers to and from Detroit will continue to have ample connecting service with transatlantic flights at the New York gateway; and that suspension of service at Detroit during the indicated period would result in substantial savings to TWA; and is in the public interest.

No objections to the application have been received.

In circumstances substantially similar to those here alleged by TWA, the Board has suspended TWA at Detroit during the winter months on previous occasions.[2] Here, as in that instance, it would appear that TWA's suspension will not appreciably inconvenience Detroit transatlantic passengers during the period of the suspension. PAA's direct Transatlantic service continues to be available, as well as numerous connecting flights to New York.

On the basis of the foregoing considerations, and pursuant to authority duly delegated by the Board's regulations, 14 CFR 385.13(n), it is found that suspension of TWA's authority to serve Detroit on its international Route 147 from December 29, 1964 until March 8, 1965 is in the public interest.

*Accordingly, it is ordered:*

1. That Trans World Airlines, Inc., be and it hereby is authorized to suspend service at Detroit, Mich., on its international Route 147 from December 29, 1964, until March 8, 1965; and

2. That this order may be amended or revoked at any time, in the discretion of the Board, without hearing.

This order will be published in the FEDERAL REGISTER.

Persons entitled to petition the Board for review of this order pursuant to the Board's regulations, 14 CFR 385.50, may file such petitions within five days after the date of service of this order.

This order shall be effective and become the action of the Civil Aeronautics Board upon expiration of the above period unless within such period a petition for review thereof is filed, or the Board gives notice that it will review this order on its own motion.

[SEAL] HAROLD R. SANDERSON,
*Secretary.*

[F.R. Doc. 64-13308; Filed, Dec. 24, 1964; 8:46 a.m.]

[1] TWA alleges that during the first three weeks of November, TWA's average load factor on its weekly Detroit International flight fell to 10.8 percent.

[2] TWA was suspended temporarily at Detroit from January 20, 1964 until March 31, 1964 (Order E-20334 and Order E-20498).

## FEDERAL MARITIME COMMISSION

### LYKES BROS. STEAMSHIP CO., INC.

### Notice of Agreement Filed for Approval

Notice is hereby given that the following Agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of the agreement(s) at the Washington office of the Federal Maritime Commission, 1321 H Street NW., Room 301; or may inspect agreements at the offices of the District Managers, New York, N.Y., New Orleans, La., and San Francisco, Calif. Comments with reference to an agreement including a request for hearing, if desired, may be submitted to the Secretary, Federal Maritime Commission, Washington, D.C., 20573, within 20 days after publication of this notice in the FEDERAL REGISTER. A copy of any such statement should also be forwarded to the party filing the agreement (as indicated hereinafter) and the comments should indicate that this has been done.

Notice of agreement filed for approval by:

W. J. Amoss, Vice President Traffic,
Lykes Bros. Steamship Co., Inc.,
821 Gravier Street,
New Orleans, La., 70150.

Agreement No. 9360, between Lykes Bros. Steamship Co., Inc., Norddeutscher Lloyd, and Hamburg-Amerika Linie, as refiled, establishes a rate agreement for operation in the eastbound trade from U.S. Gulf ports (Key West, Fla., to Brownsville, Tex., inclusive) to European ports in the Le Havre/Hamburg Range. The agreement provides (1) that the parties shall discuss and agree upon rates for the trade, (2) that each party has the right to alter such rates upon giving forty-eight hours' advance notice thereof, and (3) that each party shall maintain and file its own tariff, in accordance with the terms and conditions set forth therein. Notice of the filing of Agreement 9360, was previously published in the FEDERAL REGISTER on July 13, 1964 (29 F.R. 9635). The agreement previously covered both eastbound and westbound operations.

Dated: December 21, 1964.

By order of the Federal Maritime Commission.

THOMAS LISI,
*Secretary.*

[F.R. Doc. 64-13264; Filed, Dec. 24, 1964; 8:45 a.m.]

### M.A.N.Z. LINE JOINT SERVICE

### Notice of Agreement Filed for Approval

Notice is hereby given that the following Agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of the agreement(s) at the Washington office of the Federal Maritime Commission, 1321 H Street NW., Room 301; or may inspect agreements at the offices of the District Managers, New York, N.Y., New Orleans, La., and San Francisco, Calif. Comments with reference to an agreement including a request for hearing, if desired, may be submitted to the Secretary, Federal Maritime Commission, Washington, D.C., 20573, within 20 days after publication of this notice in the FEDERAL REGISTER. A copy of any such statement should also be forwarded to the party filing the agreement (as indicated hereinafter) and the comments should indicate that this has been done.

Notice of agreement filed for approval by:

Elmer C. Maddy, Esq.,
Kirlin Campbell & Keating,
One Twenty Broadway, New York, N.Y. 10005.

Agreement 7814-2 between the member lines of the M.A.N.Z. Line Joint Service restates approved Agreement 7814 to eliminate the Montreal, Australia, New Zealand Line from participation, to delete New Zealand from the scope of the agreement, and to add a self-policing provision to the agreement.

Notice of the filing of Agreement 7814-2, between the member lines of this joint service, which also provided that the parties thereto would be separate members of conferences and other section 15 agreements was previously published in the FEDERAL REGISTER on February 1, 1964, 29 F.R. 1674.

Dated: December 21, 1964.

By order of the Federal Maritime Commission.

THOMAS LISI,
*Secretary.*

### Notice of Qualification as Citizen of U.S.

DECEMBER 18, 1964.

This is to give notice that pursuant to § 3.21, Customs Regulations (19 C.F.R. 3.21), issued under the provisions of section 27A of the Merchant Marine Act, 1920, as amended by the Act of September 2, 1958 (46 U.S.C. 883-1), Nelbro Packing Company, 653 Colman Building, Seattle, Washington, incorporated under the laws of the State of Washington, did on November 27, 1964, file with the Acting Commissioner of Customs, in duplicate, an oath for qualification of a corporation as a citizen of the United States following the form of oath prescribed in customs Form 1260.

The oath shows that:

(a) A majority of the officers and directors of the corporation are citizens of the United States (list of names, home addresses, and citizenship attached to the oath);

(b) Not less than 90 percent of the employees of the corporation are residents of the United States;

(c) The corporation is engaged primarily in a manufacturing or mineral industry in the United States, or in a Territory, District, or possession thereof;

(d) The aggregate book value of the vessels owned by the corporation does not exceed 10 percent of the aggregate book value of the assets of the corporation; and

(e) The corporation purchases or produces in the United States, its Territories or possessions, not less than 75 percent of the raw materials used or sold in its operations.

The Acting Commissioner of Customs, having found this oath to be in compliance with the law and regulations, on December 18, 1964, issued to Nelbro Packing Company a certificate of compliance on customs Form 1262 as provided in § 3.21(i) of the regulations. The certificate and any authorization granted thereunder will expire three years from the date thereof unless there first occurs a change in the corporate status requiring a report under § 3.21(h) of the regulations.

[SEAL] LESTER D. JOHNSON,
*Acting Commissioner of Customs.*

[F.R. Doc. 64-13304; Filed, Dec. 24, 1964; 8:46 a.m.]

## FEDERAL POWER COMMISSION

[Docket No. E-7194]

### IDAHO POWER CO.

### Notice of Application

DECEMBER 22, 1964.

Take notice that on November 25, 1964, an application, and on December 21, 1964, an amendment thereto, was filed with the Federal Power Commission, pursuant to section 204 of the Federal Power Act by Idaho Power Co. (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Idaho and Nevada, with its principal business office at Boise, Idaho, seeking an order authorizing the issuance of up to 250,000 shares of Common Stock at $5 par value, in the aggregate amount of $1,250,000 par value at or near the market price on outstanding stock. Applicant requests an exemption from § 34.1a (b) and (c) of the Commission's regulations under the Federal Power Act requiring competitive bidding. Applicant proposes to accept the proposal of Kidder, Peabody & Co., New York, for the purchase and underwriting of said Common Stock, at or near the market price, subject to marketing conditions at the time of offering with underwriting commission of 70 cents per share.

Applicant states that the purpose for which the Common Stock is to be issued and sold is to obtain permanent capital for repayment of the principal amount of short-term bank loans now outstanding which it expects will total $7,100,000 by the end of 1964 and for interim financing of the cost of construction, extension and improvement of operating facilities and towards the future construction costs.

Applicant's construction program for 1965 is estimated at $31,333,000, the outstanding items of which are as follows: Generating stations: Hell's Canyon, Homestead, Oreg., three units, total capability 425,000 kw, $11,072,000; transmission facilities, $6,848,000; substation facilities, $5,556,000; distribution lines and substations, $5,911,000.

Any person desiring to be heard or to make any protest with reference to said application should on or before January 11, 1965, file with the Federal Power Commission, Washington, D.C., 20426, petitions or protests in accordance with the requirements of the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10). The application is on file and available for public inspection.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13268; Filed, Dec. 24, 1964; 8:45 a.m.]

## SECURITIES AND EXCHANGE COMMISSION

[File No. 812-1744]

### DEPOSITORS FUND OF BOSTON, INC.

### Notice of Application for Order of Exemption

DECEMBER 21, 1964.

Notice is hereby given that Depositors Fund of Boston, Inc. ("Applicant"), 111 Devonshire Street, Boston 9, Mass., a Massachusetts corporation, and an open-end, diversified management investment company registered under the Investment Company Act of 1940 ("Act"), has filed an application pursuant to section 6(c) of the Act for an order of the Commission exempting Applicant from compliance with the provisions of section 14(a) of the Act. All interested persons are referred to the application on file with the Commission for a complete statement of Applicant's representations which are summarized below.

Applicant has filed a registration statement under the Securities Act of 1933 for 1,999,999 shares of common stock, $1 par value, to be offered to investors in exchange for such investors' securities. Such registration has not yet become effective. The purpose of the Fund is to provide investors holding securities at relatively low tax bases with a means of exchanging such securities for shares of the Fund, thereby obtaining diversification without incurring any Federal capital gains tax liability at the time of such exchange. Vance, Sanders & Co., Inc., the dealer manager, and a group of securities dealers which it will form and manage intend to solicit deposits of securities, to be held by a depository in safekeeping for the separate account of each investor, for a period ending approximately ninety days from the effective date of the Applicant's registration statement under the Securities Act of 1933. At all times during the solicitation

period, the depositing investor will retain all incidents of ownership to the securities deposited, with the right to withdraw such securities from the depository without charge.

The minimum deposit to be accepted from any investor is to be securities having a market value of $25,000, and the exchange will not be consummated unless the market value of the deposited securities as at the effective date of the planned exchange aggregates a minimum of $30,000,000. If such value is obtained upon the termination of the solicitation period, Applicant, within 15 days thereafter, will send a special report to all depositors which will list all securities then on deposit, together with their current fair market values at that time and their respective Federal tax bases, as determined from the information furnished to the Applicant by the depositors, who have the right to withdraw any or all of their deposited securities at any time prior to the mailing of the report to investors and during a period of three weeks thereafter. Applicant will have the right to reject securities on deposit for a period of up to ten days after the end of the period during which the investors may withdraw. All of Applicant's shares which are issued in exchange for securities will be issued simultaneously on the effective date of the exchange. Each depositing investor is to represent that he will acquire shares of Applicant issued to him in the planned exchange without any intention of distributing them to the public.

Notice is further given that any interested person may, not later than January 6, 1965 at 5:30 p.m. submit to the Commission in writing a request for hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon Applicant. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) should be filed contemporaneously with the request. At any time after said date, as provided by Rule 0–5 of the rules and regulations promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application shall be issued upon request or upon the Commission's own motion.

For the Commission (pursuant to delegated authority).

[SEAL] ORVAL L. DUBOIS, *Secretary.*

[F.R. Doc. 64–13263; Filed, Dec. 24, 1964; 8:45 a.m.]

# Rules and Regulations

## Title 42—PUBLIC HEALTH

**Chapter I—Public Health Service, Department of Health, Education, and Welfare**

**SUBCHAPTER D—GRANTS**

### PART 53—GRANTS FOR CONSTRUCTION AND MODERNIZATION OF HOSPITALS AND MEDICAL FACILITIES

Notice of proposed rule making, public rule making procedures and postponent of effective date have been omitted in the issuance of the following revised Part 53—Grants for Construction and Modernization of Hospitals and Medical Facilities, which relates solely to grants for construction and modernization of public and other nonprofit hospitals and medical facilities.

The following regulations shall become effective on the date of publication in the FEDERAL REGISTER except that (1) Subparts B through F (relating to distribution of beds and facilities) of the regulations in effect prior to this revision (42 CFR 53.11–53.52) shall be applicable to any State until such State has received approval of the State plan conforming to Subparts B through G of these revised regulations, but in any event the State plan must conform to the revised Subparts B through G not later than July 1, 1965; and (2) Section 53.112 (nondiscrimination) of the regulations (42 CFR) in effect prior to this revision shall be applicable until the regulations of the Secretary of Health, Education, and Welfare under the Civil Rights Act (Public Law 88–352) become effective.

1. The table of contents of Part 53—Grants for Construction and Modernization of Hospitals and Medical Facilities, and Subparts A through M of that Part, are revised to read as follows:

2. Subpart M of Part 53 is amended as follows:

"Subpart M (Appendix A) General Standards of Construction and Equipment" is redesignated "Subpart N (Appendix A) General Standards of Construction and Equipment", and §§ 53.131–53.155 are redesignated §§ 53.141–53.165, respectively. As amended, Subpart N will read as set forth below.

The prior section heading "§ 53.136 Mental hospital" is redesignated "§ 53.146 Mental hospital—Long-term care".

The prior section heading "§ 53.137 Psychiatric hospital" is redesignated "§ 53.147 Mental hospital—Intensive care".

The prior section heading "§ 53.138 Chronic disease hospital" is redesignated "§53.148 Facility for long-term care—Chronic disease hospital".

The prior section heading "§ 53.149 Nursing homes" is redesignated "§ 53.159 Facility for long-term care—Nursing home".

Paragraph (b) of prior section 53.155 is deleted and paragraphs "(c)" and "(d)" are resignated "(b)" and "(c)", respectively.

Revised Part 53 reads as set forth below.

This amendment was approved by the Federal Hospital Council on November 4, 1964.

Dated: December 8, 1964.

[SEAL] LUTHER L. TERRY,
*Surgeon General.*

Approved: December 18, 1964.

LUTHER L. TERRY,
*Chairman, Federal Hospital Council.*

Approved: December 18, 1964.

ANTHONY J. CELEBREZZE,
*Secretary.*

## Subpart A—Definitions

### § 53.1 Definitions.

All terms shall have the same meaning as given them in Title VI of the PHS Act, as amended (42 U.S.C. 291 et seq.) hereinafter termed the "Federal Act". In addition the following terms shall have the following meanings when used in the regulations in this part:

(a) *Area.* The geographic territory from which patients come or are expected to come to existing or proposed hospitals, or existing or proposed public health centers, or existing or proposed medical facilities (i.e., facilities for long-term care, diagnostic or treatment centers, rehabilitation facilities), the delineation of which is based on such factors as population distribution, natural geographic boundaries, and transportation and trade patterns, and all parts of which are reasonably accessible to existing or proposed hospitals, public health centers, or medical facilities. When appropriate, interstate areas may be formed with the mutual agreement of the States concerned.

(b) *Hospital.* General, tuberculosis, mental, and other types of hospitals, and related facilities, such as intensive, intermediate, and self-care nursing units, laboratories, outpatient departments, nurses' home facilities (and prior to July 1, 1965, nurses' training facilities), and central service facilities operated in connection with hospitals, but not institutions furnishing primarily domiciliary care. The term "hospital" shall be restricted to institutions providing community service for inpatient medical or surgical care of the sick or injured; this includes obstetrics.

(c) *General hospital.* Any hospital for short-term inpatient medical or surgical care of illness or injury including obstetrics.

(d) *Mental hospital.* A hospital for the comprehensive diagnosis and treatment of patients with mental illness.

(e) *Tuberculosis hospital.* A hospital for the diagnosis and treatment of tuberculosis.

(f) *Facility for long-term care.* A facility providing community service for inpatient care for convalescent or chronic disease patients who require skilled nursing care and related medical services.

(1) Which is a hospital (other than a hospital primarily for the care and treatment of mentally ill or tuberculosis patients) or is operated in connection with a hospital, or

(2) In which such nursing care and medical services are prescribed by, or are performed under the general direction of, persons licensed to practice medicine or surgery in the State. Institutions furnishing primarily domiciliary care are not included.

"Chronic disease hospitals" and "nursing homes" as used in Subpart N (Appendix A) constitute "facilities for long-term care".

(g) *Diagnostic or treatment center.* A facility providing community service for the diagnosis or diagnosis and treatment of ambulatory patients (outpatients) which is operated in connection with a hospital, or in which patient care is under the professional supervision of persons licensed to practice medicine or surgery in the State, or, in the case of dental diagnosis or treatment, under the professional supervision of persons licensed to practice dentistry in the State. This includes outpatient departments and clinics of public or nonprofit hospitals. The applicant must be either (1) a State, political subdivision, or public agency, or (2) a corporation or an association which owns and operates a nonprofit hospital.

(h) *Rehabilitation facility.* (1) A facility providing community service which is operated for the primary purpose of assisting in the rehabilitation of disabled persons through an integrated program under competent professional supervision of (i) medical evaluation and services, and (ii) psychological, social, or vocational evaluation and services. The major portion of the required evaluation and services must be furnished within the facility; and the facility must be operated either in connection with a hospital or as a facility in which all medical and related health services are prescribed by, or are under the general direction of, persons licensed to practice medicine or surgery in the State.

(2) For the purpose of this paragraph:

(i) An integrated program brings together as a team specialized personnel from the (*a*) medical, and (*b*) psychological, social, or vocational areas for the purpose of pooling information, interpretations and opinions for the development of a rehabilitation plan of services in which the disabled individual is viewed as a whole. When members of the team contribute to the diagnosis and treatment of illness, their contributions must be coordinated under medical responsibility. These integrated services may be provided in a facility to care for many types of disabilities or a single type of disability.

(ii) A disabled person is an individual who has a physical or mental condition which, to a material degree, limits, contributes to limiting, or if not corrected, will probably result in limiting, the individual's performance or activities to the extent of constituting a substantial physical, mental, or vocational handicap.

(iii) Medical service, in the case of a rehabilitation facility operated in connection with a hospital, means a service under the direct personal supervision of a medical director, varied and extensive availability of specialized consultants, physical and occupational therapy department and occupational therapy services, and medical evaluation.

(iv) Medical service, in the case of a rehabilitation facility not operated in connection with a hospital, means medical supervision, availability by agreement of medical consultants, and evaluation and services suitable to the needs of the disabled persons to be served.

(v) Social service means evaluation and services by a qualified social worker in amounts and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(vi) Psychological service means evaluation and services by a qualified psychologist in amounts and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(vii) Vocational service, in the case of a rehabilitation facility operated in connection with a hospital, means evaluation and services by a qualified vocational rehabilitation counselor in amounts and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(viii) Vocational service, in the case of a rehabilitation facility not operated in connection with a hospital, means those vocational services required in hospitals plus a variety of vocational services appropriate to the program and the persons to be served, such as prevocational exploration, work evaluation and vocational training.

(i) *Public health center.* A publicly owned facility utilized by a local health unit for the provision of public health services, including related publicly owned facilities such as laboratories, clinics, and administrative offices operated in connection with public health centers.

(j) *Local health unit.* A single county, city, county-city, or local district health unit, as well as a State health district unit where the primary function of the State district unit is the direct provision of public health services to the population under its jurisdiction.

(k) *Public health services.* Services provided through organized community effort in the endeavor to prevent disease, prolong life, and maintain a high degree of physical and mental efficiency.

(l) *Hospital bed.* A bed for an adult or child patient. Bassinets for the newborn in a maternity unit nursery, beds in labor rooms, recovery rooms, and other beds used exclusively for emergency purposes are not included in this definition.

(m) *Population.* In computing the population of the States or any area thereof, for planning purposes, the State agency shall use the latest figures of civilian population certified by the Federal Department of Commerce and distribute such population among the various areas. The sum of the populations distributed among the various areas shall not exceed the figures certified by the Department of Commerce.

(n) *Projected population.* The State agency shall use the projected State population estimates obtained from the Federal Department of Commerce and provided to the State agency by the Surgeon General, and shall distribute such population among the various areas. The sum of the projected populations distributed among the various areas shall not exceed the figures provided by the Surgeon General.

(o) *Nonprofit hospital, nonprofit diagnostic or treatment center, nonprofit rehabilitation facility, and nonprofit facility for long-term care.* Any hospital, diagnostic or treatment center, rehabilitation facility, or facility for long-term care, as the case may be, owned and operated by one or more nonprofit corporations or associations, no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual.

(p) *Community service.* A facility provides a community service when (1) the services furnished are available to the general public, or (2) admission is limited only on the basis of age, medical indigency, or type or kind of medical or mental disability, or (3) the facility constitutes a medical or nursing care unit of a home or other institution which home or other institution is available in accordance with subparagraph (1) or (2) of this paragraph.

(q) *Modernization.* Modernization includes alteration, major repair, remodeling, replacement, and renovation of existing buildings (including initial equipment thereof), and replacement of obsolete, built-in equipment of existing buildings. It does not include the replacement of a facility or a portion of a facility to an inpatient capacity greater than the capacity of the existing facility.

(r) *Equipment.* This term includes those items which are necessary for the functioning of the facility but does not include items of current operating expense such as food, fuel, drugs, dressings, paper, printed forms, and soap.

(s) *Built-in equipment.* Built-in equipment is that equipment which is affixed to the facility, and usually included in the construction contract.

(t) *Major repair.* The term "major repair" consists of those repairs to an existing building excluding routine maintenance which restore the building to a sound state, the cost of which is no less than $100,000.

(u) *State.* The 50 States, Puerto Rico, Guam, Virgin Islands, American Samoa, and the District of Columbia.

(v) *State agency.* The State agency designated by the State pursuant to section 604(a)(1) of the Federal Act.

(w) *Surgeon General.* The Surgeon General of the Public Health Service.

(x) *Secretary.* The Secretary of Health, Education, and Welfare.

## Subpart B—Distribution of Beds for Acute and Long-Term Illness (Excluding Mental and Tuberculosis)

### § 53.11 State need (standards of adequacy).

(a) The number of beds for acute and long-term illness required to provide adequate service to the people residing in any State shall be the total of such beds required for individual service areas within the State. The number of beds required for each service area shall be calculated by the State agency, using a formula as follows:

(1) For general hospitals,

Step (i) Multiply the current area use rate (patient days per 1000 population per year) by the projected area population (in thousands) and divide by 365 to obtain a projected area average daily census.

Step (ii) Divide the projected area average daily census by .80 (occupancy factor) and add 10 to obtain the number of beds needed in the area.

State agencies wishing to use a different formula may do so, provided:

(*a*) The formula used shall incorporate area use rate, projected area population and an occupancy or other factor or factors, and

(*b*) The formula is submitted to and approved by the Surgeon General before it is used in the State plan.

(2) For facilities for long-term care, where data on long-term patient days are available and valid, a similar formula shall be used, with .90 occupancy factor, subject to the provisions set forth in subparagraph (1) (*a*) and (*b*) of this paragraph.

### § 53.12 Service areas.

(a) The same service areas shall be used for planning general hospital and long-term care beds and facilities in order that the relationship of these two categories of facilities may be indicated.

(b) Each service area shall have sufficient population that it may have both general hospital and long-term care services appropriately planned in one or more facilities.

(c) The State agency shall describe in the State plan the population characteristics of each service area and outline a program for the distribution of beds and facilities for general hospital and long-term care.

### § 53.13 Existing general hospital beds and long-term care beds.

(a) The count of existing general hospital beds shall include the beds in the hospitals of this category as defined in Subpart A, which are not included in the count of beds for any other category under this part, and beds in any mental hospital, tuberculosis hospital or facility for long-term care which are specifically assigned for general hospital care, provided the beds so assigned in any such facility number 10 or more.

(b) The count of existing beds in facilities for long-term care shall include the beds in the facilities of this category as defined in Subpart A, which are not included in the count of beds in any other category under this part, and beds in any general, mental or tuberculosis hospital which are specifically assigned to long-term care other than mental or tuberculosis, provided the beds so assigned to any such facility number 10 or more.

(c) The count of existing beds described in paragraphs (a) and (b) of this section shall: (1) Include beds in all nursing units, including those currently closed or assigned to easily convertible nonpatient use, and bed space under construction, and (2) exclude beds in labor rooms, recovery rooms, emergency rooms, beds used intermittently for diagnosis or treatment, beds set up for temporary use, bassinets in newborn nurseries in maternity units, and unfinished bed space not under construction.

(d) The number of existing facilities in each category referred to in this subpart shall be counted.

(e) Existing beds described in paragraphs (a) and (b) of this section shall be classified as conforming or nonconforming according to specific standards of plant evaluation. Such standards shall include:

(1) Fire-resistivity of each building;

(2) Fire and other safety factors of each building;

(3) Design and structural factors affecting the function of nursing units;

(4) Design and structural factors affecting the function of service departments.

## Subpart C—Distribution of Tuberculosis Hospital Beds

### § 53.21 State need (standards of adequacy).

The number of beds required to provide adequate hospital services for tuberculosis patients in any State or service area shall be determined:

(a) In relation to the development of outpatient and community based programs and not as isolated inpatients programs; and

(b) On an estimated average occupancy rate of at least 80 percent of the current year's existing beds, except where a lower rate is justified by the State agency.

### § 53.22 Distribution.

Tuberculosis hospitals receiving grants under the Federal Act shall be built in centers of population and shall be a part of or in proximity to general hospitals.

### § 53.23 Existing tuberculosis hospital beds.

(a) The count of existing tuberculosis hospital beds shall include the beds in tuberculosis hospitals, which are not included in the count of beds for any other category, and also beds in any general hospital which are specifically assigned for the care of patients with tuberculosis, provided the beds so assigned in any such general hospital number 10 or more.

(b) Existing tuberculosis hospital beds shall be classified as conforming or nonconforming according to plant evaluation standards as set forth in Subpart B of this part.

## Subpart D—Distribution of Mental Hospital Beds

### § 53.31 Community mental health centers plan.

Except as provided in section 53.32 the State plan developed under the Community Mental Health Centers Act, Public Law 88–164, and regulations thereunder (§ 54.201 et seq. of this chapter) shall constitute that portion of the plan for mental health services, beds and facilities required under the Federal Act (Title VI of the Public Health Service Act, as amended).

### § 53.32 State need (standards of adequacy).

Until such time as the State plan under Public Law 88–164 is approved by the Surgeon General, and with respect to

those facilities not programmed under Public Law 88-164, the beds and facilities required to provide adequate services for the care of the mentally ill in the State or service area shall be:

(a) Determined in relation to the development of outpatient and community based programs and not as isolated inpatient programs;

(b) Determined on an average estimated occupancy rate of at least 80 percent of the current year's existing beds, except where a lower rate is justified by the State agency;

(c) Distributed in centers of population and as a part of or in proximity to general hospitals;

(d) Determined in relation to existing beds, services and facilities for the care of the mentally ill. (The count of existing mental hospital beds shall include the beds in mental hospitals, which are not included in the count of beds in any other category, and also beds in any general hospital which are specifically assigned for the comprehensive inpatient care of patients with mental illness. Existing mental hospital beds shall be classified as conforming or nonconforming according to plant evaluation standards as set forth in Subpart B of this part.

## Subpart E—Distribution of Public Health Centers

### § 53.41 State need (standards of adequacy).

(a) The number of public health centers to be planned in a State shall be adequate to meet the needs of the people of that State.

(b) The need shall be determined after consultation with the State health authority (where the State Health Department is not the State agency), and with local health departments where such departments are operating independent units.

### § 53.42 Distribution.

The general method of distribution of public health centers throughout the State shall conform to the plan of organization of local health units within the State. In instances where the State Health Department is not the State agency, the method of distribution shall be determined after consultation with the State health authority.

### § 53.43 Existing public health centers.

(a) Where the State Health Department is not the State agency, the number of existing public health centers shall be determined after consultation with the State health authority.

(b) Existing public health centers shall be classified as conforming or nonconforming according to plant evaluation standards, which shall include:

(1) Fire-resistivity of each building;

(2) Fire and other safety factors of each building;

(3) Design and structural factors affecting the function of the center.

## Subpart F—Distribution of Diagnostic or Treatment Centers

### § 53.51 State need (standards of adequacy).

Diagnostic or treatment centers shall be planned in sufficient number to make at least the basic minimum services readily available to all persons in the State. Provision of the basic minimum services requires facilities for examination of patients by a physician or a dentist, and the provision of clinical laboratory and diagnostic X-ray services.

### § 53.52 Distribution (service areas).

(a) To facilitate the necessary relationship between hospitals and diagnostic or treatment centers, distribution of diagnostic or treatment centers shall be planned in the same areas used for distribution of general hospitals and facilities for long-term care.

(b) In determining the need for additional facilities for diagnostic or treatment services in an area as a basis for distribution of such facilities, special consideration shall be given to areas in which there is a shortage of services provided by private physicians and dentists.

### § 53.53 Existing diagnostic or treatment centers.

(a) The count of existing diagnostic or treatment centers shall exclude:

(1) Offices of private physicians and dentists, whether for individual or group practice;

(2) Industrial clinics for employees only, first aid clinics, and similar facilities not furnishing a community service.

(b) Existing diagnostic or treatment centers shall be classified as conforming or nonconforming according to plant evaluation standards as set forth in Subpart E of this part.

## Subpart G—Distribution of Rehabilitation Facilities

### § 53.61 State need (standards of adequacy).

(a) Rehabilitation facilities shall be planned by each State so that all persons in the State shall have access to integrated rehabilitation services for all types of disabilities. The facility or facilities may be programed in the State or by joint planning with one or more other States to serve the residents of such States. In determining the number of rehabilitation facilities and services needed, the State shall consider such factors as the particular needs of the population to be served and the scope and nature of service of the existing and proposed facilities.

### § 53.62 Distribution.

In determining the need for additional rehabilitation services as a basis for distribution of rehabilitation facilities, consideration shall be given to (a) rehabilitation services provided in existing facilities, avoiding duplication and overlapping of services; and (b) availability of rehabilitation services to people in all geographical areas.

### § 53.63 Existing rehabilitation facilities.

The count of existing rehabilitation facilities shall include existing beds in such facilities. Such beds shall be classified in accordance with the procedures set forth in Subpart B of this part.

## Subpart H—Distribution of Modernization Projects for all Categories of Facilities

### § 53.71 Determination of need.

(a) Not later than January 1, 1966, the need for modernization shall be determined for each category of facilities by evaluation of existing facilities and with initial consideration being given to the most densely populated areas of the State. The evaluation shall be based on specific standards of plant evaluation, which shall include:

(1) Fire-resistivity of each building;

(2) Fire and other safety factors of each building;

(3) Design and structural factors affecting the function of the facility.

(b) Based on the evaluation, beds or facilities shall be classified as conforming or nonconforming. Those beds or facilities which are classified as nonconforming shall represent the beds and facilities in need of modernization.

(c) In the event that an area has a total of existing conforming beds or facilities and existing nonconforming beds or facilities needing modernization which exceeds the total need for the area, the number of beds or facilities to be modernized shall be reduced accordingly. At no time shall the beds or facilities to be modernized, when added to the existing conforming beds or facilities, be greater than the total beds or facilities needed in any one category.

### § 53.72 Distribution.

Modernization shall be planned for general hospitals, facilities for long-term care, and diagnostic or treatment centers in the service areas used for planning new construction. For other categories of facilities, modernization may be planned on a Statewide basis.

## Subpart I—Priority of Projects

### § 53.81 General.

The general manner in which the State agency shall determine the priority of projects included in the State construction program shall be based on the relative need of different areas lacking adequate facilities and shall conform to the principles set out in this subpart.

### § 53.82 Hospitals (new construction).

Special consideration shall be given to hospitals which will serve rural communities and areas with relatively small financial resources; and prior to July 1, 1965 (and to the extent deemed feasible by the State agency), to hospital facilities which will include new or expanded facilities for nurse training. Relative need for new construction shall be expressed in terms of the ratio of existing conforming beds to total beds needed in each area.

### § 53.83 Facilities for long-term care (new construction).

Priority shall be determined on the basis of the relative need for beds in facilities for long-term care in the area to be served by the project taking into account the utilization of existing beds and giving special consideration to projects operated by or affiliated with hospitals. Relative need for new construction shall be expressed in terms of the ratio of existing conforming beds to total beds needed in each area.

### § 53.84 Diagnostic or treatment centers (new construction).

The priority of diagnostic or treatment center projects shall be determined on the basis of the relative need for additional diagnostic or treatment services in the area to be served by the project taking into account existing available services and their utilization.

### § 53.85 Rehabilitation facilities (new construction).

Priority shall be given to rehabilitation facility projects in the order of importance as given below taking into consideration existing rehabilitation services in the community and the need for additional services in the community.

(a) Facilities operated in connection with a university teaching hospital which will provide an integrated program of medical, psychological, social, and vocational evaluation and services under competent supervision.

(b) Facilities offering rehabilitation services for multiple disabilities in hospitals and medical facilities capable of sustaining an organized department of physical medicine and rehabilitation.

(c) All other rehabilitation facilities.

### § 53.86 Public health centers (new construction).

Highest priority in this category shall be given to the provision of facilities for local health units serving rural communities and communities with relatively small financial resources. Where the agency designated to administer the State plan is not the State health authority, the State agency shall determine the relative priorities to be established after consultation with the State health authority.

### § 53.87 Modernization.

Special consideration for modernization shall be given to areas of high population density. For each category, relative need shall be expressed for inpatient facilities in terms of the ratio of existing conforming beds in each area to total existing beds in such area, and for ambulatory (outpatient) facilities the ratio of existing conforming outpatient facilities in each area to total existing outpatient facilities in such area.

## Subpart J—Allotments for Modernization and Transfer of State Allotments

### § 53.91 Allotments for modernization.

The allotment to the several States under section 602(a)(2) of the Act for modernization shall be, for the period July 1, 1965 to June 30, 1966, computed as follows:

(a) One-half will be allotted to each State in the same proportion as the product of—

(1) The population of each State; and

(2) The square of its allotment percentage bears to the sum of the corresponding products for all of the States.

(b) One-half will be allotted to each State on the basis of need, determined by giving a weight of—

(1) 40 percent to the State's proportion of all hospital beds in existence in the United States in 1948; and

(2) 60 percent to the State's share of all Hill-Burton allotments made for the years 1949 through 1953.

### § 53.92 Transfer of allotments to another State.

A State may submit a request in writing to the Surgeon General that a specified portion of its allotment for the construction of hospitals and public health centers, facilities for long-term care, diagnostic or treatment centers, rehabilitation facilities, or for modernization, be added to the corresponding allotment of another State for the purpose of meeting a portion of the Federal share of the cost of a project for the construction or modernization of a facility of the type authorized under the allotments in such other State. In determining whether the facility with respect to which the request is made will meet needs of the State making the request and that use of the specified portion of such State's allotment as requested by it will assist in carrying out the purposes of the Federal Act, the Surgeon General (or, in the case of a rehabilitation facility, the Surgeon General and the Secretary) shall consider the accessibility of the facility and the extent to which services will be made available to the residents of the State making the request for the transfer.

### § 53.93 Transfer of allotments for modernization to another category within a State.

(a) For the purpose of transfer of allotments as authorized by section 602(e)(1) of the Federal Act, a reasonable opportunity for applicants to submit approvable applications for modernization projects shall include a period of time during which applications may be submitted which is not less than 12 months from the date an application for such a project could first have been approved in accordance with the Act and these regulations.

(b) A determination under section 602(e)(2) of the Federal Act that there is a greater need for facilities other than modernization projects shall be made only after completion of the determination of the State's needs for modernization projects pursuant to Subpart H of this part and in accordance with the approved State plan.

## Subpart K—General Standards of Construction and Equipment

### § 53.101 General.

(a) Plans and specifications for each project submitted to the Surgeon General for approval, and in the case of rehabilitation facilities, the approval of the Secretary, under the Federal Act shall be prepared in accordance with "General Standards of Construction and Equipment" for facilities of different classes and in different types of locations as set forth in Subpart N (Appendix A) of this part. The Surgeon General may approve, subject also in the case of rehabilitation facilities to the approval of the Secretary, plans and specifications which contain deviations from the requirements prescribed, if he is satisfied that the purposes of such requirements have been fulfilled.

(b) The design and construction covered by the plans and specifications must conform with the applicable State and local laws, codes, and ordinances and with the approved State plan. The plans and specifications must be complete and adequate for contract purposes and have the approval and recommendation of the State agency.

(c) Equipment shall be provided in the kind and to the extent necessary for the proper functioning of the facility as planned.

### § 53.102 Size of mental hospitals.

No application for construction of a mental hospital for intensive care with a capacity of more than 500 beds or of a mental hospital for long-term care with a capacity of more than 3,000 beds shall be approved. This requirement shall not be construed to prevent approval of applications for improvements of mental hospitals with bed capacities equal to or greater than those specified above, if such improvements are designed to provide more intensive treatment facilities within such hospitals.

### § 53.103 Size of tuberculosis hospitals.

No application for construction of a tuberculosis hospital with a capacity of less than 100 beds shall be approved, except that an application for construction of a tuberculosis hospital with a capacity from 50 to 100 beds may be approved where necessary (a) to provide facilities for an isolated area too small to support a larger hospital, or (b) to expand, remodel, or alter existing hospital facilities.

### § 53.104 Size of facilities for long-term care.

No application shall be approved for construction of a facility for long-term care, not an addition to a hospital, with a capacity of less than 10 beds.

## Subpart L—Community Service; Services for Persons Unable To Pay; Nondiscrimination

### § 53.111 Community service; services for persons unable to pay; nondiscrimination on account of creed.

Before an application for the construction of a hospital or medical facility is recommended by a State agency for approval, the State agency shall obtain assurances from the applicant that:

(a) The facility will furnish a community service;

(b) The facility will furnish below cost or without charge a reasonable vol-

ume of services to persons unable to pay therefor. As used in this paragraph, "persons unable to pay therefor" includes persons who are otherwise self-supporting but are unable to pay the full cost of needed services. Such services may be paid for wholly or partly out of public funds or contributions of individuals and private and charitable organizations such as community chest or may be contributed at the expense of the facility itself. In determining what constitutes a reasonable volume of services to persons unable to pay therefor, there shall be considered conditions in the area to be served by the applicant, including the amount of such services that may be available otherwise than through the applicant. The requirements of assurance from the applicant may be waived if the applicant demonstrates to the satisfaction of the State agency, subject to subsequent approval by the Surgeon General, that to furnish such services is not feasible financially; and

(c) All portions and services of the entire facility for the construction of which, or in connection with which, aid under the Federal Act is sought, will be made available without discrimination on account of creed; and no professionally qualified person will be discriminated against on account of creed with respect to the privilege of professional practice in the facility.

**§ 53.112 Nondiscrimination on account of race, color, or national origin.**

Attention is called to the requirements of Title VI of the Civil Rights Act of 1964 (78 Stat. 252; P.L. 88–352) which provides that no person in the United States shall, on the ground of race, color, or national origin be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance (sec. 601). A regulation implementing such Title VI, applicable to grants for construction and modernization of hospitals and medical facilities, has been issued by the Secretary of Health, Education, and Welfare with the approval of the President (45 CFR Part 80). This regulation, published in the FEDERAL REGISTER of December 4, 1964 (29 F.R. 16298–16305), will become effective on the 30th day after such publication.

**§ 53.113 Nondiscrimination in construction contracts.**

Each construction contract is subject to the condition that the grantee shall comply with the requirements of, and give the assurances required in Executive Order 11114, June 22, 1963 (28 F.R. 6485), and the applicable rules, regulations and procedures prescribed pursuant thereto by the President's Committee on Equal Employment Opportunity (28 F.R. 9812).

## Subpart M—Methods of Administration of the State Plan

**§ 53.121 General.**

The State plan shall provide for general methods of administration which are in accord with the principles set out in this subpart.

**§ 53.122 Construction program.**

The State programs for hospitals, facilities for long-term care, diagnostic or treatment centers, rehabilitation facilities, public health centers, and modernization shall be developed in the following manner:

(a) The State agency shall determine the need for additional hospital facilities of all types, facilities for long-term care, diagnostic or treatment centers, rehabilitation facilities, public health centers and for modernization of such facilities in accordance with the provisions of Subpart B through Subpart H.

(b) The State agency shall determine through field investigation, and otherwise, the approximate locations in each area in which the various types of health facilities identified in paragraph (a) of this section should most appropriately be built and the locations at which modernization projects are needed.

(c) After having determined the hospital, long-term care facilities, diagnostic or treatment center, rehabilitation facilities, public health center and modernization needs, the State agency shall establish an overall construction program. This program shall set forth all such needs in accordance with the standards specified in Subpart B through Subpart H and shall show the relative need for each project included, irrespective of the availability of funds for construction and for maintenance and operation of such project.

(d) The State agency shall from time to time as necessary, but not less often than annually, review the State plan, including the overall program for the construction of hospitals, long-term care facilities, diagnostic or treatment centers, rehabilitation facilities, public health centers and for modernization, and shall submit to the Surgeon General any modifications of the plan and the construction program as the State agency considers necessary to administer the plan and the annual allotment.

(e) At least thirty days prior to the submission of the State plan or any modification thereof to the Surgeon General, the State agency shall publish in newspapers having general circulation throughout the State a general description of the proposed plan or any such modification, and the State plan shall be available for examination and comment by interested persons prior to submission to the Surgeon General.

(f) The State agency shall establish a separate construction schedule on such forms and for such periods as the Surgeon General may prescribe. Insofar as funds are available for construction and for maintenance and operation, construction shall be scheduled in the order of relative need.

**§ 53.123 Personnel administration.**

(a) *Merit system.* A system of personnel administration on a merit basis shall be established and maintained with respect to the personnel employed in the administration of the State plan. Such a system shall include provision for:

(1) Impartial administration of the merit system;

(2) Operation on the basis of published rules or regulations;

(3) Classification of all positions on the basis of duties and responsibilities and establishment of qualifications necessary for the satisfactory performance of such duties and responsibilities;

(4) Establishment of compensation schedules adjusted to the responsibility and difficulty of the work;

(5) Selection of permanent appointees on the basis of examinations so constructed as to provide a genuine test of qualifications and so conducted as to afford all qualified applicants opportunity to compete;

(6) Advancement on the basis of capacity and meritorious service; and

(7) Tenure of permanent employees.

Substantial compliance with the Standards for a Merit System of Personnel Administration, issued by the Secretary of Health, Education, and Welfare, the Secretary of Labor, and the Secretary of Defense on January 26, 1963, 28 F.R. 734, including any subsequent amendments thereof, will be deemed to meet the requirements of the regulations in this part.

(b) *Conflict of interest.* No full-time officer or employee of the State agency, or any firm, organization, corporation, or partnership which such officer or employee owns, controls, or directs, shall receive funds from the applicant, directly or indirectly, in payment for services provided in connection with the planning, design, construction or equipping of the project.

**§ 53.124 Fair hearings.**

The State agency shall establish such rules and regulations as will provide an opportunity for an appeal to and a fair hearing before the State agency to every applicant for a construction project who is dissatisfied with any action of the State agency regarding its application.

**§ 53.125 Construction standards.**

The State agency shall adopt general standards of construction and equipment for the various types of hospitals, facilities for long-term care, diagnostic or treatment centers, rehabilitation facilities, and public health centers assisted under this program. The standards adopted shall not be less than the general standards prescribed by the Surgeon General and set forth in Subpart N (Appendix A) of this part.

**§ 53.126 Minimum standards of maintenance and operation.**

The State plan shall provide for minimum standards of maintenance and operation of facilities providing inpatient care which receive aid under the Federal Act, and effective not later than July 1, 1966, shall provide for enforcement of such standards.

**§ 53.127 Application; submittal; amendment; processing.**

(a) *Submittal of application.* Construction applications, including both a detailed narrative description and a detailed estimate of the cost of the project, shall be submitted to the Surgeon General through the State agency on forms prescribed by the Surgeon General.

(b) *Amendment to application.* An amendment to any application approved by the Surgeon General shall be processed in the same manner as an original application, except that the original application's conformity with the priority regulations shall suffice for an amendment which does not modify the factors on which the priority was granted.

(c) *Processing of application.* The State agency shall approve, recommend, and forward applications received in the order of priority, except that the State agency may approve, recommend and forward to the Surgeon General applications out of the order of priority if:

(1) The State agency has afforded reasonable opportunity for development and presentation of projects in the order of priority; and

(2) The State agency certifies to the Surgeon General that financial resources for the construction, maintenance and operation of projects of higher priority are not then available.

**§ 53.128 Assurances from applicant.**

In addition to any other requirements imposed by law, each construction grant shall be subject to the condition that the applicant will furnish and comply with the following assurances. The Surgeon General may, at any time, approve exceptions to those conditions and assurances where he finds that such exceptions are not inconsistent with the Federal Act and the purposes of the program:

(a) That the applicant (or other public or nonprofit agency which is to operate the facility) has or will have a fee simple or such other estate or interest in the site, including necessary easements and rights-of-way, sufficient to assure for a period of not less than 50 years undisturbed use and possession for the purpose of the construction and operation of the facility;

(b) That the Surgeon General's approval of the final working drawings and specifications, which conform to the general standards of construction and equipment, will be obtained before the project is advertised or placed on the market for bidding;

(c) That applicant will perform actual construction work by the lump sum (fixed price) contract method; employ adequate methods of obtaining competitive bidding prior to awarding the construction contract, either by public advertising or circularizing three or more bidders; and award the contract to the responsible bidder submitting the lowest acceptable bid; provided, however, that the purchase and installation of equipment which is unique to the facility, as well as kitchen, laundry and laboratory equipment, need not be considered construction work for the purpose of this section, except that if open competitive bidding is employed to obtain any or all of such equipment, the award shall be made to the responsible bidder submitting the lowest acceptable bid;

(d) That applicant will enter into no construction contract or contracts for the project or a part thereof, the cost of which is in excess of the estimated cost approved in the application for that portion of the work covered by the plans and specifications, without the prior approval of the Surgeon General;

(e) That applicant will submit to the Surgeon General for prior approval changes that substantially alter the scope of work, function, utilities or safety of the facility.

(f) That applicant will construct the project, or cause it to be constructed, to final completion in accordance with the application and approved plans and specifications;

(g) That applicant will maintain adequate and separate accounting and fiscal records and accounts for all funds provided from any source to pay the cost of the project, and permit audit of such records and accounts at any reasonable times;

(h) That applicant will furnish progress reports and such other information as the Surgeon General may require;

(i) That applicant will provide and maintain competent and adequate architectural or engineering supervision and inspection at the construction site to insure that the completed work conforms with the approved plans and specifications;

(j) That sufficient funds will be available to meet the non-Federal share of the cost of constructing the facility;

(k) That sufficient funds will be available when construction is completed for effective use of the facility for the purposes for which it is being constructed;

(l) (1) That any laborer or mechanic employed by any contractor or subcontractor in the performance of work on the construction of the facility will be paid wages at rates not less than those prevailing on similar construction in the locality as determined under the Davis-Bacon Act (40 U.S.C. 276 et seq.) and will receive compensation at a rate not less than one and one-half times his basic rate of pay for all hours worked in any workweek in excess of eight hours in any calendar day or forty hours in the workweek (40 U.S.C. 327–332); and

(2) That the following conditions and provisions will be included in all construction contracts:

(i) The provisions of Labor Standards for U.S. Public Health Service Construction Grant Programs (PHS 930–A–5) pertaining to the Copeland Act (Anti-Kickback) Regulations and Labor Standards (prevailing rates of pay and overtime requirements) except in the case of contracts in the amount of $2,000.00 or less;

(ii) The contractor shall furnish performance and payment bonds, each of which shall be in the full amount of the contract price, and shall maintain, during the life of the contract, adequate fire, workmen's compensation, public liability and property damage insurance;

(iii) Representatives of the Surgeon General and State agency will have access at all reasonable times to work wherever it is in preparation or progress, and the contractor shall provide proper facilities for such access and inspection;

(m) That a facility providing inpatient care will be operated and maintained in accordance with minimum standards prescribed by the State agency for the maintenance and operation of such facilities;

(n) That the applicant will conform to all the applicable requirements of the State plan and the regulations of this part.

**§ 53.129 Certification to the Surgeon General.**

After the State agency has approved a construction application, it shall recommend it to the Surgeon General for approval and shall certify:

(a) That the application contains reasonable assurance as to the availability of funds for the cost of construction and the entire cost of maintenance and operation when completed:

(1) Availability of funds for the non-Federal share of construction costs shall mean (i) funds immediately available, placed in escrow, or acceptably pledged, or (ii) funds or fund sources specifically earmarked in a sum sufficient for that purpose, or (iii) other assurances acceptable to the Surgeon General;

(2) To assure the availability of funds for maintenance and operation, the application for the construction of a new project must include a proposed operating budget, on a form prescribed by the Surgeon General, for the two-year period immediately following its completion. In the case of an addition to an existing facility, the application must include a statement showing that funds are or will be available to meet any excess of proposed expenditures over anticipated income from the operation of the constructed addition for the two-year period immediately following its completion.

(b) That the application is in conformity with and contains the assurances required by the State plan and these regulations.

**§ 53.130 Requests for construction payments.**

(a) *Certification by State agency.* The State agency shall certify to the Surgeon General the amount of payments due to an applicant for the cost of work performed and materials and equipment furnished.

(1) Except as provided in subparagraph (2) of this paragraph, payments shall be made as follows:

(i) The first installment when not less than 25 percent of the construction of the project has been completed;

(ii) A second installment when not less than 50 percent of the construction of the project has been completed;

(iii) A third installment when not less than 75 percent of the project has been completed;

(iv) A fourth installment when the project is 95 percent completed; and

(v) The final payment when the project is completed and final inspection by a representative of the Surgeon General is made and the amount certified as due and payable as determined by the audit.

(2) Upon a written request and a showing of necessity by the applicant, the Surgeon General may adopt a different schedule of payments.

(b) *Inspection by State agency.* As a basis for certification by the State agency that payment of an installment is due an applicant, the State agency shall make adequate inspections to determine that the work has been performed upon a

project, or purchases have been made, in accordance with the approved plans and specifications.

**§ 53.131 Fiscal and accounting requirements.**

(a) *Construction allotments.* (1) The State agency shall be responsible for establishing and maintaining accounts and fiscal controls of all Federal and State funds allotted for construction projects. Federal and State funds shall be separately identified by maintaining separate fund accounts for this purpose.

(2) The fiscal records shall be so designed as to show at any given time the Federal funds allotted, encumbered, and unencumbered balances. If State contributions are made for construction, separate accounts, reflecting similar information, shall be maintained for State funds.

(b) *Construction payments.* (1) Where the State may receive Federal funds for applicants for construction project grants, or the State itself is an applicant, adequate records of account and fiscal controls shall be established and maintained by the State to assure proper accounting of all funds received and disbursed. Similar suitable accounts shall be maintained to show the receipt and disbursement of State, local or other funds used for matching purposes.

(2) The State agency shall require that applicants receiving Federal funds establish and maintain adequate accounting and fiscal records to reflect the receipt and expenditure of funds allotted and paid for construction projects.

(3) The States which by law are authorized to make payments to applicants shall promptly pay such applicants funds certified for payment by the Surgeon General for approved construction projects.

**§ 53.132 Access by Comptroller General.**

The State plan shall provide that the Comptroller General of the United States or his duly authorized representatives will have access for purposes of audit and examination to such records of the State agency as are required to be maintained by the Surgeon General.

**§ 53.133 Notice of change of status of facility.**

The State agency shall promptly notify the Surgeon General in writing, if at any time within 20 years after completion of construction, any facility which received funds under the Federal Act, as amended, is transferred to any person, agency, or organization, not qualified to file an application under the Federal Act or not approved as a transferee by the State agency; or ceases to be a public health center or a public or other nonprofit hospital, diagnostic or treatment center, facility for long-term care or rehabilitation facility, as defined in the Federal Act.

**§ 53.134 Good cause for other use of facility.**

If within twenty years after completion of any construction for which a construction grant has been made the facility shall cease to be a public health center or a public or other nonprofit hospital, diagnostic or treatment center, facility for long-term care, or rehabilitation facility the Surgeon General, in determining whether there is good cause for releasing the applicant or other owner of the facility from its obligation shall take into consideration the extent to which:

(a) The facility will be devoted by the applicant or other owner to use for another public or nonprofit purpose which will promote the purpose of the Federal Act; or

(b) There are reasonable assurances that for the remainder of the twenty year period other public or nonprofit facilities not previously utilized for the purpose for which the facility was constructed will be so utilized and are substantially equivalent in nature and extent for such purposes.

## Subpart N—(Appendix A) General Standards of Construction and Equipment

**§ 53.141 Introduction.**

(a) The standards set forth in this subpart have been established by the Surgeon General of the U.S. Public Health Service as required by Title VI of the Public Health Service Act. These standards constitute minimum requirements for construction and equipment and shall apply to all projects for which Federal assistance is requested under the act. They are considered necessary to insure properly planned and well constructed hospitals and public health centers which can be maintained and efficiently operated to furnish adequate services.

(b) Throughout these general standards reference is made to certain sizes of hospitals such as, "up to and including 100 beds," "over 100 beds," etc. These references are not meant to be applied strictly. They indicate the approximate sizes at which certain changes in requirements will occur.

(c) It should be particularly noted that the small hospital of 50 beds or under presents a special problem. The size of the various departments will be generally smaller and will depend upon the requirements of the particular hospital. Some of the functions allotted separate spaces or rooms in these general standards may be combined provided that the resulting plan will not compromise the best standards of medical and nursing practice. In other respects the general standards set forth in this subpart, including the area requirements, will apply.

(d) In the case of types of hospitals not specifically treated herein the standards for general hospitals will apply. Due allowance will be made for the specialized or unusual requirements of the particular hospital involved.

(e) Since these are minimum requirements it is desirable only that they form a basis for development of higher standards. In the interest of promoting the development of higher standards it is the intention of the Public Health Service to make suggestions and disseminate the latest information as to current good practice in planning and design of health facilities. This information will be distributed from time to time to State agencies and other interested persons.

(f) No attempt has been made in establishing these standards to comply with all the various State and local codes and regulations which, of course, must be observed. The standards set forth in this subpart must be followed where they exceed any State and local codes and regulations. Likewise, compliance is required with minimum standards of construction and equipment promulgated by the State Agency where such requirements provide a higher standard than the standards set forth in this subpart.

**§ 53.142 Site survey and soil investigation.**

(a) The applicant shall provide for a survey and soil investigation of the site and furnish a plat of the site. The purpose of this survey and soil investigation is to obtain all information necessary for the design of the building foundations and mechanical service connections and development of the site. It is suggested that this matter be deferred until the architect has been selected in order that he may cooperate with the engineer who obtains the data.

(b) If any existing structures or improvements on the site are to be removed by the owners or others, the buildings or improvements must be so designated on the plat.

(c) Any discrepancies between the survey and the recorded legal description shall be reconciled or explained.

(d) The plat shall indicate:

(1) The courses and distances of property lines.

(2) Dimensions and location of any buildings, structures, easements, rights-of-way or encroachments on the site.

(3) Details of party walls, or walls and foundations adjacent to the lot lines.

(4) The position, dimensions and elevations of all cellars, excavations, wells, back-filled areas, etc., and the elevation of any water therein.

(5) All trees which may be affected by the building operations.

(6) Detailed information relative to established curb and building lines and street, alley, sidewalk and curb grades at or adjacent to the site and the materials of which they are constructed.

(7) All utility services and the size, characteristics, etc., of these services.

(8) The location of all piping, mains, sewers, poles, wires, hydrants, manholes, etc., upon, over or under the site or adjacent to the site if within the limits of the survey.

(9) Complete information as to the disposal of sanitary, storm water and subsoil drainage and suitability of subsoil for rainwater or sanitary disposal purposes if dry wells are used.

(10) Official datum upon which elevations are based and a bench mark established on or adjacent to the site.

(11) Elevations on a grid system of not more than 20-foot intervals to indicate changes of slope, etc., over that portion of the site to be developed.

(12) Elevations of contours, bottoms of excavations, etc.

(13) Contemplated date and description of any proposed improvements to approaches or utilities adjacent to the site.

(e) The plat shall bear a certification by the city engineer or other qualified official, that the true street lines and the officially established grades of curbs, sidewalks and sewers are correctly given.

(f) Adequate investigation shall be made to determine the subsoil conditions. The investigations shall include a sufficient number of test pits or test borings as will determine, in the judgment of the architect, the true conditions.

(g) Samples of strata of soil or rock taken in each pit or boring shall be retained in suitable containers. Each sample container shall be identified as to the boring and elevations at which taken and the labels initialed by the engineer making the soil investigation.

(h) The following information shall be noted on the plat:

(1) Thickness, consistency, character, and estimated safe bearing value of the various strata encountered in each pit or boring.

(2) Amount and elevation of ground water encountered in each pit or boring, its probable variation with the seasons and effect on the subsoil.

(3) The elevation of rock, if known, and the probability of encountering quicksand.

(4) Average depth of frost effect below surface of ground.

(5) High and low water levels of nearby bodies of water affecting the ground water level.

(6) The probability of freshets overrunning the site.

(7) Whether the soil contains alkali in sufficient quantities to affect concrete foundations.

(8) The elevation and location of the top of workings relative to the site, if the site is underlaid with mines, or old workings are located in the vicinity.

(9) Whether the site is subject to mineral rights which have not been developed.

**§ 53.143 Site.**

(a) The site of any hospital should be reasonably accessible to the center of community activities. Public transportation should be available within a reasonable distance, especially if an outpatient service is to be maintained.

(b) Hospitals should be located in relation to the center of population, close to where patients live and where competent special medical and surgical consultation is readily available and where employees can be recruited and retained.

(c) The site should not be near insect breeding areas, noise or other nuisance producing industrial developments; airports, railways or highways producing noise or air pollution, or near penal or other objectionable institutions or near a cemetery.

(d) Adequate roads and walks shall be provided within the lot lines to the main entrance, ambulance entrance and community activities.

(e) The site for a public health center should be convenient to the center of community activities.

**§ 53.144 General hospital.**

Units required in the general hospital

(a) *Administration department.*

Up to and including 100 beds:
- Business office with information counter.
- PBX Board and night information.[1]
- Administrator's office.
- Director of nurses' office.[1]
- Medical record room.
- Staff lounge.
- Lobby.
- Public toilets.

Over 100 beds:
- Business office.
- Information counter.
- PBX Board and night information.[1]
- Administrator's office.
- Director of nurses' office.
- Admitting office.
- Medical social service room.[1]
- Medical record room (should be easily available to O.P.D.).
- Staff lounge.
- Library, conference and board room.
- Lobby.
- Retiring room.[1]
- Public toilets.

(b) *Adjunct diagnostic and treatment facilities.* Except for the morgue and autopsy, this department preferably should be located covenient to both in- and out-patients.

Laboratory:
- Adequate facilities for chemical, bacteriological, serological, pathological and hematological services.

Basal metabolism and electrocardiography:
- Up to and including 100 beds: No special provisions required. Can be done in bed rooms.
- Over 100 beds: One room near the laboratory.

Morgue and autopsy: [1] May not be required in hospitals under 50 beds if other facilities such as undertaker or coroner are available. Where provided: Combination morgue and autopsy with mortuary refrigerator.

Radiology: Each hospital to have at least [1] radiographic room with adjoining darkroom, toilet, and office. Hospitals of 150 beds and over should have at least 1 additional radiographic room. The radiology department shall have ray protection as required.

Physical therapy: [1] In hospitals of 100 beds and over: Space should be provided for electrotherapy, hydrotherapy, massage, and exercise. Equipment to be furnished when competent technician is acquired.

Pharmacy:
- Up to and including 100 beds: Drug room with minimum facilities for compounding.
- Over 100 beds: Complete pharmacy and may include space for manufacturing and solution preparation depending on policy of hospital.

(c) *Nursing department.*

General:
- No room should have more than 4 beds. Each room shall have a lavatory. Nursing units composed of multi-bed rooms shall have a quiet room. No patients' bed rooms shall be located on any floor which is below grade.

Size of nursing unit: Not more than 35 beds.[1]
- Larger units permissible, if additional facilities are provided.
- Minimum room areas: 80 sq. ft. per bed in two- and four-bed rooms. 100 minimum sq. ft. in one-bed rooms.

Service rooms in each nursing unit:
- Nurses' station.
- Utility room.
- Floor pantry (one per floor).[2]
- Toilet facilities.
- Bedpan facilities.
- One bathroom.
- Stretcher alcove.
- Linen and supply storage.
- Janitors' closet.

Treatment room: One for each two nursing units per floor.[1]

Solarium: One for each nursing floor.[1]

Nurses' toilet room: One for each nursing floor. In hospitals of 100 beds and over the maternity department shall be housed in a separate wing or floor.

(d) *Nursery department.*

Full term nursery:
- Area required: Not less than 24 square feet per bassinet, 30 square feet recommended.
- Number of bassinets: No more than 12 bassinets in each full term nursery, 8 recommended.
- Examination and work room: One examination and work room between each two full term nurseries.

Premature nursery: Recommended in hospitals of 16 or more maternity beds and required in hospitals of 25 or more maternity beds.
- Area required: 30 square feet per bassinet.
- Number of bassinets: Not more than six in each premature nursery.
- Workroom: Work area may be within premature nursery but the area so provided shall be in addition to the required bassinet area.

Observation nursery:
- Area required: 40 square feet per bassinet.
- Number of bassinets: Approximately 10% of full term bassinets. Not more than 6 bassinets in each observation nursery.
- Workroom: One workroom for each two observation nurseries.

Formula room: Location in obstetrical nursery area or near kitchen optional.

(e) *Surgical department.* (Shall be located to prevent traffic through it to any other part of the hospital.)

Operating rooms:
- Major: One operating room for each 50 beds or major fraction thereof up to and including 200 beds. Above 200 beds the number of operating rooms will be based on the expected average of daily operations.
- Cystoscopy: One in each hospital over 100 beds highly desirable. Should have an adjoining toilet room. Location in hospital optional.
- Fracture room: [1] One in each hospital over 100 beds. Shall have an adjoining splint room. Location in hospital optional.

Auxiliary rooms:
- Sub-sterilizing facilities.
- Scrub-up facilities.
- Nurses' locker room with toilet.
- Janitors' closet.
- Instrument storage.
- Clean-up room.
- Anesthesia equipment storage.
- Surgical Supervisor station.
- Doctor's locker room with toilet.
- Storage closet.
- Stretcher alcove.
- Storage room for sterile supplies beginning at 100 beds.
- Dark room beginning at 100 beds.[1]

[1] Desirable but not mandatory.

[2] As required by program.

Central sterilising and supply room:
- Divided into work space, sterilising space and sterile storage space.
- Adjacent room for storage of unsterile supplies.
- Location in hospital optional.

(f) *Obstetrics department.* (Shall be located to prevent traffic through it to any other part of the hospital. Shall be completely separated from surgical department.)

Delivery rooms: One for each 20 maternity beds.
Labor beds: One for each 10 maternity beds.
Auxiliary rooms:
- Sub-sterilising facilities.
- Scrub-up facilities.
- Clean-up room or utility room.
- Supervisors' station.
- Nurses' locker room with toilet starting at 50 beds.[1]
- Sterile storage closet.
- Stretcher alcove.
- Janitors' closet.
- Doctors' locker room with toilet starting at 50 beds.

(g) *Emergency department.*

Accident room:
- With separate ambulance entrance.[1]
- Shall be separated from operating suite and obstetrical suite.
- Additional facilities will depend on amount of accident work expected.

(h) *Service department.*

Dietary facilities:
- Main kitchen and bakery.
- Dietitian's office.
- Dishwashing room.
- Adequate refrigeration.
- Garbage refrigerator.[1]
- Can washing facilities.
- Day storage room.
- Personnel dining space.
- Provide 12 square feet per person; may be designed for multiple seatings.
- Cafeteria or table service optional.

Housekeeping facilities:
- Laundry; unless commercial or other laundry facilities are available, each hospital shall have a laundry of sufficient capacity to process full 7 days' laundry in work week and contain the following areas:
  - Sorting area—completely enclosed.
  - Processing area.
  - Clean linen and sewing room separate from laundry.
  - Sewing room may be included in clean linen room in hospitals up to and including 100 beds.
  - Where no laundry is provided in the hospital, a soiled linen room and a clean linen and sewing room shall be provided.
- Housekeeper's office: May be combined with clean linen room in hospitals up to 100 beds.

Mechanical facilities:
- Boiler and pump room.
- Shower and locker facilities.[1]
- Engineers' space.
- Maintenance shops: In hospitals up to and including 100 beds at least one room shall be provided.[1] In larger hospitals separation of carpentry, painting and plumbing should be provided.
- For minimum requirements for mechanical and electrical work see the respective sections.

Employees' facilities:
- Nurses' locker room:
  - Lockers as required.
  - Rest room.
  - Toilet room.
- Female help lockers:
  - Locker room.
  - Rest room.
  - Toilet and shower room.[1]
- Male help lockers:
  - Locker room.
  - Toilet and shower room.[1]
- Ratio of male and female help will vary and size of locker rooms must be adjusted accordingly.

Storage:
- Inactive record storage.
- General storage: 20 square feet per bed and to be concentrated in one area insofar as possible. Mechanical maintenance storage may be in a separate area.

(i) *Out-patient department.* (If survey indicated that the out-patient department is unnecessary it may be omitted.)

General:
- Out-patient department should be located on the most easily accessible floor. It should have convenient access to radiology, pharmacy, laboratory, and physical therapy.
- The size will vary in different locations and is not necessarily proportional to the size of the hospital. The patient load must be estimated to determine the number of rooms required.
- An out-patient department may be combined with the public health center clinics if the health center is a part of the hospital.

Administrative:
- Waiting space with public toilets.
- Appointment and cashiers' office.
- Social service office.

Clinical:
- History or screening room.
- Examination and treatment rooms:
  - Eye, ear, nose, and throat room.[1]
  - Dental facilities (2 chairs desirable).[1]
- Utility room.

(j) *Contagious disease nursing unit.*[1] Where 10 or more beds are contemplated for nursing contagious diseases, they should be housed in a separate contagious disease nursing unit.

Patient rooms:
- A maximum of 2 beds in each room.
- Glazed partition between beds.[1]
- Patient rooms shall have a view window from corridor.
- Each patient room shall have a separate toilet and a lavatory in the room.

Each nursing unit shall contain:
- Nurses' station.
- Utility room.
- Nurses' work room.
- Treatment room.
- Scrub sinks strategically located in the corridor.
- Serving pantry with separated dishwashing room adjacent.
- Doctors' locker space and gown room.
- Nurses' locker space and gown room.
- Janitors' closet.
- Storage closet.
- Stretcher alcove.

(k) *Pediatric nursing service.*[1]

Where 16 or more pediatric beds are contemplated, a separate pediatric nursing unit shall be provided and contain the following items:

General:
- Each bed in a multi-bedroom shall be in a clear glazed cubicle.[1]
- Each room shall have a lavatory.
- Patients' rooms wherever possible should have clear glazing between them and in the corridor partitions.

Minimum area:
- 80 square feet per bed in two-bed rooms and over.
- 100 square feet in single rooms.
- 40 square feet per bassinet in nurseries.

Each nursing unit shall contain:
- Nursery with bassinets in cubicles.
- Observation suite.
- Treatment room.
- Nurses' station.
- Nurses' toilet room.
- Utility room.
- Floor pantry.[2]
- Play room or solarium.
- Bath room.
- Toilet room for each sex.
- Bed pan facilities.
- Wheelchair and stretcher alcove.
- Janitors' closet.
- Storage closet.

(l) *Psychiatric nursing unit in the general hospital.*[1]

General: Layout and design of details to be such that the patient will be under close observation and will not be afforded opportunity for escape, suicide, hiding, etc. Care must be taken to avoid sharp projections of corners of structure, exposed pipes, heating elements, fixtures, etc., to prevent injury by accident.

Minimum room areas:
- 80 square feet per bed in 4-bed rooms.
- 100 square feet in single rooms.
- 40 to 50 square feet per patient in day rooms.

Each nursing unit shall contain:
- Doctors' office.
- Examination room.
- Nurses' station.
- Day room.
- Utility room.
- Bedpan facilities.
- Pantry.
- Dining room.
- Toilet room.
- Shower and bathroom.
- Continuous tub room (for disturbed patients).[2]
- Patients' laundry (personal) for women's wards only.
- Patients' locker room.
- Storage closet (for recreational and occupational therapy).
- Stretcher closet.
- Linen closet.
- Supply closet.
- Janitors' closet.

## § 53.145 Tuberculosis hospital.

(a) *Administration department.*

From 50 up to and including 200 beds:
- Business office with information counter.[3]
- Medical social service office.[3]
- Medical director's office.
- Secretary's office.[3]
- Supervisor's office.
- Medical record and film filing room.[3]
- Viewing room, library[3] and conference room. Singly or in combination.
- Lobby and waiting room.
- Retiring room.[1]
- Toilets.

Over 200 and up to 500 beds:
- Business office and information counter.[3]
- Business manager's office.[3]
- Secretary.[3]
- Admitting office.[3]
- Two medical social service offices.[3]
- Medical director's office.
- Secretary.
- Assistant medical director's office.
- Supervisor's office.
- Secretary.
- Assistant director of nurses' office.

[1] Desirable but not mandatory.

[2] If required by program.

[3] As required by program.

[4] These facilities need not be provided if the Tuberculosis Hospital is in connection with a general hospital in which such facilities exist.

- Medical record room.[3]
- Library[3] and conference room.
- Staff lounge and locker room.
- Lobby and waiting room.
- Retiring room.[1]
- Toilets.

(b) *Adjunct diagnostic and treatment facilities.*

Except for the morgue and autopsy this department should be preferably located convenient to both in- and out-patients.

Laboratory:
- Adequate facilities for chemical, bacteriological, serological, pathological and hematological services.

Basal metabolism and electrocardiography:
- One room near the laboratory.

Morgue and autopsy:
- From 50 up to and including 200 beds: combination morgue and autopsy room with mortuary refrigerator.[3]
- Over 200 and up to 500 beds:
  - Morgue with mortuary refrigerator.
  - Autopsy room.
  - Shower and toilet room.
  - Separate exit.

Radiology:
- From 50 up to and including 200 beds:
  - Radiographic room.[3]
  - Dark room.[3]
  - Dressing booths.[1]
  - Must be convenient to out-patient department as well as in-patients.
- Over 200 and up to 500 beds:
  - Radiographic room.
  - Dark room.
  - Dressing booths.
  - Viewing room.
  - Roentgenologist's office.
  - Film file room.
  - Must be convenient to out-patient department as well as in-patients.

Pharmacy:
- From 50 up to and including 200 beds: Drug room with minimum facilities for mixing.[3]
- Over 200 and up to 500 beds: Complete pharmacy and may include space for manufacturing and solution preparation depending on policy of hospital.

Dental and eye, ear, nose, and throat:
- From 50 up to and including 200 beds:
  - Dental facilities (2 chairs desirable).[3]
  - One eye, ear, nose, and throat room.[3]
- Over 200 and up to 500 beds:
  - Dental facilities (2 chairs desirable).
  - Eye, ear, nose, and throat room.
  - Waiting room.

Occupational therapy:
- Library.
- Barber shop.
- Canteen.
- Assembly room.
- Flexible space for learning and working in crafts and classroom for patient instruction shall be provided.

(c) *Nursing department.*

General: At least 80 percent of the hospital beds should be in single rooms.[1] No room should have more than four beds.[2] Each room shall have a lavatory. No patients' bedrooms shall be located on any floor which is below grade.

Size of nursing unit: No nursing unit shall be larger than 50 beds.

Minimum room areas:
- 80 square feet per bed in two- and four-bed rooms.
- 100 square feet in one-bed rooms.

[1] Desirable but not mandatory.

[2] As required by program.

[3] These facilities need not be provided if the Tuberculosis Hospital is in connection with a general hospital in which such facilities exist.

Service rooms in each nursing unit:
- Nurses' station.
- Utility room.
- Floor pantry (one per floor).[3]
- Toilet and washroom:
  - Water closets—1 to each 8 patients.
  - Lavatories.
  - Dental basins.[1]
- Storage closet for supplies.
- Bath and shower room: Bath tubs and/or showers—1 to 14 patients.
- Gowning space.
- Bed pan facilities.
- Linen closet.
- Janitors' closet.
- Space for wheel chairs and stretchers.
- Storage closet for equipment.

Doctors' office and treatment room—one for each nursing unit.
Solarium: One for each nursing unit.
Sputum technique facilities.
Nurses' toilet room: One for each nursing floor.
Nurses' cloak closet—one for each nursing floor.

(d) *Surgical department.* (Shall be located to prevent traffic through it to any other part of the hospital.)

From 50 up to and including 200 beds:
- Major operating room.[3]
- Sterilizing room.[3]
- Central supply and work room.[3]
- Scrub-up facilities.[3]
- Clean-up room.[3]
- Storage closet.[3]
- Janitors' closet.[3]
- Doctors' locker room with toilet and showers.[3]
- Nurses' locker room with toilet and showers.[3]

Over 200 and up to 500 beds:
- Major operating room: One for each 200 beds or major fraction thereof.
- Minor operating and fracture room.
- Sub-sterilizing facilities.
- Clean-up room.
- Scrub-up facilities.
- Janitors' closet.
- Storage room for sterile supplies.
- Anesthesia storage.
- Surgical supervisor office.
- Doctor's locker room with toilet and shower.
- Nurses' locker room with toilet and shower.
- Storage closet.
- Stretcher alcove.
- Central sterilizing and supply room divided into work space, sterilizing space, and sterile storage space.
- Adjacent room for storage of unsterile supplies.

Pneumothorax suite:
- Pneumothorax room with dressing booths.
- Fluoroscopy room.
- Waiting space.
- From 50 up to and including 200 beds:
  - One pneumothorax suite for 100 beds or major fraction thereof.
- Over 200 and up to 500 beds: One pneumothorax suite for 100 beds or major fraction thereof.

(e) *Service department.*

Dietary facilities:
- Main kitchen and bakery.[3]
- Dietitian's office.[3]
- Patients' dishwashing room.
- Staff and help dishwashing room.[3]
- Adequate refrigeration.[3]
- Garbage refrigerator.[1]
- Can washing room.
- Day storage room.[3]
- Help dining room.[3]
- Staff dining room.[3]
- Patients' dining space—to serve 40 percent of the patients.[1]
- Provide 12 square feet per person in dining rooms. May be designed for two seatings. Cafeteria or table service optional.

Housekeeping facilities:
- Laundry:[3]
  - Sorting area.
  - Processing area.
  - Clean linen room.
  - Sewing room.
- Laundry capacity shall be adequate to process full 7 days' laundry in workweek.
- Housekeeper's office.
- Incinerator.

Mechanical facilities:[3]
- Boiler and pump room.
- Engineers' office.
- Shower and locker facilities.
- Maintenance shops:
  - Carpentry.
  - Painting.
  - Plumbing.
- For minimum requirements for mechanical and electrical work, see the respective sections.

Employees' facilities:[3]
- Nurses' locker room without nurses' residence:
  - Locker room with lockers as required.
  - Rest room.
  - Toilet and shower room.
- Where nurses' residence is adjacent provide only rest room and toilet.
- Female help locker room:
  - Locker room.
  - Rest room.
  - Toilet and shower room.
- Male help locker room:
  - Locker room.
  - Rest room.
  - Toilet and shower room.

Storage:[3]
- General storage. Provide 20 square feet per bed, preferably concentrated in one area.
- Record storage.
- Out-patient department:[3]
- Out-patient department should be located on most easily accessible floor. Must be convenient to radiology, pharmacy, and laboratory departments.
- Size will vary in different locations and with the availability of other examination and diagnostic facilities, and is not necessarily proportionate to the size of the hospital. The estimated patient load will determine the number, size, and scope of individual facilities in out-patient department.

Facilities required:

Administrative:
- Waiting room with public toilets.
- Information, appointment and records office.
- Medical social service office.
- Janitor's closet.

Clinical:
- History or screening room.
- Examination rooms.
- Dressing booths.
- Pneumothorax room.
- Fluoroscopy room.
- Utility room.
- Storage room.

## § 53.146 Mental hospital (long-term care).

(a) *General.* (1) A mental hospital should be on a large acreage with ample space around all buildings for recreation, attractive landscaping and the proper segregation of the various patient classification groups and building functions; and should be readily accessible to the community which it is to serve. It is strongly urged that mental hospitals be not greater than 1,500 beds.

(2) The mental hospital presents a special problem of patient classification, treatment and supervisory function. In the following minimum requirements an over-all organization is designated with certain supervisory or organizational

functions mentioned in their most desirable, but not mandatory, locations and these may, therefore, be changed to other locations.

(3) Patients have been classified and grouped according to behavior, and requirements vary somewhat for each classification. Minimum room area requirements are grouped into the following main categories, as follows:

(i) Medical and surgical and chronic disease classification: 70 square feet per bed in alcoves and four-bed rooms; 100 square feet in single rooms.

(ii) Tuberculosis classification: 70 square feet per bed in alcoves and four-bed rooms; 100 square feet in single rooms.

(iii) Reception, convalescent, chronic disturbed, industrial classifications: 70 square feet per bed in alcoves and four- (or more) bed rooms: 80 square feet in single rooms.

(iv) Infirm and inactive: 60 square feet per bed in four- (or more) bed rooms; 80 square feet in single rooms.

(4) No patient bedrooms shall be located on any floor which is below grade.

(b) *Administration.* This area includes the administrative, business and public contact functions of the institution.

Location: Near main entrance to institution and close to reception area.
General:
- Entrance lobby.
- Public toilets (male and female).
- Information and telephones (main switchboard).
- Post office.
- Personnel toilets (male and female).
- Mechanical room.

Offices:
- Director.
- Assistant director.
- Conference room.
- Business administrator.
- Business.
- Public relations and services.
- Secretaries.
- Janitors' closet.

Medical:
- Central records office.
- Central records room.
- Inactive records storage.

(c) *Reception.* (1) This area includes the reception and treatment of new patients, most of whom will be entering a mental hospital for the first time. Since they are new patients, and in need of very careful treatment, it is necessary to separate and prohibit contact between patients in the following classifications of behavior:

- Quiet.
- Depressed.
- Disturbed.

(2) In addition, each of the above classifications should be separated by sexes, and each classification should have its own complete nursing units with all nursing facilities available, and each should be readily accessible to an outdoor area. All safety and security measures should be observed in this group. Intensive care and treatment will be given these new patients in an effort to cure them in the first few weeks of treatment. Should the patient fail to recover in this comparatively short period of time he will be sent to other nursing areas for continued treatment. Three other nursing areas will be classified according to the behavior of the patients which they are to house.

(3) The reception area should be set well apart from the other areas of the hospital, and should contain sufficient diagnostic, treatment, recreational and occupational facilities, to furnish complete treatment in order that these new patients may recover without having been transfered to the other areas of the mental hospital.

(4) The number of beds required in this reception area must be determined by study of the total receiving and intensive treatment facilities in the community which is served. The total number of beds in this and the convalescent area should be in accord with the admissions within a three- to six-month period.

Location: Near administration area.
General:
- Lobby.
- Visitors' toilets (male and female).
- Main visitors room with alcoves.
- Janitors' closets.
- Mechanical room.

Administration:
- Medical records office.
- Information.
- Chief psychiatrist's office and conference room.
- Secretaries' offices.
- Clinical psychologist's office.
- Chief of nursing service and staff.
- Chief of social service and offices.
- Personnel toilets (male and female).

Staff facilities:
- Doctors' toilet room.
- Nurses' lounge and toilet room.

Admission:
- Ambulance entrance.
- Patients' bath and toilet.[1]
- Utility room.[1]
- Examination and consultation rooms.

Adjunct diagnostic and treatment facilities:
- Minor surgery and treatment room.
- Portable X-ray storage room.[1]
- Dark room.[1]
- Small laboratory.[1]
- Patients' toilet and shower.
- Small treatment room (for shock therapy, etc.).
- Patients' exercise room (directly accessible to outdoor exercise yard).

Occupational therapy:
- Occupational therapy room (to be located near quiet patient units).
- Storage closets.
- Occupational therapists' office.[1]
- Barber and beauty shop.

Nursing units: The following classifications of nursing units of not more than 25 beds will be required:
- Quiet nursing units (male and female).
- Depressed nursing units (male and female).
- Disturbed nursing units (male and female).
- For small reception facilities a combination of patient classifications may be provided in one nursing unit of not more than 25 beds provided that contact between the patients of each classification may be prohibited or limited.

Suggested bed distribution of nursing units:

Each disturbed nursing unit:

| | Patients |
|---|---|
| Two 4-bed wards | 8 |
| Three 2-bed or 3-bed wards | 6 or 9 |
| Four or six 1-bed rooms | 4 or 6 |
| Two 1-bed rooms (isolation unit) [1] | 2 |
| Total | 20 to 25 |

Each depressed nursing unit:

| | Patients |
|---|---|
| Two 4-bed wards | 8 |
| Two 3-bed alcoves | 6 |
| Four 1-bed rooms | 4 |
| (Isolation unit) [1] | 2 |
| Total | 20 |

Quiet unit: Same bed distribution as disturbed nursing units.

Facilities in each nursing unit:
- Doctor's consultation room (for each two units).
- Examination room.
- Nurses' station.
- Utility room.
- Bed pan facilities.
- Small dining room and pantry:
  - Essential for disturbed.
  - Convenient for depressed.
  - Unnecessary for quiet.
- Patients' locker room.
- Linen closet.
- Patients' shower and bath room.
- Patients' dressing room.
- Patients' toilets.
- Patients' wash room.
- Continuous tub room (for disturbed units).[2]
- Day room (40 to 50 square feet per patient and preferably divided into one small and one large room).
- Occupational therapy storage closet.
- Janitors' closet.

Dietary:
- Patients' dining room cafeteria service: this dining room will be used by patients from convalescent houses as well as from reception area (two seatings may be used).
- Janitor's closet.
- Coat room and toilets (male and female).[1]
- Kitchen (serving).
- Dishwashing room (enclosed).
- Employees' toilet.
- Patients' toilet (male and female).
- Refrigerated garbage storage.
- Can washing room.

(d) *Convalescent.* (1) This area is considered a part of the reception area and will house new patients who have been sent from the reception building, and who are expected to recover within six months to a year. Most of these patients will have the same classification as those in the reception area. Small complete nursing units, separate for each sex, should be provided. Special treatment, such as mechanical fever, electric shock, special electro and hydro therapy, and insulin, etc., can be given in the reception building.

(2) These patients will also use the dining room facilities of the reception area.

(3) In general, while most of these patients are continuing to receive intensive treatment, they are well enough and manageable enough to go freely or be escorted to their activities.

(4) The same security and safety measures are required as those for the reception area.

(5) Location: Grouped by sexes near reception area.

[1] Desirable but not mandatory.

[2] If required by program.

General:
- Entrance lobby.
- Visitors' room with alcoves.
- Visitors' toilets (male and female).
- Attendants' locker and toilet room.
- Mechanical room.
- Nursing units (to contain not more than 50 beds).
- Suggested bed distribution of each nursing unit:

| | Patients |
|---|---|
| One 8-bed ward | 8 |
| Four 4-bed wards | 16 |
| Eleven 1-bed wards | 11 |
| Total | 35 |

Facilities in each nursing unit:
- Doctors' consultation room (for each two units).
- Examination room.
- Nurses' station.
- Utility room.
- Bed pan facilities.
- Pantry (one for each two nursing units).
- Patients' locker.
- Patients' toilet room.
- Patients' shower or bath room.
- Day room (40 to 50 square feet per patient—preferably divided into one large and one small room).
- Storage closet (occupational and recreational therapy equipment).
- Linen closet.
- Janitors' closet.
- Patients' wash room.
- One-third of the nursing units, for both men and women should have one continuous tub room.[2]

(e) *Chronic disturbed.* This area should be separate from the main group of mental hospital facilities and set apart from the nursing areas of other patient classifications because of possible noise or other disturbance. It will be used to treat restless, noisy, assaultive or suicidal patients and must be designed to provide the greatest security and observation. Since these patients are very active it is necessary to have an outdoor area or exercise yard, and due to the amount of equipment and care these patients require, and the resulting necessary space for treatment, not less than two nursing units to a building are recommended.

Location: These buildings to be located away from the other nursing buildings.
General:
- Entrance lobby.
- Visitors' room.
- Visitors' toilets (male and female).
- Beauty shop (female buildings).
- Barber shop (male buildings).
- Attendants' locker and toilet room.
- Pantry (for two nursing units).
- Mechanical room.
- Enclosed exercise yard (100 square feet per patient).

Treatment facilities:
- Hydrotherapist's office and toilet.[2]
- Continuous tub room.[2]
- Linen storage facilities.[2]
- Patients' dressing room.
- Janitors' closet.
- Exercise room (near outdoor exercise yard).
- Storage closet (for small gymnasium equipment).

Nursing units (to contain not more than 30 beds):
Suggested bed distribution of each unit:

| | Patients |
|---|---|
| One 8-bed ward | 8 |
| Two 4-bed wards | 8 |
| Ten 1-bed rooms | 10 |
| Total | 26 |

[2] If required by program.

Facilities in each nursing unit:
- Doctors' office with toilet (for each two units).
- Examination room.
- Nurses' station.
- Utility room.
- Patients' locker room.
- Patients' toilet room.
- Patients' wash room.
- Patients' shower and dressing room.
- Day room (40 to 50 square feet per patient). Preferably divided into (1) small room and (1) large room.
- Storage closet (recreational equipment).
- Occupational therapy room (one for each two units).
- Linen closet.
- Janitors' closet.

Dietary:
- Dining room—cafeteria service.
- Serving kitchen.
- Dishwashing room.
- Employees' toilet.
- Janitors' closet.

(f) *Infirm.* This area will house patients who are in need of considerable medical care and who may be infirm. The very sick will be transferred to the medical and surgical or chronic disease building, but these infirm patients will need constant and careful nursing. Minimum security and all safety measures will be required, and the nursing units should be complete with all facilities available and readily accessible to an out-door yard or area.

Location: Close to medical and surgical building.
General:
- Entrance lobby.
- Visitors' room.
- Visitors' toilets (male and female).
- Barber shop (male buildings).[1]
- Beauty shop (female buildings).[1]
- Attendants' locker and toilet room (male and female).
- Mechanical room.
- Enclosed yard (40 square feet per patient).[1]

Nursing units (to contain not more than 60 beds). Suggested bed distribution for each unit:

| | Patients |
|---|---|
| Two 10-bed wards | 20 |
| Four 4-bed wards | 16 |
| Four 1-bed rooms | 4 |
| Total | 40 |

Facilities in each nursing unit:
- Doctors' office (for each 3 units).
- Examination room.
- Nurses' station.
- Utility room.
- Bed pan facilities.
- Pantry and dining room (one for each two units).
- Patients' locker room.
- Patients' wash room.
- Patients' toilet room.
- Patients' dressing room.
- Patients' shower or bath room.
- Day room (30 square feet per patient).
- Storage closet (for recreational and occupational therapy equipment).
- Linen closet.
- Wheel chair and stretcher closet.
- Janitors' closet.

Dietary:
- Serving kitchen.
- Dishwashing room.
- Employees' toilet.
- Janitors' closet.

(g) *Inactive.* This area will house patients who are lethargic. They need a considerable amount of attention, most of which will be furnished by the physical therapist and occupational therapist. They will be urged into activities furnished in the occupational and recreational therapy buildings, but some of the lighter occupational and physical therapy should be provided in this area. All security and safety measures will be required.

[1] Desirable but not mandatory.

Location: In main group of nursing buildings and near gymnasium and recreation buildings.
General:
- Entrance lobby.
- Visitors' room.
- Visitors' toilets (male and female).
- Occupational therapy room.
- Attendants' locker and toilet room.
- Mechanical room.
- Enclosed yard (100 square feet per patient).[1]

Nursing units (to contain not more than 50 beds) suggested bed distribution (of each unit):

| | Patients |
|---|---|
| Three 10-bed wards | 30 |
| Two 4-bed wards | 8 |
| Four 1-bed rooms | 4 |
| Total | 42 |

Facilities in each nursing unit:
- Doctors' office (for each 3 units).
- Examination room.
- Nurses' station.
- Utility room.
- Bedpan facilities.
- Pantry (for each 2 units).
- Patients' locker room.
- Patients' wash room.
- Patients' toilet room.
- Patients' shower or bath room.
- Patients' dressing room.
- Day room (40 to 50 square feet per patient and preferably divided into one small and one large room).
- Storage closet (for recreational and occupational therapy equipment).
- Linen closet.
- Janitors' closet.

Dietary:
- Dining room.
- Serving kitchen.
- Dishwashing room.
- Employees' toilet.
- Janitors' closet.

(h) *Industrial.* This area will house patients who are well enough to be occupied on the grounds, farm, industrial buildings, shops, kitchens, laundry, etc. Less supervision and care is necessary than in the other groups, and these patients can go to the out-patient department of the medical and surgical building for examination and treatment.

Location: In main group of nursing buildings near service buildings.
General:
- Entrance lobby.
- Visitors' room.
- Visitors' toilets (male and female).
- Attendants' locker and toilet room.
- Mechanical room.

Nursing units (to contain not more than 60 beds) suggested bed distribution:

| | Patients |
|---|---|
| Two 16-bed wards | 32 |
| Two 8-bed wards | 16 |
| Four 1-bed rooms | 4 |
| Total | 52 |

Facilities in each nursing unit:
- Doctors' office and examination room—one for each 3 units.
- Nurses' station.
- Patients' toilet.
- Patients' dressing room.

Patients' shower room.
Patients' locker room.
Patients' wash room.
Day room (40 to 50 square feet per patient) preferably divided into one small and one large room.
Storage closet (for recreation equipment).
Linen closet.
Janitors' closet.

(i) *Medical and surgical.* This area will house patients who have been hospitalized from nursing units of other classifications for short periods of illnesses, and should be housed in a modern general hospital complete with all facilities to serve the entire mental hospital community. Nursing units should be arranged for easy segregation of patients and the adjunct diagnostic and treatment facilities are recommended to be on the first or ground floor for easy access to the out-patient department. All security and safety measures should be incorporated in this building. The number of beds shall be approximately 4 percent of the total patients which this building serves.

Location: Between main group of nursing area and reception area.
General:
Entrance lobby.
Information counter.
Visitors' toilets (male and female).
Mechanical room.
Administration:
Chief physician's office.
Medical record room.
Head nurse's office.
Secretaries' offices.
Personnel toilets (male and female).
Staff facilities:
Doctors' locker and shower room.
Nurses' locker and shower room.
Adjunct diagnostic and and treatment facilities:
Laboratory: Separate spaces for office, clinical pathology, bacteriology and serology, washing and sterilizing
Basal metabolism and electrocardiography: Near laboratory and convenient to out-patient department.
Morgue and autopsy room: [1] Combination morgue and autopsy with mortuary refrigerator.
Radiology:
Radiographic room with an adjoining dark room and office.
X-ray therapy suit.[1]
Physical therapy: Suite for electro-therapy, hydro-therapy, and exercise room with adjoining office.
Pharmacy: Drug room with minimum facilities for mixing. (May be in service area.)
Nursing units (to contain not more than 30 beds) suggested bed distributions:
Medical wards (25 beds each):

| | Patients |
|---|---|
| Two 4-bed wards | 8 |
| Three 2-bed rooms | 6 |
| Nine 1-bed rooms | 9 |
| Isolation suite [1] | 2 |
| Total | 25 |

Surgical wards (25 beds each) same as medical wards.
Employees' wards: [1] Maximum size, 25 to 30 beds.
NOTE: Where isolation suite or contagious disease nursing unit is available the small units in each nursing unit are not required.
Facilities in each nursing unit:
Doctors' examination room (one for each two nursing units).
Nurses' station.
Utility room.
Bed pan facilities.
Pantry (one for each two nursing units).
Patients' bath and shower room.
Supply closet.
Patients' toilet room (male and female).
Day room (approximately 25 square feet per patient). Omit for employees' wards.
Storage closet (recreational and occupational therapy equipment).
Stretcher and wheel chair closet.
Linen closet.
Janitors' closet.
Surgical department: Should be located to prevent traffic through it to any other part of hospital.
Operating rooms:
Major: One for each 50 beds up to and including 200 beds. Above 200 beds the number of operating rooms will be based on the expected average of daily operations.
Minor: One in each hospital over 50 beds.
Cystoscopy [1] One in each hospital over 100 beds. Shall have an adjoining toilet room.
Fracture room: One in each hospital over 100 beds. Shall have an adjoining splint room.
Auxiliary rooms:
Substerilizing facilities.
Scrub-up facilities.
Nurses' locker room with toilet and shower.
Instrument room beginning at 100 beds.
Clean-up room.
Anesthesia equipment storage.
Surgical supervisor's station.
Doctor's locker room with toilet and shower.
Storage closet.
Stretcher closet.
Storage room for sterile supplies beginning at 100 beds.
Janitors' closet.
Dark room beginning at 100 beds.
Central sterilizing and supply room:
Divided into work space, sterilizing space, and sterile storage space.
Adjacent room for storage of unsterile supplies.
Emergency department:
Ambulance entrance.
Receiving bath and toilet.
Utility room.
Supply and stretcher storage.
Emergency operating room, near out-patient department.
Service department:
Kitchen (serving).
Dishwashing room.
Refrigerated garbage room.
Can washing room.
Dining rooms (for ⅓ of patients).
Storage.
General storage (20 square feet per bed).
Housekeepers' office.
Linen storage room.
Sewing room.
Linen sorting room.
Personnel facilities:
Locker and toilet rooms (male and female).
Attendants' locker and toilet rooms (male and female).
Out-patient department:
Waiting room.
Examination and treatment rooms (including eye, ear, nose and throat rooms and gynecology room [1]).
Record room.
Dental facilities (2 chairs desirable).
Electroencephalographic unit.
NOTE: Out-patient department should be convenient to radiology, laboratory, therapy, emergency, etc.

(j) *Chronic disease.* (1) This area will house patients who have chronic illness, or who are in need of intensive treatment and nursing care or those who, because of infectious diseases, need to be isolated.

(2) Nursing units of this classification should be attached to the medical and surgical building for easy access to the diagnostic and treatment facilities.

(3) Not all of these nursing units need have maximum safety and security measures.

(4) The number of beds shall be approximately 7.5 percent of the total number of patients which these buildings serve.

Location: Attached to medical and surgical building.
General: Corridors to service department and adjunct facilities.
Nursing units (to contain not more than 30 beds) suggested bed distribution (of each nursing unit):

| | Patients |
|---|---|
| Two 4-bed wards | 8 |
| Three 2-bed wards | 6 |
| Eight 1-bed rooms | 8 |
| Total | 22 |

Facilities in each nursing unit:
Doctors' office (for each 2 units).
Examination room.
Nurses' station.
Utility room.
Bed pan facilities.
Pantry (for each 2 nursing units).
Dining room (for ½ of patients in nursing unit).
Patients' locker room.
Patients' wash room.
Patients' toilet.
Patients' dressing room.
Patients' shower or bath room.
Day room (30 square feet per patient).
Closet (recreational and occupational therapy equipment).
Stretcher and wheel chair closet.
Linen closet.
Janitors' closet.

(k) *Tuberculosis.* (1) For patients of this classification, it is recommended to use the requirements of the tuberculosis hospital. In addition, patients will be grouped according to behavior as Quiet or Disturbed. Security and safety measures comparable to those of the reception area are required.

(2) The number of beds shall be determined as approximately 5 percent of the total patients which this building serves.

(l) *Gymnasium, theater, recreation, library and chapel.* (Combination or separate buildings acceptable.)

Location: Adjacent to main group of nursing and reception areas.
General:
Entrance lobby.
Coat rooms and toilets (male and female).
Personnel toilets (male and female).
Mechanical room.
Theater facilities:
Office.
Hall (seating capacity based on 7 square feet per person with 40 percent attendance of patients and personnel).
Projection booth.
Stage.
Dressing rooms with toilets (two for each sex).
Work shop.
Chapel facilities:
Three offices for ecclesiastics.
Toilets.
Three small prayer rooms.
Portable altars (where chapel is not separate).
Storage rooms.
Gymnasium facilities:
Recreational therapists' office.
Personnel locker and toilet rooms (male and female).
Patients' locker and toilet rooms (male and female).
Basketball court (standard college size plus space for collapsible seating).
Small gymnasium (for exercise equipment).
Storage rooms.
Recreational facilities:
Chief recreational therapist's office.
Bowling alleys (with space for spectators).
Billiard room.
Ping pong room.
Patients' barber shop.
Patients' beauty shop.
Canteen (for light lunch, drinks, etc.):
Office and table areas.
Cooking and fountain areas.
Dishwashing and sterilizing.
Storage.
Garbage refrigeration.[1]
Can washing facilities.
Sales rooms.
Storage room.
Library:
Librarians' office.
Reading room (current and request matter).
Stock room.
Work room and storage space.
Music rooms:
Music therapists' office.
Music room (approximately 500 square feet with portable stage).
Store rooms.
Music rooms (approximately 250 square feet).

(m) *Occupational therapy.*

Location: Adjacent to main group of nursing areas and reception area.
General:
Entrance lobby.
Patient coat room and toilets (male and female).
Personnel coat room and toilets (male and female).
Mechanical room.
Administration: Office for occupational therapist.
Facilities:
Open floor space (for occupational equipment).
One or more special purpose rooms.
Storage rooms (for materials and equipment).
Industrial therapy occupations should be located near the service group of buildings.

(n) *Central kitchen and dining rooms.*

Location: In main group of nursing buildings.
General: Load on dining rooms, kitchens and preparation will vary; see requirements of each.
Men patients' coat room and toilet.[1]
Women patients' coat room and toilet.[1]
Men attendants' coat room and toilet.
Women attendants' coat room and toilet.
Dining rooms: Patients' and personnel (capacity 15 square feet per person).
Kitchen:
Dietitians' office and toilet.
Complete cooking and baking facilities.
Dishwashing room.
Preparation (meat and vegetables).
Adequate refrigeration.
Day storage.
Garbage refrigeration.[1]
Can washing facilities.
Janitors' closet.
Personnel lockers and toilets.

(o) *Storage buildings.*

Location: In service groups of buildings.
General: Area (20 square feet per patient).

[1] Desirable but not mandatory.

(p) *Laundry.* Adequate to process seven full days of laundry per work week.

Location: In service group of buildings.
Facilities:
Manager's office and toilet.
Receiving room.
Sorting area.
Contaminated receiving room.
Sterilizing room.
Processing room.
Clean linen storage.
Sewing room.
Personnel locker and toilet room.

(q) *Heating plant.*

Location: In service group of buildings.
General:
Heating plant (to be determined by engineering studies).
Emergency generating facility.
Office.
Personnel toilets.
General repair shop.
Carpenter shop.
Electrical shop.
Plumbing shop.
Paint shop.

(r) *Incinerator.* As required. See § 53.163(a)(13).

### § 53.147 Mental Hospital (intensive care).

(a) *General.* (1) The principles of psychiatric safety shall be followed throughout. Materials and details of construction shall be such that patients will not be afforded opportunity for escape, suicide, etc. Care must be taken to avoid sharp projections of corners of structure, exposed piping, heating elements, fixtures, hardware, etc.

(2) For requirements of sizes of doors, widths of corridors, sizes of elevators, provisions for ventilation, fire protection, etc., see sections on Details, Finishes, etc.

(b) *Administration department.*

Up to and including 100 beds:
Business office with information counter.
Chief psychiatrist's office.
Chief psychologist's office (if there is no out-patient department).
Record office.
Director of nurses' office.[1]
Social service offices (if there is no out-patient department to be near receiving).
Staff lounge.
Lobby.
Public toilets.
From 100 to 500 beds:
Business office.
Chief psychiatrist's office.
Chief psychologist's office (if there is no out-patient department).
Social service offices (if there is no out-patient department).
Director of nursing.
Record room.
Staff lounge.
Library and conference room.
Lobby.
Public toilets.
Toilets for administrative personnel.

(c) *Receiving department.*

Facilities for male and female receiving:
Entrance hall.
Dressing room.
Bath and toilet room.
Medical examination room.
Waiting room.
Stretcher closet.
Clerks' offices.
Doctors' offices.

(d) *Adjunct diagnostic and treatment facilities.*

Laboratory:
Up to and including 100 beds:
Office.
Laboratory.
Over 100 beds: Separate spaces for office, clinical pathology, bacteriology, washing and sterilizing.
Basal metabolism and electrocardiography:
Up to and including 100 beds: No special provision necessary.
Over 100 beds: Room near laboratory and convenient to out-patient department.
Morgue and autopsy: Combination morgue and autopsy with mortuary refrigerator. (Is not required in hospital of less than 100 beds if similar facilities are available nearby.)
Dental facilities (2 chairs desirable).
Eye, ear, nose and throat suite.
Electro-encephalographic suite.
Radiology:
Up to and including 100 beds: One radiographic room and dark room and convenient to out-patient department.
Over 100 beds: At least one additional radiographic room.
Physical therapy:
Electro-therapy.
Hydro-therapy with exercise space.
Continuous tub and pack room.[1]
Small gymnasium, convenient to outdoor area, and to disturbed patients.
Pharmacy: One room with minimum facilities for compounding.
Occupational therapy:
Space for small woodworking tools and benches for carpentry, metal work, leatherwork, printing, weaving, rug making, etc.
Office.
Storage room.

(e) *Surgical department.*

Operating rooms:
Major: One.
Minor: One, with adjoining splint room.
Auxiliary rooms:
Sub-sterilizing facilities.
Scrub-up facilities.
Clean-up room.
Anesthesia room.[1]
Anesthesia storage.
Doctors' locker room with toilet.
Nurses' locker room with toilet.
Storage closet.
Stretcher closet.
Janitors' closet.
Storage room for sterile supplies and instruments.
Surgical department to be located to prevent traffic through it from other parts of the hospital.
Central sterilizing and supply room—divided into work space, sterilizing space, and sterile storage—adjacent room for storage of unsterile supplies.

(f) *Nursing department.*

General: The layout and the design of details to be such that the patient will be under close observation and will not be afforded opportunity for escape, suicide, hiding, etc. No patients' bedrooms shall be located on any floor which is below grade. Provisions shall be made for the following classifications:
New admissions (male).
New admissions (female).
Quiet ambulant (male).
Quiet ambulant (female).
Medical and surgical.
Disturbed (male).
Disturbed (female).
Alcoholic (male).
Alcoholic (female).

[1] If required by program.

Criminalistic (male).
Criminalistic (female).
Children.
Minimum room areas:
80 square feet per bed in alcoves and four-bed rooms.
100 square feet in single rooms.
40 to 50 square feet per patient in day rooms and preferably divided into one large and one small room.
Facilities for each nursing unit:
Doctors' office and examination room.
Nurses' station and toilet.
Day room.
Utility room.
Pantry.
Dining room.
Wash room and toilets.
Patients' locker.
Shower and bath room.
Storage closet (for recreational and occupational therapy).
Supply closet.
Linen closet.
Janitors' closet.
Stretcher closet (medical and surgical unit).
Bedpan facilities (medical and surgical unit).
Isolation suite: In medical and surgical unit.

(g) *Service department.*

Dietary facilities:
Main kitchen and bakery.
Dietitians' office.
Dishwashing room.
Adequate refrigerators.
Garbage refrigerator.[1]
Can washing room.
Day storage room.
Staff dining room (12 square feet per person).
Housekeeping facilities:
Laundry (if provided): Capacity shall be adequate to process full 7 days' laundry in work week.
Sorting area.
Processing room.
Clean linen and sewing room separate from laundry.
Housekeeper's office: Near linen storage.
Mechanical facilities:
Boiler room and pump room (if provided).
Engineers' office.
Shower and locker room.
Maintenance shops—carpentry, painting, mechanical repair rooms.
Employees' facilities:
Nurses' locker rooms. If no nurses' residence:
Locker room.
Rest room.
Toilet and shower room.
Attendants' locker rooms. If no attendants' residence (male and female).
Locker room.
Toilet and shower rooms.
Other female help lockers:
Locker room.
Rest room.
Toilet and shower room.
Other male help lockers:
Locker room.
Toilet and shower room.
Storage:
Record space.
General storage: 20 square feet per bed and to be concentrated in one area.

(h) *Out-patient department.* (If provided.)

General:
Located on the ground floor. Entrance separate from main entrance of hospital.[1] It must be convenient to radiology, laboratory and physical therapy.
The patient load must be estimated in order to determine the number of consultation and examining rooms.

[1] Desirable but not mandatory.

Facilities required:
Administrative:
Waiting room with public toilets.
Cashiers' and appointment office.
Social service offices.
Psychological examination rooms.
Medical examination rooms.
Utility rooms.
Children's rooms.

### § 53.148 Facility for long-term care—chronic disease hospital.

The facilities listed below need not be provided if functionally available in an adjoining hospital.

(a) *Administration department.*

Business office with information counter, telephone switchboard, and cashier's window.
Administrator's office.
Director of nurses' office.
Medical Director's office.
Medical record room.
Medical social service office.
Combination conference room, doctors' lounge, and staff library.
Lobby and waiting room.
Public telephone.
Public toilets.
Personnel toilets.[2]

(b) *Adjunct diagnostic and treatment facilities.*

Except for the morgue and autopsy room, these facilities should be located convenient to both inpatients and outpatients.
Laboratory:
Adequate facilities for chemical, bacteriological, pathological and hematological services.
Basal metabolism and electrocardiography facilities.
Morgue and autopsy room: In Chronic Disease Hospitals of 100 beds or more. Desirable but not mandatory in Chronic Disease Hospitals of under 100 beds if such services are available locally.
Radiology:
Each Chronic Disease Hospital to have at least one radiographic room with toilet, adjoining dark room, film filing space and dressing facilities.
Pharmacy:
Drug room with minimum facilities for compounding and dispensing. Complete pharmacy may include facilities for bulk compounding and solution preparation depending on policy of hospital.
Physical therapy:
Examination room.
Office and work space for physical therapy staff.
Rehabilitation gymnasium for adults.[2]
Rehabilitation gymnasium for children if children are included in program.[2]
Hydrotherapy area.[2]
Thermotherapy and massage area.[2]
Storage for supplies and equipment.
Outdoor exercise area.[2]
Occupational therapy:
Office and work space for occupational therapy staff.
Therapy area:
In large units space should be divided for diversified work. (Separate room for children is desirable.)
Storage for supplies and equipment.
Toilet facilities for physical therapy and occupational therapy departments.
Facilities for teaching activities of daily living.
Speech and hearing facilities: [1]
Offices for therapists and space for examination and treatment.
Artificial appliance facilities: [2]
Space for fitting and adjustment service.

(c) *Out-patient department.*

[2] If required by program.

Should be provided only if survey indicates that an out-patient department is needed.
Should be located on the most easily accessible floor and have convenient access to radiology, pharmacy, laboratory and rehabilitation facilities.
The size will vary in different locations and is not necessarily proportional to the size of the hospital. The patient load must be estimated to determine the number and type of rooms required.
Administration:
Waiting space with public toilets.
Appointment and cashier's desk.
Medical social service office.
Clinical:
Examination and treatment rooms: Number and specialties to be determined by the character of the patient load.
Utility room.

(d) *Nursing department.*

General:
No patients' room shall have more than 4 beds. Six beds, not more than 3 beds deep from outside wall, will be permitted in chronic disease hospitals of 100 beds or more.
Not more than 2 beds per patients' room is desirable. Each patients' room shall have a lavatory. A toilet room with lavatory accessible from adjoining patients' room is recommended. Each nursing unit shall have a separation room
No patients' room shall be located on any floor which is below grade.
Size of nursing unit:
Should not be more than 40 beds. Larger units will be permitted if additional service facilities are provided as required.
Minimum patients' room areas:
80 square feet per bed (100 square feet desirable) in multi-bed patients' rooms; 100 square feet per bed (125 square feet desirable) in one-bed patients' rooms.
Service facilities in each nursing unit:
Nurses' station.
Nurses' toilet.
Utility room.
Treatment room.
Floor pantry.
Solarium:
Provide 25 square feet per bed for 75 percent of beds on nursing unit.
Dining room:
Provide 25 square feet per bed for 75 percent of beds on nursing unit.
The percentage of the beds for which solarium and dining area must be provided may be reduced depending on the type of patient to be cared for.
It is recommended that the dining and solarium areas be adjacent so that they can be combined into one room for recreational and other group activity purposes.
Toilet facilities:
If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 8 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
If toilets provided adjacent to patients' rooms are not large enough, a separate training toilet, at least 5 feet by 6 feet, should be provided.
Bedpan facilities.
Bathing facilities:
1 bathtub.
1 shower. (A separate bath room for each sex, containing at least one bathtub and one shower, is recommended. A ratio of one bathtub or one shower for each 10 beds is desirable.)
Stretcher and wheelchair parking space.
Clean linen storage.
Equipment and supply storage.
Janitor's closet.
Patient's laundry.[1]

NOTE: It is recommended that a specially designed nursing unit, similar to that required in the section on rehabilitation facilities in a hospital, be provided for rehabilitation patients in the chronic disease hospital.

(e) *Surgical department.*[2]

Shall be located to prevent traffic through it to any other part of the hospital.
Major operating room.
Scrub-up facilities.
Anesthesia equipment storage.
Clean-up room.
Storage closet.
Janitor's closet.
Central sterilizing and supply room.
If a surgical department is not included the central sterilizing and supply room must be provided elsewhere in the hospital.
Doctors' locker room with toilet. (Shower desirable but not mandatory.)
Nurses' locker room with toilet. (Shower desirable but not mandatory.)

(f) *Dental department.*

Facilities for dental diagnosis, treatment and laboratory procedures.

(g) *Service department.*

Dietary facilities:
Main kitchen and dieto-therapy facilities.
Dietitians' space.
Appropriate food service facilities.
Dishwashing room.
Adequate refrigeration.
Garbage disposal facilities.
Day storage room.
Personnel dining room: Provide 12 square feet per person. May be designed for multiple seating.
Janitor's closet.
Housekeeping facilities:
Laundry; unless commercial or other laundry facilities are available, each chronic disease hospital shall have a laundry of sufficient capacity to process full 7 days' laundry in work week and contain the following areas:
Sorting area.
Processing area.
Clean linen and sewing room separate from laundry.
Where no laundry is provided in the hospital, a soiled linen room and a clean linen and sewing room shall be provided.
Housekeeper's office.
Mechanical facilities:
Boiler and pump room.
Desk space for engineer.
Shower and locker facilities.[1]
Maintenance shops: In hospitals up to and including 100 beds at least one room shall be provided. In larger hospitals separation of carpentry, painting, and plumbing should be provided.
Employees' facilities:
Nurses' lockers:[4]
Locker room: one locker for each 2 hospital beds.
Rest room.
Toilet room. (Shower desirable but not mandatory.)
Female help lockers: [4]
Locker room.
Rest room.
Toilet room. (Shower desirable but not mandatory.)
Male help lockers:
Locker room.
Toilet room. (Shower desirable but not mandatory.)
Ratio of male and female help will vary and size of locker rooms must be adjusted accordingly.

[1] Desirable but not mandatory.
[2] If required by program.
[4] May be combined.

Storage:
Inactive record storage.
Patients' clothes storage room.
General storage: 20 square feet per bed and to be concentrated in one area.
Storage of outdoor equipment.[1]

### § 53.149 Nurses', residence.

Rooms:
One nurse per room: [1]
100 square feet in single rooms.
150 square feet in double rooms.
Lavoratory in each room.[1]
Closet or wardrobe for each nurse.
No nurses' rooms shall be located on any floor which is below grade.
Common floor facilities:
Lounge with kitchenette to serve 30 to 60 nurses.
Laundry room with 2 trays and 2 ironing boards to serve each 60 nurses.[1] If not provided on each floor, a centrally located laundry room containing the same proportion of trays and ironing boards shall be provided.
Bath room: One shower or tub for each 6 beds.
Toilet room: With lavatories in bedrooms—1 water closet for each 6 beds and 1 lavatory for each 3 water closets. Without lavoratories in bedrooms—1 water closet for each 6 beds and 1 lavatory for each 5 beds.
Linen closet.
Janitors' closet.
Telephone facilities.[1]
General facilities:
Lobby.
Office.
Main lounge (with alcoves [1]).
Men's toilet (off lobby).
Storage room for trunks.
Laundry distribution room.[1]
Employees' toilet room.[1]
Boiler room (if facilities not available elsewhere).

### § 53.150 School of nursing.

(a) *Teaching facilities.*

One science laboratory room.
One dietetics laboratory room.
One nursing arts laboratory with adequate facilities.
One classroom to accommodate approximately twice the number of students as the nursing arts laboratory.
One lecture room to accommodate total student body.
One library.

(b) *Offices.* Offices for instructors.

(c) *General.*

Storage room convenient to class rooms.
Toilet room.
Janitors' closet.

### § 53.151 Public health centers.

(a) *Administration.*

Where health department administration personnel has no offices in health center:
Waiting room.
Public toilets.
Office for public health nurses.
Staff toilets.
Assembly space: Waiting room may be used for this purpose where health centers serve under 30,000 population.
Where health department administration offices are provided in health centers add:
Health officer's office.
Office for sanitary engineers.
Health education office.
Staff room and library: In health center for over 30,000 population.

(b) *Clinical.* The clinical services, and extent of such services, provided in the health center will depend on the program contemplated by the health department to take care adequately of the particular needs of the population served by the health center.

For populations up to 30,000:
Two examination rooms for maternal and child health, V.D. and TB clinics.
Consultation room.
Utility room.
Dental room.[1]
For population over 30,000, if the following services are provided, they shall include areas noted as follows:
Maternal and child health:
Demonstration room.
Examining room.
Toilet.
Tuberculosis and X-ray:
X-ray room with dressing booths.
Dark room.
Consultation and viewing room.
Venereal disease:
Examination room.
Treatment room.
Consultation room.
Toilet.
Dental:
Dental facilities (2 chairs desirable).
Small dental laboratory.
Pharmacy: Dispensing room.

(c) *Laboratory.* The volume and type of laboratory tests in the health center will vary with local conditions and will determine the size of the laboratory. Such factors as density of population, area to be served, type of center, municipal, county, or rural), its use as a branch of the State laboratory and availability of other laboratory facilities must be considered.

One room is required for urinalysis, hematology, and dark field examinations for syphilis and storage of biologicals furnished by the State Health Department.
Where food control, sanitation and communicable disease work is contemplated another room shall be furnished for this purpose.

(d) *Service.*

General storage areas:
Bulk office and janitors' supplies.
Bulk clinical supplies.
Educational material.
Storage closets:
Office supplies.
Medical supplies.
Educational material.
Janitors' closet: Centrally located.
Heating plant.

### § 53.152 State public health laboratory.

(a) *Administration department.*

Director's office.
Secretary's office.
Assistant Director's office.
Information desk and switchboard.
Clerical office.
Office supply room.
Library.
Staff meeting room.
Records and filing room.
Mailing and receiving room for incoming specimens, distribution of containers and of biologicals.
Specimen and emergency treatment room.

(b) *Bacteriology department.*

Office.
Water, food and milk laboratory.
Enteric disease and agglutination laboratory.
Tuberculosis laboratory.

Diagnostic laboratory.
Incubator room.
Sterile room.
Rabies room.
Adequate refrigeration.

(c) *Syphilis serology department.*

Office.
Laboratory: Section of room separated by partitions for centrifuges and preparation of specimens.

(d) *Chemistry department.*

Office.
Laboratory: Facilities for water, food, drug, toxicology, and/or industrial hygiene analyses.
Instrument room: Facilities for darkening.

(e) *Research and investigation.*

Laboratory: Complete laboratory facilities within unit.

(f) *Biologicals department.*

Adequate refrigeration.
Deep freeze unit.
Room temperature storage.

(g) *Central services.*

Culture media and reagent preparation room.
Glassware cleaning room.
Acid cleaning unit.
Sterilizing room for culture media and clean glassware only.
Supply room for storage and issue of sterile supplies, general supplies, chemicals, and glassware. Adjacent to sterilizing and glassware cleaning room.
Bulk storage room.
Janitor service room.
Maintenance and utilities unit: Provisions for metal and woodwork, and glassblowing.
Incinerator (animal).
Animal quarters:
  Animal rooms.
  Room for cleaning and sterilizing cages.
  Preparation room for food and bedding.
  Operating and animal inoculation room.

(h) *Facilities for personnel.*

Men's locker room with washroom and shower.
Women's locker room with washroom and shower.
Rest room.
Lunch room.
Staff toilets.

(i) *Additional facilities.* If the following activities are included, minimum requirements will be as follows:

Consultation and evaluation service to local laboratories:
  Office.
  Laboratory.
Manufacture of biologicals: This department, including Blood and Blood Products, shall be adequately isolated from the other laboratories. In the case of smallpox and tetanus vaccine preparation separation may be satisfactory in the same building if a separate entrance is provided and no interior connection exists to this department. A separate mechanical ventilating system must be provided.
  Office.
  Laboratory: Cubicles for isolation work.
  Culture media room.
  Sterile room.
  Sterilizing room.
  Glaswashing room.
  Adequate refrigeration.
  Deep freeze unit.
  Storage room, controlled temperature.
  Packaging room.
  Incinerator.
  Accessible parking space.[1]

Blood and blood products:
  Laboratory: Space and equipment for processing.
  Sterile room.
  Office (may be shared with biologicals department).
  Adequate refrigeration (may be shared with biologicals department).
  Storage room (may be shared with biologicals department).
Pathology department: Laboratory.
Clinical laboratory department: Laboratory.
Virology department: This department shall be efficiently isolated from other laboratories including a separate mechanical ventilating system:
  Office.
  Laboratory: Cubicles for isolation work.
  Sterile room.
  Sterilizing room.
  Inoculation and operating room.
  Animal quarters:
    Facilities for storage of food and bedding.
    Cleaning and sterilizing of cages.
  Locker room with washroom and shower.

### § 53.153 Diagnostic or treatment centers.

(a) *General.* (1) The extent of the diagnostic, treatment, and ancillary facilities will be determined by the services contemplated and the estimated patient load.

(2) Where the facility is to be an integral part of a hospital, the requirements of adjunct diagnostic and treatment facilities and outpatient department of general hospital, § 53.144(b) shall apply.

(3) Where a diagnostic or treatment center is not to be an integral part of a hospital, then the facilities listed below must be provided unless available for convenient use in an associated health facility.

(4) The planning of diagnostic or treatment centers should provide for the privacy of the patient during interview, examination, and treatment.

(b) *Administration facilities.*

Administrative, business, and receptionist space.
Medical records space.
Waiting space.
Public telephone.

(c) *Diagnostic facilities.* (In certain types of specialized projects, such as mental health clinics, the need for radiological and laboratory facilities will be determined by the services contemplated.)

Radiographic room with adjoining dark room.
Utility and sterilizing facilities.
Laboratory.

(d) *Diagnostic and treatment facilities.* If medical examination and/or treatment are to be included the following shall be added:

Consultation, examination and treatment space is required by the services contemplated.

(e) *Service facilities.*

Storage.
Janitor's closet.
Employees' locker facilities.
Toilet facilities.
Boiler room.

### § 53.154 Rehabilitation facilities (general).

(a) Wherever possible rehabilitation facilities should be located on the ground floor. The evaluation and treatment facilities should be grouped to facilitate integration of the program and located for convenient access by inpatients and outpatients.

(b) In determining the size of facilities for inpatient and outpatient services, it should be considered that the outpatient load is usually much larger than the inpatient load.

### § 53.155 Rehabilitation facilities (multiple disability) in a hospital.

The facilities listed in this section which are in an existing hospital and which are conveniently located and available for use need not be provided.

(a) *Administration.*

Appointment and cashier's space.
Office for volunteer services coordinator.[1]
Lobby and waiting room.
Public telephone booth.
Public toilets.
Personnel toilets.[1]

(b) *Evaluation and treatment facilities.* Evaluation and treatment facilities shall include medical facilities and, depending upon the program, one or more of the following: psychological, social or vocational, as listed below.

Conference and library room.
Medical facilities:
  Offices, examination rooms and work space for medical personnel such as physicians and nurses.
Dental facilities: [2]
  Office and work space for provision of appropriate dental treatment.
Physical therapy:
  Office and work space for physical therapy staff.
  Rehabilitation gymnasium for adults.
  Rehabilitation gymnasium for children if children are included in program.[1]
  Hydrotherapy area.
  Thermotherapy and massage area.
  Storage for supplies and equipment.
  Outdoor exercise area.[1]
Occupational therapy:
  Office and work space for occupational therapy staff.
  Therapy area:
    In large units space should be divided for diversified work (separate room for children is desirable).
Storage space for supplies and equipment.
Facilities for teaching activities of daily living.
Speech and hearing facilities: [2]
  Offices for therapists and space for examination and treatment.
Artificial appliance facilities:
  Space for fitting and adjustment service.
Psychological facilities:
  Office and work for psychological testing evaluation and counseling.
Social service facilities:
  Office space for private interview and counseling.
Vocational facilities:
  Office and work space for counseling, evaluation, prevocational programs and placement. A prevocational area is not required for facilities exclusively serving children under the age of 12.

[1] Desirable but not mandatory.
[2] If required by program.

Special education:
  Schoolroom for children if children are included in program.
General facilities:
  Locker, toilet and shower facilities for patients.
  Clean and soiled linen facilities.
  Locker and toilet facilities for female volunteers.[1]
  Locker and toilet facilities for male volunteers.[1]

(c) *Nursing unit for adults.*[1]

General: It is recommended that this unit be located on the ground floor near the treatment area. Approximately one-fifth of the beds should be in two-bed rooms, the remainder in four-bed rooms. Each patient's room shall have a lavatory. Generous wardrobe space for each patient should be provided in the patients' rooms. A toilet room, with lavatory, accessible from adjoining patients' rooms, is recommended. No patients' room shall be located on any floor which is below grade.
Size of nursing unit:
  Not more than 50 beds, 35 to 40 beds recommended.
Minimum patients' room areas:
  100 square feet per bed in multi-bed patients' rooms.
Service facilities in each nursing unit for adults:
  Nurses' station.
  Nurses' toilet.
  Utility room.
  Examination and treatment room.
  Floor pantry.
  Solarium: Provides 25 square feet per bed for 75 percent of beds on nursing unit.
  Dining room: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
  It is recommended that the dining and solarium area be adjacent so that they can be combined into one room for recreational and other group activity purposes.
  Toilet facilities:
    If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 5 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
    If toilets provided adjacent to patients' rooms are not large enough, a separate training toilet, at least 5 feet by 6 feet, should be provided.
  Bedpan facilities.
  Bathing facilities:
    1 bathroom for each sex.
    1 shower to each 8 beds.
    1 bathtub.
  Stretcher and wheelchair parking space.
  Clean linen storage.
  Equipment and supply storage.
  Janitor's closet.
  Telephone alcove (one per floor).
  Patients' laundry.[1]

(d) *Nursing unit for children.*[1]

General: It is recommended that this unit be located on the ground floor near the treatment area. No patients room should have more than 4 beds. Provide 2 two-bed rooms in each nursing unit. Each patients' room shall have a lavatory. Generous wardrobe space for each patient should be provided in the patients' room. A toilet room, with lavatory, accessible from adjoining patient's room is recommended. No patients' room shall be located on any floor which is below grade.
Size of nursing unit:
  Not more than 30 beds.
Minimum room areas:
  100 square feet per bed in two-bed and four-bed rooms. 80 square feet per bed recommended for crib room if provided.
Service facilities in each nursing unit for children:
  Nurses' station.
  Nurses' toilet.
  Utility room.
  Examination and treatment room.
  Floor pantry.
  Solarium: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
  Dining room: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
  It is recommended that the dining and solarium area be adjacent so that they can be combined into one room for recreational and other group activity purposes.
  Toilet facilities:
    If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 5 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
    If toilets provided adjacent to patients' rooms are not large enough a separate training toilet, at least 5 feet by 6 feet, should be provided.
  Bedpan facilities.
  Bathing facilities:
    1 bathroom for each sex.
    1 shower to each 8 beds.
    1 bathtub.
  Stretcher and wheelchair parking space.
  Clean linen storage.
  Equipment and supply storage.
  Janitor's closet.
  Telephone alcove (one per floor).

[1] Desirable but not mandatory.

(e) *Service department.* In general the same service facilities will be required as those noted under separate rehabilitation facility (multiple disability) for inpatients and outpatients, § 53.146, except that those service facilities which are available in the adjoining hospital need not be duplicated.

### § 53.156 Separate rehabilitation facility (multiple disability) for inpatients and outpatients.

(a) *Administration.*

Business office with information counter, telephone switchboard and cashier's window.
Administrator's office.
Director of nurses' office.
Office for volunteer services coordinator.[1]
Case records room.
Library for staff and patients.
Lobby and waiting room.
Public telephone booth.
Public toilets.
Personnel toilets.

(b) *Evaluation and treatment facilities.*

Evaluation and treatment facilities shall include medical facilities and, depending upon the program, one or more of the following: psychological, social, or vocational, as listed below.
  Clinical laboratory.[2]
  Radiology: Radiographic room with adjoining dark room, toilet and office.[2]
  Pharmacy: Drug room with minimum facilities for compounding.[2]
  Conference and library room.
  Medical facilities:
    Offices, examination rooms and work space for medical personnel such as physicians and nurses.
  Dental facilities: [2] Office and work space for provision of appropriate dental treatment.
  Physical therapy:
    Office and work space for physical therapy staff.
    Rehabilitation gymnasium for adults.
    Rehabilitation gymnasium for children if children are included in program.[1]
    Hydrotherapy area.
    Thermotherapy and massage area.
    Storage for supplies and equipment.
    Outdoor exercise area.[1]
  Occupational therapy:
    Office and work space for occupational therapy staff.
    Therapy area.
      In large units space should be divided for diversified work (separate room for children is desirable).
  Storage space for supplies and equipment.
  Facilities for teaching activities of daily living.
  Speech and hearing facilities: Offices for therapists and space for examination and treatment.[2]
  Artificial appliance facilities: Space for fitting and adjustment service.
  Psychological facilities: Office and work space for psychological testing evaluation and counseling.
  Social service facilities: Office space for private interview and counseling.
  Vocational facilities:
    Office and work space for counseling, evaluation, prevocational programs and placement. A prevocational area is not required for facilities serving children under the age of 12.
    Special education: Schoolroom for children if children are included in program.
  General facilities:
    Locker, toilet, and shower facilities for patients.
    Clean and soiled linen facilities.

(c) *Nursing unit for adults.*

General: It is recommended that this unit be located on the ground floor near the treatment area. Approximately one-fifth of the beds should be in two-bed rooms, the remainder in four-bed rooms.
Each patients' room shall have a lavatory. Generous wardrobe space for each patient should be provided in the patients' rooms. A toilet room, with lavatory, accessible from adjoining patients' rooms, is recommended. No patients' rooms shall be located on any floor which is below grade.
Size of nursing unit: Not more than 50 beds, 35 to 40 beds recommended.
Minimum patients' room areas: 100 square feet per bed in multi-bed patients' rooms.
Service facilities in each nursing unit for adults:
  Nurses' station.
  Nurses' toilet.
  Utility room.
  Examination and treatment room.
  Floor pantry.
  Solarium: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
  Dining room: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
  It is recommended that the dining and solarium area be adjacent so that they can be combined into one room for recreational and other group activity purposes.

[2] If required by program.

Toilet facilities:
If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 5 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
If toilets provided adjacent to patients' rooms are not large enough, a separate training toilet, at least 5 feet by 6 feet, should be provided.
Bedpan facilities.
Bathing facilities:
1 bathroom for each sex.
1 shower to each 8 beds.
1 bathtub.
Stretcher and wheelchair parking space.
Clean linen storage.
Equipment and supply storage.
Janitor's closet.
Telephone alcove (one per floor).
Patients' laundry.[1]

(d) *Nursing unit for children.*[2]

General: It is recommended that this unit be located on the ground floor near the treatment area. No patients' room should have more than 4 beds. Provide 2 two-bed rooms in each nursing unit. Each patients' room shall have a lavatory. Generous wardrobe space for each patient should be provided in the patients' rooms. A toilet room, with lavatory, accessible from adjoining patients' room is recommended. No patients' room shall be located on any floor which is below grade.
Size of nursing unit: Not more than 30 beds.
Minimum patients' room areas: 100 square feet per bed in 2-bed and 4-bed room. 80 square feet per bed recommended for crib room if provided.
Service facilities in each nursing unit for children:
Nurses' station.
Nurses' toilet.
Utility room.
Examination and treatment room.
Floor pantry.
Solarium: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
Dining room: Provide 25 square feet per bed for 75 percent of beds on nursing unit.
It is recommended that the dining and solarium area be adjacent so that they can be combined into one room for recreational and other group activity purposes.
Toilet facilities:
If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 5 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
If toilets provided adjacent to patients' rooms are not large enough, a separate training toilet, at least 5 feet by 6 feet, should be provided.
Bedpan facilities.
Bathing facilities:
1 bathroom for each sex.
1 shower to each 8 beds.
1 bathtub.
Stretcher and wheelchair parking space.
Clean linen storage.
Equipment and supply storage.
Janitor's closet.
Telephone alcove (one per floor).

(e) *Service department.*

Central sterilizing and supply room.
Dietary facilities:
Main kitchen.
Dietitians' space.
Dishwashing room.
Adequate refrigeration.
Garbage disposal facilities.
Day storage room.
Personnel dining space. Provide 12 square feet per person; may be designed for multiple seatings.
Outpatients' dining facilities as required.
Janitor's closet.
Housekeeping facilities:
Laundry; unless commercial or other laundry facilities are available, each rehabilitation facility shall have a laundry of sufficient capacity to process full 7 days' laundry in work week and contain the following areas:
Sorting area.
Processing area.
Clean linen and sewing room separate from laundry.
Where no laundry is provided in the hospital, a soiled linen room and a clean linen and sewing room shall be provided.
Housekeeper's office.
Mechanical facilities:
Boiler and pump room.
Shower and locker facilities.[2]
Engineers' space.
Maintenance shops: At least one room shall be provided. In large rehabilitation facilities, separation of carpentry, painting and plumbing is recommended.
Employees' facilities:
Female staff and volunteers lockers:
Locker room.
Rest room.
Toilet and shower room.
Female help lockers:
Locker room.
Rest room.
Toilet and shower room.
Male staff and volunteers lockers:
Locker room.
Toilet and shower room.
Male help lockers:
Locker room.
Toilet and shower room.
Storage:
General storage. 20 square feet per bed and to be concentrated in one area.
Storage of out-door equipment.[1]

### § 53.157 Separate rehabilitation facility (multiple disability) for outpatients only.

(a) *Administration.*

Business office with information counter, telephone switchboard and cashier's window.
Administrator's office.
Director of nurses' office.
Office for volunteer services coordinator.[1]
Case records room.
Library for staff and patients.
Lobby and waiting room.
Public telephone booth.
Public toilets.
Personnel toilets.[1]

(b) *Evaluation and treatment facilities.*

Evaluation and treatment facilities shall include medical facilities and, depending upon the program, one or more of the following: psychological, social or vocational, as listed below.
Conference and library room.
Medical facilities:
Offices, examination rooms and work space for medical personnel such as physicians and nurses.
Dental facilities: [2] Office and work space for provision of appropriate dental treatment.
Physical therapy:
Office and work space for physical therapy staff.
Rehabilitation gymnasium for adults.
Rehabilitation gymnasium for children if children are included in program.[1]
Hydrotherapy area.
Thermotherapy and massage area.
Storage for supplies and equipment.
Outdoor exercise area.[1]
Occupational therapy:
Office and work space for occupational therapy staff.
Therapy area: In large units space should be divided for diversified work (separate room for children is desirable).
Storage space for supplies and equipment.
Facilities for teaching activities of daily living.
Speech and hearing facilities: [2] Offices for therapists and space for examination and treatment.
Artificial appliance facilities: Space for fitting and adjustment service.
Phychological facilities: Office and work space for psychological testing evaluation and counseling.
Social service facilities: Office space for private interview and counseling.
Vocational facilities:
Office and work space for counseling, evaluation, prevocational programs and placement. A prevocational area is not required for facilities exclusively serving children under the age of 12.
Special Education:
Schoolroom for children if children are included in program.
General facilities:
Locker, toilet and shower facilities for patients.
Clean and soiled linen facilities.

(c) *Service facilities.*

Dietary facilities.[2]
Housekeeping facilities: Clean and soiled linen storage.
Janitors' closet(s).
Mechanical facilities:
Boiler room.
Maintenance shop.
Employees' facilities:
Female staff and volunteers lockers:
Locker room.
Rest room.
Toilet and shower room.
Female help lockers:
Locker room.
Rest room.
Toilet and shower room.
Male staff and volunteers lockers:
Locker room.
Toilet and shower room.
Male help lockers:
Locker room.
Toilet and shower room.
Storage:
General storage.

### § 53.158 Single disability rehabilitation facility.

The requirements for a single disability rehabilitation facility will be dependent upon the specific project program, which shall include, however, services in the four basic areas—medical, psychological, social and vocational. In general the single disability rehabilitation facility will follow the pattern established for the multiple disability rehabilitation facility. In other respects the general standards set forth herein shall apply.

[1] Desirable but not mandatory.
[2] If required by program.

### § 53.159 Facility for long-term care—nursing home.

(a) *General.* (1) The facilities listed in this section need not be provided if functionally available in an adjoining hospital.

(2) Nursing homes should be planned to approximate the home atmosphere as closely as possible. It is desirable that larger bedrooms be provided than are generally provided in general hospitals, that each bed be equitably placed in relation to the windows, that wardrobe and closet space in patients' rooms be more generous. The use of more open, informal planning, the provision of inviting recreational spaces both indoors and out, the use of decoration, color, furnishings, etc., to minimize institutional effect is recommended.

(b) *Administration department.*

Business office.[4]
Administrator's office.[4]
Consultation room.[1]
Lobby and waiting room.
Public toilet facilities.
Public telephone.

(c) *Ancillary facilities.*

Recreation room.
Occupational activities room.
Patients' dining room.
Provide at least 50 square feet per bed for 75 percent of the total beds in the nursing home for recreation, occupational activities and patients' dining.
It is recommended that the recreation, occupational activities and patients' dining areas be adjacent so that they can be combined into one room for recreational and other group activity purposes.
Physical therapy services as required.
Patients' laundry.[4]
Storage for occupational and recreational equipment.
Outdoor recreation area.[2]

(d) *Nursing department.*

General: No patients' room shall have more than 4 beds. Six beds, not more than three beds deep from outside wall, will be permitted in nursing homes of over 100 beds. Not more than 2 beds per patients' room is desirable. Each patients' room shall have a lavatory. A toilet room, with lavatory, accessible from adjoining patients' room is recommended. At least one single room with private toilet shall be provided in each nursing unit for each sex for purposes of medical isolation, incompatibility, personality conflict, etc. No patients' room shall be located on any floor which is below grade.
Size of nursing unit: Should not have more than 40 beds. Larger units will be permitted if additional service facilities are provided as required.
Minimum patients' room areas: 80 square feet per bed (100 square feet desirable) in multiple bed patients' rooms; 100 square feet per bed (125 square feet desirable) in one-bed patients' rooms.
Service facilities for each nursing unit:
Nurses' station.
Nurses' toilet.
Utility room.
Treatment room.
Floor pantry: one for each nursing floor in multi-story buildings.[2]
Toilet facilities:
If centralized toilets are provided, a toilet room for each sex at a ratio of 1 water closet to each 8 beds will be required. One of the water closet enclosures in each toilet room should be at least 5 feet by 6 feet to permit toilet training.
If toilets provided adjacent to patients' rooms are not large enough, a separate training toilet, at least 5 feet by 6 feet, should be provided.
Bedpan facilities.
Bathing facilities:
1 bathtub.
1 shower. (A separate bath room for each sex, containing at least one bathtub and one shower, is recommended. A ratio of one bathtub or one shower for each 10 beds is desirable.)
Stretcher and wheelchair parking area.
Clean linen storage.
Equipment and supply storage.
Janitor's closet.

(e) *Service department.*

Dietary facilities:
Kitchen.
Dishwashing room.
Adequate refrigeration.
Garbage disposal facilities.
Personnel dining facilities.
Janitors' closet.
Housekeeping facilities:
Clean linen facilities.
Soiled linen facilities.
If commercial laundry is not available, laundry facilities shall be provided.
Mechanical facilities:
Boiler room.
Maintenance facilities—at least a bench in boiler room. In larger Nursing Homes, separate maintenance facilities should be provided.
Incinerator.[1]
Employees' facilities:
Male locker room and toilet.
Female locker room and toilet.
Storage:
General storage—15 square feet per bed and to be concentrated in one area.
Patients' clothes storage room.
Storage for outdoor equipment.[1]

### § 53.160 Details.

The following general requirements apply to all hospitals. Conditions in special hospitals, not covered in the general requirements, are specifically noted.

(a) *General requirements for hospitals.*

Door widths: 3 feet 8 inches (3 feet 10 inches preferable) at all:
Bedrooms.
Treatment rooms.
Operating rooms.
X-ray therapy rooms.
Delivery rooms.
Solariums.
X-ray rooms.
Physical therapy rooms.
Labor rooms.
Door swings: No doors shall swing into the corridor except closet doors.
Corridor widths: 7 feet (8 feet preferred). A greater width should be provided at elevator entrances.
Stair widths: The width of stairways shall be not less than 3 feet 8 inches. The width shall be measured between handrails where handrails project more than 3½ inches.
Elevators: Platform size—5 feet 4 inches x 8 feet. Door opening—3 feet 10 inches. See also mechanical section.
Laundry chutes: Use optional. Where used 2'0" minimum diameter.
Nurses' call system: (Does not apply to mental and psychiatric hospitals and mental units in general hospitals.) Call station between each two beds in two-bed rooms and four-bed rooms and one in each one-bed room.
Corridor dome light over each nursing room.
Dome light and buzzer at nurses' station, utility room and floor pantry.
Fire safety:
Exit facilities:
All exit facilities shall follow the recommendations of the Building Exits Code of the National Fire Protection Association.
Fire protection facilities:
Other fire protection requirements such as standpipes, sprinklers, chemical fire extinguishers and fire alarm systems shall conform to the requirements of any one of the codes listed in § 53.152 (a) (Structural Requirements).
Fire-resistive construction:
See § 53.162(c) for fire-resistive requirements affecting the structural members and connections.
Ray protection: X-ray rooms, surgeries, cystoscopic rooms and other areas containing X-ray producing equipment, other than mobile equipment, shall have ray protection as recommended in applicable handbooks of the National Bureau of Standards.
Radioisotopes: Rooms or areas where radioisotopes are used or stored, including teletherapy apparatus utilizing Radium, Cobalt-60, or Cecium-137 or other radioisotopes, shall have the ray protection necessary to limit the radiation in occupied areas to those levels required by the Atomic Energy Commission. The methods for determining radiation barriers shall be those established in the applicable handbooks of the National Bureau of Standards.
X-ray equipment: X-ray equipment and installation shall comply with recommendations contained in the National Electrical Code and applicable handbooks of the National Bureau of Standards.
Ceiling heights:
Boiler room:
Not less than 12'0" except that a lesser height may be used for these small buildings which may use a domestic type packaged heating unit. When a boiler is set in a depressed pit area, the height shall be measured from the pit floor.
Laundry:
Not less than 11'0" (a higher ceiling is desirable).
Kitchen:
Not less than 10'0" (a higher ceiling is desirable).
Operating rooms, delivery rooms, Cystoscopic rooms, emergency rooms and similar rooms having ceiling-mounted light fixtures—not less than 9'0" (a higher clearance may be necessary for some surgical lights).
All other rooms except those containing special equipment which may require a greater height (X-ray, etc.)—not less than 8'0" except that ceiling heights for corridors, storage rooms, patients' room toilets and other minor auxiliary rooms may be lower.
Insulation in ceilings: Ceilings of boiler rooms, kitchens and laundries shall be insulated where the floor directly above them is to be used for hospital purposes.
Parking space: Adequate parking space should be available for all health facilities.

(b) *Chronic disease hospitals, rehabilitation facilities and nursing homes.*

Space allowances: Space allowances shall be consistent with the need in areas used by patients using crutches, wheelchairs or wheel stretchers.

[1] Desirable but not mandatory.
[2] If required by program.
[4] May be combined.

Doors: All doors through which patients will pass shall be at least 3 feet 8 inches wide. Doors at least 3 feet wide will be permitted at individual toilets adjacent to patients' bedrooms.

Corridors: Corridors used by patients shall be at least 8 feet wide. A greater width should be provided at elevator entrances.

Handrails: Handrails will be required on both sides of corridors used by patients in chronic disease hospitals and nursing homes. Handrails are not required in corridors of rehabilitation facilities.

Thresholds: Thresholds at doorways shall be flush.

Telephone alcoves: Telephone alcoves shall be a minimum of 4 feet square. Phone shall be located on a shelf convenient for patients in wheelchairs. Doors to telephone booths are not recommended.

Drinking fountains: Drinking fountains shall be located in corridors of nursing units and treatment areas and lobby. The fountain shall be accessible to patients in wheelchairs.

Brackets: In rehabilitation facilities brackets should be provided adjacent to patients' beds for braces and crutches.

Water closet stalls: Water closet stalls for patient use shall have handrails on both sides. Curtains are recommended in lieu of doors to stalls.

Toilet rooms: Toilet rooms adjacent to patients' rooms shall permit movement of wheelchairs and shall have handrails on both sides.

Hardware: Hardware on water closet enclosures shall be operable from outside.

Lavatories: The front edge of the lavatory for patient use shall be set not less than 22 inches from the wall to which it is attached.[1] They shall be supported on brackets to allow wheelchairs to slide under.

Mirrors: Mirrors shall be arranged for the convenience of patients in wheelchairs as well as patients in a standing position.

Bathtubs: Bathtubs shall not be elevated in rehabilitation facilities. It is recommended that bathtubs shall not be elevated in chronic disease hospitals and nursing homes. Handrails shall be provided at all bathtubs.

Showers: Showers should be approximately 4 feet square and should have handrails and curtains. Curbs shall be omitted.

(c) *Mental hospitals, psychiatric hospitals and psychiatric units in general hospitals.* The principals of psychiatric security and safety shall be followed throughout. Materials and details of construction shall be such that patients will not be afforded opportunity for escape, suicide, hiding, etc. Care must be taken to avoid projecting sharp corners, exposed piping, heating elements, fixtures, hardware, etc.

(d) *Public health centers and diagnostic or treatment centers.* Width of corridors shall be not less than 5'0''. Greater width preferred. Windows of examination and treatment rooms shall be glazed with obscure glass to insure privacy.[1]

(e) *State public health laboratories.* Provide separate air conditioning or ventilation system for bacteriological and virus laboratories with ample supply and exhaust to function properly with closed windows. Emergency showers shall be provided in chemical laboratories. Each chemical laboratory room shall have a minimum of two exits. All windows must be screened.

[1] Desirable but not mandatory.

§ 53.161 Finishes.

(a) *General.*

Floors:
- The floors of the following areas shall have smooth, waterproof surfaces which are wear resistant:
  - Toilets:
    - Baths.
    - Bedpan rooms.
    - Floor pantries.
    - Utility rooms.
    - Treatment rooms.
    - Sterilizing rooms.
    - Janitors' closets.
- The floors of the following areas shall be smooth and easily cleaned:
  - Pharmacies.
  - Laboratories.
  - Patient rooms.
- The floors of the following areas shall be waterproof, greaseproof, smooth and resistant to heavy wear:
  - Kitchens.
  - Butcher shops.
  - Food preparation.
  - Formula rooms.
- Floors in anesthetizing areas and in rooms used for storage of flammable anesthetic agents in surgical suites shall be conductive as required by the NFPA No. 56—Code for Use of Flammable Anesthetics.

Walls:
- The walls of the following areas shall have a smooth surface with painted or equal washable finish in light color. At the base, they shall be waterproof and free from spaces which may harbor ants and roaches:
  - All rooms where food and drink are prepared, served or stored.
- The walls of the following areas shall have waterproof painted, glazed or similar finishes to a point above the splash or spray line:
  - Kitchens.
  - Scullieries.
  - Utility rooms.
  - Baths.
  - Showers.
  - Dishwashing rooms.
  - Janitors' closets.
  - Sterilizing rooms.
  - Spaces with sinks.
- The walls of the following areas shall have waterproof glazed, painted or similar surface which will withstand washing to a distance of not less than 5'0'':
  - Operating rooms.
  - Delivery rooms.

Ceilings:
- The ceilings of the following areas shall be painted with waterproof paint:
  - Operating rooms.
  - Delivery rooms.
  - All scullieries, kitchens and other rooms where food and drink are prepared.
- The ceilings of the following areas shall be acoustically treated:
  - Corridors in patient areas.
  - Nurses' stations.
  - Labor rooms.
  - Utility rooms.[1]
  - Floor pantries.
  - Kitchens.[1]

(b) *State public health laboratory.*

Floors:
- Resilient, smooth and stain resistant: All laboratories other than chemistry laboratories.
- Resilient, smooth and acid resistant: Chemistry laboratories.
- Smooth, waterproof, grease-proof, easily cleaned, non-slip, resistant to heavy traffic:
  - Culture media rooms.
  - Glasswashing rooms.
  - Sterilization rooms.
  - Acid cleaning rooms.
  - Animal rooms.

Walls:
- Waterproof, painted, glazed or similar finishes to a point above the splash or spray line. They shall be without cracks, and in conjunction with floors shall be waterproof and free of cracks and spaces which may harbor ants and roaches:
  - Laboratories.
  - Incubator rooms.
  - Sterilizing rooms.
  - Culture media rooms.
  - Glasswashing rooms.
  - Acid cleaning rooms.
  - Inoculation and operating rooms.
  - Animal rooms.
- Same as above, but finish to reach to ceiling:
  - Sterile rooms.

Ceilings: Waterproof painted: Sterile rooms.

Shelves and cabinets: Shelves and cabinets which are used for the storage of food, dishes and cooking utensils shall be so constructed and mounted that there shall be no openings or spaces which cannot be cleaned and which might harbor vermin or insects. Cabinets which are used for the storage of open food containers and dishes shall be dust tight.

(c) *Chronic disease hospitals, rehabilitation facilities and nursing homes.*

Wainscot: A wainscot of durable material should be provided in all rooms used by patients for protection of walls against damage caused by wheelchairs, stretchers and carts. Such a wainscot is desirable but not mandatory in chronic disease hospitals and nursing homes.

§ 53.162 Structural.

(a) *Codes.* In addition to compliance with the standards set forth in this subpart, all applicable local and State building codes and regulations must be observed. In areas which are not subject to local or State building codes, the recommendations of any one of the following national codes shall apply insofar as such recommendations are not in conflict with the standards set forth in this subpart.

1. National Building Code: National Board of Fire Underwriters, 85 John Street, New York 38, N.Y.
2. Basic Building Code: Building Officials Conference of America, 1525 East 53d Street, Chicago 15, Ill.
3. Southern Building Code: Southern Building Code Congress, Brown-Marx Building, Birmingham, Ala.
4. Uniform Building Code: International Conference of Building Officials, 610 South Broadway, Los Angeles 14, Calif.

(b) *Design data.*—(1) *General.* The buildings and all parts thereof shall be of sufficient strength to support all dead, live and lateral loads without exceeding the working stresses permitted for the materials of their construction in the applicable code.

(2) *Special.* Special provisions shall be made for machine or apparatus loads which would cause a greater stress than that produced by the specified minimum live load, with due consideration of vibration or impact resulting from operation of such equipment (e.g., some portable X-ray machines weigh as much as 1,000 pounds). Consideration shall be given to structural members and connections of structures which may be subject to hurricanes, tornadoes and earthquakes. Suitable allowance shall be made for future partition changes.

(3) *Live loads.* The following unit live loads shall be taken as the minimum uniformly distributed live loads for the occupancies listed:

Hospital wards, bedrooms, and all adjoining service rooms which comprise a typical nursing unit (except solaria and corridors)—40 p.s.f. Solaria, corridors in nursing units and all corridors above the first floor, operating suites, examination and treatment rooms, laboratories, toilets and locker rooms—60 p.s.f.

Corridors on first floor, waiting rooms and similar public areas, offices, conference room, library, kitchen and radiographic room—80 p.s.f.

Sairways, laundry, large rooms used for dining, recreation or assembly purposes, work shops—100 p.s.f.

Records file room, storage, supply—125 p.s.f.

Mechanical equipment room (unless actual equipment loads are accurately determined)— 150 p.s.f.

Roofs (except use increased value where snow and ice may occur)—20 p.s.f.

Wind—as required by local conditions, but not less than—15 p.s.f.

(c) *Construction including fire-resistive requirements.* (1) Foundations shall rest on natural solid ground and shall be carried to a depth of not less than one foot below the estimated frost line or shall rest on leveled rock or load-bearing piles when solid ground is not encountered. Footings, piers, and foundation walls shall be adequately protected against deterioration from the action of ground water. Proper bearing values for the soil shall be established in accordance with recognized standards.

(2) One-story buildings shall be constructed of not less than one-hour fire-resistive construction throughout except as follows:

(i) Boiler rooms and rooms used for the storage of combustible materials shall be of two-hour fire-resistive noncombustible construction.

(ii) Interior non-load-bearing partitions, other than those enclosing corridors and vertical shafts, may be of noncombustible construction without a fire-resistive rating.

(3) Structures built of other than noncombustible materials shall adhere to the floor area restrictions set forth in any one of the national codes listed in paragraph (a) of this section. For purposes of evacuation, the window sills of one-story buildings constructed of other than noncombustible materials shall be not more than six feet above the adjacent ground level.

(4) Buildings more than one story in height shall be constructed of noncombustible materials, using a structural framework of reinforced concrete or structural steel except that load-bearing masonry walls and piers may be utilized for buildings up to and including three stories in height. The fire-resistive requirements of the various building elements shall follow the requirements of any one of the four national codes listed in paragraph (a) of this section except for the modifications listed below:

(i) Corridor partitions shall be of one-hour fire-resistive construction.

(ii) Walls enclosing stairways, elevators, laundry and trash chutes, and other vertical shafts, boiler rooms and rooms used for storage of combustible materials shall be of two-hour fire-resistive construction.

(5) Interior finish of all exit ways, storage rooms and all areas of unusual fire hazard shall have a flame spread rating of less than 20.

(6) Interior finish of patient rooms, patient day rooms and other areas occupied by patients shall have a flame spread rating of less than 75.

(7) Interior finish of other areas shall have a flame spread rating of less than 75, except that ten percent of the aggregate wall and ceiling areas of any space may have a flame spread rating up to 200.

(8) Interior finish materials shall be classified in accordance with their average flame spread rating on the basis of tests conducted in accordance with ASTM Standard No. E 84.

§ 53.163 Mechanical and electrical.

(a) *Heating; steam systems and ventilation*—(1) *Codes.* The heating system, steam system, boilers, ventilation system, and air conditioning system shall be furnished and installed to meet all requirements of the local and State codes and regulations, and the regulations of the National Board of Fire Underwriters and the minimum general standards as set forth in this section. Where there is no local or State boiler code, the recommendations of the A.S.M.E. shall apply. Gas fired equipment shall comply with the regulations of the American Gas Association.

(2) *Boilers.* Boilers shall have the necessary capacity when operating at normal rating to supply the heating system, hot water, and steam operated equipment, such as sterilizers, laundry and kitchen equipment. Spare boiler capacity shall also be provided in a separate unit to replace any boiler which might break down, except that spare boiler capacity for heating will not be required in design temperature zone +20° F. or higher as shown by the current edition of the ASHRAE Guide. Boilers which supply high pressure steam to sterilizers, kitchens, laundry, etc., shall meet the requirements of the city and State boiler codes for 125 pounds working pressure. It is desirable to operate boilers, supplying steam for laundries, at not less than 105 pounds pressure while boilers for sterilizers and kitchen may operate at 50 pounds pressure.

(3) *Heating system.* The building shall be heated by a hot water, steam, or equal type heating system.

(4) *Steam system.* A system of steam and return mains and appurtenances shall be provided to supply all equipment which requires steam heat.

(5) *Boiler accessories.* Boiler feed pumps, return pumps and circulating pumps shall be furnished in duplicate, each of which has a capacity to carry the full load. Blow off valves, relief valves, non-return valves, injectors and fittings shall be provided to meet the requirements of the city and state codes. Where no city or state codes are in force the recommendations of the ASME shall apply.

(6) *Temperatures.* It shall be possible to maintain a temperature of 70° F. in each room and occupied space except that in operating and delivery rooms and nurseries it shall be 75° F. In spaces where radiant heat is used, the minimum temperatures specified may be reduced to maintain an equivalent comfort level. Radiators and convectors, if used, shall be provided with hand control valve except where individual room automatic control is provided.

(7) *Piping.* Steam and hot water piping may be copper pipe and fittings, standard weight steel or iron pipe and cast iron fittings. Pipe used in heating and steam systems shall not be smaller sizes than prescribed by the latest edition of the ASHRAE Guide. The ends of all steam mains and low points in steam mains shall be dripped.

(8) *Valves.* Steam, return and heating risers, steam, return and heating mains shall be controlled separately by a valve. Each steam and return main shall be valved. Each piece of equipment supplied with steam shall be valved on the supply and return ends.

(9) *Thermostatic control.* The heating system shall be thermostatically controlled in one or more zones.

(10) *Auxiliary heat.* The heating system serving operating rooms, delivery rooms, recovery rooms, and nurseries shall be designed so that heat is available on a year round basis.

(11) *Coverings.* Boilers and smoke breeching shall be insulated with covering not less than 1-inch magnesia blocks and ½-inch plastic asbestos finish. All high pressure steam and high pressure return piping shall be insulated with covering not less than the equivalent of 1-inch four ply asbestos covering. Heating mains in the boiler room, in unheated spaces, unexcavated spaces, and where concealed, shall be insulated with covering not less than 1-inch asbestos air cell.

(12) *Ventilation.* (i) Rooms which do not have outside windows and which are used by patients or hospital personnel, such as utility rooms, toilets, bed pan rooms, baths, sterilizer rooms, sterilizer equipment chambers and food storage rooms shall be provided with forced or suitable ventilation to change the air at least once every six minutes.

(ii) Kitchens, morgues and laundries which are located inside the hospital building shall be ventilated by exhaust systems which will discharge the air above the main roof or 50'0'' from any window. The ventilation of these spaces shall comply with the State or local codes but if no code governs, the air in the work spaces shall be exhausted at least once every six minutes with the greater part of the air being taken from the flat work ironer and ranges. Air from the laundry sorting area shall be discharged with no recirculation. Rooms used for the storage of combustible anesthetic agents, paints and other highly flammable materials shall be ventilated to the outside air with intake and discharge ducts. Oxygen storage and oxygen manifold rooms shall comply with the regulations set forth in the latest edition of the NFPA–56.

(iii) The operating and delivery rooms shall be provided with a supply ventilating system with heaters and humidi-

fiers which will change the air at least eight times per hour by supplying fresh filtered air humidified to prevent static. No recirculation will be permitted. The air shall be removed from these rooms by forced system of exhaust. The adjoining sterilizing rooms and sterilizing equipment chambers shall be provided with exhaust ventilation.

(13) *Incinerators:* (i) An incinerator shall be installed in each hospital. The incinerator shall be designed to burn completely 60 percent wet garbage without objectionable smoke or odor. Where garbage is removed from the premises or disposed of by other means, incinerators will be required for the disposal of dressings, contagious and infectious materials, amputations and general rubbish. Rubbish incinerators shall be designed to completely burn 50 percent wet rubbish without objectionable smoke or odor. Gas- or oil-fired incinerators are desirable. Incinerators with capacities up to 500 pounds shall have the enclosing walls of combustion chambers lined with fire brick not less than 4½ inches thick. Incinerators of greater capacity shall have not less than 9-inch fire brick lining. The gases shall be carried to a point above the roof of the hospital. Flue fed type incinerators which have an identical refuse chute and smoke flue shall not be installed in hospitals or medical facilities.

(ii) Incinerators for diagnostic or treatment facilities need not conform in all respects to the above requirements but shall be of such design, construction and capacity to fulfill the needs of such facilities.

(14) *Tests.* The systems shall be tested to demonstrate to the satisfaction of the State agencies having jurisdiction that: The boilers will carry the full load with one boiler in reserve, that the steam supply to all steam heated equipment is ample, that the ventilating equipment meets the minimum requirements and that all systems circulate satisfactorily without leaks or noise.

(15) *Health centers, nurses' residences, laboratories, diagnostic or treatment centers, rehabilitation facilities and nursing homes.* (i) A spare boiler may not be required for health centers, nurses' residences, laboratories, diagnostic or treatment centers, rehabilitation facilities and nursing homes. Incinerators are recommended in health centers, nurses' residences, laboratories, rehabilitation facilities and nursing homes.

(ii) Separate special ventilation or air conditioning systems are required for the bacteriological and virus laboratories.

(16) *Mental hospitals.* Radiators, grilles, pipes, valves and equipment shall be so located that they are not accessible to patients. Hot air heating may be used for spaces occupied by mental patients.

(b) *Plumbing and drainage.* All parts of the plumbing systems shall comply with all applicable local and State codes and the requirements of the State Department of Health and the minimum general standards as set forth in this paragraph. Where no State or local codes are in force or where such codes do not cover special hospital equipment, appliances, and water piping, the National Plumbing Code ASA–A40.8–1955 shall apply.

(1) *Water service.* (i) The water supply available for the hospital shall be tested and approved by the State Department of Health.

(ii) The water service shall be brought into the building to comply with the requirements of the local water department and shall be free of cross connections.

(2) *Hot water heaters and tanks.* (i) The hot water heating equipment shall have sufficient capacity to supply 6½ gallons of water at 125° F. per hour per bed for hospital fixtures, 4 gallons of water at 180° F. per hour per bed for kitchen and 4½ gallons of water at 180° F. per hour per bed for laundry.

(ii) The hot water storage tank or tanks shall have a capacity equal to 80 percent of the heater capacity.

(iii) Where direct fired hot water heaters are used they shall be of an approved high pressure type. Submerged steam heating coils shall be of copper. Storage tanks shall be of noncorrosive metal or be lined with noncorrosive material to comply with the A.S.M.E. Code for pressure vessels. Tanks and heaters shall be fitted with vacuum and relief valves, and where the water is heated by coal or gas they shall have thermostatic relief valves. Heaters shall be thermostatically controlled.

(3) *Water supply systems.* (i) From the cold water service and hot water tanks, cold water and hot water mains and branches shall be run to supply all plumbing fixtures and equipment which require hot or cold water or both for their operation. Pipes shall be sized to supply water to all fixtures with a minimum pressure of 15 pounds at the top floor fixtures during maximum demand periods. All plumbing fixtures except water closets, urinals, bedpan washers and drinking fountains shall have both hot and cold water supplies. Every supply outlet or connection to a fixture or appliance shall be protected against back flow in accordance with the provisions of standards for air gaps and backflow preventers as provided by National Plumbing Code ASA–A40.8–1955. Wherever the usage of fixture or appliance will permit, water supplied to all fixtures, open tanks and equipment, shall be introduced through a suitable air gap between the water supply and the flood level of the fixture. No connections shall be made which will permit backflow.

(ii) Hot water circulating mains and risers shall be run from the hot water storage tank to a point directly below the highest fixture at the end of each branch main. Where the building is higher than 3 stories, each riser shall be circulated. Water pipe sizes shall be equal to those prescribed by the National Plumbing Code ASA–A40.8–1955.

(4) *Drainage system.* All fixtures and equipment shall be connected through traps to soil and waste piping and to the sewer. Indirect waste connections shall be provided for devices or fixtures in which food, drink, water and ice are processed or stored, dishwashing machines, sterilizers, stills and equipment requiring cooling water. All shall conform to the requirements of the National Plumbing Code ASA–A40.8–1955.

(5) *Rain water drains.* Leaders shall be provided to drain the water from roof areas to a point from which it cannot flow into the basement or areas around the building. Courts, yards, and drives which do not have natural drainage from the building shall have catch basins and drains to low ground, storm water system, or dry wells. Where dry wells are used they shall be located at least 20′ 0″ from the building.

(6) *Gas piping.* Gas appliances shall be approved by the American Gas Association and shall be connected in accordance with the requirements of the company furnishing the gas. Gas outlets shall not be provided in patients' bedrooms.

(7) *Oxygen systems.* Where oxygen systems are installed the oxygen piping, outlets, manifolds, manifold rooms and storage rooms shall be installed in accordance with the requirements of N.F.P.A. Bulletins No. 56 and No. 565.

(8) *Pipe.* The building drain, to a point 5′ 0″ from the building, shall be of cast iron. Soil stacks, drains, vents, waste lines, and leaders shall be of copper, cast iron or steel except drain lines in back-fill or soil shall be of cast iron. Oxygen lines shall be of copper tubing not lighter than type "K" or I.P.S. red brass with fittings of brass or copper. Drains from sinks which use chemicals shall be of approved acid resistant material. Gas piping shall be of black iron with malleable fittings or copper tubing.

(9) *Valves.* Each main, branch main, riser and branch to a group of fixtures of the water systems shall be valved.

(10) *Insulation.* (i) Tanks and heaters shall be insulated with covering equal to 1″ 4-ply air cell.

(ii) Hot water and circulating pipes shall be insulated with covering equal to canvas jacketed 3-ply asbestos air cell.

(iii) Cold water mains in occupied spaces and in store rooms shall be insulated with canvas jacketed felt covering to prevent condensation. All pipes in outside walls shall also be insulated to prevent freezing.

(11) *Stand pipe system.* The stand pipe system shall be installed as required by the local and State departments having jurisdiction. Where no local or State codes are in force, the stand pipe system shall comply with the requirements of the National Board of Fire Underwriters.

(12) *Sprinkler system.* To reduce the danger from fire, it is desirable to provide automatic sprinkler systems in those areas which are considered hazardous from a fire safety point of view. Such hazardous areas may include the soiled linen rooms, basement corridors, paint shops, wood working shops, trash rooms, storage rooms, accessible attics, laundry and trash chutes, and entire nonfireproofed buildings.

(13) *Plumbing fixtures.* (i) The material used for plumbing fixtures shall be of an approved non-absorptive acid resisting material.

(ii) Water closets in and adjoining patients' areas shall be of a quiet operating type.

(iii) Flush valves shall be designed for quiet operation with non-return stops, back flow preventers and silencers.

(iv) Patient lavatories, service lavatories, and sinks which may be used for filling pitchers shall have the spout mounted so that it is a minimum distance of 5 inches above the flood rim of the fixture. All lavatories and sinks used by patients, doctors, nurses, and food handlers shall be trimmed with valves which can be operated without the use of the hands. Wrist, knee and foot action valves meet this requirement. If wrist action valves are used on patient lavatories the blade handles shall not exceed 4½ inches in length.

(14) *Drinking fountains.* Drinking fountains shall comply with the A.S.A. Z4.2–1942.

(15) *Tests.* (i) All soil, waste, vent, and drain lines shall be tested by water or air test before they are built in.

(ii) A smoke or chemical test shall be applied after fixtures have been set. Water pipe shall be hydraulically tested to a pressure equal to twice the working pressure. The tests shall demonstrate to the satisfaction of the State Agency that there are no leaks, that hot water is circulating satisfactorily, that all traps are properly vented, that there is ample supply of hot and cold water to all fixtures, that no fixture or equipment can be back syphoned and that there are no backflow connections.

(16) *Sterilizers.* Sterilizers and autoclaves shall be provided of the required types and necessary capacity to adequately sterilize instruments, utensils, dressings, water, operating room material, such as gloves, sutures, etc., and as required for laboratories. The sterilizers shall be of recognized hospital types with approved controls and safety features.

(17) *Mental, psychiatric, tuberculosis and chronic disease hospitals, rehabilitation facilities and nursing homes.* (i) Plumbing fixtures which require hot water and which are accessible to patients shall be supplied with water which is thermostatically controlled to provide a maximum water temperature of 110° F. at the fixture.

(ii) Special consideration shall be given to piping, controls, and fittings of plumbing fixtures as required by the types of mental patient and the doctor in charge of planning. No pipes or traps shall be exposed and fixtures shall be substantially bolted through walls. Generally, for disturbed patients, prison type water closets without seats shall be used and shower and bath controls shall not be accessible to patients.

(iii) The hot water heat and tank capacities for laundries in T.B. and mental hospitals may be reduced to 40 percent of that required for general hospitals.

(18) *Laboratories, nurses' residences and health centers.* (i) Emergency quick acting cold water showers are required at convenient points in chemical laboratories.

(ii) Only one system of hot water will be required in laboratories, nurses' residences and health centers and the elbow or knee action lavatory and sink faucet handles will be required only in clinical rooms of health centers.

(c) *Electrical installations*—(1) *Codes and regulations.* The installation of electrical work and equipment shall comply with all local and State codes and laws applicable to electrical installations and the minimum general standards as set forth in this paragraph. Where such codes and laws are not in effect or where they do not cover special installations the National Electrical Code and standards referenced therein which are applicable shall apply. The regulations of the local utility company shall govern service connections. All materials shall be new and shall equal standards established by the Underwriters Laboratories, Inc. Certificates of approval shall be issued by these departments having jurisdiction before the work will be approved for final payment.

(2) *Service.* Connections from the service mains, with meter connections and service switches shall be installed as required by the Public Service Company.

(3) *Feeders and circuits.* Separate power and light feeders shall be run from the service to a main switchboard and from there sub-feeders shall be provided to the motors and power and light distributing panels. Where there is only one service feeder, separate power and light feeders from the service entrance to the switchboard will not be required. From the power panels feeders shall be provided for large motors, and circuits from the light panels shall be run to the lighting outlets. Large heating elements shall be supplied by separate feeders from the power or light service as directed by the local public service company. Independent feeders shall be furnished for X-ray equipment.

(4) *Switchboard and power panels.* Circuit breakers or dead front type fused switches shall be installed to protect all feeders and sub-feeders. Motor shall be connected with breakers or fused switches.

(5) *Light panels.* Light panels shall be provided on each floor for the lighting circuits on that floor. Light panels shall be located near the load centers not more than 100′ 0″ from the farthest outlet.

(6) *Lighting outlets and switches.* All occupied areas shall be adequately lighted as required by duties performed in the space. Patients' bedrooms shall have as a minimum general illumination a night light and a patient's reading light. The outlets for general illumination and night lights shall be switched at the door. Switches in patients' rooms shall be of an approved mercury or equal, quiet operating type, or shall be placed in the corridor. Operating and delivery rooms shall have general illumination and special lights for the tables each on an independent circuit.

(7) *Equipment and installation in hazardous areas.* All electrical equipment and installation in operating, delivery, emergency, anesthesia storage and anesthesia induction rooms shall comply with National Fire Protection Association Code NFPA No. 56.

(8) *X-ray film illuminator.* Each operating room shall have a film illuminator.

(9) *Receptacles (convenience outlets).* Receptacles suitable for the service shall be located where plug-in service is required. Each bedroom shall not have less than two duplex receptacles, with at least one receptacle near the head of each bed. Polarized receptacles for special equipment shall be installed where required. Grounding type receptacles shall be installed not more than 50 feet apart in all nursing unit corridors. At least three three-pole grounded receptacles shall be installed in each operating, delivery, and emergency room.

(10) *Emergency lighting.* Emergency lighting shall be provided for exits, stairs, and patient corridors which shall be supplied by an emergency service, an automatic emergency generator or battery with automatic switch. Operating and delivery room lights shall be connected with an automatic transfer switch which will throw the circuits to the emergency service in case of current failure. Should an emergency service from the street be used, it shall be from a generating plant independent of that used for the main electric service.

(11) *Nurses call.* Each patient shall be furnished with a nurses' call station which will register a call from the patient; at the corridor door, at the nurses' station, and in each pantry and utility room of the nursing unit. A duplex unit may be used for 2 patients. Indicating lights shall be provided at each station where there are more than two beds in a room. Nurses' call stations will not be required for beds which are used only for children. Operating, delivery and recovery rooms, rooms used for children and nurseries shall have one emergency call each for use of the nurse. Wiring for nurses' call systems shall be installed in conduit.

(12) *Lighting fixtures.* Lighting fixtures shall be furnished for all lighting outlets. They shall be of a type suitable for the space. Should ceiling lights be used in patients' rooms, they shall be of a type which does not shine in the patients' eyes.

(13) *Fire alarms.* A manually operated fire alarm system shall be installed in each hospital, rehabilitation facility, and nursing home. It is recommended that this system be coded and electrically supervised. The alarm system shall comply with applicable local codes, or in the absence of such codes the NFPA 101—"Building Exits Code" and NFPA 72—"Standard for Proprietary Protective Signalling Systems" shall apply.

(14) *Clocks.* A clock system is desirable but not mandatory. Where provided, it should be complete with master clock and time indicator clocks in administrative offices, main lobby, and work areas as required.

(15) *Tests.* Lighting fixtures, all wiring and equipment shall be tested to show that it is free from grounds, shorts, or open circuits, that motors rotate correctly and that all equipment operates as specified.

(16) *Health centers, nurses' residences, laboratories, diagnostic or treatment facilities, and separate rehabilitation facilities for outpatients only.* Emergency lighting and call systems will not be required in health centers, nurses' residences, laboratories, diagnostic or treatment facilities and separate rehabil-

itation facilities for outpatients only except as provided for by local and State codes.

(17) *Mental hospitals.* (i) No lighting fixtures, switches, receptacles or electrical equipment shall be accessible to mental patients.

(ii) Nurses' call systems will not be required in areas occupied by mental patients.

(d) *Elevators and dumbwaiters*—(1) *Codes.* Elevators and dumbwaiters shall comply with all local and State codes, American Standard Safety Code for Elevators, Dumbwaiters, and Escalators (A17.1—1960), The National Board of Fire Underwriters, the National Electrical Code, and the minimum general standards as set forth herein.

(2) *Number of elevators.* (i) Any hospital, rehabilitation facility, or nursing home with patients on one or more floors above the first or where the operating or delivery rooms are above the first floor shall have at least one electric motor driven hospital-type elevator with car inside dimensions of at least 5'0" wide by 7'6" deep and door clear opening of not less than 3'8". Hospitals, rehabilitation facilities, or nursing homes with a bed capacity of from 60 to 200 above the first floor shall have not less than two such elevators. Hospitals with a bed capacity of from 201 to 350 above the first floor shall have not less than three such elevators. Elevators provided in addition to these minimums may be of any type considered suitable.

(ii) Elevator cars shall be constructed of all noncombustible material.

(3) *Controls.* Elevators shall have either generator field control or multivoltage control where speed is greater than 150 feet per minute. Elevators with speeds of more than 350 feet per minute shall be the gearless type. Elevators shall have automatic leveling of the two-way automatic maintaining type with accuracy within plus or minus ½".

(4) *Operation.* Elevators for which operators will not be regularly employed shall be equipped for automatic operation and shall have car switch to permit operation by an attendant during special occasions, or to bypass registered calls in emergencies.

(5) *Dumbwaiters.* Cars of electrically operated dumbwaiters shall be of steel. When travel does not exceed 50 feet, the minimum speed shall be 50 feet per minute; for travel of more than 50 feet, the minimum speed shall be 100 feet per minute. When speed exceeds 100 feet per minute, provision shall be made for a reduced stopping speed of not more than 50 feet per minute. Operation shall be by momentary contact pushbutton.

(6) *Tests.* Elevator and dumbwaiter machines shall be tested for speed and load with and without loads in both directions. Elevators shall be tested for leveling and shall be given overspeed tests as specified in A17.1—1960 American Standard Safety Code for Elevators, Dumbwaiters, and Escalators.

(e) *Refrigeration* — (1) *Codes.* (i) The refrigerators and refrigerating systems shall be furnished and installed to meet all requirements of the local and State codes and regulations, the National Board of Fire Underwriters, and the minimum general standards as set forth in this paragraph.

(ii) This section shall include portable refrigerators, built-in refrigerators, garbage refrigeration, ice-making and refrigerator equipment, morgue boxes.

(2) *Box construction.* (i) Boxes shall be insulated with waterproof, nonabsorbent, verminproof insulation. For the portable boxes, the insulation in the doors and walls shall be equal to 2-inch cork. Outer walls and doors of the walk-in boxes shall have insulation equal to 4-inch cork. Boxes shall be lined with non-absorbent sanitary material which will withstand the heavy use to which it will be subjected and constructed so as to be easily cleaned.

(ii) Refrigerators of adequate capacity shall be provided in all kitchens and other preparation centers, where perishable foods will be stored.

(iii) In the main kitchen, a minimum of two separate sections or boxes shall be provided, one for meats and dairy products, and one for general storage.

(3) *Refrigerator machines.* (i) Toxic, "irritant", or inflammable refrigerants shall not be used in refrigerator machines located in buildings occupied by patients.

(ii) The compressors and evaporators shall have sufficient capacity to maintain temperatures of 35° F. in the meat and dairy boxes, and 40° F. in the general storage boxes when the boxes are being used normally. Compressors shall be automatically controlled.

(4) *Tests.* Compressors, piping, and evaporators shall be tested for leaks and capacity.

(f) *Kitchen equipment*—(1) *Codes.* The kitchen equipment shall be so constructed and installed as to comply with the applicable local and State laws, codes, regulations and requirements, and with the applicable sanitation standards of Public Health Bulletin No. 37, entitled "Ordinance and Code Regulating Eating and Drinking Establishments, recommended by the U.S. Public Health Service," and with the minimum general standards set forth in this section.

(2) *Equipment.* (i) The equipment shall be adequate and so arranged as to enable the storage, preparation, cooking, and serving of food and drink to patients, staff and employees to be done in an efficient and sanitary manner. The equipment shall be selected and arranged in accordance with the types of food service adopted for the hospital.

(ii) Adequate cabinets or other facilities shall be provided for the storage or display of food, drink, and utensils, and shall be designed so as to protect them from contamination by insects, rodents, other vermin, splash, dust, and overhead leakage.

(iii) Adequate facilities shall be provided for the washing and bactericidal treatment of utensils used for eating, drinking, and food preparation. Where utensils are to be washed by hand, there shall be provided an adequate sink equipped with heating facilities to maintain a water temperature of at least 170° F. in the bactericidal treatment compartment throughout the dishwashing period. Where utensils are to be washed by machine, there shall be provided facilities for supplying to the dishwashing machine an adequate supply of rinse water at 170° F., measured at the rinse sprays, throughout the dishwashing period. All tables, shelves, counters, display cases, stoves, hoods, and similar equipment shall be so constructed as to be easily cleaned and shall be free of inaccessible spaces providing harborage for vermin. Where there is not sufficient space between equipment and the walls or floor to permit easy cleaning, the equipment shall be set tight against the walls or floor and the joint properly sealed. All utensils and equipment surfaces with which food or drink comes in contact shall be of smooth, not readily corrodible material free of breaks, corrosion, open seams or cracks, chipped places, and V-type threads. All surfaces with which food or drink comes in contact shall be easily accessible for inspection and cleaning and shall be self-draining, and shall not contain or be plated with cadmium or lead. All water supply and waste line connections to kitchen equipment shall be installed in compliance with the plumbing requirements of these standards.

(g) *Laundry*—(1) *Codes.* (i) The laundry equipment shall be designed and installed to comply with all local and State codes and laws, and the requirements of the State Department of Health and the minimum general standards as set forth in this section.

(ii) Where laundries are provided they shall be complete with washers, extractors, tumblers, ironer and presses which shall be provided with all safety appliances and sanitary requirements.

(2) *Washers.* There shall be at least two washers which shall have a combined rated capacity of not less than 12 pounds of dry laundry per day per patient bed, when operating not more than 40 hours per week.

(3) *Ironer.* Provide one flat work ironer with a capacity equal to 70 percent of the washer capacity when operating 40 hours per week.

(4) *Extractor.* There shall be not less than one extractor with a daily capacity equal to that given above for the washers and for hospitals with more than 100 beds there shall be two extractors.

(5) *Tumbler.* Provide a minimum of one tumbler with a rated capacity equal to 25 percent of the washers, when operating 40 hours per week.

(6) *Presses.* For finished work provide not less than 1 nurses uniform unit consisting of 3 presses or one utility unit with 2 presses which shall be increased for the larger hospitals.

(7) *Wash tubs.* Provide 2 wash tubs.

(8) *Mental and tuberculosis hospitals.* The capacity per bed of laundry equipment for tuberculosis and mental hospitals shall be 40 percent of that required for general hospitals.

### § 53.164 Preparation of plans, specifications and estimates.

(a) *General.* (1) The requirements contained in this section have been established for the guidance of the applicant and the architect to provide a standard method of preparation of drawings, specifications and estimates.

(2) It is expected that the applicant will find it advantageous to submit the material through the State Agency in three stages for its recommendation and approval. However, the applicant may, if he so elects, combine the first two stages.

(3) If the data required under stage 3 is available, it may be submitted without the drawings required under stages one and two.

(4) Copies of the final working drawings and specifications previously submitted under stage three will be submitted for approval with the formal application for the project. The requirements for the material submitted at each of the three stages are as follows:

(b) *Drawings and specifications*—(1) *(First stage) program and schematic plans*—(i) Program.

(a) List in outline form the rooms or spaces to be included in each department, explaining the functions or services to be provided in each, indicating the approximate size, the number of personnel and the kind of equipment or furniture it will contain. Note any special or unusual services or equipment to be included in the facility.

(b) If a hospital project, submit a schedule showing the total number of beds, their distribution in room and in the services, such as medicine, surgery, obstetrics, etc.

(ii) Schematic plans: Single line drawings of each floor showing the relationship of the various departments or services to each other and the room arrangement in each department. The name of each room should be noted. The proposed roads and walks, service and entrance courts, parking and orientation may be shown on either a small plot plan or the 1st floor plan. Simple vertical space diagram should be submitted at this stage.

(iii) Construction outline: A brief description of the type of construction.

(iv) Description of site: If a survey has been made, a plat shall be submitted at this time, if not, it should be submitted with the Preliminary Plans (Second Stage). In lieu of a plat of the survey, a description of the site may be submitted at this time. This shall note the general characteristics of the site, easement, availability of electricity, water and sewer lines, main roadway approaches, direction of prevailing breezes, orientation, etc. A map indicating location of the hospital in its geographic area with particular reference to recommendation given under § 53.143 should be submitted.

(v) Preliminary cost estimates.

(2) *(Second stage) preliminary plans, elevations, and outline specifications.* (i) (a) Development of the preliminary sketch plans indicating in more detail the assignment of all spaces, size of areas and rooms, and including single line layouts of air conditioning and ventilation ducts, heating and steam mains, hot and cold water systems, and soil and waste lines. Indicate in outline the fixed and movable equipment and furniture.

(b) The plans shall be drawn at a scale sufficiently large to clearly present the proposed design.

(c) The total floor area shall be computed and shown on the drawings.

(d) The drawings shall include a plan for each floor, including the basement or ground floor, roof plan, approach plan showing roads, parking areas, sidewalks, etc., elevations of all facades, and sections through the building. Mechanical drawings shall show (1) single line layouts of all air conditioning and ventilation duct systems, (2) layout of heating, chilled water and steam mains, (3) location of heating, ventilation and cooling units, (4) layout of cold and hot water supply and soil and waste systems, (5) layouts of oxygen, nitrous oxide, suction and special piping systems, (6) scale layout of boiler and other equipment rooms, including main pieces of equipment, (7) riser diagrams for the enumerated systems shall be shown for multistory construction.

(ii) Outline specifications shall provide a general description of the construction, including interior finishes; acoustical material, its extent and type; extent of conductive floor covering. Description of the type of pipe and fittings for all plumbing, heating, ventilation and air conditioning systems. Description of the air conditioning, heating and ventilation systems and their controls. Description of the steam heated equipment such as sterilizers, kitchen and laundry equipment, and the type of elevators.

(iii) Revised cost estimates.

(3) *(Third stage) working drawings and specifications.* (i) All working drawings shall be well prepared so that clear and distinct prints may be obtained; accurately dimensioned and include all necessary explanatory notes, schedules and legends. Working drawings shall be complete and adequate for contract purposes. Separate drawings shall be prepared for each of the following branches of work:

Architectural, structural, mechanical, electrical. They shall include or contain the following:

(a) *Architectural drawings.* (1) Approach plan showing all new topography, newly established levels and grades, existing structures on the site (if any), new buildings and structures, roadways, walks, and the extent of the areas to be seeded. All structures and improvements which are to be removed under the construction contract shall be shown. A print of the survey shall be included with the working drawings for the information of bidders only. The survey shall not be made a contract drawing.

(2) Plan of each floor and roof.

(3) Elevations of each facade.

(4) Sections through building.

(5) Scale and full size details as necessary; scale details at one and one-half (1½) inches to the foot may be necessary to properly indicate portions of the work. Full size details may be prepared after award of construction contract.

(6) Schedule of finishes.

(b) *Equipment drawings.* Large scale drawings of typical and special rooms indicating all fixed equipment and major items of furniture and movable equipment. The furniture and movable equipment will not be included in the construction contract but should be indicated by dotted lines.

(c) *Structural drawings.* (1) Plans for foundations, floors, roofs and all intermediate levels shall show a complete design with sizes, sections, and the relative location of the various members. Schedule of beams, girders and columns.

(2) Floor levels, column centers, and offsets shall be dimensioned.

(3) Special openings and pipe sleeves shall be dimensioned or otherwise noted for easy reference.

(4) Details of all special connections, assemblies and expansion joints shall be given.

(5) Notes on design data shall include the name of the governing building code, values of allowable unit stresses, assumed live loads, wind loads, earthquake load, and soil-bearing pressures.

(6) For special structures, a stress sheet shall be incorporated in the drawings showing:

(i) Outline of the structure.

(ii) All load assumptions used.

(iii) Stresses and bending moments separately for each kind of loading.

(iv) Maximum stress and/or bending moment for which each member is designed, when not readily apparent from (iii).

(v) Horizontal and vertical reactions at column bases.

(d) *Mechanical drawings.* These drawings with specifications shall show the complete heating, steam piping and ventilation systems; plumbing, drainage and stand pipe systems; and laundry.

(1) *Heating, steam piping and ventilation.*

(i) Radiators and steam heated equipment, such as sterilizers, warmers and steam tables.

(ii) Heating and steam mains and branches with pipe sizes.

(iii) Diagram of heating and steam risers with pipe sizes.

(iv) Sizes, types and heating surfaces of boilers, furnaces, with stokers and oil burners, if any.

(v) Pumps, tanks, boiler breeching and piping and boiler room accessories.

(vi) Air conditioning systems with refrigerators, water and refrigerant piping, and ducts.

(vii) Exhaust and supply ventilating systems with steam connections and piping.

(2) *Plumbing, drainage and stand pipe systems.* (i) Size and elevation of: Street sewer, house sewer, house drains, street water main and water service into the building.

(ii) Location and size of soil, waste, and vent stacks with connections to house drains, fixtures and equipment.

(iii) Size and location of hot, cold and circulating mains, branches and risers from the service entrance and tanks.

(iv) Riser diagram to show all plumbing stacks with vents, water risers and fixture connections.

(v) Gas, oxygen and special connections.

(vi) Standpipe system.

(vii) Plumbing fixtures and fixtures which require water and drain connections.

(3) *Elevators and dumbwaiters.* Shaft details and dimensions, size car platform and doors; travel, pit and machine room.

(4) Kitchens, laundry, refrigeration and laboratories shall be detailed at a satisfactory scale to show the location, size and connection of all fixed and movable equipment.

(e) *Electrical drawings.* Drawings shall show all electrical wirings, outlets, and equipment which require electrical connections.

(1) Electrical service entrance with service switches, service feeders to the public service feeders and characteristics of the light and power current. Transformers and their connections if located in the building, shall be shown.

(2) Plan and diagram showing main switchboard, power panels, light panels and equipment. Feeder and conduit sizes shall be shown with schedule of feeder breakers or switches.

(3) Light outlets, receptacles, switches, power outlets and circuits.

(4) Telephone layout showing service entrance, telephone switchboard, strip boxes, telephone outlets and branch conduits as approved by the Telephone Co. Where public telephones are used for inter-communication, provide separate room and conduits for racks and automatic switching equipment as required by the Telephone Company.

(5) Nurses' call systems with outlets for beds, duty stations, door signal lights, annunciators and wiring diagrams.

(6) Doctors' call and doctors' in-and-out systems with all equipment wiring, if provided.

(7) Fire alarm system with stations, gongs, control board and wiring diagrams.

(8) Emergency lighting system with outlets, transfer switch, source of supply, feeders and circuits.

(f) *Additions to existing projects.* (1) Procedures and requirements for working drawings and specifications to be followed and in addition the following information shall be submitted:

(i) Type of activities within the existing building and distribution of existing beds, etc.

(ii) Type of construction of existing building and number of stories high.

(iii) Plans and details showing attachment of new construction to the existing structure and mechanical systems.

(2) Specifications shall supplement the drawings and shall comply with the following:

(i) The specifications shall fully describe, except where fully indicated and described on the drawings, the materials, workmanship, the kind, sizes, capacities, finishes and other characteristics of all materials, products, articles and devices.

(ii) The specifications shall include:

(*i*) Cover or title sheet.

(*ii*) Index.

(*iii*) Invitation for bids.

(*iv*) General conditions.

(*v*) Wage schedule, section 2, Labor Standards and Kickback Regulations.

(*vi*) General requirements.

(*vii*) Sections describing materials and workmanship in detail for each class of work.

(*viii*) Form of bid bond.

(*ix*) Bid form.

(*x*) Form of agreement.

(*xi*) Performance and payment bond forms.

(iii) In order to obtain a standard procedure Standard Specification Forms will be furnished to the State Agency as a guide to the Architect.

(3) Estimates shall show in convenient form and detail the probable total cost of the work to be performed under the contract for construction of new buildings, expansion, remodeling and alteration of existing buildings including provision of fixed equipment contemplated by plans and specifications.

§ 53.165 Equipment.

(a) *General.* Equipment necessary for the functioning of the facility as planned shall be provided in the kind and to the extent required to perform the desired service. The necessary equipment shall be included in the cost of the project and is considered an essential part of the project.

(b) *Classification of equipment.* All equipment shall be classified in three groups as indicated below; the basis of classification being the usual methods of purchasing the equipment and suggested accounting practices in regard to depreciation.

(1) *Group I: Built-in equipment usually included in construction contracts.* Hospital cabinets and counters, laboratory and pharmacy cabinets, X-ray darkroom equipment, cubicle curtain equipment, shades and venetian blinds and any other built-in equipment, including items which have been included previously under §§ 53.144 through 53.164, such as: Kitchen equipment, laundry chutes, elevators, dumbwaiters, boilers, incinerators, refrigerating equipment, sterilizing equipment, surgical lighting, dental units and chairs, autopsy tables and the like.

(2) *Group II: Depreciable equipment of five years' life or more normally purchased through other than construction contracts.* Large items of furniture and equipment having a reasonably fixed location in the building but capable of being moved. Examples: Bedroom and office furniture, anesthesia apparatus, operating and obstetrical tables, radiographic and fluoroscopic units, basal metabolism apparatus and oxygen tents, dental amalgamators and casting machines, centrifuges, microscopes and balances, wheeled equipment and the like.

(3) *Group III: Non-depreciable equipment of less than five years' life normally purchased through other than construction contract.* Small items of low unit cost and suited to storeroom control. Examples: Chinaware, silverware, kitchen utensils, waste baskets, bedpans, dressing jars, catheters, surgical instruments, bed linens, blankets, and the like.

(c) *Responsibility of applicant.* (1) It shall be the responsibility of the applicant to select and purchase all necessary equipment for the complete functioning of all services included in the project in accordance with these standards and any further standards prescribed by the State Agency.

(2) It is essential that the equipment shall be properly apportioned and budgeted to the various services of the facility so that unduly expensive or elaborate equipment is not provided for some services of the project, necessitating the use of cheap and inadequate equipment for other services.

(3) As soon as possible after the award of the construction contract, the applicant shall submit to the Surgeon General through the State Agency for approval a complete list in triplicate of all proposed Groups II and III equipment, including itemized estimate of cost.

[F.R. Doc. 64-13154; Filed, Dec. 28, 1964; 8:45 a.m.]

# Title 7—AGRICULTURE

## Chapter I—Agricultural Marketing Service (Standards, Inspections, Marketing Practices), Department of Agriculture

## PART 81—REGULATIONS UNDER THE POULTRY PRODUCTS INSPECTION ACT

### Notice of Postponement of Effective Date of Certain Amendments of Regulations With Respect to Poultry Soups

*Statement of considerations.* On July 7, 1964 (29 F.R. 8456) there was published in the FEDERAL REGISTER a document amending, inter alia, §§ 81.134 and 81.208 of the regulations (7 CFR 81.134, 81.208) under the Poultry Products Inspection Act, as amended (21 U.S.C. 451 et seq.). The document provides that the amendments shall become effective on January 1, 1965. In a court action instituted by one of the affected processors of dehydrated poultry soups, the United States District Court for the District of New Jersey has decided to issue a preliminary injunction restraining, pending final decision in that case, the enforcement of the provisions of §§ 81.134 and 81.208 of the regulations, as so amended, with respect to certain dehydrated soup mixes prepared by such processor. In view of the imminence of such injunction, in order to afford equitable treatment for other poultry soup processors and to avoid confusion in the affected industry, it is deemed necessary to postpone temporarily the effective date of said amendments with respect to all consumer-packaged soups, whether dehydrated, canned, or otherwise prepared, containing poultry ingredients.

*Regulatory action.* Therefore, pursuant to said Poultry Products Inspection Act, the effective date of the provisions of §§ 81.134 and 81.208, as set forth in the amendments published on July 7, 1964, insofar as they relate to consumer-packaged soups containing poultry ingredients, is postponed until February 1, 1965. During such period of postponement, the provisions of the introductory paragraph and paragraph (a) of § 81.208 as published August 15, 1962 (27 F.R. 8098, 7 CFR 81.208 (Supp. 1963)) shall continue in effect and be applicable to consumer-packaged soups containing poultry ingredients. These provisions are as follows:

§ 81.208 **Exemption of certain human food products which contain poultry.**

The human food products listed in this section, which consist in part of edible parts of poultry, are hereby exempted from classification as poultry products under the Act: *Provided,* That the poultry used in such products is federally inspected or inspected under an approved foreign inspection system and the other conditions set forth herein are met.

(a) Any food product (in a consumer package) not otherwise provided for in this section, which contains less than 10 percent cooked poultry skins, giblets, fat or meat (deboned white or dark poultry meat, or both), separately or in any combination: *Provided,* That it contains less than 2 percent poultry meat. The aforesaid percentages of ingredients shall be computed on the basis of the moist, deboned, cooked poultry in the ready-to-serve product when prepared in accordance with the serving directions on the consumer package.

Section 81.134 of the presently effective regulations (23 F.R. 732, 7 CFR 81.134), which was amended by the July 7, 1964 amendments to include, interalia, minimum meat content specifications for soups containing poultry ingredients, does not now contain such specifications or other provisions with respect to poultry soups. Therefore postponement of the effective date of the July 7, 1964 amendment of § 81.134 with respect to consumer-packaged poultry soups will relieve such products from any requirements under the provisions of § 81.134 during the period of postponement.

The amendments of sections 81.134 and 81.208 with respect to all other products within their provisions, will become effective on January 1, 1965. No change is made concerning the amendments of the other sections (§§ 81.1 and 81.6) of the regulations contained in the document published on July 7, 1964, and they will become effective on January 1, 1965.

This action is necessary in order to afford equitable treatment to all poultry soup processors in view of the imminence of a preliminary injunction on behalf of one processor, and in order to accomplish its purpose it must be made effective on January 1, 1965, when the July 7, 1964 amendments of the regulations are scheduled to become effective. Therefore under section 4 of the Administrative Procedure Act (5 U.S.C. 1003) it is found upon good cause that notice of rule-making and other public procedure with respect to this action are impracticable and good cause is found for making it effective less than 30 days after publication hereof in the FEDERAL REGISTER.

(Sec. 14, 71 Stat. 447, 21 U.S.C. 463; 29 F.R. 16210; 28 F.R. 496, as amended)

This action shall become effective on January 1, 1965.

Done at Washington, D.C., this 23d day of December 1964.

G. R. GRANGE,
*Deputy Administrator,*
*Marketing Services.*

## Chapter X—Agricultural Marketing Service (Marketing Agreements and Orders; Milk), Department of Agriculture

[Milk Order No. 47]

## PART 1047—MILK IN THE FORT WAYNE, INDIANA, MARKETING AREA

### Order Amending Order

§ 1047.0 **Findings and determinations.**

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing records.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), public hearings were held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Fort Wayne, Indiana, marketing area. Upon the basis of the evidence introduced at such hearings and the records thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

(b) *Additional findings.* (1) It is necessary in the public interest to make this order amending the order effective not later than January 1, 1965. Any delay beyond that date would tend to disrupt the orderly marketing of milk in the marketing area.

(2) The provisions of the said order are known to handlers. The recommended decision of the Deputy Administrator, Regulatory Programs, U.S. Department of Agriculture, concerning the handling of milk in the Fort Wayne and Indianapolis, Indiana, marketing areas was issued November 17, 1964 (29 F.R. 15647; F.R. Doc. 64-11908), and the recommended decision of the Administrator, Agricultural Marketing Service, U.S. Department of Agriculture, concerning the handling of milk in the Fort Wayne, Indiana, marketing area was issued November 13, 1964 (29 F.R. 15443; F.R. Doc. 64-11776). The decisions of the Assistant Secretary containing amendment provisions of this order were issued: December 9, 1964 (29 F.R. 17041; F.R. Doc. 64-12815), with respect to the Fort Wayne order only, and December 11, 1964 (29 F.R. 17816; F.R. Doc. 64-12880), with respect to the Indianapolis and Fort Wayne orders. The changes effected by this order will not require extensive preparation or substantial alteration in method of operation for handlers. In view of the foregoing, it is hereby found and determined that good cause exists for making this order amending the order effective January 1, 1965, and that it would be contrary to the public interest to delay the effective date of this amendment for 30 days after its publication in the FEDERAL REGISTER. (Sec. 4(c), Administrative Procedure Act, 5 U.S.C. 1001-1011.)

(c) *Determinations.* It is hereby determined that:

(1) The refusal or failure of handlers (excluding cooperative associations specified in section 8c(9) of the Act) of more than 50 percent of the milk, which is marketed within the marketing area, to sign a proposed marketing agreement, tends to prevent the effectuation of the declared policy of the Act;

(2) The issuance of this order, amending the order, is the only practical means pursuant to the declared policy of the Act of advancing the interests of producers as defined in the order as hereby amended; and

(3) The issuance of the order amending the order is approved or favored by at least two-thirds of the producers who during the determined representative period were engaged in the production of milk for sale in the marketing area.

*Order relative to handling.*—It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Fort Wayne, Indiana, marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended and as hereby amended, as follows:

1. Section 1047.16 is revised to read as follows:

§ 1047.16 **Fluid milk product.**

Fluid milk product means milk, skim milk, buttermilk, flavored milk, flavored

milk drinks, concentrated milk disposed of for fluid consumption (other than in hermetically sealed cans), cream, sour cream and sour cream products labeled Grade A, and any mixture of cream and milk or skim milk (except frozen cream, aerated cream products, eggnog, milk shake mixes, ice cream, ice cream mixes, other frozen desserts and sterilized products packaged in hermetically sealed containers).

2. In § 1047.51, the introductory text and paragraph (a) are revised to read as follows:

**§ 1047.51 Class prices.**

Subject to the provisions of §§ 1047.52 and 1047.53, the minimum class prices per hundredweight of milk for the month shall be as follows:

(a) *Class I milk price.* The price for Class I milk shall be the basic formula price for the preceding month plus $1.20, and plus or minus a "supply-demand adjustment" of not more than 38 cents computed as follows:

(1) Divide the aggregate pounds of producer milk in Class I milk (excluding inventory and "overage" and adjusted to eliminate duplications due to interhandler and intermarket plant transfers) under this part and under Part 1049 of this chapter (Indianapolis, Indiana, order) for the second, third and fourth months preceding by the aggregate pounds of producer milk receipts under such parts for the same months, multiplying the result by 100 and round to the nearest whole number. The result shall be known as the "current utilization percentage";

(2) For each full percentage point that the current utilization percentage is above the applicable maximum standard utilization percentage listed below increase the Class I price differential by two cents; and for each full percentage point that the current utilization percentage is below the applicable minimum standard utilization percentage listed below decrease such differential by two cents.

| Month for which pricing is being computed | Preceding months used in computation | Standard utilization percentages | |
|---|---|---|---|
| | | Minimum | Maximum |
| Jan. | Sept., Oct., Nov. | 79 | 82 |
| Feb. | Oct., Nov., Dec. | 78 | 81 |
| Mar. | Nov., Dec., Jan. | 77 | 80 |
| Apr. | Dec., Jan., Feb. | 76 | 79 |
| May | Jan., Feb., Mar. | 76 | 79 |
| June | Feb., Mar., Apr. | 73 | 76 |
| July | Mar., Apr., May | 69 | 72 |
| Aug. | Apr., May, June | 64 | 67 |
| Sept. | May, June, July | 62 | 65 |
| Oct. | June, July, Aug. | 64 | 67 |
| Nov. | July, Aug., Sept. | 68 | 71 |
| Dec. | Aug., Sept., Oct. | 75 | 78 |

**§ 1047.52 [Amended]**

3. In section 1047.52(a) the figure "0.125" is changed to "0.120".

(Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674)

Effective date: January 1, 1965.

Signed at Washington, D.C., on December 23, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

[F.R. Doc. 64–13380; Filed, Dec. 28, 1964; 8:49 a.m.]

[Milk Order No. 49]

## PART 1049—MILK IN THE INDIANAPOLIS, INDIANA, MARKETING AREA

### Order Amending Order

**§ 1049.0 Findings and determinations.**

The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon certain proposed amendments to the tentative marketing agreement and to the order regulating the handling of milk in the Indianapolis, Indiana, marketing area. Upon the basis of the evidence introduced at such hearing and the record thereof, it is found that:

(1) The said order as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

(2) The parity prices of milk, as determined pursuant to section 2 of the Act, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the said marketing area, and the minimum prices specified in the order as hereby amended, are such prices as will reflect the aforesaid factors, insure a sufficient quantity of pure and wholesome milk, and be in the public interest;

(3) The said order as hereby amended, regulates the handling of milk in the same manner as, and is applicable only to persons in the respective classes of industrial or commercial activity specified in, a marketing agreement upon which a hearing has been held.

(b) *Additional findings.* (1) It is necessary in the public interest to make this order amending the order effective not later than January 1, 1965. Any delay beyond that date would tend to disrupt the orderly marketing of milk in the marketing area.

(2) The provisions of the said order are known to handlers. The recommended decision of the Deputy Administrator, Regulatory Programs, was issued November 17, 1964, and the decision of the Assistant Secretary containing all amendment provisions of this order was issued December 11, 1964. The changes effected by this order will not require extensive preparation or substantial alteration in method of operation for handlers. In view of the foregoing, it is hereby found and determined that good cause exists for making this order amending the order effective January 1, 1965, and that it would be contrary to the public interest to delay the effective date of this order for 30 days after its publication in the FEDERAL REGISTER (Sec. 4(c), Administrative Procedure Act, 5 U.S.C. 1001–1011).

(c) *Determinations.* It is hereby determined that:

(1) The refusal or failure of handlers (excluding cooperative associations specified in section 8c(9) of the Act) of more than 50 percent of the milk, which is marketed within the marketing area, to sign a proposed marketing agreement, tends to prevent the effectuation of the declared policy of the Act;

(2) The issuance of this order, amending the order, is the only practical means pursuant to the declared policy of the Act of advancing the interests of producers as defined in the order as herein amended; and

(3) The issuance of the order amending the order is approved or favored by at least two-thirds of the producers who during the determined representative period were engaged in the production of milk for sale in the marketing area.

*Order relative to handling.*—It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Indianapolis, Indiana, marketing area shall be in conformity to and in compliance with the terms and conditions of the aforesaid order, as amended and as hereby amended, as follows:

In § 1049.51, the introductory text and paragraph (a) are revised to read as follows:

**§ 1049.51 Class prices.**

Subject to the provisions of §§ 1049.52 and 1049.53, the minimum class prices per hundredweight of milk for the month shall be as follows:

(a) *Class I milk price.* The price for Class I milk shall be the basic formula price for the preceding month plus $1.27, and plus or minus a "supply-demand adjustment" of not more than 38 cents computed as follows:

(1) Divide the aggregate pounds of producer milk in Class I (excluding inventory and "overage" and adjusted to eliminate duplications due to interhandler and intermarket plant transfers) under this part and under Part 1047 of this chapter (Fort Wayne, Indiana, order) for the second, third and fourth months preceding by the aggregate pounds of producer milk receipts under such parts for the same months, multiplying the result by 100 and round to the nearest whole number. The result shall be known as the "current utilization percentage";

(2) For each full percentage point that the current utilization percentage is above the applicable maximum standard utilization percentage listed below increase the Class I price differential by two cents; and for each full percentage point that the current utilization percentage is below the applicable minimum standard utilization percentage listed below decrease such differential by two cents.

| Month for which pricing is being computed | Preceding months used in computation | Standard utilization percentages | |
|---|---|---|---|
| | | Minimum | Maximum |
| Jan. | Sept., Oct., Nov. | 79 | 82 |
| Feb. | Oct., Nov., Dec. | 78 | 81 |
| Mar. | Nov., Dec., Jan. | 77 | 80 |
| Apr. | Dec., Jan., Feb. | 76 | 79 |
| May | Jan., Feb., Mar. | 76 | 79 |
| June | Feb., Mar., Apr. | 73 | 76 |

# Title 41—PUBLIC CONTRACTS AND PROPERTY MANAGEMENT

## Chapter 1—Federal Procurement Regulations

### PART 2—PROCUREMENT BY FORMAL ADVERTISING

### Subpart 1–2.2—Solicitation of Bids

BIDDERS MAILING LISTS

Sections 1–2.205–1 and 1–2.205–4 covering bidders mailing lists are amended to read as follows:

**§ 1–2.205–1 Establishment of lists.**

(b) All eligible and qualified concerns which have submitted bidders mailing list applications, or which the procuring activity considers capable of filling the requirements of a particular procurement, shall be placed on the appropriate bidders mailing list. Planned producers under the Industrial Readiness Planning Program shall be included on the bidders mailing list for their planned items. The issuance of notices to new prospective suppliers that they have been added to the bidders mailing list shall be handled in accordance with agency procedures. The issuance of a solicitation within a reasonable time may be considered appropriate notification. Those suppliers not meeting the criteria for placement on the bidders mailing list shall be notified accordingly.

**§ 1–2.205–4 Excessively long bidders mailing lists.**

(b) *Rotation of lists.* Mailing lists may be rotated, but to do so will require considerable judgment as to whether the size of the transaction justifies the rotation. Consideration also should be given as to whether time permits utilization of the pre-invitation notice (see § 1–2.205–4(c)). In rotating a list, the interests of small business (see § 1–1.702(b)(2)) and the existence of labor surplus areas (see § 1–1.802–2(e)) shall be considered. Whenever the rotation method is employed, the successful bidder on the previous procurement for the same or similar items and those prospective suppliers who have been added to the bidders mailing list since the last procurement shall be solicited, in addition to those bidders comprising that segment of the list selected for use in a particular procurement, except where such action would be precluded by use of the small business total set-aside portion.

(Sec. 205(c), 63 Stat. 390; 40 U.S.C. 486(c))

*Effective date.* This regulation is effective February 1, 1965, but may be observed earlier.

Dated: December 22, 1964.

LAWSON B. KNOTT, JR.,
*Acting Administrator of General Services.*

# Title 14—AERONAUTICS AND SPACE

## Chapter I—Federal Aviation Agency

[Docket No. 6107; Amdt. 39–17]

### PART 39—AIRWORTHINESS DIRECTIVE [NEW]

### Lockheed Aircraft Service Company Models 109C and 109D Flight Recorders

A proposal to amend Part 507 of the Regulations of the Administrator to include an airworthiness directive requiring the incorporation of certain modifications on Lockheed Aircraft Service Company Models 109C and 109D flight recorders was published in 29 F.R. 10523. Since the publication of that proposal, Part 507 has been recodified into Part 39 [New] of the Federal Aviation Regulations, effective November 20, 1964, therefore this amendment is being made to Part 39 [New].

Interested persons have been afforded an opportunity to participate in the making of the amendment. Comments received expressed concern on availability of parts and stringency of the compliance time. The Agency has determined that the necessary parts will be available in sufficient time to enable operators to comply with this AD within 8 months of its effective date, and the AD has been so changed. Objection in principle has also been raised to the use of this AD to impose design changes to an item meeting the requirements of a Technical Standard Order. The Agency appreciates this viewpoint but accident investigation has been hampered by the mechanical and fire damage sustained by flight recorders during accidents. Accordingly, preparation of proposed revisions to the minimum performance standards of the TSO for flight recorders has been undertaken and this AD is necessary to correct the condition of flight recorders presently installed.

In consideration of the foregoing, and pursuant to the authority delegated to me by the Administrator (25 F.R. 6489) § 39.13 of Part 39 [New] (14 CFR Part 39 [New]), is hereby amended by adding the following new airworthiness directive:

LOCKHEED AIRCRAFT SERVICE COMPANY. Applies to Lockheed Aircraft Service Company Models 109C and 109D flight recorders installed in aircraft as required by applicable operating rules.

Compliance required within eight months time in service after the effective date of this AD, unless already accomplished.

To improve the crash survivability of the flight record, modify the Lockheed Aircraft Service Company flight recorder Models 109C and 109D as follows:

(a) On Model 109C serial numbers up to and including Serial Number 882 and Model 109D up to and including Serial Number 135, replace the tape cassette with a Lockheed Aircraft Service Company stainless steel cassette P/N 4024570–1.

(b) On Model 109C up to and including Serial Number 889, saw off near the case the two latch clamps which are to the left of the pitot pressure line connector when facing the pitot pressure line connector. File the remaining edges of the clamp to conform to the contour of the recorder case and install Lockheed Aircraft Service Company clamping ring P/N 4024582–1.

This amendment shall become effective January 27, 1965.

(Secs. 313(a), 601, 603; 72 Stat. 752, 775, 776; 49 U.S.C. 1354(a), 1421, 1423)

Issued in Washington, D.C., on December 21, 1964.

G. S. MOORE,
*Director, Flight Standards Service.*

[F.R. Doc. 64–13364; Filed, Dec. 28, 1964; 8:50 a.m.]

[Airspace Docket No. 64-CE-21]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Revocation of Federal Airway and Reporting Point

On October 3, 1964, a Notice of Proposed Rule Making was published in the FEDERAL REGISTER (29 F.R. 13611) stating that the Federal Aviation Agency was considering amendments to Part 71 [New] of the Federal Aviation Regulations which would revoke Blue Federal airway No. 9 from Duluth, Minn., to the United States-Canada International Border, and which would revoke the Duluth radio beacon as a reporting point associated with Blue 9.

Interested persons were afforded an opportunity to participate in the proposed rule making through submission of comments. All comments received were favorable.

In consideration of the foregoing, Part 71 [New] of the Federal Aviation Regulations is amended, effective 0001 e.s.t., March 4, 1965, as hereinafter set forth.

1. In § 71.109 (29 F.R. 17507), Blue Federal airway No. 9 is revoked.

2. In § 71.203 (29 F.R. 17711), "Duluth, Minn., RBN" is deleted.

These amendments are made under the authority of section 307(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1348).

Issued in Washington, D.C., on December 21, 1964.

H. B. HELSTROM,
*Acting Chief, Airspace Regulations and Procedures Division.*

[F.R. Doc. 64-13332; Filed, Dec. 28, 1964; 8:46 a.m.]

[Airspace Docket No. 64-SO-18]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Alteration of Controlled Airspace

On November 20, 1964, Federal Register Document No. 64-11852 was published in the FEDERAL REGISTER (29 F.R. 15568) altering the alinement of Victor 18 between Augusta, Ga. and Charleston, S.C., and designating an S alternate, effective January 7, 1965. Section 71.7 provides that unless otherwise designated, the airspace between a segment of a main VOR Federal airway and its associated alternate segments is controlled airspace. It was not intended, however, that the airspace between the realined segment of Victor 18 and its associated S alternate be designated as controlled airspace, therefore, this action excludes this encompassed airspace.

Since this alteration is relaxatory in nature, it may be made effective immediately without notice or public procedure thereon, and the original effective date of the rule may be retained.

In consideration of the foregoing, effective immediately, Federal Register Document No. 64-11852 is amended as follows:

In paragraph 1.a. "Allendale." is deleted and "Allendale, excluding the airspace between the main and this alternate airway." is substituted therefor.

This amendment is made under the authority of section 307(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1348).

Issued in Washington, D.C., on December 18, 1964.

DANIEL E. BARROW,
*Chief, Airspace Regulations and Procedures Division.*

[F.R. Doc. 64-13333; Filed, Dec. 28, 1964; 8:47 a.m.]

[Airspace Docket No. 64-WA-87]

## PART 71—DESIGNATION OF FEDERAL AIRWAYS, CONTROLLED AIRSPACE, AND REPORTING POINTS [NEW]

### Alteration of Reporting Point

The purpose of this amendment to Part 71 [New] of the Federal Aviation Regulations is to redesignate the Flint Stone, Md., Intersection as a compulsory low altitude reporting point.

The Flint Stone Intersection is a compulsory low altitude reporting point of VOR Federal airways Nos. 8 and 268 and is presently described as the intersection of the Grantsville, Md. 086° and Martinsburg, W. Va. 297° radials. Redesignation of the Flint Stone Intersection via the Martinsburg VORTAC 297° and St. Thomas, Pa. 239° radials would increase the angular divergence at the intersection, thereby improving holding procedure capabilities.

Since this amendment is procedural in nature and does not alter the geographical location of the intersection, notice and public procedure hereon are unnecessary.

In consideration of the foregoing, Part 71 [New] of the Federal Aviation Regulations is amended, effective 0001 e.s.t., March 4, 1965, as hereinafter set forth.

In § 71.203 (29 F.R. 17711), the Flint Stone INT is amended to read as follows:

Flint Stone INT: INT of St. Thomas, Pa., 239°, Martinsburg, W. Va., 297° radials.

This amendment is made under the authority of section 307(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1348).

Issued in Washington, D.C., on December 18, 1964.

DANIEL E. BARROW,
*Chief, Airspace Regulations and Procedures Division.*

[F.R. Doc. 64-13334; Filed, Dec. 28, 1964; 8:47 a.m.]

[Docket No. 6396; Amdt. 135-1]

## PART 135—AIR TAXI OPERATORS AND COMMERCIAL OPERATORS OF SMALL AIRCRAFT [NEW]

### Extension of Compliance Date for Requirement of Alternate Source of Static Pressure

The purpose of this amendment is to extend for six months the compliance date for § 135.155(e) of Part 135 [New] of the Federal Aviation Regulations. This requirement, effective September 7, 1964, provides that for IFR operations with passengers under this Part an airplane must be equipped with an alternate source of static pressure for the altimeter and the airspeed and vertical speed indicators.

Many small airplanes used in air taxi and commercial operations are not equipped with an alternate static pressure source. This was not required under the regulations that preceded Part 135 [New], but it was included as an emergency equipment requirement in proposed Part 47 of the Civil Air Regulations, the forerunner of Part 135 [New].

After adoption of Part 135 [New], a number of unanticipated problems arose with respect to acceptable methods of complying with § 135.155(e). Principally, these problems were concerned with installation and engineering for various types of aircraft, including the use of kits. At least one aircraft manufacturer is now developing a kit that, if approved and installed, would be an acceptable method of compliance with the alternate static source requirement. Additional time will be required to solve these problems. Therefore, pending their resolution, compliance with § 135.155(e) should not be required.

Since this amendment grants relief by extending the date for compliance with a requirement of the Federal Air Regulations, the Administrator finds that notice and public procedure hereon are not necessary, and this amendment may be made effective immediately.

In consideration of the foregoing, § 135.155(e) of Part 135 [New] of the Federal Aviation Regulations is amended, effective December 25, 1964, to read as follows:

§ 135.155 Equipment requirements: airplanes carrying passengers under IFR.

No person may operate an airplane under IFR, carrying passengers, unless it has—

* * * * *

(e) After March 6, 1965, an alternate source of static pressure for the altimeter and the airspeed and vertical speed indicators;

* * * * *

This amendment is made under the authority of sections 313(a) and 601-610 of the Federal Aviation Act of 1958 (49 U.S.C. 1354, 1421-1430).

Issued in Washington, D.C., on December 21, 1964.

N. E. HALABY,
*Administrator.*

[F.R. Doc. 64-13335; Filed, Dec. 28, 1964; 8:47 a.m.]

SUBCHAPTER F—AIR TRAFFIC AND GENERAL OPERATING RULES [NEW]

[Reg. Docket No. 6327; Amdt. 405]

## PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES [NEW]

### Miscellaneous Amendments

The amendments to the standard instrument approach procedures contained herein are adopted to become effective when indicated in order to promote safety. The amended procedures supersede the existing procedures of the same classification now in effect for the airports specified therein. For the convenience of the users, the complete procedure is republished in this amendment indicating the changes to the existing procedures.

As a situation exists which demands immediate action in the interests of safety in air commerce, I find that compliance with the notice and procedure provisions of the Administrative Procedure Act is impracticable and that good cause exists for making this amendment effective within less than 30 days from publication.

In view of the foregoing and pursuant to the authority delegated to me by the Administrator (24 F.R. 5662), Part 97 [New] (14 CFR Part 97 [New]) is amended as follows:

1. By amending the following low or medium frequency range procedures prescribed in § 97.11(a) to read:

LFR STANDARD INSTRUMENT APPROACH PROCEDURES

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less | | More than 2-engine, more than 65 knots |
| | | | | | 65 knots or less | More than 65 knots | |
| Ephrata VOR | EH-LFR | Direct | 3500 | T-dn%<br>C-dn<br>S-dn-34<br>A-dn | 300-1<br>800-2<br>500-1<br>1000-3 | 300-1<br>800-2<br>500-1<br>1000-3 | 200-½<br>800-2<br>500-1<br>1000-3 |

Radar vectoring utilizing Larson RAPCON Radar authorized in accordance with approved patterns.
Procedure turn W side of crs, 157° Outbnd, 337° Inbnd, 3000' within 10 miles. Not authorized beyond 10 miles. (Nonstandard to avoid Larson AFB.)
Minimum altitude over facility on final approach crs, 2200'.
Crs and distance, facility to airport, 337°—3.4 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 3.4 miles after passing LFR, turn right, climb to 4000' on E crs Ephrata LFR within 20 miles or, when directed by ATC, turn right, return to EH-LFR, hold at 3000' on W crs, right turns, 1-minute holding pattern.
CAUTION: 2455' radio tower 3.0 miles W of airport.
%Takeoffs all runways: Climb direct to EPH VOR, thence continue climb on R-060 EPH VOR within 10 miles so as to cross EPH VOR at or above: Southwestbound V-2 and V-448, 2800'; westbound V-2N 2800'; all turns N side R-060.
LFR departures: Climb direct to EH LFR, thence continue climb on the S crs EH LFR within 10 miles so as to cross EH LFR at or above: Westbound, 2800'; all turns W side of S crs.
MSA within 25 miles of facility: NE—3500'; SE—3100'; SW—3600'; NW—4900'.
City, Ephrata; State, Wash.; Airport Name, Ephrata Municipal; Elev., 1272'; Fac. Class., BMRLZ; Ident., EH; Procedure No. 1, Amdt. 8; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 7; Dated, 15 Sept. 62

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| RDM VOR | RM LFR | Direct | 6000 | T-dn %<br>C-dn<br>S-dn-10<br>A-dn | 300-1<br>600-1<br>500-1<br>800-2 | 300-1<br>600-1<br>500-1<br>800-2 | 200-½<br>600-1½<br>500-1<br>800-2 |

Procedure turn N side NW crs, 282° Outbnd, 102° Inbnd, 6000' within 10 miles. Not authorized beyond 10 miles terrain.
Minimum altitude over facility on final approach crs, 4000'.
Crs and distance, facility to airport, 102°—3.7 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 3.7 miles after passing RM LFR, turn right, climb direct to RM LFR, thence continue climb to 6000' in a left turn 1-minute holding pattern on the NW crs of RM LFR.
NOTES: 1. Shuttle to 7000' on SE crs RM LFR within 10 miles. 2. Final approach from holding pattern at RM LFR not authorized. Procedure turn is required.
MSA within 25 miles of facility: NE—6800'; SE—7100'; SW—11,100'; NW—6000'.
%Takeoffs all runways: climb on crs 210° magnetic from Redmond Airport to intercept R-142 RDM VOR, thence direct RDM VOR climbing to cross VOR at or above 5000'. Aircraft departing via V-283 northwestbound continue climb in a 1-minute right turn holding pattern to 8000' on R-160 RDM VOR.
LFR equipped aircraft: climb on crs 210° magnetic from Redmond Airport to intercept S crs RM LFR, thence direct to RM LFR climbing to cross LFR at or above 5000'. Aircraft requiring higher MEA for direction of flight continue climb in a left turn 1-minute holding pattern on NW crs RM LFR to required MEA.
City, Redmond; State, Oreg.; Airport Name, Roberts Field; Elev., 3077'; Fac. Class., SBRAZ; Ident., RM; Procedure No. 1, Amdt. 6; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 5; Dated, 29 Oct. 55

| | | | | | | | |

Procedure turn S side SW crs, 214° Outbnd, 034° Inbnd, 1500' within 10 miles SW Cape Suckling Int.
Minimum altitude over facility on final approach crs, None.* Minimum altitude over Cape Suckling Int Inbnd on final approach, 1500'.
Crs and distance, facility to airport, 146°—0.3 mile.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 6 miles after passing Cape Suckling Int, turn right, climb to 1500' on the SW crs (214°) to Cape Suckling Int. Hold SW of Cape Suckling, 034° Inbnd, 1-minute right turns.
NOTES: 1. VFR flight required from missed approach point to airport. 2. No maneuvering approved NW through E of airport.
CAUTION: High mountain range N through NE to ESE of airport. Terrain 2258'—3 miles E of airport.
*Initial approach to Yakataga LFR not authorized. Initial approach authorized to Cape Suckling Int at MEA.
MSAs within 25 miles of facility: N-13,000'; E-10,500'; S-2,000'; W-12,300'.
City, Yakataga; State, Alaska; Airport Name, Yakataga; Elev., 12'; Fac. Class., BMRL; Ident., CYT; Procedure No. 1, Amdt. 10; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 9, Dated, 30 Sept. 61

2. By amending the following automatic direction finding procedures prescribed in § 97.11(b) to read:

ADF STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| | | | | | 2-engine or less | | More than 2-engine, more than 65 knots |
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 65 knots or less | More than 65 knots | |
| Burton Int | Kitsap RBn | Direct | 3000 | T-dn | 500–1 | 500–1 | 500–1 |
| Lofall Int | Kitsap RBn | Direct | 3000 | C-dn | 600–1 | 600–1 | 600–1½ |
| SEA VOR | Kitsap RBn | Direct | 3000 | A-dn | 800–2 | 800–2 | 800–2 |
| SJ LFR | Kitsap RBn | Direct | 3000 | | | | |

Radar vectoring using Seattle-Tacoma Radar authorized in accordance with approved patterns.
Procedure turn W side crs, 187° Outbnd, 007° Inbnd, 1800′ within 10 miles.
Facility on airport.
Minimum altitude over facility on final approach crs, 1100′.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 0.0 mile after passing PWT RBn, make immediate right turn, climb to 2000′ on crs 187° from Kitsap RBn within 10 miles.
CAUTION: 1761′ terrain 2.5 miles N of airport.
Other changes: Deletes air carrier and weather restrictions.
MSA within 25 miles of facility: 000°–090°—2100′; 090°–180°—2000′; 180°–270°—7700′; 270°–360°—8600′.

City, Bremerton; State, Wash.; Airport Name, Kitsap County; Elev., 482′; Fac. Class., MHW; Ident., PWT; Procedure No. 1, Amdt. 2; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 1; Dated, 23 Feb. 63

Radar vectoring and transitions by Griffiss Rapcon authorized in accordance with approved patterns.
Procedure turn E side of crs, 329° Outbnd, 149° Inbnd, 3000′ within 10 miles.
Minimum altitude over facility on final approach crs 2700′.
Crs and distance, facility to airport, 149°—5.7 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 5.7 miles after passing BKG RBn, climb straight ahead to 3200′ direct to UTI RBn. Hold SE of UTI RBn, 329° Inbnd, 1-minute right turns.
MSA within 25 miles of BKG RBn: 000°–090°—4000′; 090°–180°—3500′; 180°–270°—3500′; 270°–360°—3000′.

City, Utica; State, N.Y.; Airport Name, Oneida County; Elev., 742′; Fac. Class., MHW; Ident., BKG; Procedure No.2, Amdt. Orig.; Eff. Date, 26 Dec. 64

3. By amending the following very high frequency omnirange (VOR) procedures prescribed in § 97.11(c) to read:

VOR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |

4. By amending the following terminal very high frequency omnirange (TerVOR) procedures prescribed in § 97.13 to read:

TERMINAL VOR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| | | | | T-dn | 300–1 | 300–1 | 200–½ |
| | | | | C-dn | 700–1 | 700–1 | 700–1½ |

6. By amending the following instrument landing system procedures prescribed in § 97.17 to read:

ILS STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| CPR VOR | LOM | Direct | 8000 | T-dn% | 300–1 | 300–1 | 200–½ |
| Henning Int | LOM | Direct | 8000 | C-dn | 400–1 | 500–1 | 500–1½ |
| Alcova Int | LOM | Direct | 8000 | S-dn-7 | 200–½ | 200–½ | 200–½ |
| Glenrock Int | Evansville Int | Direct | 8000 | A-dn | 800–2 | 800–2 | 800–2 |
| Evansville Int | LOM | Direct | 8000 | | | | |
| Airport Int | LOM | Direct | 8000 | | | | |
| Oil Field Int | LOM | Direct | 8000 | | | | |
| Lockett Int | LOM | Direct | 8000 | | | | |

*Procedure turn N side of W crs, 254° Outbnd, 074° Inbnd, 8000′ within 10 miles.
Minimum altitude at glide slope interception Inbnd, 6700′.
Altitude of glide slope and distance to approach end of runway at OM, 6680′—3.9 miles; at MM, 5648′—0.6 mile.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished, climb to 7500′ on E crs of ILS within 20 miles of LMM or, when directed by ATC, turn left, proceed direct to CPR VOR, climbing to 7500′.
NOTE: Glide slope unusable beyond 1 mile W of LOM and above 7000′ due to moderate-to-severe roughness.
*Final approach from holding pattern not authorized. Procedure turn required.
%Southeastbound (134° through 155°) IFR departures: On V-19 cross Deer Creek Intersection at or above 9000′; on V-85 cross Mountain Intersection at or above 10,000′.

City, Casper; State, Wyo.; Airport Name, Casper Air Terminal; Elev., 5348′; Fac. Class., ILS; Ident., I-CPR; Procedure No. ILS-7, Amdt. 10; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 9; Dated, 21 Mar. 64

| | | | | | | | |
|---|---|---|---|---|---|---|---|

| | | | | A-dn | 900-2 | 900-2 | 900-2 |

Procedure turn S side of crs, 089° Outbnd, 269° Inbnd, 4400' within 10 miles. (Final approach from holding pattern at YK LOM not authorized, procedure turn required.)
Minimum altitude at glide slope Int Inbnd, 4000'.
Altitude of glide slope and distance to approach end of runway at OM, 3334'—6.9 miles; at MM, 1315'—0.6 mile.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished, make right climbing turn and climb to 4400' on E crs ILS within 10 miles of LOM.
NOTE: All components of the ILS and related airborne equipment must be operational and used when executing this approach, except that either the ALS or the condenser discharge flashers or combination thereof must be operational for the entire length of the ALS system.
CAUTION: High terrain extends from NE to NW of YKM VOR.
#Takeoff minimums Runways 4/22 and 16/34: 500-1 day, 800-2 night.
%Takeoffs all runways: Climb on R-283 YKM VOR within 6 miles of YKM VOR to cross YKM VOR at or above, eastbound V-4 2000'; westbound V4/48 4500'; southbound V-25/25E 2000'; northbound V-25 4500'; northeastbound V-448 3000'. All turns S side R-283 YKM VOR.
*Circling S of the airport not authorized 110° clockwise through 205° from airport location point. Terrain and obstructions within this area and within 1.7 miles to 2155'.

City, Yakima; State, Wash; Airport Name, Yakima Municipal; Elev., 1082'; Fac. Class., ILS; Ident., I-YKM; Procedure No. ILS-27, Amdt. 11; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 10; Dated, 17 Oct. 64

7. By amending the following radar procedures prescribed in § 97.19 to read:

RADAR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet, MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach, except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| 030° | 190° | Within: | | Surveillance approach | | | |
| 190° | 030° | 25 miles | 2100 | | | | |
| | | 25 miles | 2500 | T-dn | 300-1 | 300-1 | #200-¼ |
| | | | | C-dn | 400-1 | 500-1 | 500-1½ |
| | | | | S-dn-30L* | 400-1 | 400-1 | 400-1 |
| | | | | S-dn-12R** | 400-1 | 400-1 | 400-1 |
| | | | | A-dn | 800-2 | 800-2 | 800-2 |

Radar control must provide 3-mile horizontal or 1000' vertical separation from the following obstructions:

| Obstruction | MSL | Location |
|---|---|---|
| Tower | 1680' | 23 miles WNW |
| Tower | 2049' | 9 miles NW |

If visual contact not established upon descent to authorized landing minimums or if landing not accomplished, climb to 3000' on NW crs ILS (305°) within 20 miles or, when directed by ATC, turn right, climb to 2200', proceed direct to VOR.
#All aircraft are restricted to 300-1 mimimums for takeoff on Runways 3-21, 16L-34R, and 12L-30R.
*400-½ authorized, except for turbojet aircraft, with operative ALS and high-intensity runway lights.
**400-¾ authorized, except for turbojet aircraft, with operative high-intensity runway lights.

City, Austin; State, Tex.; Airport Name, Robert Mueller Municipal; Elev., 631'; Fac. Class. and Ident., Austin radar; Procedure No. 1, Amdt. 4; Eff. Date, 26 Dec. 64; Sup. Amdt. No. 3; Dated, 29 Aug. 64

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 000° | 360° | Within 30 miles | 3000 | Surveillance approach | | | |
| | | | | T-dn | 300-1 | 300-1 | 200-¼ |

[Reg. Docket 6365; Amdt. 406]

## PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES [NEW]

### Miscellaneous Amendments

The amendments to the standard instrument approach procedures contained herein are adopted to become effective when indicated in order to promote safety. The amended procedures supersede the existing procedures of the same classification now in effect for the airports specified therein. For the convenience of the users, the complete procedure is republished in this amendment indicating the changes to the existing procedures.

As a situation exists which demands immediate action in the interests of safety in air commerce, I find that compliance with the notice and procedure provisions of the Administrative Procedure Act is impracticable and that good cause exists for making this amendment effective within less than 30 days from publication.

In view of the foregoing and pursuant to the authority delegated to me by the Administrator (24 F.R. 5662), Part 97 [New] (14 CFR Part 97 [New]) is amended as follows:

1. By amending the following automatic direction finding procedures prescribed in § 97.11(b) to read:

ADF STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.

If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition From— | Transition To— | Course and distance | Minimum altitude (feet) | Ceiling and visibility minimums: Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
|---|---|---|---|---|---|---|---|
| Forest Hill Int via V157/166 | Craigtown Int | Direct | 2000 | T-dn | 300-1 | 300-1 | 200-½ |
| Forest Hill Int | APG RBn | Direct | 2000 | C-dn | 500-1 | 500-1 | 500-1½ |
| Jarrettsville Int | APG RBn | Direct | 2000 | S-dn | NA | NA | NA |
| | | | | A-dn | 800-2 | 800-2 | 800-2 |

Procedure turn W side of crs, 037° Outbnd, 217° Inbnd, 2000′ within 10 miles.
Minimum altitude over facility on final approach crs, 1100′.
Crs and distance, facility to airport 217°—1.8 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 1.8 miles after passing APG RBn, make right turn, climb to 1000′ on crs 355°, proceed direct to APG RBn climbing to 2000′. Hold NE 217° bearing Inbnd APG-RBn, 1-minute right turns 2000′.
NOTE: Procedure turn not required if Craigtown Int received.
Authorized for military use only, except by prior arrangement.
CAUTION: Magnetic disturbance of as much as 8 degrees exists at sea level in maneuvering areas S of APG RBn.
MSA within 25 miles of facility: 090°-180°—1300′; 180°-090°—2100′.

City, Aberdeen; State, Md.; Airport Name, Phillips AAF; Elev., 57′; Fac. Class., MH; Ident., APG; Procedure No. 1, Amdt. Orig.; Eff. Date, 2 Jan. 65

ADF STANDARD INSTRUMENT APPROACH PROCEDURE—Continued

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| | | | | T-dn | 300–1 | 300–1 | 200–½ |
| | | | | C-dn | 700–1 | 700–1 | 700–1½ |
| | | | | A-dn | 800–2 | 800–2 | 800–2 |
| | | | | If Terry fan marker received, minimums become: | | | |
| | | | | C-dn | 600–1 | 600–1 | 600–1½ |

Radar transitions and vectoring authorized in accordance with approved patterns.
No procedure turn. Radar control will not descend aircraft below 3000′ until passing Margaret Int Inbnd.
Minimum altitude over Terry fan marker on final approach crs, 1500′.
Crs and distance, Margaret Int to RBn, 095°—5.7 miles; Terry FM to airport, 095°—1.5 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 0.0 mile after passing FTY RBn, make left turn, climb to 3000′ and return to Margaret Int via 275° bearing from FTY RBn or follow radar vector after being reidentified.
NOTE: ATL approach control radar must be in operation for vector to final approach crs. Night air carrier operations not authorized.
CAUTION: Water tank 1218′—1.8 miles WNW and tower 1375′—2.7 miles NW of airport.
MSA within 25 miles of facility: 000°–180°—4000′; 180°–270°—3700′; 270°–360°—3800′.

City, Atlanta; State, Ga.; Airport Name, Fulton County; Elev., 834′; Fac. Class., MH; Ident., FTY; Procedure No. 1, Amdt. Orig.; Eff. Date, 2 Jan. 65

| | | | | | | | |

Procedure turn N side final approach crs, 210° Outbnd, 030° Inbnd, 2100′ within 10 miles.
Minimum over facility on final approach crs, 1600′.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 0.0 mile of CWM RBn, make left-climbing turn and climb to 2100′ on 210° crs from H then return to MH.
NOTES: 1. Approaches controlled by Battle Creek approach control. Close flight plan with Battle Creek Radio by radio or long distance phone immediately upon landing.
2. No weather available.
MSA within 25 miles of facility: 000°–090°—2300′; 090°–180°—2600′; 180°–270°—2400′; 270°–360°—2200′.

City, Coldwater; State, Mich.; Airport Name, Branch County Memorial; Elev., 956′; Fac. Class., MHW; Ident., CWM; Procedure No. 1, Amdt. Orig.; Eff. Date, 2 Jan. 65

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| McClure Int | LOM | Direct | 2100 | T-dn | 300–1 | 300–1 | 200–½ |
| Waterville VOR | LOM | Direct | 2100 | C-dn | 500–1 | 500–1 | 500–1¼ |
| Harbor View Int | LOM | Direct | 2100 | S-dn-7 | 500–1 | 500–1 | 500–1 |
| Gerald Int | LOM | Direct | 2100 | A-dn | 800–2 | 800–2 | 800–2 |

Radar vectoring authorized in accordance with approved patterns.
Procedure turn S side of crs, 249° Outbnd, 069° Inbnd, 2100′ within 10 miles.
Minimum altitude over facility on final approach crs, 1500′.
Crs and distance, facility to airport, 069°—4.7 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 4.7 miles after passing LOM, make right-climbing turn to 2200′, proceed to Waterville VOR. Hold SE Waterville VOR on R–140, right turns, 1 minute, 320° Inbnd.
Alternate No. 1 missed approach: Within 4.7 miles after passing LOM, make climbing left turn to 2100′, proceed to Toledo LOM. Hold SW Toledo LOM, right turns, 1 minute, 069° Inbnd.
CAUTION: Tower 865′—1¾ miles S of LMM.
MSA within 25 miles of facility: 000°–090°—2600′; 090°–180°—2000′; 180°–270°—2100′; 270°–360°—2500′.

City, Toledo; State, Ohio; Airport Name, Toledo Express; Elev., 684′; Fac. Class., LOM; Ident., TO; Procedure No. 1, Amdt. 8; Eff. Date, 2 Jan. 65; Sup. Amdt. No. 7; Dated 9 May 64

## 2. By amending the following very high frequency omnirange (VOR) procedures prescribed in § 97.11(c) to read:

VOR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| Chattahoochee Int | ATL VOR | Direct | 2500 | T-dn | 300–1 | 300–1 | 200–½ |
| Atlanta RBn | ATL VOR | Direct | 2500 | C-d | 500–1 | 500–1 | 500–1½ |
| | | | | C-n | 500–2 | 500–2 | 500–2 |
| | | | | S-d-3 | 500–1 | 500–1 | 500–1 |
| | | | | S-n-3 | 500–2 | 500–2 | 500–2 |
| | | | | A-dn | 800–2 | 800–2 | 800–2 |
| | | | | If Riverdale Int received, minimums become: | | | |
| | | | | C-dn | 500–1 | 500–1 | 500–1½ |
| | | | | S-dn-3 | 400–1 | 400–1 | 400–1 |

Radar vectoring authorized in accordance with approved patterns.
Procedure turn E side of crs, 196° Outbnd, 016° Inbnd, 2500′ within 10 miles.
Minimum altitude over facility on final approach crs, 2500′.
Minimum altitude over Riverdale Int on final approach crs, 1500′.
Crs and distance, facility to airport, 016°—8.1 miles. Riverdale Int to airport, 016°—3.1 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 8.1 miles after passing ATL VOR, or 3.1 miles after passing Riverdale Int, turn right, climb to 2500′ and proceed direct to REC–VOR.
NOTES: (1) When authorized by ATC, DME may be used from R–090 CW to R–300 within 15 miles at 2500′ to position aircraft for straight-in approach with the elimination of a procedure turn. (2) Aircraft executing missed approach may, after being reidentified, be radar controlled.
MSA within 25 miles of the facility: 000°–090°—4000′; 090°–180°—2200′; 180°–270°—3300′; 270°–360°—3800′.

City, Atlanta; State, Ga.; Airport Name, Atlanta; Elev., 1024′; Fac. Class., BVORTAC; Ident., ATL; Procedure No. 1, Amdt. 8; Eff. Date, 2 Jan. 65; Sup. Amdt. No. 7; Dated, 5 Sept. 64

VOR STANDARD INSTRUMENT APPROACH PROCEDURE—Continued

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| Lisbon Int | Ely Int (final) | Via crs 200°—1.9 miles to CID VOR R–087°. | 2500 | T-dn | 300–1 | 300–1 | 200–½ |
| | | | | C-dn | 400–1 | 500–1 | 500–1½ |
| | | | | S-dn-26# | 400–1 | 400–1 | 400–1 |
| Solon Int | Ely Int (final) | Via crs 340°—1.8 to CID VOR R–087°. | 2500 | A-dn | 800–2 | 800–2 | 800–2 |
| CID VOR | Ely Int | Direct | 2500 | | | | |
| IOW VOR | Ely Int | Direct | 2500 | | | | |

Radar vectoring to final approach crs authorized in accordance with approved patterns.
Procedure turn N side of crs, 087° Outbnd, 267° Inbnd, 2500′ witbin 10 miles of Ely Intersection.
Minimum altitude over facility on final approach crs 2500′.
Crs and distance, Ely Int to airport 267°—5.3 miles.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished within 5.3 miles after passing Ely Int, proceed to CID VOR via R–087, climbing to 2000′ or, when directed by ATC, make right turn climbing to 2500′ and return to Ely Int.
NOTE: Aircraft executing missed approach may be radar controlled after radar identification. Operating dual VOR equipment required to execute this procedure.
Minimum radar altitudes from Ely Intersection: 0 to 25 miles CW 060° to 290°—2500′; 0 to 15 miles CW 290° to 310°—2500′; 0 to 10 miles CW 310° to 060°—2900′.
#400–¾ authorized, except for turbo-jet aircraft, with operative high-intensity runway lights.
MSA within 25 miles of facility: 000°–090°—2900′; 090°–180°—2100′; 180°–270°—2200′; 270°–360°—3400′.

City, Cedar Rapids; State, Iowa; Airport Name, Cedar Rapids Municipal; Elev., 863′; Fac. Class., BVORTAC; Ident., CID; Procedure No. 2; Amdt. 3; Eff. Date, 2 Jan. 65; Sup. Amdt. No. 2; Dated, 5 Dec. 64

## 3. By amending the following terminal very high frequency omnirange (TerVOR) procedures prescribed in § 97.13 to read:

TERMINAL VOR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If an instrument approach procedure of the above type is conducted at the below named airport, it shall be in accordance with the following instrument approach procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitudes shall correspond with those established for en route operation in the particular area or as set forth below.

| Transition | | | | Ceiling and visibility minimums | | | |
|---|---|---|---|---|---|---|---|
| From— | To— | Course and distance | Minimum altitude (feet) | Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
| Leslie Int | JXN VOR | Direct | 2300 | T-dn | 300–1 | 300–1 | 200–½ |
| Brooklyn Int | JXN VOR | Direct | 2300 | C-dn | 500–1 | 500–1 | 500–1½ |
| LFD VOR | JXN VOR | Direct | 2700 | S-dn-13 | 500–1 | 500–1 | 500–1 |
| Springport Int | Cloverleaf Int (final) | Direct | 2100 | A-dn | 800–2 | 800–2 | 800–2 |
| | | | | If aircraft dual omni equipped and Cloverleaf Int received, the following minimums apply: | | | |
| | | | | C-dn | 400–1 | 500–1 | 500–1½ |
| | | | | S-dn-13 | 400–1 | 400–1 | 400–1 |

Procedure turn W side of crs, 308° Outbnd, 128° Inbnd, 2300′ within 10 miles.
Facility on airport.
Minimum altitude over JXN VOR on final approach crs, 1500′.
Crs and distance, Cloverleaf Int to airport, 128°—4.4 miles; Cloverleaf Int to VOR, 128°—4.7 miles.
Crs and distance, breakoff point to Runway 13, 135°—0.30 mile.
If visual contact not established upon descent to authorized landing minimums or if landing not accomplished over JXN VOR, climb to 2300′ on R–128 within 10 miles. Reverse crs, proceed to JXN VOR.
CAUTION: Tower 11.3 miles NW, 1946′; tower 2.2 miles SE, 1330′; tower 3.0 miles NE, 1310′.
#Use of Springport to Cloverleaf Int (final) transition to eliminate procedure turn requires dual omni equipment.
MSA within 25 miles of facility: 000°–090°—2400′; 090°–180°—2500′; 180°–270°—2600′; 270°–360°—3000′.

6. By amending the following radar procedures prescribed in § 97.19 to read:

RADAR STANDARD INSTRUMENT APPROACH PROCEDURE

Bearings, headings, courses and radials are magnetic. Elevations and altitudes are in feet, MSL. Ceilings are in feet above airport elevation. Distances are in nautical miles unless otherwise indicated, except visibilities which are in statute miles.
If a radar instrument approach is conducted at the below named airport, it shall be in accordance with the following instrument procedure, unless an approach is conducted in accordance with a different procedure for such airport authorized by the Administrator of the Federal Aviation Agency. Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the radar controller. From initial contact with radar to final authorized landing minimums, the instructions of the radar controller are mandatory except when (A) visual contact is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach, except when the radar controller may direct otherwise prior to final approach, a missed approach shall be executed as provided below when (A) communication on final approach is lost for more than 5 seconds during a precision approach, or for more than 30 seconds during a surveillance approach; (B) directed by radar controller; (C) visual contact is not established upon descent to authorized landing minimums; or (D) if landing is not accomplished.

| Transition From— | Transition To— | Course and distance | Minimum altitude (feet) | Ceiling and visibility minimums: Condition | 2-engine or less: 65 knots or less | 2-engine or less: More than 65 knots | More than 2-engine, more than 65 knots |
|---|---|---|---|---|---|---|---|
| | | Within: | | Precision approach | | | |
| 070° | 290° | 15 miles | 2500 | | | | |
| 290° | 070° | 15 miles | 3000 | S-dn-##9L | 200–½ | 200–½ | 200–½ |
| 000° | 360° | 15–25 miles | 3000 | A-dn-9L | 600–2 | 600–2 | 600–2 |
| | | | | Surveillance approach | | | |
| | | | | T-dn# | 300–1 | 300–1 | 200–½ |
| | | | | C-dn* | 400–1 | 500–1 | 500–1½ |

| | | | | A-dn | 800–2 | 800–2 | 800–2 |

If visual contact not established upon descent to authorized landing minimums or if landing not accomplished 9L and 3: Climb to 3000' and proceed to Tucker Int. via ATL VOR R-033. 9R and 15: Climb to 3000' and proceed direct to MDU VOR. 27R and 33: Climb to 3000' and proceed to Chattahoochee Int. via REG VOR R-269. 27L: Climb to 3000' and proceed direct to ATL VOR.
NOTE: Aircraft executing missed approach may, after being reidentified, be radar controlled.
*Runways 27L, 27R, 33, 3.
##Runway visual range 2600' also authorized for landing on Runway 9L, provided all components of the PAR, high-intensity runway lights, approach lights, condenser discharge flashers, outer compass locator and all related airborne equipment are operating satisfactorily. Descent below 1224' MSL shall not be made unless visual contact with the approach lights has been established or the aircraft is clear of clouds.
#Runway visual range 2600' also authorized for takeoff on Runway 9L, in lieu of 200–½ when 200–½ is authorized, provided high-intensity runway lights are operational.

City, Atlanta; State, Ga.; Airport Name, Atlanta; Elev., 1024'; Fac. Class. and Ident., Atlanta Radar; Procedure No. 1, Amdt. 9; Eff. Date, 2 Jan. 65; Sup. Amdt. No. 8; Dated, 7 Sept. 63

RADAR STANDARD INSTRUMENT APPROACH PROCEDURE—Continued

# Title 21—FOOD AND DRUGS

## Chapter I—Food and Drug Administration, Department of Health, Education, and Welfare

### SUBCHAPTER A—GENERAL

### PART 8—COLOR ADDITIVES

### Color Additive Mixtures Exempt From Certification; Further Postponement of Effective Date With Respect to Color Additive Mixtures for Cosmetic Use

By order published in the FEDERAL REGISTER of July 16, 1964 (29 F.R. 9608), the effective date of § 8.30 (21 CFR 8.30) of the interpretative and procedural regulations with respect only to diluents for use in cosmetic color additive mixtures was postponed to January 1, 1965. The circumstances which led to this postponement still continue.

Therefore, pursuant to sections 701 and 706 of the Federal Food, Drug, and Cosmetic Act, and under the authority delegated to the Commissioner of Food and Drugs by the Secretary of Health, Education, and Welfare (21 CFR 2.90; 29 F.R. 471): *It is ordered*, That the effective date of § 8.30 with respect only to diluents for use in color additive mixtures be further postponed until a regulation is promulgated and becomes effective listing safe diluents for cosmetic use, including cosmetics which directly color the human body.

(Secs. 701, 706, 52 Stat. 1055 as amended; 74 Stat. 399; 21 U.S.C. 371, 376)

Dated: December 21, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64–13353; Filed, Dec. 28, 1964; 8:50 a.m.]

| | |
|---|---|
| Red saunders (red sandalwood); *Pterocarpus santalinus*, L. | In alcoholic beverages only. |
| Stargrass (starwort); *Aletris farinosa* L. | Do. |
| Tansy flowers and oil; *Tanacetum vulgare* L. | Thujone free. In alcoholic beverages only. |
| Tansy flowers extract and extract, solid; *Tanacetum vulgare* L. | Do. |
| Walnut hull, extract; walnut leaves, extract; walnut husks; and walnuts, green; *Juglans* spp. | In alcoholic beverages only. |

§ 121.91 [Amended]

2. Section 121.91 *Further extensions of effective date of statute for certain food additives as indirect additives to food* is amended by inserting in alphabetical order under the list of products the following items:

| *Product* | *Specified uses or restrictions* |
|---|---|
| Asbestos fiber | Components of phenolic molding compound for use in processing, holding, packaging, or transporting food. |
| Allethrin | Component of insecticide for control of infestation in food-storage and food-processing areas; limit 2 p.p.m. on food. |
| Anhydroformaldehyde aniline resin | Component of phenolic molding compound for use in processing, holding, packaging, or transporting food. |
| Barium hydroxide | Do. |
| Hexamethylenetetramine | Do. |
| Mineral oil meeting the following specifications: Virgin distillate from petroleum; no cracked products present; distillation end-point at 760 mm. not to exceed 700° F. with residue not to exceed 2% as determined by ASTM Method D 86-IP-123. | Component of burlap bags for packaging dry food. |
| Oxalic acid | Component of insecticide for control of infestation in food-storage and food-processing areas; limit 20 p.p.m. in food. |
| | Component of phenolic molding compound for use in processing, holding, packaging, or transporting food. |
| Paraldehyde | Do. |
| *p*-Phenylethyl phenol | Do. |
| Piperonyl butoxide | Component of insecticide for control of infestation in food-storage and food-processing areas; limit 20 p.p.m. in food. |
| Pyrethrins | Component of insecticide for control of infestation in food-storage and food-processing areas; limit 3 p.p.m. in food. |

* * * * * *

Notice and public procedure and delayed effective date are not necessary prerequisites to the promulgation of this order, and I so find, since extensions of time, under certain conditions, for the effective date of the food additives amendment to the Federal Food, Drug, and Cosmetic Act were contemplated by Public Law 88-625 as a relief of restrictions on the food-processing industry.

*Effective date.* This order shall be effective on the date of signature.

(Sec. 6(c), Public Law 85-929, as amended, sec. 2, Public Law 87-19; Public Law 88-625; 72 Stat. 1788, as amended 76 Stat. 42; 21 U.S.C., note under sec. 342)

Dated: December 22, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64-13384, Filed, Dec. 28, 1964; 8:49 a.m.]

SUBCHAPTER B—FOOD AND FOOD PRODUCTS

## PART 121—FOOD ADDITIVES

### Subpart A—Definitions and Procedural and Interpretative Regulations

FURTHER EXTENSION OF EFFECTIVE DATE OF STATUTE FOR CERTAIN SPECIFIED FOOD ADDITIVES

Having evaluated data supplied following enactment of Public Law 88-625 (78 Stat. 1002; 21 U.S.C. 342, note), and having concluded that such data meet the provisions of that statute and the policy prescribed by § 121.84, the Commissioner of Food and Drugs has concluded that no undue risk to the public health is involved in the interim use of some additional food additives until June 30, 1965, or until regulations shall have been issued establishing or denying tolerances or exemptions from the requirement of tolerances in accordance with section 409 of the Federal Food, Drug, and Cosmetic Act. Therefore, pursuant to the authority above cited, which has been delegated to the Commissioner by the Secretary of Health, Education, and Welfare (21 CFR 2.90; 29 F.R. 471), §§ 121.90 and 121.91 of the food additive regulations are amended as follows:

§ 121.90 [Amended]

1. Section 121.90 *Further extensions of effective date of statute for certain food additives as direct additives to food* is amended as follows:

a. By changing the word "defined" in paragraph (a) to read "listed".

b. By inserting a centerhead "Miscellaneous" preceding the list in paragraph (a).

c. By inserting in the list in paragraph (a) in alphabetical order, the following item:

| *Product* | *Specified uses or restrictions* |
|---|---|
| 1,1-Bis(*p*-chlorophenyl)-2,2,2-trichloroethanol | From use on fresh mint leaves for control of mites; limit 100 p.p.m. as residue in mint oil. |

d. By inserting the following new subheading and items at the end of the list in paragraph (a):

| | |
|---|---|
| FLAVORING SUBSTANCES AND NATURAL SUBSTANCES USED IN CONJUNCTION WITH FLAVORS | |
| Aloe and aloe extract; *Aloe perryi* Baker, *A. barbadensis* Mill., *A. ferox* Mill., and hybrids of this species with *A. africana* Mill., and *A. spicata* Baker. | In alcoholic beverages only. |
| Aloe, cape; *Aloe ferox* Mill., and its hybrids with *A. africana* Mill., and *A. spicata* Baker. | Do. |
| Aloin; *Aloe perryi* Baker, *A. barbadensis* Mill., *A. ferox* Mill., and hybrids of this species with *A. africana* Mill., and *A. spicata* Baker. | Do. |
| Angola weed; *Roccella fuciformis* Ach. | Do. |
| Boldus (boldo leaves); *Peumus boldus* Mol. | Do. |
| Bryonia (bryony); *Bryonia alba* L. | Do. |
| Calamus (sweetflag) and calamus oil; *Acorus calamus* L. | Do. |
| Cassia fistula (goldenshower senna); *Cassia fistula* L. | Do. |
| Cocillana bark; *Guarea rusbyi* (Britt.) Rusby | Do. |
| Forgetmenot; *Myosotis* spp. | Do. |
| Hart's-tongue; *Phyllitis scolopendrium* (L.) Newm. | Do. |
| Lungmoss (lungwort); *Sticta pulmonaria* Ach. | Do. |
| Meadowsweet, European (*Spirea ulmaria*); *Filipendula ulmaria* (L.) Maxim. | Do. |
| Melilot herb (yellow melilot); *Melilotus officinalis* (L.) Lam. | Do. |
| Quillaia extract (soapbark extract, China bark extract), *Quillaja saponaria* Molina. | Do. |

## PART 121—FOOD ADDITIVES

### Subpart F—Food Additives Resulting From Contact With Containers or Equipment and Food Additives Otherwise Affecting Food

PRESSURE-SENSITIVE ADHESIVES

The Commissioner of Food and Drugs, having evaluated the data submitted in a petition (FAP 4B1366) filed by Minnesota Mining and Manufacturing Co., 2501 Hudson Road, St. Paul, Minn., 55119, and other relevant material, has concluded that the food additive regulations should be amended as hereinafter provided to clearly indicate that any limitations prescribed in § 121.1059 are not applicable to substances used in pressure-sensitive adhesives in accordance with a prior sanction or approval. Therefore, pursuant to the provisions of the Federal Food, Drug, and Cosmetic Act (sec. 409(c)(1), 72 Stat. 1786; 21 U.S.C. 348(c)(1)), and under the authority delegated to the Commissioner by the Secretary of Health, Education, and Welfare (21 CFR 2.90; 29 F.R. 471), § 121.2577(a)(4) is amended to read as follows:

§ 121.2577 **Pressure-sensitive adhesives.**

* * * * * *

(a) * * *

(4) Substances identified in § 121.1059 other than substances used in accordance with paragraph (a)(2) of this section.

Any person who will be adversely affected by the foregoing order may at any time within 30 days from the date of its publication in the FEDERAL REGISTER file with the Hearing Clerk, Department of Health, Education, and Welfare, Room 5440, 330 Independence Avenue SW., Washington, D.C., 20201, written objections thereto, preferably in quintuplicate. Objections shall show wherein the person filing will be adversely affected by the order and specify with particularity the provisions of the order deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought. Objections may be accompanied by a memorandum or brief in support thereof.

*Effective date.* This order shall be effective on the date of its publication in the FEDERAL REGISTER.

(Sec. 409(c)(1), 72 Stat. 1786; 21 U.S.C. 348(c)(1))

Dated: December 21, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64-13354; Filed, Dec. 28, 1964; 8:50 a.m.]

## PART 121—FOOD ADDITIVES

### Subpart F—Food Additives Resulting From Contact With Containers or Equipment and Food Additives Otherwise Affecting Food

ADHESIVES; COMPONENTS OF PAPER AND PAPERBOARD IN CONTACT WITH DRY FOOD

The Commissioner of Food and Drugs, having evaluated the data submitted in petitions filed by Mr. Donald Simpson, 1000 Connecticut Avenue, Washington 6, D.C. (FAP 5B1578), and Stein, Hall & Co., Inc., 605 Third Avenue, New York, N.Y., 10016 (FAP 5B1587), and other relevant material, has concluded that the food additive regulations (21 CFR 121.2520, 121.2571) should be amended to provide for the use of additional substances in the formulation of food-packaging adhesives and additional substances as components of paper and paperboard in contact with dry food, as hereinafter set forth. Therefore, pursuant to the provisions of the Federal Food, Drug, and Cosmetic Act (sec. 409(c)(1), 72 Stat. 1786; 21 U.S.C. 348(c)(1)), and under the authority delegated to the Commissioner by the Secretary of Health, Education, and Welfare (21 CFR 2.90; 29 F.R. 471), Part 121 is amended as follows:

1. Section 121.2520(c)(5) is amended by inserting alphabetically in the list "Components of Adhesives" new items, as follows:

§ 121.2520 **Adhesives.**

* * * * * *

(c) * * *

(5) * * *

| | |
|---|---|
| Sodium *n*-dodecylpolyethoxy (50 moles) sulfate. | |
| * * * * * | |
| Sodium isododecylphenoxypolyethoxy (40 moles) sulfate. | |

2. Section 121.2571(b) is amended by inserting alphabetically in the list of substances new items, as follows:

§ 121.2571 **Components of paper and paperboard in contact with dry food.**

* * * * * *

(b) * * *

| *List of substances* | *Limitations* |
|---|---|
| * * * | * * * |
| *N*-Cyclohexyl-*p*-toluene sulfonamide | |
| * * * | * * * |
| Sodium *n*-dodecylpolyethoxy (50 moles) sulfate | |
| * * * | * * * |
| Sodium isododecylphenoxypolyethoxy (40 moles) sulfate | |

Any person who will be adversely affected by the foregoing order may at any time within 30 days from the date of its publication in the FEDERAL REGISTER file with the Hearing Clerk, Department of Health, Education, and Welfare, Room 5440, 330 Independence Avenue SW., Washington, D.C., 20201, written objections thereto, preferably in quintuplicate. Objections shall show wherein the person filing will be adversely affected by the order and specify with particularity the provisions of the order deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought. Objections may be accompanied by a memorandum or brief in support thereof.

*Effective date.* This order shall be effective on the date of its publication in the FEDERAL REGISTER.

(Sec. 409(c)(1), 72 Stat. 1786; 21 U.S.C. 348(c)(1))

Dated: December 21, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64-13355; Filed, Dec. 28, 1964; 8:50 a.m.]

## PART 121—FOOD ADDITIVES

### Subpart D—Food Additives Permitted in Food for Human Consumption

ION-EXCHANGE RESINS

No comments were received in response to the notice published in the FEDERAL REGISTER of November 5, 1964 (29 F.R. 14990), proposing that § 121.1148, which prescribes the conditions of safe use of ion-exchange resins in treatment of food, be amended to exempt certain resins from the acetic acid-solvent extraction requirement; to expand the ion-exchange resin use; and to add new items to the list of desirable replacement ions. Therefore, pursuant to the provisions of the Federal Food, Drug, and Cosmetic Act (sec. 409, 72 Stat. 1785 et seq.; 21 U.S.C. 348) and under the authority delegated to the Commissioner of Food and Drugs by the Secretary of Health, Education, and Welfare (21 CFR 2.90; 29 F.R. 471), § 121.1148 is amended as proposed by changing paragraph (b) and by adding a new paragraph (d). The affected portions read as follows:

§ 121.1148 **Ion-exchange resins.**

* * * * * *

(b) Ion-exchange resins are used in the purification of foods, including potable water, to remove undesirable ions or to replace less desirable ions with one or more of the following: Bicarbonate, calcium, carbonate, chloride, hydrogen, hydroxyl, magnesium, potassium, sodium, and sulfate.

* * * * * *

(d) The ion-exchange resins identified in paragraph (a) (1), (2), and (11) of this section are exempted from the acetic-acid extraction requirement of paragraph (c)(4) of this section.

Any person who will be adversely affected by the foregoing order may at any time within 30 days from the date of its publication in the FEDERAL REGISTER file with the Hearing Clerk, Department of Health, Education, and Welfare, Room 5440, 330 Independence Avenue SW., Washington, D.C., 20201, written objections thereto, preferably in quintuplicate. Objections shall show wherein the person filing will be adversely affected by the order and specify with particularity the provisions of the order deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought. Objections may be accompanied by a memorandum or brief in support thereof.

*Effective date.* This order shall be effective on the date of its publication in the FEDERAL REGISTER.

(Sec. 409, 72 Stat. 1785 et seq.; 21 U.S.C. 348)

Dated December 21, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64-13356; Filed, Dec. 28, 1964; 8:50 a.m.]

SUBCHAPTER D—HAZARDOUS SUBSTANCES

## PART 191—HAZARDOUS SUBSTANCES; DEFINITIONS AND PROCEDURAL AND INTERPRETATIVE REGULATIONS

### Fire Extinguishers; Exemption From Labeling Requirements

There has been submitted to the Commissioner of Food and Drugs, as provided in the Federal Hazardous Substances Labeling Act and § 191.62 of the regulations thereunder, a request to exempt certain fire extinguishers from the labeling required by section 2(p)(1) of the act because the contents of such extinguishers are under pressure.

The Commissioner has concluded, on the basis of information supplied to him by the petitioner and obtained on his own initiative, that fire extinguishers meeting the conditions set forth in this order need not bear a pressure warning statement otherwise required by section 2(p)(1) of the act. Therefore, pursuant to the provisions of the Federal Hazardous Substances Labeling Act (sec. 3(c), 74 Stat. 374; 15 U.S.C. 1262) and under the authority vested in the Secretary of Health, Education, and Welfare and delegated to the Commissioner (21 CFR 2.90; 29 F.R. 471), § 191.63(a) is amended by adding thereto a new subparagraph (24), as follows:

**§ 191.63 Exemption for small packages, minor hazards, and special circumstances.**

(a) • • •

(24) Fire extinguishers containing fire extinguishing agents which are under pressure or which develop pressure under conditions of use are exempt from the labeling requirements of section 2(p)(1) of the act insofar as such requirements apply to the pressure hazard as defined in § 191.1(m): *Provided*, That the containers for such extinguishers are designed to withstand a pressure of at least six times the charging pressure or five times the maximum pressure which would be developed in the container at 120° F. during conditions of use.

Notice and public procedure and delayed effective date are not necessary prerequisites to the promulgation of this order, and I so find, since the Federal Hazardous Substances Labeling Act contemplates such modification of the labeling requirements under certain conditions.

*Effective date.* This order shall be effective on the date of its publication in the FEDERAL REGISTER.

(Sec. 3(c), 74 Stat. 374; 15 U.S.C. 1262)

Dated: December 21, 1964.

JOHN L. HARVEY,
*Deputy Commissioner of Food and Drugs.*

[F.R. Doc. 64-13357; Filed, Dec. 28, 1964; 8:50 a.m.]

# Title 26—INTERNAL REVENUE

## Chapter I—Internal Revenue Service, Department of the Treasury

SUBCHAPTER A—INCOME TAX

[T.D. 6785]

## PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Substantiation of Charitable Contribution Deductions

On April 12, 1963, notice of proposed rule making with respect to the amendment of paragraph (a) of § 1.170-1 of the Income Tax Regulations (26 CFR Part 1) under section 170 of the Internal Revenue Code of 1954 (relating to charitable, etc., contributions and gifts) was published in the FEDERAL REGISTER (28 F.R. 3588). After consideration of all such relevant matter as was presented by interested persons regarding the rules proposed, the regulations under section 170 of such Code are amended as follows:

PARAGRAPH 1. Section 1.170 is amended by revising section 170(b)(1)(A) and (2), by adding a new paragraph (5) at the end of section 170(b), by redesignating subsections (e) and (f) of section 170 as subsections (h) and (i), respectively, by adding after subsection (d) of section 170 new subsections (e), (f) and (g), and by revising the historical note. These revised, redesignated and added provisions read as follows:

**§ 1.170 Statutory provisions; charitable, etc., contributions and gifts.**

SEC. 170. *Charitable, etc., contributions and gifts.*

• • • • •

(b) *Limitations*—(1) *Individuals.* In the case of an individual the deduction provided in subsection (a) shall be limited as provided in subparagraphs (A), (B), (C), and (D).

(A) *Special rule.* Any charitable contribution to—

(i) A church or a convention or association of churches,

(ii) An educational organization referred to in section 503(b)(2),

(iii) A hospital referred to in section 503(b)(5), or to a medical research organization (referred to in section 503(b)(5)) directly engaged in the continuous active conduct of medical research in conjunction with a hospital, if during the calendar year in which the contribution is made such organization is committed to spend such contributions for such research before January 1 of the fifth calendar year which begins after the date such contribution is made,

(iv) An organization referred to in section 503(b)(3) organized and operated exclusively to receive, hold, invest, and administer property and to make expenditures to or for the benefit of a college or university which is an organization referred to in clause (ii) of this subparagraph and which is an agency or instrumentality of a State or political subdivision thereof, or which is owned or operated by a State or political subdivision thereof or by an agency or instrumentality of one or more States or political subdivisions,

(v) A governmental unit referred to in subsection (c)(1), or

(vi) An organization referred to in subsection (c)(2) which normally receives a substantial part of its support (exclusive of income received in the exercise or performance by such organization of its charitable, educational, or other purpose or function constituting the basis for its exemption under section 501(a)) from a governmental unit referred to in subsection (c)(1) or from direct or indirect contributions from the general public,

shall be allowed to the extent that the aggregate of such contributions does not exceed 10 percent of the taxpayer's adjusted gross income computed without regard to any net operating loss carryback to the taxable year under section 172.

• • • • •

(2) *Corporations.* In the case of a corporation, the total deductions under subsection (a) for any taxable year shall not exceed 5 percent of the taxpayer's taxable income computed without regard to—

(A) This section,

(B) Part VIII (except section 248),

(C) Any net operating loss carryback to the taxable year under section 172, and

(D) Section 922 (special deduction for Western Hemisphere trade corporations).

Any contribution made by a corporation in a taxable year (hereinafter in this sentence referred to as the "contribution year") in excess of the amount deductible for such year under the preceding sentence shall be deductible for each of the 5 succeeding taxable years in order of time, but only to the extent of the lesser of the two following amounts: (i) the excess of the maximum amount deductible for such succeeding taxable year under the preceding sentence over the sum of the contributions made in such year plus the aggregate of the excess contributions which were made in taxable years before the contribution year and which are deductible under this sentence for such succeeding taxable year; or (ii) in the case of the first succeeding taxable year, the amount of such excess contribution, and in the case of the second, third, fourth, or fifth succeeding taxable year, the portion of such excess contribution not deductible under this sentence for any taxable year intervening between the contribution year and such succeeding taxable year.

• • • • •

(5) *Carryover of certain excess contributions by individuals.* (A) In the case of an individual, if the amount of charitable contributions described in paragraph (1)(A) payment of which is made within a taxable year (hereinafter in this paragraph referred to as the "contribution year") beginning after December 31, 1963, exceeds 30 percent of the taxpayer's adjusted gross income for such year (computed without regard to any net operating loss carryback to such year under section 172), such excess shall be treated as a charitable contribution described in paragraph (1)(A) paid in each of the 5 succeeding taxable years in order of time, but, with respect to any such succeeding taxable year, only to the extent of the lesser of the two following amounts:

(i) The amount by which 30 percent of the taxpayer's adjusted gross income for such succeeding taxable year (computed without regard to any net operating loss carryback to such succeeding taxable year under section 172) exceeds the sum of the charitable contributions described in paragraph (1)(A) payment of which is made by the taxpayer within such succeeding taxable year (determined without regard to this subparagraph) and the charitable contributions described in paragraph (1)(A) payment of which was made in taxable years (beginning after December 31, 1963) before the contribution year which are treated under this subparagraph as having been paid in such succeeding taxable year; or

(ii) In the case of the first succeeding taxable year, the amount of such excess, and in the case of the second, third, fourth, or fifth succeeding taxable year, the portion of such excess not treated under this subparagraph as a charitable contribution described in paragraph (1)(A) paid in any taxable year intervening between the contribution year and such succeeding taxable year.

(B) In applying subparagraph (A), the excess determined under subparagraph (A) for the contribution year shall be reduced to the extent that such excess reduces taxable income (as computed for purposes of the second sentence of section 172(b)(2)) and increases the net operating loss deduction for a taxable year succeeding the contribution year.

• • • • •

(e) *Special rule for charitable contributions of certain property.* The amount of any charitable contribution taken into account under this section shall be reduced by the amount which would have been treated as gain to which section 1245(a) or 1250(a) applies if the property contributed had been sold at its fair market value (determined at the time of such contribution).

(f) *Future interests in tangible personal property.* For purposes of this section, payment of a charitable contribution which consists of a future interest in tangible personal property shall be treated as made only when all intervening interests in, and rights to the actual possession or enjoyment of, the property have expired or are held by persons other than the taxpayer or those standing in a relationship to the taxpayer described in section 267(b). For purposes of the preceding sentence, a fixture which is intended to be severed from the real property shall be treated as tangible personal property.

(g) *Application of unlimited charitable contribution deduction*—(1) *Allowance of deduction for taxable years beginning after December 31, 1963.* If the taxable year begins after December 31, 1963—

(A) Subsection (b)(1)(C) shall apply only if the taxpayer so elects (at such time and in such manner as the Secretary or his delegate by regulations prescribes); and

(B) For purposes of subsection (b)(1)(C), the amount of the charitable contributions for the taxable year, and for all prior taxable years beginning after December 31, 1963) shall be determined without the application of subsection (b)(5) and solely by reference to charitable contributions described in paragraph (2).

If the taxpayer elects to have subsection (b)(1)(C) apply for the taxable year, then for such taxable year subsection (a) shall apply only with respect to charitable contributions described in paragraph (2), and no amount of charitable contributions made in the taxable year or any prior taxable year may be treated under subsection (b)(5) as having been made in the taxable year or in any succeeding taxable year.

(2) *Qualified contributions.* The charitable contributions referred to in paragraph (1) are—

(A) Any charitable contribution described in subsection (b)(1)(A);

(B) Any charitable contribution, not described in subsection (b)(1)(A), to an organization described in subsection (c)(2) substantially more than half of the assets of which is devoted directly to, and substantially all of the income of which is expended directly for, the active conduct of the activities constituting the purpose or function for which it is organized and operated;

(C) Any charitable contribution, not described in subsection (b)(1)(A), to an organization described in subsection (c)(2) which meets the requirements of paragraph (3) with respect to such charitable contribution; and

(D) Any charitable contribution payment of which is made on or before the date of the enactment of the Revenue Act of 1964 [February 26, 1964].

(3) *Organizations expending at least 50 percent of donor's contributions.* An organization shall be an organization referred to in paragraph (2)(C), with respect to any charitable contribution, only if—

(A) Not later than the close of the third year after the organization's taxable year in which the contribution is received (or before such later time as the Secretary or his delegate may allow upon good cause shown by such organization), such organization expends an amount equal to at least 50 percent of such contribution for—

(i) The active conduct of the activities constituting the purpose or function for which it is organized and operated,

(ii) Assets which are directly devoted to such active conduct,

(iii) Contributions to organizations which are described in subsection (b)(1)(A) or in paragraph (2)(B) of this subsection, or

(iv) Any combination of the foregoing; and

(B) For the period beginning with the taxable year in which such contribution is received and ending with the taxable year in which subparagraph (A) is satisfied with respect to such contribution, such organization expends all of its net income (determined without regard to capital gains and losses) for the purposes described in clauses (i), (ii), (iii), and (iv) of subparagraph (A).

If the taxpayer so elects (at such time and in such manner as the Secretary or his delegate by regulations prescribes) with respect to contributions made by him to any organization, then, in applying subparagraph (B) with respect to contributions made by him to such organization during his taxable year for which such election is made and during all his subsequent taxable years, amounts expended by the organization after the close of any of its taxable years and on or before the 15th day of the third month following the close of such taxable year shall be treated as expended during such taxable year.

(4) *Disqualifying transactions.* An organization shall be an organization referred to in subparagraph (B) or (C) of paragraph (2) only if at no time during the period consisting of the organization's taxable year in which the contribution is received, its 3 preceding taxable years, and its 3 succeeding taxable years, such organization—

(A) Lends any part of its income or corpus to,

(B) Pays compensation (other than reasonable compensation for personal services actually rendered) to,

(C) Makes any of its services available on a preferential basis to,

(D) Purchases more than a minimal amount of securities or other property from, or

(E) Sells more than a minimal amount of securities or other property to,

the donor of such contribution, any member of his family (as defined in section 267(c)(4)), any employee of the donor, any officer or employee of a corporation in which he owns (directly or indirectly) 50 percent or more in value of the outstanding stock, or any partner or employee of a partnership in which he owns (directly or indirectly) 50 percent or more of the capital interest or profits interest. This paragraph shall not apply to transactions occurring on or before the date of the enactment of the Revenue Act of 1964 [February 26, 1964].

(h) *Disallowance of deductions in certain cases.* (1) For disallowance of deductions in case of contributions or gifts to charitable organizations engaged in prohibited transactions, see section 503(e).

(2) For disallowance of deductions for contributions to or for the use of communist controlled organizations, see section 11(a) of the Internal Security Act of 1950 (64 Stat. 996; 50 U.S.C. 790).

(i) *Other cross references.* (1) For charitable contributions of estates and trusts, see section 642(c).

(2) For nondeductibility of contributions by common trust funds, see section 584.

(3) For charitable contributions of partners, see section 702.

(4) For charitable contributions of nonresident aliens, see section 873.

(5) For treatment of gifts for benefit of or use in connection with the Naval Academy as gifts to or for the use of the United States, see section 3 of the Act of March 31, 1944 (58 Stat. 135; 34 U.S.C. 1115b).

(6) For treatment of gifts for benefit of the library of the Post Office Department as gifts to or for the use of the United States, see section 2 of the Act of August 8, 1946 (60 Stat. 924; 5 U.S.C. 393).

(7) For treatment of gifts accepted by the Secretary of State under the Foreign Service Act of 1946 as gifts to or for the use of the United States, see section 1021(e) of that Act (60 Stat. 1032; 22 U.S.C. 809(e)).

(8) For treatment of gifts of money accepted by the Attorney General for credit to the "Commissary Funds Federal Prisons" as gifts to or for the use of the United States, see section 2 of the Act of May 15, 1952 (66 Stat. 73, as amended by the Act of July 9, 1952, 66 Stat. 479, 31 U.S.C. 725s-4).

[Sec. 170 as amended by sec. 1, Act of Aug. 7, 1956 (Pub. Law 1022, 84th Cong., 70 Stat. 1117); secs. 10, 11, and 12, Technical Amendments Act 1958 (72 Stat. 1609-10); sec. 7(a), Act of Sept. 14, 1960 (Pub. Law 86-779, 74 Stat. 1002); sec. 13(d), Rev. Act 1962 (76 Stat. 1034); sec. 2, Act of Oct. 23, 1962 (Pub. Law 87-858, 76 Stat. 1134); secs. 209 and 231 (b), Rev. Act 1964 (78 Stat. 43, 100)]

PAR. 2. Section 1.170-1 is amended by revising paragraph (a) to read as follows:

**§ 1.170-1 Charitable, etc., contributions and gifts; allowance of deduction.**

(a) *In general*—(1) *General rule.* Any charitable contribution (as defined in section 170(c)) actually paid during the taxable year is allowable as a deduction in computing taxable income, regardless of the method of accounting

employed or when pledged. In addition, contributions by corporations may under certain circumstances be deductible even though not paid during the taxable year (see § 1.170–3). The deduction is subject to the limitations of section 170(b) (see §§ 1.170–2 and 1.170–3) and is subject to verification by the district director. For rules relating to the determination of, and the deduction for, amounts paid to maintain certain students as members of the taxpayer's household and treated under section 170 (d) as paid for the use of an organization described in section 170(c) (2), (3), or (4), see paragraph (f) of § 1.170–2. For a special rule relating to the computation of the amount of the deduction with respect to a contribution of section 1245 or section 1250 property, see section 170 (e).

(2) *Information required in support of deductions for taxable years beginning before January 1, 1964.* In connection with claims for deductions for charitable contributions paid in taxable years beginning before January 1, 1964, taxpayers shall state in their income tax returns the name and address of each organization to which a contribution was made and the amount and approximate date of the actual payment of each contribution. Any deduction for charitable contribution must be substantiated, when required by the district director, by a statement from the organization to which the contribution was made indicating whether the ogranization is a domestic organization, the name and address of the contributor, the amount of the contribution, and the date of its actual payment, and by such other information as the district director may deem necessary.

(3) *Information required in support of deductions for taxable years beginning after December 31, 1963*—(i) *In general.* In connection with claims for deductions for charitable contributions paid in taxable years beginning after December 31, 1963, taxpayers shall state in their income tax returns the name of each organization to which a contribution was made and the amount and date of the actual payment of each contribution. If a contribution is made in propetry other than money, the taxpayer shall state the kind of property contributed (for example, used clothing, paintings, securities) and shall state the method utilized in determining the fair market value of the property at the time the contribution was made. In any case in which a taxpayer makes numerous cash contributions to an organization during the taxable year, the taxpayer may state the total cash payments made to such organization during the taxable year in lieu of listing each cash contribution and the date of payment.

(ii) *Contribution by individual of property other than money.* If an individual taxpayer makes a charitable contribution of an item of property other than money and claims a deduction in excess of $200 in respect of his contribution of such item, he shall attach to his income tax return a statement setting forth the following information with respect to such item:

(a) The name and address of the organization to which the contribution was made.

(b) The date of the actual contribution.

(c) A description of the property in sufficient detail to identify the particular property contributed including, in the case of tangible property, the physical condition of the property at the time of contribution. In the case of securities, the name of the issuer, the type of security, and whether or not such security is regularly traded on a stock exchange or in an over-the-counter market.

(d) The manner (for example, by purchase, gift, bequest, inheritance, exchange, etc.) and the approximate date of acquisition of the property by the taxpayer. If the property was created, produced, or manufactured by the taxpayer, the approximate date the property was substantially completed.

(e) The fair market value of the property at the time the contribution was made, showing the method utilized in determining the fair market value. (If the valuation was determined by appraisal, a copy of the signed report of the appraiser should be submitted.)

(f) In the case of property (not including securities) held by the taxpayer for a period less than five years immediately preceding the date on which the contribution was made, the cost or other basis, adjusted as provided by section 1016. If available, the cost or other basis, adjusted as provided by section 1016, of property (not including securities) held for a period of five years or more prior to the time of contribution should be submitted.

(g) In the case of section 1245 or section 1250 property, the reduction by reason of section 170(e) in the amount of the charitable contribution taken into account under section 170.

(h) The terms of any agreement or understanding entered into by or on behalf of the taxpayer relating to the use, sale, or disposition of the property contributed. For example, there must be attached to the income tax return of an individual taxpayer the terms of any agreement or understanding which restricts the donee's right to dispose of the donated property (either temporarily or permanently) or which reserves to, or confers upon, anyone other than the donee organization (or an organization participating with such organization in cooperative fund raisng) any right to the income from such property, to the possession of the property (including the right to vote securities), to acquire such property by purchase or otherwise, or to designate who shall have such income, possession, or right to acquire. Notwithstanding the above, it will not be necessary to set forth the terms of any agreement or understanding which merely earmarks contributed property for a particular charitable use, such as the use of donated furniture in the reading room of the donee organization's library.

(i) The total amount claimed as a deduction for the taxable year due to the contribution of the property. If less than the entire interest in the property is contributed during the taxable year, the amount claimed as a deduction in any prior year or years for contributions of other interests in such property, the name and address of each organization to which any such contribution was made, the place where the property (if tangible property) is located or kept and the name of the person having actual possession of the property, if other than the organization to which the property giving rise to the deduction was contributed.

(iii) *Statement from donee organization.* Any deduction for a charitable contribution must be substantiated, when required by the district director, by a statement from the organization to which the contribution was made indicating whether the organization is a domestic organization, the name and address of the contributor, the amount of the contribution, the date of actual receipt of the contribution, and such other information as the district director may deem necessary. If the contribution includes an item of property (other than money or securities which are regularly traded on a stock exchange or in an over-the-counter market) which the donee deems to have a fair market value in excess of $200 at the time of receipt, such statement shall also indicate for each such item its location if retained by the organization, the amount received by the organization on any sale of the property and the date of sale, or in case of other disposition of the property, the method of disposition.

[T.D. 6786]

## PART 1—INCOME TAX: TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Limitation on Amount of Casualty or Theft Loss Deduction

On October 29, 1964, notice of proposed rule making with respect to the amendments of the Income Tax Regulations (26 CFR Part 1) under section 165 of the Internal Revenue Code of 1954 to conform the regulations to changes made by section 208 of the Revenue Act of 1964 (78 Stat. 43), and to reflect in § 1.165, statutory provisions; losses, of such Regulations the amendment of section 165(i) by section 3 of the Excise-Tax Rate Extension Act of 1964 (78 Stat. 237), relating to losses arising from confiscation of property by the Government of Cuba was published in the FEDERAL REGISTER (29 F.R. 14743). No objection to the rules proposed having been received during the 30-day period prescribed in the notice, the regulations as proposed are hereby adopted.

[SEAL] BERTRAND M. HARDING,
*Acting Commissioner of Internal Revenue.*

Approved: December 22, 1964.

STANLEY S. SURREY,
*Assistant Secretary of the Treasury.*

In order to conform the Income Tax Regulations (26 CFR Part 1) under section 165 of the Internal Revenue Code of 1954 to section 208 of the Revenue Act of 1964 (78 Stat. 43), and to reflect in § 1.165, statutory provisions; losses, of such Regulations the amendment of section 165(i) by section 3 of the Excise-Tax Rate Extension Act of 1964 (78 Stat. 237), relating to losses arising from confiscation of property by the Government of Cuba, such regulations are amended as follows:

PARAGRAPH 1. Section 1.165 is amended by revising section 165(c)(3), by redesignating section 165(i) as 165(j), by adding a new section 165(i), and by revising the historical note. These amended and added provisions read as follows:

**§ 1.165 Statutory provisions; losses.**

SEC. 165. *Losses.* • • •

(c) *Limitation on losses of individuals.* • • •

(3) Losses of property not connected with a trade or business, if such losses arise from fire, storm, shipwreck, or other casualty, or from theft. A loss described in this paragraph shall be allowed only to the extent that the amount of loss to such individual arising from each casualty, or from each theft, exceeds $100. For purposes of the $100 limitation of the preceding sentence, a husband and wife making a joint return under section 6013 for the taxable year in which the loss is allowed as a deduction shall be treated as one individual. No loss described in this paragraph shall be allowed if, at the time of filing the return, such loss has been claimed for estate tax purposes in the estate tax return.

• • • • •

(i) *Certain property confiscated by the Government of Cuba*—(1). *Treatment as subsection (c)(3) loss.* For purposes of this chapter, in the case of an individual who was a citizen of the United States, or a resident alien, on December 31, 1958, any loss of property which—

(A) Was sustained by reason of the expropriation, intervention, seizure, or similar taking of the property, before January 1, 1964, by the government of Cuba, any political subdivision thereof, or any agency or instrumentality of the foregoing, and

(B) Was not a loss described in paragraph (1) or (2) of subsection (c),

shall be treated as a loss to which paragraph (3) of subsection (c) applies. In the case of tangible property, the preceding sentence shall not apply unless the property was held by the taxpayer, and was located in Cuba, on December 31, 1958.

(2) *Special rules.* (A) For purposes of subsection (a), any loss described in paragraph (1) shall be treated as having been sustained on October 14, 1960, unless it is established that the loss was sustained on some other day.

(B) For purposes of subsection (a), the fair market value of property held by the taxpayer on December 31, 1958, to which paragraph (1) applies, on the day on which the loss of such property was sustained, shall be its fair market value on December 31, 1958.

(C) For purposes of section 172, a loss described in paragraph (1) shall not be treated as an expropriation loss within the meaning of section 172(k).

(D) For purposes of section 6601, the amount of any tax imposed by this title shall not be reduced by virtue of this subsection for any period prior to February 26, 1964.

(3) *Refunds or credits.* Notwithstanding any law or rule of law, refund or credit of any overpayment attributable to the application of paragraph (1) may be made or allowed if claim therefor is filed before January 1, 1965. No interest shall be allowed with respect to any such refund or credit for any period prior to February 26, 1964.

(j) *Cross references.* (1) For special rule for banks with respect to worthless securities, see section 582.

(2) For disallowance of deduction for worthlessness of securities to which subsection (g)(2)(C) applies, if issued by a political party or similar organization, see section 271.

(3) For special rule for losses on stock in a small business investment company, see section 1242.

(4) For special rule for losses of a small business investment company, see section 1243.

(5) For special rule for losses on small business stock, see section 1244.

[Sec. 165 as amended by secs. 7 and 57 (c)(1), Technical Amendments Act 1958 (72 Stat. 1606, 1646); sec. 202 (a), Small Business Tax Revision Act 1958 (72 Stat. 1676); secs. 208 and 238, Rev. Act 1964 (78 Stat. 43, 128); sec. 3, Excise-Tax Rate Extension Act 1964 (78 Stat. 237)]

PAR. 2. Section 1.165–7 is amended by revising paragraph (a)(1) and by adding a new subparagraph (4) to paragraph (b). These amended and added provisions read as follows:

**§ 1.165–7 Casualty losses.**

(a) *In general*—(1) *Allowance of deduction.* Except as otherwise provided in paragraphs (b)(4) and (c) of this section, any loss arising from fire, storm, shipwreck, or other casualty is allowable as a deduction under section 165(a) for the taxable year in which the loss is sustained. However, see § 1.165–6, relating to farming losses, and § 1.165–11, relating to an election by a taxpayer to deduct disaster losses in the taxable year immediately preceding the taxable year in which the casualty occurred. The manner of determining the amount of a casualty loss allowable as a deduction in computing taxable income under section 63 is the same whether the loss has been incurred in a trade or business or in any transaction entered into for profit, or whether it has been a loss of property not connected with a trade or business and not incurred in any transaction entered into for profit. The amount of a casualty loss shall be determined in accordance with paragraph (b) of this section. For other rules relating to the treatment of deductible casualty losses, see § 1.1231–1, relating to the involuntary conversion of property.

• • • • •

(b) *Amount deductible.* • • •

(4) *Limitation on certain losses sustained by individuals after December 31, 1963.* (i) Pursuant to section 165(c)(3), the deduction allowable under section 165(a) in respect of a loss sustained—

(a) After December 31, 1963, in a taxable year ending after such date,

(b) In respect of property not used in a trade or business or for income producing purposes, and

(c) From a single casualty

shall be limited to that portion of the loss which is in excess of $100. The nondeductibility of the first $100 of loss applies to a loss sustained after December 31, 1963, without regard to when the casualty occurred. Thus, if property not used in a trade or business or for income producing purposes is damaged or destroyed by a casualty which occurred prior to January 1, 1964, and loss resulting therefrom is sustained after December 31, 1963, the $100 limitation applies.

(ii) The $100 limitation applies separately in respect of each casualty and applies to the entire loss sustained from each casualty. Thus, if as a result of a particular casualty occurring in 1964, a taxpayer sustains in 1964 a loss of $40 and in 1965 a loss of $250, no deduction is allowable for the loss sustained in 1964 and the loss sustained in 1965 must be reduced by $60 ($100—$40). The determination of whether damage to, or destruction of, property resulted from a single casualty or from two or more separate casualties will be made upon the basis of the particular facts of each case. However, events which are closely related in origin generally give rise to a single casualty. For example, if a storm damages a taxpayer's residence and his automobile parked in his driveway, any loss sustained results from a single casualty. Similarly, if a hurricane causes high waves, all wind and flood damage to a taxpayer's property caused by the hurricane and the waves results from a single casualty.

(iii) Except as otherwise provided in this subdivision, the $100 limitation applies separately to each individual taxpayer who sustains a loss even though the property damaged or destroyed is owned by two or more individuals. Thus, if a house occupied by two sisters and jointly owned by them is damaged or destroyed, the $100 limitation applies separately to each sister in respect of any loss sustained by her. However, for purposes of applying the $100 limitation, a husband and wife who file a joint return for the first taxable year in which the loss is allowable as a deduction are treated as one individual taxpayer. Accordingly, if property jointly owned by a husband and wife, or property separately owned by the husband or by the wife, is damaged or destroyed by a single casualty in 1964, and a loss is sustained in that year by either or both the husband or wife, only one $100 limitation applies if a joint return is filed for 1964. If, however, the husband and wife file separate returns for 1964, the $100 limitation applies separately in respect of any loss sustained by the husband and in respect of any loss sustained by the wife. Where losses from a single casualty are sustained in two or more separate tax years, the husband and wife shall, for purposes of applying the $100 limitation to such losses, be treated as one individ-

ual for all such years if they file a joint return for the first year in which a loss is sustained from the casualty; they shall be treated as separate individuals for all such years if they file separate returns for the first such year. If a joint return is filed in the first loss year but separate returns are filed in a subsequent year, any unused portion of the $100 limitation shall be allocated equally between the husband and wife in the latter year.

(iv) If a loss is sustained in respect of property used partially for business and partially for nonbusiness purposes, the $100 limitation applies only to that portion of the loss properly attributable to the nonbusiness use. For example, if a taxpayer sustains a $1,000 loss in respect of an automobile which he uses 60 percent for business and 40 percent for nonbusiness, the loss is allocated 60 percent to business use and 40 percent to nonbusiness use. The $100 limitation applies to the portion of the loss allocable to the nonbusiness loss.

PAR. 3. Section 1.165–8 is amended by revising paragraphs (a)(1) and (c) to read as follows:

**§ 1.165–8 Theft losses.**

(a) *Allowance of deduction.* (1) Except as otherwise provided in paragraphs (b) and (c) of this section, any loss arising from theft is allowable as a deduction under section 165(a) for the taxable year in which the loss is sustained. See section 165(c)(3).

* * * * * *

(c) *Amount deductible.* The amount deductible under this section in respect of a theft loss shall be determined consistently with the manner prescribed in § 1.165–7 for determining the amount of casualty loss allowable as a deduction under section 165(a). In applying the provisions of paragraph (b) of § 1.165–7 for this purpose, the fair market value of the property immediately after the theft shall be considered to be zero. In the case of a loss sustained after December 31, 1963, in a taxable year ending after such date, in respect of property not used in a trade or business or for income producing purposes, the amount deductible shall be limited to that portion of the loss which is in excess of $100. For rules applicable in applying the $100 limitation, see paragraph (b)(4) of § 1.165–7. For other rules relating to the treatment of deductible theft losses, see § 1.1231–1, relating to the involuntary conversion of property.

(Sec. 7805 of the Internal Revenue Code of 1954, 68A Stat. 917; 26 U.S.C. 7805)

[T.D. 6787]

## PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

### Earnings and Profits of Controlled Foreign Corporations

In order to make certain changes in the Income Tax Regulations (26 CFR Part 1) under section 964(a) of the Internal Revenue Code of 1954, § 1.964–1 is amended by revising paragraph (b)(1)(ii) and (2)(i) and by revising paragraph (e)(4)(ii). These amended provisions read as follows:

**§ 1.964–1 Determination of the earnings and profits of a foreign corporation.**

* * * * * *

(b) *Accounting adjustments*—(1) *In general.* * * *

(ii) *Physical assets, depreciation, etc.* All physical assets (as defined in paragraph (e)(5)(ii) of this section), including inventory when reflected at cost, shall be taken into account at historical cost computed either for individual assets or groups of similar assets. The historical cost of such an asset shall not reflect any appreciation or depreciation in its value or in the relative value of the currency in which its cost was incurred. Depreciation, depletion, and amortization allowances shall be based on the historical cost of the underlying asset and no effect shall be given to any such allowance determined on the basis of a factor other than historical cost. For special rules for determining historical cost where assets are acquired during a taxable year beginning before January 1, 1950, or a majority interest in the foreign corporation is acquired after December 31, 1949, but before October 27, 1964, see subparagraph (2) of this paragraph.

* * * * * *

(2) *Historical cost.* * * *

(i) In the event that the foreign corporation became a majority owned subsidiary of a United States person (within the meaning of section 7701(a)(30)) after December 31, 1949, but before October 27, 1964, and the asset was held by such foreign corporation at that time, as though the asset was purchased on the date during such period the foreign corporation first became a majority owned subsidiary at a price equal to its then fair market value, or

* * * * * *

(e) *Exchange gain or loss.* * * *

(4) *Translation of balance sheet.* * * *

(ii) *Physical assets.* Amounts representing physical assets (other than inventory) shall be translated at the appropriate exchange rate for the translation period in which the historical cost of the asset was incurred or is deemed to have been incurred. For special rules for determining date on which the historical cost of certain assets acquired during taxable years beginning before January 1, 1950, or owned at the time a majority interest in the corporation was acquired after December 31, 1949, but before October 27, 1964, is deemed to have been incurred, see paragraph (b)(2) of this section.

Because this Treasury decision amends existing regulations merely by liberalizing the application of the election under § 1.964–1(b)(2), it is found that it is unnecessary to issue this Treasury decision with notice and public procedure thereon under section 9(a) of the Administrative Procedure Act, approved June 11, 1946, or subject to the effective date limitation of section 4(c) of said Act.

(Sec. 7805 of the Internal Revenue Code of 1954, 68A Stat. 917; 26 U.S.C. 7805)

[SEAL] BERTRAND M. HARDING,
*Acting Commissioner of Internal Revenue.*

Approved: December 23, 1964.

STANLEY S. SURREY,
*Assistant Secretary of the Treasury.*

# Title 37—PATENTS, TRADEMARKS, AND COPYRIGHTS

## Chapter I—Patent Office, Department of Commerce

## PART 1—RULES OF PRACTICE IN PATENT CASES

## PART 3—FORMS FOR PATENT CASES

### Forms and Rules of Practice

The following amended rules of practice and illustrative forms are adopted pursuant to Public Law 88–292, March 26, 1964, 78 Stat. 171, thus prescribing the documents presently required to be filed in the Patent Office under oath which may be subscribed to by a written declaration in the indicated form in lieu of the oath otherwise required.

In the FEDERAL REGISTER of June 24, 1964, proposed amended § 1.65 and a proposed § 1.68 as well as an illustrative form (3.11(a)) for this purpose were published and intention was stated to conform other affected rules and forms to effect the purpose of Public Law 88–292.

Interested persons were invited to submit their comments or suggestions on the proposals, and full and careful consideration has been given to all the material submitted.

Use of the declaration in the prescribed instances may be any applicant, foreign or domestic. The provisions of § 1.66 of the rules relating to oaths remain in effect with respect to oaths when oaths are used, but this rule is not applicable to a declaration when used as an alternative to an oath. When a declaration is used, the ribboning procedure is not necessary, nor is it necessary to appear before an official in connection with the making of a declaration.

Suggestions were made that the rules allow the declaration to be made separately, apart from the other parts of the application. Except in the case of the declaration not accompanying an already accepted application (form 3.13(a)), and in the case of the supplemental declaration for amendment presenting claims for material disclosed but not originally claimed (form 3.14(a)), the declaration, like the oath, is an integral part of the application in accordance with section III of Title 35 of the United States Code, and 37 CFR 1.51 and shall be maintained together therewith.

Further suggestions were made that the use of the declaration be extended even further than was proposed.

Amendments herein adopted would allow the declaration to be used as part of the original application for a patent involving designs, plants, and other patentable inventions; for reissue patents; when claiming matter originally shown or described but not originally claimed; or when filing a divisional or continuing application. Experience in these areas may very well provide a basis for more extended use of declarations in the future but, as an initial matter, the use will be limited to these listed instances.

These amended rules shall take effect on the date of this publication. Declarations, executed on and after that date, in proper form, will be accepted in the prescribed instances in lieu of the oath heretofore required.

The text of the new rule, amendments to existing rules, and illustrative forms follows:

Sections 1.41, 1.42, 1.43, 1.45, 1.47, 1.51, 1.52, 1.57, 1.61, 1.67, 1.76, 1.153, 1.162, and 1.175 are amended by inserting the words "or declaration" after the word "oath" wherever it occurs, including occurrences in the title of a section.

Paragraph (c) of § 1.52 is amended by inserting the phrase ", or declaration made," after the phrase "signed and sworn to".

Paragraph (a) of § 1.172 is amended by inserting the phrase ", or declaration made," after the phrase "sworn to" in the two occurrences of this latter phrase.

The caption "THE OATH", preceding § 1.65 is amended to read "STATEMENT; OATH OR DECLARATION".

Section 1.65 is amended to read as follows:

**§ 1.65 Statement of applicant.**

(a)(1) The applicant, if the inventor, must state that he verily believes himself to be the original and first inventor or discoverer of the process, machine, manufacture, composition of matter, or improvement thereof, for which he solicits a patent; that he does not know and does not believe that the same was ever known or used before his invention or discovery thereof, and shall state of what country he is a citizen and where he resides and whether he is a sole or joint inventor of the invention claimed in his application. In every original application the applicant must distinctly state that to the best of his knowledge and belief the invention has not been in public use or on sale in the United States more than one year prior to his application or patented or described in any printed publication in any country before his invention or more than one year prior to his application, or patented in any foreign country prior to the date of his application on an application filed by himself or his legal representatives or assigns more than twelve months prior to his application in this country. He shall state whether or not any application for patent on the same invention has been filed in any foreign country, either by himself, or by his legal representatives or assigns. If any such application has been filed, the applicant shall name the country in which the earliest such application was filed, and shall give the day, month, and year of its filing; he shall also identify by country and by day, month, and year of filing, every such foreign application filed more than twelve months before the filing of the application in this country. (2) This statement (i) must be subscribed to by the applicant, and (ii) must either (a) be sworn to (or affirmed) as provided in § 1.66, or (b) include the personal declaration of the applicant as prescribed in § 1.68. See § 1.153 for design cases and § 1.162 for plant cases.

(b) If the application is made as provided in §§ 1.42, 1.43, or 1.47, the applicant shall state his relationship to the inventor and, upon information and belief, the facts which the inventor is required by this section to state.

(c) An additional statement may be required if the application has not been filed in the Patent Office within a reasonable time after execution of the original statement.

A new § 1.68 is included to read as follows:

**§ 1.68 Declaration in lieu of application oath.**

(a) The applicant may, in lieu of making an oath or affirmation in the manner provided by § 1.66, set forth in the body of the statement required from him by § 1.65 his written declaration that all statements made of his own knowledge are true and that all statements made on information and belief are believed to be true, if, and only if, the applicant is, on the same paper, warned that willful false statements and the like are punishable by fine or imprisonment, or both (18 U.S.C. 1001) and may jeopardize the validity of the application or any patent issuing thereon.

(b) A written declaration by the applicant satisfying the foregoing conditions, may also be used in lieu of an oath when presenting a claim for matter not originally claimed (§ 1.67), when applying for a reissue patent (§§ 1.171 and 1.172), when applying for a patent for a design (§§ 1.151 and 1.153), and when applying for a patent for a plant (§§ 1.161 and 1.162).

Form 3.11a, an alternative to form 3.11, *Oath to accompany application for patent,* follows:

3.11a *Declaration to accompany application for patent.*

(Sections 1.65 and 1.68 provide for a declaration in lieu or in place of an oath in certain instances. The petition and specification precede the declaration.)

(1) ----------, the above-named petitioner-- declare-- that ---------- citizen-- of the United States (2) and resident-- of (3) ---------- that ---------- verily believe-- (4) ---------- to be the original, first, and (5) ---------- inventor-- of the improvement in (6) ---------- described and claimed in the annexed specification; that (7) ---------- do-- not know and do-- not believe that the same was ever known or used before (8) ---------- invention thereof, or patented or described in any printed publication in any country before (8) ---------- invention thereof, or more than one year prior to this application, or in public use or on sale in the United States more than one year prior to this application; that said invention has not been patented in any country foreign to the United States or an application filed by (9) ---------- or (8) ---------- legal representatives or assigns more than twelve months prior to this application; and that no application for patent on said invention has been filed by (9) ---------- or (8) ---------- representatives or assigns in any country foreign to the United States, except as follows: (10) ----------

The undersigned petitioner-- declare-- further that all statements made herein of (8) ---------- own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

Inventor's full name or names (11) ----------

---

(Signature)

Date ----------.

Notes: See §§ 1.65 and 1.68.

(1) Name of inventor; if the invention is joint, the names of all the joint inventors.

(2) If the applicant be an alien, state of what foreign country he is a citizen or subject.

(3) Give city and state, or if a foreign resident, city and country, of residence. If more than one inventor give residences of each inventor if different. Street address need not be given here as it appears elsewhere.

(4) "Himself" in the case of a sole inventor; "themselves" in the case of joint inventors.

(5) "Sole" in the case of a sole inventor; "joint" in the case of point inventors.

(6) Title of the invention.

(7) "He" in the case of a sole inventor; "they" in the case of joint inventors.

(8) "His" in the case of a sole inventor; "their" in the case of joint inventors.

(9) "Him" in the case of a sole inventor; "them" in the case of joint inventors.

(10) If no application has been filed in a foreign country strike out the words "except as follows:". If one or more applications have been filed in foreign countries, the first application and each application more than twelve months old (six months in design cases) must be recited. The country and date of filing the foreign application must be given and the number of the application or other identifying data may also be stated. The claim for priority under 35 U.S.C. 119 (see § 1.55) may be made here. The following examples illustrate various situations.

(a) Only one prior foreign application filed: state "in (country) on (date)." If the right of priority is also claimed add "the right of priority of which application is claimed."

(b) More than one prior foreign application: state "in (country) on (date) and in other countries on subsequent dates." The country and date do not need to be recited except for the first filed application and each application more than twelve months old (six months in design cases).

(11) All petitioners are to sign (see section 1.41).

Form 3.12a, an alternative to form 3.12, *Oath to accompany application for patent, by an administrator (or executor),* follows:

3.12a *Declaration to accompany application for patent by an administrator (or executor).*

(Sections 1.65 and 1.68 provide for a declaration in lieu or in place of an oath in certain instances.)

A ----------, B ----------, the above-named petitioner, declares that he is a citi-

zen of the United States of America and a resident of _____, that he is the administrator of the estate (or executor of the last will and testament) of C _____ D _____, deceased, late a citizen of the United States and resident of _____, that he verily believes the said C _____ D _____ to be the original, first and sole inventor of the improvement in _____ described and claimed in the foregoing specification; that he does not know and does not believe that the same was ever known or used before the invention thereof by the said C _____ D _____, or patented or described in any printed publication in any country before the said invention thereof, or more than one year prior to this application, or in public use or on sale in the United States more than one year prior to this application; that said invention has not been patented in any country foreign to the United States on an application filed by the said C _____ D _____ or his legal representatives or assigns more than twelve months prior to this application; and that no application for patent on said invention has been filed by the said C _____ D _____ or his representatives or assigns in any country foreign to the United States except as follows: _____

The undersigned petitioner declares further that all statements made herein of his own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon. [TITLE OF INVENTION]

[SPECIFICATION]

I, _____, declare that I am a citizen of _____, residing at _____; that I have read the foregoing specification and claims and I verily believe I am the original, first, and sole inventor of the invention in _____ described and claimed therein; that I do not know and do not believe that this invention was ever known or used before my invention thereof, or patented or described in any printed publication in any country before my invention thereof, or more than one year prior to this application; or in public use or on sale in the United States more than one year prior to this application; that this invention has not been patented in any country foreign to the United States on an application filed by me or my legal representatives or assigns more than twelve months before this application; and that no application for patent on this invention has been filed by me or my representatives or assigns in any country foreign to the United States, except as follows:

And I hereby appoint _____, Registration No. _____, my attorney (or agent) to prosecute this application and to transact all business to the Patent Office connected therewith.

Wherefore I pray that Letters Patent be granted to me for the invention or discovery described and claimed in the foregoing specification and claims, and I hereby subscribe my name to the foregoing specification and claims, declaration, power of attorney, and this petition.

The undersigned petitioner declares further that all statements made herein of _____ own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

## Chapter I—Post Office Department

## PART 151—CUSTOMS

## PART 168—DIRECTORY OF INTERNATIONAL MAIL

### Miscellaneous Amendments

**§ 151.3 [Amended]**

In § 151.3 *Examination*, amend paragraph (e) by adding, in proper order, the following customs places:

Lake Charles, La.
Charlotte, N.C.
Mayaguez, Puerto Rico.
Ponce, Puerto Rico
Beaumont, Tex.
Petersburg, Va.
Superior, Wis.

NOTE: The corresponding Postal Manual section is 261.35.

**§ 168.5 [Amended]**

In § 168.5 *Individual country regulations*, make the following change:

In country "Canada", (29 F.R. 258), under Postal Union Mail, amend the two sample addresses appearing in the first paragraph of *Observations* by changing "CAPO (number)" to "CFPO (number)".

NOTE: The above amendment is effective January 1, 1965.

## Chapter I—Interstate Commerce Commission

### SUBCHAPTER A—GENERAL RULES AND REGULATIONS

[S.O. 947; Amdt. 3]

### PART 95—CAR SERVICE

### Railroad Operating Regulations for Freight Car Movement

At a Session of the Interstate Commerce Commission, Division 3, held at its office in Washington, D.C., on the 16th day of December A.D. 1964.

Upon further consideration of Service Order No. 947 (28 F.R. 12127; 29 F.R. 6014, 9670) and:

It appearing, that an acute shortage of freight cars continues to exist in all sections of the country; that cars loaded and empty are unduly delayed in terminals and in placement at, or removal from industries; that present rules, regulations, and practices with respect to the use, supply, control, movement, distribution, exchange, interchange, and return of freight cars are insufficient to promote the most efficient utilization of cars; it is the opinion of the Commission that the continuance of the emergency requires the order of November 7, 1963, to remain in effect for an additional period of time to promote car service in the interest of the public and the commerce of the people.

*It is ordered*, That:

Section 95.947 *RAILROAD OPERATING REGULATIONS FOR FREIGHT CAR MOVEMENT*, of Service Order No. 947, be, and it is hereby amended by substituting the following paragraph (e) for paragraph (e) thereof:

**§ 95.947 Railroad operating regulations for freight car movement.**

* * * * *

(e) *Expiration date.* This order shall expire at 11:59 p.m., December 31, 1965, unless otherwise modified, changed, suspended or annulled by order of this Commission.

Effective date: This amendment shall become effective at 11:59 p.m., December 31, 1964.

(Secs. 1, 12, 15, 24 Stat. 379, 383, 384, as amended; 49 U.S.C. 1, 12, 15. Interprets or applies sec. 1(10-17), 15(4), 40 Stat. 101, as amended 54 Stat. 911; 49 U.S.C. 1(10-17), 15(4))

*It is further ordered*, That a copy of this amendment shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and per diem agreement under the terms of that agreement; and that notice of this order shall be given to the general public by depositing a copy in the office of the Secretary of the Commission at Washington, D.C., and by filing it with the Director, Office of the Federal Register.

By the Commission, Division 3.

[SEAL] HAROLD D. MCCOY,
*Secretary.*

[S.O. 953; Amdt. 1]

### PART 95—CAR SERVICE

### Free Time on Unloading Box Cars at Ports

At a Session of the Interstate Commerce Commission, Division 3, held at its office in Washington, D.C., on the 16th day of December A.D. 1964.

Upon further consideration of Service Order No. 953 (29 F.R. 1570) and:

It appearing, that a critical shortage of box cars continues to exist, that such cars are being delayed unduly in unloading at ports and that free time published in tariffs for unloading such cars aggravates the shortage, impeding the use, control, supply, movement, distribution, exchange, interchange and return of such cars; it is the opinion of the Commission that the continuance of the emergency requires the order of January 24, 1964, to remain in effect for an additional period of time to promote car service in the interest of the public and the commerce of the people.

*It is ordered*, That:

Section 95.953 *FREE TIME ON UNLOADING BOX CARS AT PORTS*, of Service Order No. 953, be, and it is hereby amended by substituting the following paragraph (g) for paragraph (g) thereof:

**§ 95.953 Free time on unloading box cars at ports.**

* * * * *

(g) *Expiration date.* This order shall expire at 11:59 p.m., December 31, 1965, unless otherwise modified, changed, suspended or annulled by order of this Commission.

Effective date: This amendment shall become effective at 11:59 p.m., December 31, 1964.

(Secs. 1, 12, 15, 24 Stat. 379, 383, 384, as amended; 49 U.S.C. 1, 12, 15. Interprets or applies sec. 1(10-17), 15(4), 40 Stat. 101, as amended 54 Stat. 911; 49 U.S.C. 1(10-17), 15(4))

*It is further ordered*, That a copy of this amendment shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and per diem agreement under the terms of that agreement; and that notice of this order shall be given to the general public by depositing a copy in the office of the Secretary of the Commission at Washington, D.C., and by filing it with the Director, Office of the Federal Register.

By the Commission, Division 3.

[SEAL] HAROLD D. MCCOY,
*Secretary.*

## Chapter II—National Bureau of Standards, Department of Commerce

### SUBCHAPTER A—TEST FEE SCHEDULES

### PART 203—HEAT

Pursuant to authority contained in 15 U.S.C. 275a the following revision is effective upon publication in the FEDERAL REGISTER.

TEMPERATURE PHYSICS

Sec.
203.101 Laboratory thermometers.
203.102 Thermocouples, thermocouple materials, and pyrometer indicators.
203.103 Resistance thermometers.
203.105 Optical pyrometers and ribbon filament lamps.

AUTHORITY: The provisions of this Part 203 issued under sec. 9, 31 Stat. 1450, as amended; 15 U.S.C. 277. Interprets or applies sec. 7, 70 Stat. 959; 15 U.S.C. 275a.

TEMPERATURE PHYSICS

**§ 203.101 Laboratory thermometers.**

Only thermometers identified uniquely by serial number will be accepted for test.

| Item | Description | Fee |
|---|---|---|
| 203.101a | Thermometers, testing at points from 0 to 100° C. inclusive, or from 32 to 212° F. inclusive, for each point tested | $12.00 |
| 203.101b | Thermometers, testing at points from 101 to 300° C. inclusive, or from 213 to 600° F. inclusive, for each point tested | 20.00 |
| 203.101c | Thermometers, testing at points from 301 to 500° C. inclusive, or from 601 to 950° F. inclusive, for each point tested | 33.00 |
| 203.101d | Thermometers, testing at points from −1 to −110° C. inclusive, or from 31 to −166° F. inclusive, for each point tested | 35.00 |
| 203.101e | Thermometers, testing in liquid air, oxygen, or liquid nitrogen (−183° to −196° C.), for each point tested | 55.00 |
| 203.101f | Calorimeter thermometers | 75.00 |
| 203.101g | Beckmann thermometers, with 5° or 6° scale, testing at 0.5° intervals by comparison with precision standards | 80.00 |
| 203.101h | When instruments submitted are found to be unsuitable for test or unreliable a charge will be made to cover the cost of the work done. Minimum fee | 1.00 |
| 203.101i | Preliminary examination for foreign material in the mercury column and bulb and for a separated mercury column will be made as required. Separated mercury column will be reunited provided this can be accomplished readily. Maximum fee | 3.00 |
| 203.101z | For special tests not covered by the above schedule, fees will be charged dependent upon the nature of the test. | |

**§ 203.102 Thermocouples, thermocouple materials and pyrometer indicators.**

(a) Only the bare wires are required in order to perform the thermocouple calibrations in this schedule. It is preferable not to send insulating and protecting tubes, as the rate of breakage of these in shipment is high. If the thermocouple is furnished mounted (as in a protection-tube assembly) a charge of $5.00 will be made for dismantling the mounting, and the various parts will be returned to the sender without reassembling them.

(b) Thermocouple length requirements listed below are exclusive of lead wire. Lead wire need not be sent with thermocouples.

(c) All thermocouple calibration data furnished in reports will be on the basis of a reference junction temperature of 0° C., or 32° F.

(d) The calibration or test of an article will not be undertaken if, in our opinion, the article will not yield the specified accuracy, or if it possesses such unusual characteristics as to prevent the carrying out of the calibration or test at a reasonable cost. Only unused base-metal thermocouples and thermocouple materials will be accepted for test.

| Item | Description | Fee |
|---|---|---|
| 203.102a | High-temperature thermocouples and thermocouple materials. Minimum length 24 in. Corresponding values of emf and temperature at 4 to 15 points in the range 0 to 1450° C. (32° to 2650° F.) | $85.00 |
| | The uncertainties in the values of temperature corresponding to the values of emf reported for platinum vs. platinum-rhodium thermocouples are estimated not to exceed 0.5 degree in the range 0 to 1100° C. and increase to not more than 2 degrees at 1450° C. Results for platinum vs. platinum-10 percent rhodium thermocouples are given at 1 degree intervals over the entire range 0 to 1450° C. | |
| | The uncertainties in the values of temperature corresponding to the values of emf reported for base-metal thermocouples are estimated not to exceed 1 degree Celsius. Base-metal thermocouples are not tested above 1100° C. (2000° F.). | |
| | Thermocouple materials are tested against platinum thermoelectric standards maintained by the Bureau. | |
| 203.102b | High-temperature thermocouples and thermocouple materials. Calibration as per item 203.101a at less than four points, per point | 25.00 |
| 203.102c | Platinum versus platinum-10 percent rhodium thermocouples. The thermocouple shall be at least 36 in. long and made of wire not less than 0.014 in. in diameter. Emf of a thermocouple at any of the following temperatures, per point: 1063° C. (gold point), 960.8° C. (silver point), 630.5° C., 419.5° C. (zinc point). Calibration uncertainty estimated not to exceed 2 μ (about 0.2 degree Celsius). | 75.00 |
| 203.102d | Platinum versus platinum-10 percent rhodium thermocouples. The thermocouple shall be at least 36 in. long and made of wire not less than 0.014 in. in diameter. Primary calibration at all of the temperatures listed in item 203.102c plus a table of corresponding values of emf and temperature at 1 degree intervals in the range 0 to 1450° C. Uncertainty in emf reported for the fixed point temperatures is estimated not to exceed 2 μ. Uncertainties in values given in the tables are estimated not to exceed 0.3 degree Celsius in the range 0 to 1100° C., and increase to not more than 2 degrees at 1450° C. If the submitted thermocouple meets the requirements of the International Practical Temperature Scale for Standard thermocouples (see the International Practical Temperature Scale of 1948 by H. F. Stimson, J. Res. NBS 65A, 139, 1961), a quadratic equation fitted at 1063, 960.8, and 630.5° C. will also be furnished. | 275.00 |
| 203.102e | High-temperature thermocouples and thermocouple materials. Interpolated corresponding values of emf and temperature as per item 203.102a, per point | 2.00 |
| 203.102f | Base-metal thermocouples. Minimum length 36 in. Corresponding values of emf and temperature with an uncertainty of 0.1° C. in the range 0 to −110° C., per point | 33.00 |
| | Minimum calibration per thermocouple, two points. | |
| 203.102g | Base-metal thermocouples. Minimum length 36 in. Corresponding values of emf and temperature with an uncertainty of about 0.1° in the range 0 to 300° C. and with an uncertainty of about 0.2° above 300° C., per point | −28.00 |
| | Minimum calibration per thermocouple, two points. | |
| 203.102h | Base-metal thermocouples. Minimum length 36 in. Corresponding values of emf and temperature with an uncertainty of about 0.1° in the range −183° to −196° C., per point | 48.00 |
| | Minimum calibration per thermocouple, two points. | |
| 203.102i | Pyrometer indicators. Calibration of single scale or meter of single dial of potentiometer (reference junction compensator counting as a dial) | 40.00 |
| 203.102j | Pyrometer indicators. Calibration of each additional dial of a multidial instrument (reference junction compensator counting as a dial) or of each additional range of each dial or scale of a multirange instrument | 15.00 |
| | Calibration of a thermocouple and pyrometer indicator as a unit will be charged for as if the thermocouple and indicator were separately calibrated. | |
| 203.102z | For special tests not covered by the above schedule, fees will be charged dependent upon the nature of the test. | |

**§ 203.103 Resistance thermometers.**

Resistance thermometers will normally be tested only if they may reasonably be expected to meet requirements as

a standard on the International Practical Temperature Scale. In general, this requires a four-lead resistor of very pure platinum hermetically sealed in a protecting tube.

| Item | Description | Fee |
|---|---|---|
| 203.103a | Standard platinum resistance thermometers—calibration at the ice, steam and sulfur points. Table will be furnished with entries at 1-degree intervals | $165.00 |
| 203.103b | Standard platinum resistance thermometers — calibration under 203.103a and at the oxygen point. Table will be furnished with entries at 1-degree intervals | 220.00 |
| 203.103c | Calorimetric type platinum resistance thermometers—calibration at the ice and steam points and at approximately 50° C. Table will be furnished with entries at 1-degree intervals | 165.00 |
| 203.103d | Capsule-type platinum resistance thermometers—comparison calibration over the range from 12° to 90° K. Results will be in the form of a table with entries at 0.1-degree intervals. Additional tables are not available unless requested at the time of test. See item 203.103f | 440.00 |
| 203.103e | Determination of the average coefficient of electrical resistance over the interval 0 to 100° C. Minimum length, 16 in. Samples must have a resistance of at least 0.1 ohm per foot at the ice point | 70.00 |
| 203.103f | Each additional table expressing the results of test under items 203.103 a, b, or c | 30.00 |
| 203.103g | Additional tables under item 203.103d are not available unless requested at the time of test. Item 203.103f If requested at the same time as the test of the thermometer under items 203.103 a, b, c, or d | 25.00 |
| 203.103h | Capsule-type platinum resistance thermometers—mounting this type of thermometer for test under item 203.103 a or b. Not applicable to item 203.103d | 10.00 |
| 203.103y | When instruments submitted are found to be unsuitable for test or unreliable, a charge will be made to cover the cost of the work done. | |
| 203.103z | For special tests not covered by the above schedule, fees will be charged dependent upon the nature of the test. | |

**§ 203.105 Optical pyrometers and ribbon filament lamps.**

(a) Optical pyrometers and ribbon filament lamps submitted for calibration should be accompanied by an order requesting the test and specifying the fee schedule item number. If desired, the calibration points may be specified. A bill will be rendered at the completion of the work.

(b) The calibration of an article will not be undertaken if it possesses such unusual characteristics as to prevent the carrying out of the calibration at a reasonable cost. If, in the course of a calibration, the device is found to behave abnormally, work may be discontinued and a fee covering the cost of the work performed will be charged.

| Item | Description | Fee |
|---|---|---|
| 203.105a | Optical pyrometers: Calibration of one range between 800° and 2400° C or the first range, between 800° and 2400° C, of a calibration involving more than one range; 4 to 12 values | $185.00 |
| 203.105b | Optical pyrometers: Calibration of ranges in addition to item 203.105a up to 4200° C, 4 to 12 values in each range, per range | 120.00 |
| 203.105c | Optical pyrometers: Three or fewer values, 800° to 2400° C | 95.00 |
| 203.105d | Ribbon filament lamps: Values of brightness temperature (at wavelength of 0.65μ) versus direct current at 6 to 16 points in the range, 800° to 2300° C | 165.00 |
| 203.105e | Ribbon filament lamps: Values of brightness temperature (at wavelength of 0.65μ) versus direct current at five or fewer points in the range, 800° to 2300° C | 90.00 |
| 203.105f | Additional interpolated values as per item 203.105a and 203.105b, per point | 2.25 |
| 203.105z | For special tests not covered by the above schedule, fees will be charged dependent upon the nature of the test. | |

A. V. ASTIN,

# Proposed Rule Making

## DEPARTMENT OF AGRICULTURE

### Agricultural Research Service

### [ 7 CFR Part 301 ]

### MEXICAN FRUIT FLY

### Conditions Governing Issuance of Certificates and Limited Permits

Notice is hereby given under section 4 of the Administrative Procedure Act (5 U.S.C. 1003) that the Agricultural Research Service, pursuant to sections 8 and 9 of the Plant Quarantine Act of 1912, as amended, and section 106 of the Federal Plant Pest Act (7 U.S.C. 161, 162, 150ee), is considering amending § 301.64-6(a)(2) of the regulations supplemental to notice of quarantine No. 64 relating to the Mexican fruit fly (7 CFR 301.64-6(a)(2)) to read as follows:

**§ 301.64-6 Conditions governing the issuance of certificates and limited permits.**

(a) *Certificates.* • • •

• • • • • •

(2) Certificates shall not be issued for the movement of citrus fruits or other host fruits into the States of Alabama, Arkansas, Georgia, Louisiana (other that Plaquemines Parish), Mississippi, New Mexico, Oklahoma, or South Carolina, nor into the citrus-producing States of Arizona, California, Florida, or Hawaii, or to Plaquemines Parish in Louisiana, or to Guam, Puerto Rico, or the Virgin Islands of the United States, except upon the basis of treatment under subdivision (iii) of subparagraph (1), paragraph (a) of this section, unless exemption from such treatment is provided in administrative instructions.

• • • • • •

(Sec. 9, 37 Stat. 318, sec. 106, 71 Stat. 33; 7 U.S.C. 162, 150ee. Interprets or applies sec. 8, 37 Stat. 318, as amended; 7 U.S.C. 161)

This notice proposes that the issuance of certificates for the movement from the regulated area of fruits and other regulated articles that are hosts of the Mexican fruit fly be conditioned on treatment, when such hosts are destined to Hawaii, Guam, Puerto Rico, or the Virgin Islands of the United States. This is in recognition of the fact that these localities are citrus-producing areas and are entitled to the same protection from Mexican fruit fly infestation as now afforded other citrus-producing areas of the United States.

All persons who desire to submit written data, views, or arguments in connection with this matter should file the same with the Director of the Plant Pest Control Division, Agricultural Research Service, United States Department of Agriculture, Federal Center Building, Hyattsville, Maryland, 20781, within 30 days after the date of publication of this notice in the FEDERAL REGISTER. All written submissions made pursuant to this notice will be made available for public inspection at such times and places and in a manner convenient to the public business (7 CFR 1.27(b)).

Done at Washington, D.C., this 22d day of December 1964.

[SEAL] GEORGE W. IRVING, JR.,
*Acting Administrator,*
*Agricultural Research Service.*

[F.R. Doc. 64-13349; Filed, Dec. 28, 1964; 8:48 a.m.]

## CIVIL AERONAUTICS BOARD

### [ 14 CFR Parts 207, 295 ]

[Economic Regs. Docket No. 15761]

### TRANSATLANTIC CHARTER TRIPS AND SPECIAL SERVICES

### Notice of Proposed Rule Making

DECEMBER 23, 1964.

Notice is hereby given that the Civil Aeronautics Board has under consideration amendments to Parts 207 and 295 of the Board's Economic Regulations, in such a manner as to prohibit the advertising of a charter in mass media.

The principal features of the proposed amendments are set forth below in the Explanatory Statement. The texts of the proposed rules are set forth below as well. The rules are proposed under the authority of sections 204(a) and 401 of the Federal Aviation Act of 1958, as amended (72 Stat. 743, 754; 49 U.S.C. 1324, 1371).

Interested persons may participate in these rule making proceedings through submission of ten (10) copies of written data, views, or arguments pertaining thereto, addressed to the Docket Section, Civil Aeronautics Board, Washington, D.C., 20428. All relevant matter in communications received on or before January 11, 1965 will be considered by the Board.

Copies of all such communications will be available for examination by interested persons in the Docket Section of the Board, Room 710 Universal Building, 1825 Connecticut Avenue NW., Washington, D.C., upon receipt thereof.

By the Civil Aeronautics Board.

[SEAL] HAROLD R. SANDERSON,
*Secretary.*

*Explanatory statement.* Section 401 (e) of the Federal Aviation Act of 1958 authorizes the Board to regulate the performance of charter trips or other special services of certificated route air carriers. This statutory provision is implemented by Part 207 of the Board's Economic Regulations.

Section 207.1 states in relevant part that, "a charter trip shall not be deemed to include transportation services offered by an air carrier to individual members of the general public or performed by an air carrier under an arrangement with a person (other than an air freight forwarder defined in subparagraph (4) of this paragraph) who provides or offers to provide transportation to the general public or transportation services engaged by persons paying for such services an amount aggregating in excess of the transporting carrier's duly published charter rate or fare." The Board recently determined that a similar provision contained in the interim certificate of a supplemental air carrier does not serve to bar the carrier (or travel agency or hotel) from financing advertising campaigns in mass media addressed to members of large organizations and offering seats on charter flights sponsored by such organizations (Eastern Air Lines et al. v. Trans International Airlines, Inc., Order E-21440, October 23, 1964).

The distinction between charter and individually ticketed air transportation is fundamental to the regulatory scheme; and the integrity of this distinction is necessarily compromised under circumstances in which advertising either is intended to or has the effect of soliciting the general public. The Board has become increasingly concerned with the implication in such advertising that the public may participate in the charters by the mere formality of acquiring membership in the organization. Even though the solicitation is done with the consent of the chartering organization and the administration of the charter is at least technically within the hands of the organization, the large scale mass media advertising opens the way to solicitation of the general public to participate in a charter.[1] Moreover, the number of charter flights presumably arranged as a result of such advertising appears to be rapidly increasing, thus suggesting increased utilization of this type of advertising in the future.

We question the need for even a very large organization to use newspapers or magazines (or radio or television) as a device to promote a charter flight to its existing bona fide membership. Such an organization normally has some means, such as a regular newsletter, for example, of making announcements to its membership. Moreover, even if it were clear that such mass media advertising greatly facilitated charter promotion we would be inclined to restrict it because of our concern that it places in motion violative forces which cannot be controlled.

In view of the foregoing, the Board proposes to amend Part 207 in such a manner as to prohibit advertising of a charter in mass media even though the

[1] Of course, it is not always clear that the chartering organization is aware of the advertising before it is placed; nor is it true in many situations that the chartering group does in fact exercise control of the charter organizing activity.

advertisement is ostensibly addressed to members of a specific organization. The prohibition would be applicable regardless of who places or pays for the advertising, i.e., the carrier, travel agent, charter organization, or hotel. On the other hand, air carrier advertising offering charter services to bona fide organizations without reference to a particular organization or flight, would continue to be permitted. For these purposes mass media would be defined as newspapers and magazines, radio, and television. Industrial plant newsletters and student newspapers would not be considered advertising in mass media if the advertisement is placed in the publication of the sponsoring organization.

Part 295 of the Board's Economic Regulations presently contains certain prohibitions against advertising directed to the general public in mass media. However, in view of the foregoing, and for purposes of clarity and to insure uniform application of the Board's charter requirements, we deem it advisable to amend Part 295 to conform the language to the proposed amendments of Part 207 and the various interim certificates of the supplemental carriers.[2]

In view of the apparent growth in the use of mass advertising technique and the potential diversion from scheduled services in certain seasonal markets, the Board proposes to make this amendment effective so as to prohibit such advertising on and after February 1, 1965, subject, of course, to comments received.

*Proposed rule.* The Civil Aeronautics Board proposes to Amend Part 207 of the Economic Regulations (14 CFR Part 207) by inserting a new paragraph immediately after the definition of "combination carrier" as follows:

A charter trip shall not be deemed to include air transportation services offered by an air carrier under circumstances in which the services are advertised in mass media, whether or not the advertisement is addressed to members of a specific organization, and regardless of who places or pays for the advertising. Mass media shall be deemed to include radio and television, and newspapers and magazines. Advertising in regular newsletters or periodicals of membership organizations, industrial plant newsletters, and student newspapers shall not be considered mass media advertising if the advertising is placed in the publication of the sponsoring organization. This paragraph shall not be construed as prohibiting air carrier advertising which offers charter services to bona fide organizations, without reference to a particular organization or flight.

*Proposed Rule.* The Civil Aeronautics Board proposes to amend Part 295 of the Economic Regulations (14 CFR Part 295) by amending § 295.2(1) as follows: (1) "Solicitation of the general public" means:

(1) A solicitation going beyond the bona fide members of an organization (and their immediate families). This includes air transportation services offered by an air carrier under circumstances in which the services are advertised in mass media, whether or not the advertisement is addressed to members of a specific organization, and regardless of who places or pays for the advertising. Mass media shall be deemed to include radio and television, and newspapers and magazines. Advertising in regular newsletters or periodicals of membership organizations, industrial plant newsletters, and student newspapers shall not be considered mass media advertising if the advertising is placed in the publication of the sponsoring organization. This provision shall not be construed as prohibiting air carrier advertising which offers charter services to bona fide organizations, without reference to a particular organization or flight.

(2) The solicitation, without limitation, of the members of an organization so constituted as to ease of admission to membership, and nature of membership, as to be in substance more in the nature of a segment of the public than a private entity.

[F.R. Doc. 64-13372; Filed, Dec. 28, 1964; 8:51 a.m.]

[2] We are contemporaneously proposing a similar amendment to these interim certificates.

# FEDERAL AVIATION AGENCY

## [ 14 CFR Part 71 [New] ]

[Airspace Docket No. 64-SO-68]

## TRANSITION AREA

### Proposed Designation

The Federal Aviation Agency is considering an amendment to Part 71 [New] of the Federal Aviation Regulations which would designate a transition area at Vero Beach, Fla.

The Federal Aviation Agency, having completed a comprehensive review of the terminal airspace structure requirements in the Vero Beach, Fla., terminal area, including studies attendant to the implementation of the provisions of CAR Amendments 60-21/60-29 (26 F.R. 570, 27 F.R. 4012), proposes the airspace action hereinafter set forth.

The proposed Vero Beach, Fla., transition area would be designated as that airspace extending upward from 700 feet above the surface within a 6-mile radius of the Vero Beach, Fla., Municipal Airport (latitude 27°39'15" N., longitude 80°24'55" W.) and within 2 miles each side of the Vero Beach VORTAC 291° radial extending from the 6-mile radius area to 8 miles W of the VORTAC; that airspace extending upward from 1200 feet above the surface within a 20-mile radius of the Vero Beach VORTAC, including the area SW of Vero Beach bounded on the E by V-51, on the SW by V-492N, on the NW by V-225, and including the airspace W of Vero Beach bounded on the SE by V-225, on the W by V-267, on the NE by V-295; excluding the airspace within a 25-mile radius of Patrick AFB, Cocoa, Fla. (latitude 28°14'-15" N., longitude 80°36'35" W.) and the airspace outside the continental limits of the United States.

The proposed transition area is needed to protect IFR departures from the Vero Beach Municipal Airport, a prescribed instrument approach procedure, several holding patterns, radar vectoring of aircraft, and to provide a continuity of controlled airspace in the area.

The floors of airways traversing the proposed transition area would automatically coincide with the floor of the transition area.

Certain minor revisions to the instrument approach procedure prescribed for the Vero Beach Municipal Airport and to minimum instrument flight rules altitudes would be effected in conjunction with the action proposed herein, but operational complexities would not be increased nor would aircraft performance characteristics or present landing minimums be adversely affected. Specific details of these changes may be examined by contacting the Chief, Airspace Utilization Branch, Air Traffic Division, Southern Region, Federal Aviation Agency, Post Office Box 20636, Atlanta, Ga., 30320.

Interested persons may submit such written data, views or arguments as they may desire. Communications should be submitted in duplicate to the Director, Southern Region, Attn: Chief, Air Traffic Division, Federal Aviation Agency, Post Office Box 20636, Atlanta, Ga., 30320. All communications received within thirty days after publication of this notice in the FEDERAL REGISTER will be considered before action is taken on the proposed amendment. No hearing is contemplated at this time, but arrangements for informal conferences with Federal Aviation Agency officials may be made by contacting the Chief, Air Traffic Division. Any data, views or arguments presented during such conferences must also be submitted in writing in accordance with this notice in order to become part of the record for consideration. The proposal contained in this notice may be changed in the light of comments received.

The official Docket will be available for examination by interested persons at the Southern Regional Office, Federal Aviation Agency, Room 724, 3400 Whipple Street, East Point, Ga.

This amendment is proposed under section 307(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1348(a)).

Issued in East Point, Ga., on December 17, 1964.

PAUL H. BOSTMAN,
*Acting Director,*
*Southern Region.*

## [ 14 CFR Part 73 [New] ]

[Airspace Docket No. 64-EA-50]

## RESTRICTED AREA

### Proposed Modification

The Federal Aviation Agency is considering an amendment to Part 73 [New] of the Federal Aviation Regulations which would modify Restricted Area R-6606 at Pendleton, Va.

Interested persons may participate in the proposed rule making by submitting such written data, views, or arguments as they may desire. Communications should identify the airspace docket number and be submitted in triplicate to the Director, Eastern Region, Attention: Chief, Air Traffic Division, Federal Aviation Agency, Federal Building, John F. Kennedy International Airport, Jamaica, N.Y., 11430. All communications received within 45 days after publication of this notice in the FEDERAL REGISTER will be considered before action is taken on the proposed amendment. The proposal contained in this notice may be changed in the light of comments received.

An official docket will be available for examination by interested persons at the Federal Aviation Agency, Office of the General Counsel, Attention: Rules Docket, 800 Independence Avenue SW., Washington, D.C. An informal docket also will be available for examination at the office of the Regional Air Traffic Division Chief.

The Department of Navy has submitted a proposal to modify R-6606 in order to accommodate a new training requirement. With the advent of a new weapons system, involving a drone helicopter referred to as DASH, it is necessary to train personnel, both day and night, in the control of these aircraft. Unlike most drones during practice exercises, these aircraft would not carry safety pilots.

The capability of sideward or backward movement found in any helicopter sometimes makes it difficult to determine its direction of movement at night. Since they would be under the control of students and sufficiently distant from radar to render loss of control a continuing possibility, restricted airspace is required as a safety measure during training exercises. It has been determined that since all DASH operations would be conducted at low level, vertical airspace of 1,000 feet would be sufficient to contain these flights. That portion of R-6606 north of latitude 36°41'42" is sufficient to encompass the entire flight pattern laterally. Therefore, it is proposed that the portion of R-6606 north of latitude 36°41'42" from the surface to 1,000 feet MSL be designated as continuous.

This amendment is proposed under the authority of section 307(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1348).

Issued in Washington, D.C., on December 18, 1964.

DANIEL E. BARROW,
*Chief, Airspace Regulations and Procedures Division.*

[F.R. Doc. 64-13337; Filed, Dec. 28, 1964; 8:40 a.m.]

## [ 14 CFR Part 514 ]

[Regulatory Docket No. 3065; Notice 64-5B]

## AIRBORNE DISTANCE MEASURING EQUIPMENT OPERATING WITHIN THE RADIO FREQUENCY RANGE OF 960-1215 MEGACYCLES: TSO-C66

### Amendment of Notice of Proposed Rule Making

The Federal Aviation Agency now has under consideration a proposal to revise the Technical Standard Order for DME (TSO-C66) to make the performance standards set forth therein applicable to DME equipment to be used on all civil aircraft. This action was issued as Notice 64-5 (29 F.R. 615).

The performance standards for DME set forth in TSO-C66 are presently applicable to equipment which is to be used on United States civil aircraft engaged in air carrier operations. By eliminating the reference to air carrier aircraft only in the applicability provision of the TSO, it was proposed to have such performance standards form the basis for TSO approval of new models of DME prescribed for the various non air carrier operations embraced by § 91.33(e) of the Federal Aviation Regulations.

Upon further consideration and in the light of comments received in response to Notice 64-5, the Agency now believes that while many of the performance standards set forth in the proposed TSO are basic and should be applied generally to all TSO-approved DME equipment used in civil aircraft, it now appears that certain of the detail tests and construction requirements are not necessarily appropriate for DME which is to be used in general aviation operations. In this connection, the Agency recognizes the need for less sophisticated equipment (i.e., low-cost, lightweight) for general aviation aircraft.

In support of this position, the FAA is engaged in a priority undertaking to develop, with the cooperation of the industry, minimum performance standards specifically designed to meet the needs of DME equipment which is to be used in general aviation operations. In the meantime, the DME equipment which is required under § 91.33(e) for operations at and above 24,000 feet MSL may be approved by any of the means presently provided under the regulations, including approval under the provisions of TSO-C66. However, as has been previously stated, approval must be conditioned upon a finding that the particular DME is of such a nature that its operation would not be derogatory to the air traffic control system.

In consideration of the foregoing, the applicability provision in the proposed Technical Standard Order entitled "Airborne Distance Measuring Equipment Operating Within the Radio Frequency Range of 960-1215 Megacycles, TSO-C66a", circulated as Notice 64-5 (29 F.R. 615), is amended by striking out the words "and all other civil aircraft."

(Sec. 313(a) and 601 of the Federal Aviation Act of 1958 (49 U.S.C. 1354, 1421))

Issued in Washington, D.C., on December 18, 1964.

C. W. WALKER,
*Acting Director,*
*Flight Standards Service.*

## ATOMIC ENERGY COMMISSION

### PROPOSED MEMORANDUM OF UNDERSTANDING WITH THE STATE OF NEW YORK

Notice is hereby given that the United States Atomic Energy Commission is publishing for public comment, prior to action thereon, a proposed Memorandum of Understanding between the State of New York and the Commission for implementation of certain provisions contained in "Agreement between the United States Atomic Energy Commission and the State of New York for discontinuance of certain Commission regulatory authority and responsibility within the State pursuant to section 274 of the Atomic Energy Act of 1954, as amended," effective October 15, 1962, which was published in the FEDERAL REGISTER on October 25, 1962 (27 F.R. 10419).

The proposed Memorandum of Understanding, which is set forth below, would among other things, provide for an exchange-of-information program between the State of New York and the Atomic Energy Commission. It also contains provisions intended to avoid dual regulation, for purposes of protection against radiation hazards, of activities conducted within the State of New York.

All interested persons desiring to submit comments and suggestions for the consideration of the Commission in connection with the proposed Memorandum of Understanding should send them in triplicate to the Secretary, United States Atomic Energy Commission, Washington, D.C., 20545, within thirty (30) days after initial publication of this notice in the FEDERAL REGISTER.

Dated at Germantown, Md., this 22d day of December 1964.

For the Atomic Energy Commission.

W. B. McCOOL,
*Secretary.*

MEMORANDUM OF UNDERSTANDING

Memorandum of Understanding between the United States Atomic Energy Commission and the State of New York for implementation of certain provisions contained in Agreement between the United States Atomic Energy Commission and the State of New York, effective on October 15, 1962, for discontinuance of certain Commission regulatory authority and responsibility within the State pursuant to section 274 of the Atomic Energy Act of 1954, as amended.

The United States Atomic Energy Commission (hereinafter referred to as the "Commission") and the State of New York (hereinafter referred to as the "State") entered into the above-described Agreement on October 15, 1962.

The Commission and the State recognized, in Article VII of that Agreement, that the limits on their respective rights, powers and responsibilities under the United States Constitution, with respect to protection against radiation hazards arising out of the activities licensed by the Commission within the State, are not precisely clear.

The Commission and the State agreed, among other things, in Article VII to work together to define, within a reasonable time, the limits of, and to provide mechanisms for accommodating, such responsibilities of both parties.

The Commission and the State have now agreed upon certain mechanisms for accommodating their interests.

In view of the foregoing, it is agreed between the Commission and the Governor of the State, acting in behalf of the State, as follows:

(1) The Commission will furnish promptly to the State, without charge, one copy of each of the below-described documents (except those documents the disclosure of which would be contrary to law and except those documents which are excluded from the Commission's public records pursuant to Part 9 of the Commission's Rules and Regulations) relating to activities authorized or sought to be authorized within the State under a specific license from the Commission: (a) Specific licenses issued by the Commission; and (b) with respect only to production or utilization facilities and activities involving the receipt of waste radioactive material from other persons for the purpose of packaging, storage or disposal, (i) filings in Commission proceedings, (ii) correspondence between the Commission and its licensees or license applicants regarding the issuance, denial, amendment, interpretation, enforcement, transfer, renewal, modification, suspension, or revocation of a Commission license, and (iii) notices filed in the Commission's Public Document Room to the effect that other documents have not been filed therein. The Commission will also furnish to the State, without charge, one copy of such other documents, relating to activities authorized or sought to be authorized within the State under a specific license from the Commission, as may be reasonably requested by the State and the disclosure of which to the State is not contrary to law or the public interest.

(2) Representatives of the Commission's regulatory staff and the State will meet from time to time to advise and consult, and to exchange information, concerning production or utilization facilities, and activities involving the receipt of waste radioactive material from other persons for the purpose of packaging, storage or disposal, authorized or sought to be authorized within the State under Commission license. Opportunity will be given to representatives of the State for at least one meeting with the Commission's regulatory staff prior to Commission publication in the FEDERAL REGISTER of a notice scheduling a hearing, or of a notice of proposed action in non-hearing cases, on applications for a construction permit or license for such a facility or activity, and for such additional meetings as the State may reasonably request.

(3) The Commission will notify the State immediately of any theft or loss of material within the State reported to the Commission by a Commission licensee. The Commission will also notify the State immediately of any incident within the State, reported to the Commission by a Commission licensee, for which immediate notification is required to be made by the licensee to the Commission under the Commission's Rules and Regulations.

(4) It is a mutual objective of the Commission and the State to avoid dual regulation for purposes of protection against radiation hazards of activities licensed by either party within the State. Accordingly, and in view of paragraph (5) and the other provisions of this Memorandum of Understanding: (a) The State will use its best efforts to exempt activities licensed by the Commission from State regulations which are directed toward protection against radiation hazards from those radiation sources which are regulated by the Commission; (b) the foregoing undertaking shall not apply to reasonable State requirements for (i) access by State representatives to records which Commission licensees are required to maintain pursuant to the Commission's Rules and Regulations or the provisions of a Commission license, (ii) sampling of effluents by State representatives, (iii) such measuring or surveying by State representatives of levels of radiation and radiation contamination as will not substantially interfere with or interrupt any activities licensed by the Commission, (iv) routing and scheduling of material in transit, and (v) access by State representatives to facilities of Commission licensees in order to accomplish the foregoing.

(5) Nothing in this Memorandum of Understanding shall be construed as defining or affecting the respective rights and powers of the Commission or the State under the United States Constitution, nor as affecting in any way the rights and privileges of any third party. In view of the mechanisms provided in this Memorandum of Understanding for accommodating the interests of the parties, the Commission and the State consider any attempt to define the limits of the rights and powers of the parties to be unnecessary.

(6) Either the Commission or the State may, with or without cause, terminate this Memorandum of Understanding, either in whole or in part, by thirty days' written notice to the other party.

(7) This Memorandum of Understanding shall become effective on March 15, 1965, and shall remain in effect unless and until such time as it is terminated pursuant to paragraphs (6).

Done at Washington, District of Columbia, in triplicate, this ____ day of ------, 19--.

For the United States Atomic Energy Commission.

[Docket No. 50-213]

## CONNECTICUT YANKEE ATOMIC POWER CO.

### Notice of Order Amending Provisional Construction Permit

Please take notice that by an order dated December 18, 1964, the Atomic Energy Commission found that Connecticut Yankee Atomic Power Co. is financially qualified to design and construct its proposed facility at Haddam Neck, Conn., subject only to the sale of $40,000,000 in first mortgage bonds to be issued by the Company. The order amends condition 2.D. of Construction Permit CPPR-14 in its entirety to read as follows:

2.D. At such time as the first mortgage bonds in the amount of $40,000,000 have been sold, Connecticut Yankee shall report that fact to the Director, Division of Reactor Licensing.

A copy of the "Order Amending Construction Permit" is on file in the Public Document Room at 1717 H Street NW., Washington, D.C., where it is available for public inspection.

Dated at Bethesda, Md. this 21 day of December 1964.

For the Atomic Energy Commission.

HAROLD L. PRICE,
*Director of Regulation.*

## POST OFFICE DEPARTMENT

### MILITARY MAIL

### Inquiries and Claims

Effective at once, inquires or claims for registered, certified, insured, or ordinary mail addressed to or from military post offices outside the continental United States, including mail to or from naval vessels, may not be filed by the sender until 75 days have elapsed from the dates of mailing of all such articles sent as surface mail.

NOTE: Heretofore the waiting period was two months. The corresponding Postal Manual section to be amended is 317.12.

(R.S. 161, as amended; 5 U.S.C. 22, 39 U.S.C. 501, 505)

LOUIS J. DOYLE,
*General Counsel.*

[F.R. Doc. 64-13345; Filed, Dec. 28, 1964; 8:48 a.m.]

### OVERSEAS MILITARY POST OFFICES

### ZIP Code Numbers

Effective January 1, 1965, all overseas military post offices will be renumbered and the address system adapted to ZIP Code Numbers. All present one-, two-, three- and four-digit APO or Navy numbers will be converted to five-digit numbers and the number will also constitute the ZIP Code Number for that destination. The addresses will be shortened by using APO for Army and Air Force Post Office and FPO for Fleet Post Office on the line with the name of the gateway post office and the ZIP Number. For example:

| *Present address* | *New address* |
|---|---|
| Commanding Officer<br>U.S. Naval Station<br>Navy No. 568<br>Fleet Post Office<br>New York, N. Y. 09571 | Commanding Officer<br>U.S. Naval Station<br>FPO New York 09571 |
| Pvt. Willard J. Roe RA32145678<br>Company F, 167th Inf. Regt.<br>APO 73<br>San Francisco, Calif. 96273 | Pvt. Willard J. Roe RA32145678<br>Company F, 167th Inf. Regt.<br>APO San Francisco 96273 |
| A/1C Harold F. Doe AF 15000000<br>2d Bomb. Squadron<br>APO 232<br>New York, N. Y. 09232 | A/1C Harold F. Doe AF 15000000<br>2d Bomb. Squadron<br>APO New York 09232 |
| PFC John D. Smith 645832 USMC<br>Headquarters and Service Squadron<br>U.S. Marine Corps Air Station<br>Navy No. 955<br>Fleet Post Office<br>San Francisco, Calif. 96638 | PFC John D. Smith 645832 USMC<br>Headquarters and Service Squadron<br>U.S. Marine Corps Air Station<br>FPO San Francisco 96664 |

Those mailers addressing mail by data processing equipment may shorten the address further by abbreviating the name of the gateway post office, as for example:

APO NY 09403
APO SF 96503
APO SEA 98749

Mail addressed to the old APO or Navy number after January 1 next will continue to be handled as heretofore.

The following list includes all current active overseas military post offices and the new five digit numbers:

| *Current Number* | *New Number* | *Current number* | *New number* |
|---|---|---|---|
| 2 | 96202 | 17 | 09017 |
| 6 | 96206 | 18 | 96218 |

# DEPARTMENT OF AGRICULTURE

## Agricultural Marketing Service

### NECTARINES GROWN IN CALIFORNIA

### Order Directing That Referendum Be Conducted; Designation of Referendum Agents To Conduct Such Referendum; and Determination of Representative Period

Pursuant to the applicable provisions of Marketing Agreement No. 124 and Order No. 916 (7 CFR Part 916), and the applicable provisions of the Agricultural Marketing Agreement Act of 1937, as amended (48 Stat. 31, as amended; 7 U.S.C. 601–674), it is hereby directed that a referendum be conducted within the 2-month period of December 1964 and January 1965, among the growers who, during the current marketing season beginning on May 1, 1964 (which period is hereby determined to be a representative period for the purposes of such referendum), were engaged, in the State of California, in the production of nectarines for market to determine whether such growers favor the termination of the said marketing agreement and order. W. B. Blackburn and G. P. Muck, of the Fruit and Vegetable Division, Agricultural Marketing Service, United States Department of Agriculture, Room 8518, 650 Capitol Avenue, Sacramento, Calif., 95814, are hereby designated as referendum agents to conduct said referendum.

The procedure for the conduct of the referendum shall be the procedure (28 F.R. 6409) for the conduct of referenda regarding marketing orders for fruits, vegetables, and tree nuts.

Dated: December 23, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

[F.R. Doc. 64-13342; Filed, Dec. 28, 1964; 8:48 a.m.]

### FRESH BARTLETT PEARS, PLUMS, AND ELBERTA PEACHES GROWN IN CALIFORNIA

### Order Directing That Referendum Be Conducted; Designation of Referendum Agents To Conduct Such Referendum; and Determination of Representative Period

Pursuant to the applicable provisions of Marketing Agreement No. 85, as amended, and Order No. 917, as amended (7 CFR Part 917), and the applicable provisions of the Agricultural Marketing Agreement Act of 1937, as amended (48 Stat. 31, as amended; 7 U.S.C. 601–674), it is hereby directed that a referendum be conducted within the 2-month period of December 1964 and January 1965, among the producers who, during the current marketing season beginning on March 1, 1964 (which period is hereby determined to be a representative period for the purposes of such referendum), were engaged, in the State of California, in the production of fruit covered by the said amended marketing agreement and order (as the term "Fruit" is therein defined) for shipment in fresh form to determine whether the producers of a particular fruit favor the termination of the said amended marketing agreement and order as to such fruit. W. B. Blackburn, and G. P. Muck, of the Fruit and Vegetable Division, Agricultural Marketing Service, United States Department of Agriculture, Room 8518, 650 Capitol Avenue, Sacramento, Calif., 95814, are hereby designated as referendum agents to conduct said referendum.

The procedure for the conduct of the referendum shall be the procedure (28 F.R. 6409) for the conduct of referenda regarding marketing orders for fruits, vegetables, and tree nuts.

Dated: December 23, 1964.

GEORGE L. MEHREN,
*Assistant Secretary.*

[F.R. Doc. 64-13342; Filed, Dec. 28, 1964; 8:48 a.m.]

## Office of the Secretary

### MICHIGAN

### Designation of Areas for Emergency Loans

For the purpose of making emergency loans pursuant to section 321 of the Consolidated Farmers Home Administration Act of 1961 (7 U.S.C. 1961), it has been determined that in the hereinafter-named county in the State of Michigan natural disasters have caused a need for agricultural credit not readily available from commercial banks, cooperative lending agencies, or other responsible sources.

MICHIGAN

Montcalm

Pursuant to the authority set forth above, emergency loans will not be made in the above-named county after December 31, 1965, except to applicants who previously received emergency or special livestock loan assistance and who can qualify under established policies and procedures.

Done at Washington, D.C., this 23d day of December 1964.

ORVILLE L. FREEMAN,
*Secretary.*

[F.R. Doc. 64-13382; Filed, Dec. 28, 1964; 8:49 a.m.]

### WEST VIRGINIA

### Designation and Extension of Areas for Emergency Loans

For the purpose of making emergency loans pursuant to section 321 of the Consolidated Farmers Home Administration Act of 1961 (7 U.S.C. 1961), it has been determined that in the hereinafter-named counties in the State of West Virginia a natural disaster has caused a need for agricultural credit not readily available from commercial banks, cooperative lending agencies, or other responsible sources.

WEST VIRGINIA

| | |
|---|---|
| Grant | Pendleton |

It has also been determined that in the hereinafter-named counties in the State of West Virginia which are presently designated (28 F.R. 12952), the above-mentioned natural disaster has caused a continuing need for agricultural credit not readily available from commercial banks, cooperative lending agencies, or other responsible sources.

WEST VIRGINIA

| | |
|---|---|
| Hampshire | Marion |
| Hardy | Mineral |
| Jackson | Monongalia |
| Kanawha | |

Pursuant to the authority set forth above, emergency loans will not be made in the above-named counties after December 31, 1965, except to applicants who previously received emergency or special livestock loan assistance and who can qualify under established policies and procedures.

Done at Washington, D.C., this 23d day of December 1964.

ORVILLE L. FREEMAN,
*Secretary.*

# DEPARTMENT OF COMMERCE

## Maritime Administration

[Report No. 47]

### LIST OF FREE WORLD AND POLISH FLAG VESSELS ARRIVING IN CUBA SINCE JANUARY 1, 1963

SECTION 1. The Maritime Administration is making available to the appropriate Departments the following list of vessels which have arrived in Cuba since January 1, 1963, based on information received through December 14, 1964, exclusive of those vessels that called at Cuba on United States Government-approved noncommercial voyages and those listed in Section 2. Pursuant to established United States Government policy, the listed vessels are ineligible to carry United States Government-financed cargoes from the United States.

SEC. 2. In accordance with approved procedures, the vessels listed below which called at Cuba after January 1, 1963, have reacquired eligibility to carry United States Government-financed cargoes from the United States by virtue of the persons who control the vessel having given satisfactory certification and assurance:

(a) That such vessels will not, thenceforth, be employed in the Cuba trade so long as it remains the policy of the United States Government to discourage such trade; and

(b) That no other vessels under their control will thenceforth be employed in the Cuba trade, except as provided in paragraph (c); and

(c) That vessels under their control which are covered by contractual obligations, including charters, entered into prior to December 16, 1963, requiring their employment in the Cuba trade shall be withdrawn from such trade at the earliest opportunity consistent with such contractual obligations.

FLAG OF REGISTRY AND NAME OF SHIP

# CIVIL AERONAUTICS BOARD

[Docket No. 15459 etc.; Order E–21601]

## PACIFIC NORTHWEST-SOUTHWEST SERVICE INVESTIGATION

### Order Amending Order Instituting Investigation

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 21st day of December 1964.

By Order E–21186, adopted August 13, 1964, the Board instituted an investigation to determine whether the public convenience and necessity require the addition, alteration, amendment, or modification of carrier authorizations so as to provide long-haul, single-carrier service between the Pacific Northwest, on the one hand, and the Southwest and the cities of Kansas City and St. Louis, on the other hand. The investigation also included the related issue of termination of three existing interchange agreements covering services within the area of investigation.

Order E–21186 provided that any awards made as a result of this proceeding shall be subject to the following restrictions:

(a) No flights may originate or terminate in Denver or Salt Lake City;

(b) At least one city in at least two groups of cities described in the order must be served on all flights except that there shall be no new single-carrier service between cities in Group III and cities in Group IV.

The order further provided that motions to consolidate applications, motions or petitions seeking modification or reconsideration of the order, and petitions for leave to intervene must be filed no later than 20 days after the issuance of the order, and that answers to such pleadings must be filed no later than 10 days thereafter.

Fifteen air carriers and 14 cities and state governments have responded to the Board's order by filing petitions for reconsideration, applications for service, motions to consolidate, and requests for clarification.[1] Answers have been filed by 10 air carriers and one civic body.[2] The pleadings filed by Alaska Airlines, Missoula, and Raton were filed after the cut-off date prescribed by the Board and will be dismissed. Little Rock also filed late but its pleadings were accompanied by a motion for leave to file in which it established good cause for failing to comply with the Board's order. Little Rock's pleadings will therefore be considered.

The issues raised by the pleadings filed in response to the Board's order fall generally into the following categories: (a) Expansion of the geographical area of the proceeding, (b) imposition of additional or more stringent restrictions, and (c) elimination of the restriction prohibiting the origination or termination of service at Group II cities.

Petitioners seeking to expand the geographical scope of the proceeding have requested the inclusion of Las Vegas, Omaha, Miami, Lincoln, Memphis, Little Rock, Tucson, Phoenix, and other points in Georgia, Florida, Montana and Canada. In this case the Board selected the area under consideration after an examination of the traffic movements and air transportation needs of various sections of the country. As indicated in our previous order, we believe the time is ripe for a full exploration of the long-haul air transportation needs of the Pacific Northwest-Southwest service area as defined in that order. Petitioners have not advanced any new matters which require or warrant reconsideration and consolidation herein of applications for service beyond the geographical scope of the area. Inclusion of these applications would unduly expand and delay the proceeding. The Board finds, therefore, that the above-mentioned pleadings seeking expansion of the geographical scope of this proceeding should be denied. The Board further finds that said applications are not mutually exclusive with the applications consolidated with this proceeding, as reconstituted by this order, and that the Ashbacker rule does not require consolidation herein.

American asks the Board to interpret its order as requiring that flights serving a Group II city must also serve at least one city in Group I. Braniff wants an interpretation that all flights over new routes awarded will be required to originate or terminate north and west of Utah, on the one hand, and to originate or terminate at a point south or east of Colorado, on the other hand. TWA asks the Board to impose a mandatory stop restriction at entry points to prevent new non-stop competitive rights between St. Louis and Kansas City on the one hand and San Francisco-Oakland, Las Vegas and Los Angeles on the other hand, and between Denver on the one hand and such points as Chicago and New York on the other hand. National requests an additional restriction so that any new authority which may result from the proceeding will carry a restriction prohibiting the operation of single plane service between San Francisco-Oakland and Las Vegas and between Los Angeles-Long Beach and San Diego, on the one hand, and Houston or New Orleans, on the other. Delta wants a similar restriction which would prevent through-plane service between California and Nevada, on the one hand, and any of the Group IV cities, on the other hand. Delta opposes any further restrictions which would limit through-plane service to points served by Delta in the Southeast. Continental, Frontier, Northwest, and United ask the Board to impose even tighter restrictions which would prevent the operation of through-plane service to any points beyond the area specified in the Board's Order of Investigation. BER, Eastern, and Western, urge the Board to retain the present restrictions without modification.

This investigation was instituted to determine the need for single carrier air service between the Pacific Northwest and the Southwest. The pleadings, however, indicate that a large and significant variety of new transcontinental and other long-haul services could be-

[1] American, Braniff, Continental, Delta, Eastern, Frontier, National, Northwest, Pacific Northern, Trans-Texas, TWA, United, West Coast, Western, Alaska Airlines, Denver, Memphis, the Washington Parties (the State of Washington Utilities and Transportation Commission, the City and Chamber of Commerce of Seattle, the City and Chamber of Commerce of Tacoma, the Port of Seattle Commission, and the Seattle Traffic Association), Omaha, Dallas, Fort Worth, Houston, New Orleans, Missoula, San Antonio, St. Louis, Raton, Little Rock, and the Nebraska Department of Aeronautics.

[2] American, Braniff, Continental, Delta, Eastern, National, TWA, Northwest, United, Western, and the Washington Parties.

come possible as a result of a combination of awards in this case with existing route authorizations. Consideration of new authorizations in such markets as New York-Seattle, New York-Denver, Miami-Seattle, and San Francisco-New Orleans, to cite only a few of the major service possibilities, are clearly extraneous to the purpose of this investigation. The inclusion of such issues would change the nature and focus of the proceeding and would unduly expand and delay its resolution. By contrast, elimination of these issues will accelerate the trial and disposition of this case, without substantial prejudice to any of the applicants. Consequently, we have determined to exclude from this case issues of single plane service between points within the area of this investigation and various major traffic generating points outside the area of the case. Thus, single plane service may not be operated pursuant to an award in this case, from a point within the area of the investigation to the following points: New York, Washington, Chicago, Miami, Tampa-St. Petersburg, Atlanta, San Francisco, Los Angeles, San Diego, and Las Vegas.

As an alternative to the exclusion of these issues, we have given full consideration to the possibility of imposing multiple stop requirements in the markets mentioned above. While such an approach would be somewhat less restrictive, it would not be as effective in reducing evidence and argument on out-of-area services. Where, as here, we have such extensive within-area service issues, we believe it is highly desirable to keep the proceeding from mushrooming into an even larger case, with attendant escallation in scope of record and time required for trial and decision.

We will also deny the several requests to impose restrictions which would prohibit the carriage of local traffic on long-haul flights between cities in any one group. Here again, any carrier desiring to protect its local traffic rights is free to participate in this proceeding by seeking restrictions on specific route proposals in order to minimize its local traffic losses.

We believe, however, that a change should be made in the restriction which provides that there shall be no new single carrier service between cities in Group III and cities in Group IV. Under the present restriction, a carrier could operate from the Pacific Northwest to a point in Group IV with intermediate stops in Group II and Group III, but with a closed door restriction between Groups III and IV. As a general rule, closed door restrictions are undesirable and should be avoided wherever possible. We will therefore revise this restriction to provide that no flights as a result of awards in this case, can be operated between a city in Group III and a city in Group IV.

Our study of the pleadings leads us to the conclusion that a modification is also required in the Group II restriction. One of the reasons for imposing this restriction was to preserve the long-haul character of this proceeding by avoiding the issue of the need for competitive services between Group II on the one hand, and Groups I, III, and IV on the other. Since there is no single-carrier service presently authorized between Denver and St. Louis, the restriction would serve no useful purpose between those points. In 1963, there were 16,770 O & D passengers between Denver and St. Louis and 8,320 between Seattle and St. Louis. If a carrier is authorized to provide long-haul service between Seattle, Denver, and St. Louis with a restriction preventing turnaround service at Denver, it would be required to operate additional schedules between Seattle and St. Louis in order to accommodate the Denver-St. Louis traffic. Moreover, the restriction in its present form could tie the Board's hands in disposing of the issue of termination of the Denver-St. Louis interchange agreement between Continental and Braniff. Any service which would replace the interchange must have sufficient flexibility to fully accommodate the Denver-St. Louis traffic. In order to accomplish this objective we will modify the Group II restriction so as to make it inapplicable to service between Denver and St. Louis. No request has been made by Salt Lake City to modify the Group II restriction, nor have any compelling reasons been advanced by other parties to warrant such relief for Salt Lake City. Since single carrier service has already been authorized between Denver and the Pacific Northwest and between Denver and cities in Group IV, we see no need to further modify the Group II restriction.

Petitions for leave to intevene have been filed by 3 air carriers, 28 cities and state governments, and the Department of Defense. Our prior order directed that petitions to intervene be filed no later than 20 days after issuance of the order—not later than September 2, 1964. The petitions of Western; Colorado Springs; Lubbock; Boise; Sante Fe; the Montana Aeronautics Commission; Kansas City, Kans.; and Memphis were filed after the September 2 deadline and petitioners have not shown good cause for failure to comply with our directive. These petitions will therefore be dismissed. The petitions of Miami, Little Rock and the Public Utility Commissioner of Oregon were also filed late but these petitioners have established good cause for failure to comply with the Board's order. It is found that the following petitioners have alleged matters indicating they are persons entitled to intervene: West Coast; the City and Chamber of Commerce of Albuquerque; the City and Chamber of Commerce of Amarillo; the City and Chamber of Commerce of Corpus Christi; the City and Chamber of Commerce of El Paso and the El Paso Airport Board; the Huntsville-Madison County Airport Authority; the City of Kansas City, Mo., and the Chamber of Commerce of Greater Kansas City; the Nebraska Department of Aeronautics; the State of New Mexico; the City and Chamber of Commerce of Oklahoma City; the Omaha Airport Authority and the Omaha Chamber of Commerce; the City and Chamber of Commerce of Portland, the Portland Freight Traffic Association and the Port of Portland; the City and Chamber of Commerce of Shreveport; the City and Chamber of Commerce of Tulsa; the Defense Traffic Management Service on behalf of the Department of Defense; the Greater Miami Traffic Association; the Utah Agencies (the Utah State Aeronautics Commission, the Salt Lake City Corporation, and the Salt Lake City Chamber of Commerce); the City and Chamber of Commerce of Little Rock and the Little Rock Municipal Airport Commission; and the Public Utility Commissioner of Oregon. The application of Trans-Texas for amendment of its certificate, Docket 15508; and the petitions for air service filed by New Orleans, Docket 15336; Dallas, Docket 15526; Denver, Docket 15518; and the Washington Parties, Docket 15260; are being consolidated with this proceeding. Since these petitioners will become formal parties, their petitions for leave to intervene will be dismissed.

*Accordingly, it is ordered:*

1. That the petitions seeking expansion of the geographical area of this proceeding be and they hereby are denied;

2. That ordering paragraph 3 of Order E–21186 be and it hereby is amended to read:

3. That any awards made as a result of this proceeding shall be subject to the following restrictions:

(a) No flights may originate or terminate in Denver or Salt Lake City; provided, however, that flights between Denver and St. Louis may originate or terminate in Denver;

(b) At least one city in at least two Groups of cities (described on page 3 of this order) must be served on all flights except that there shall be no operation of aircraft between cities in Group III and cities in Group IV (described on page 3 of this order);

(c) Single-plane service may not be provided between any point within the area of this investigation, on the one hand, and the following named points on the other hand: New York, Washington, D.C., Chicago, Miami, Tampa-St. Petersburg, Atlanta, San Francisco, Los Angeles, San Diego, and Las Vegas.

3. That the following applications and petitions for air service, to the extent they conform to the scope of this proceeding, be and they hereby are consolidated herein for hearing and decision: American, Docket 15511; Braniff, Docket 13946; Continental, Docket 15523; Delta, Docket 15246; Eastern, Docket 15521; Frontier, Docket 15516; National, Docket 15512; Northwest, Docket 15514; Pacific Northern, Docket 15515; Trans-Texas, Docket 15508; TWA, Docket 15517; United, Docket 15362; Western, Docket 15513; the City and County of Denver and the Denver Chamber of Commerce, Docket 15518; the Washington Parties, Docket 15260; the City and Chamber of Commerce of Dallas, Docket 15526; the City and Chamber of Commerce of Fort Worth, Docket 15467; the City and Chamber of Commerce of Houston, Docket 15177; the City and Chamber of Commerce of New Orleans, Docket 15336; the City and Chamber of Commerce of San Antonio, Docket 15200; and the City and Chamber of Commerce of St. Louis, Docket 13147;

4. That the motions to consolidate the following applications and petitions for air service be and they hereby are denied: Continental, Dockets 13955, 15522 and 14250; Frontier, Dockets 14059 and 15304; Northwest, Dockets 15322 and 15156; West Coast, Docket 15509; the City and Chamber of Commerce of Memphis, Docket 15530; the Omaha Airport Authority and the Omaha Chamber of Commerce, Docket 15524; the City and Chamber of Commerce of Little Rock and the Little Rock Municipal Airport Commission, Docket 15564; and the Nebraska Department of Aeronautics, Docket 15525;

5. That the motion of Alaska Airlines for consolidation of Docket 15173; the petition of the City and Chamber of Commerce of Missoula, the Missoula County Board of Commissioners, and the Missoula County Airport Board for consolidation of West Coast's application, Docket 14054; and the motion of Raton for consolidation of Docket 15628 be and they hereby are dismissed;

6. That the following petitions for leave to intervene be and they hereby are granted: West Coast; the City and Chamber of Commerce of Albuquerque; the City and Chamber of Commerce of Amarillo; the City and Chamber of Commerce of Corpus Christi; the City and Chamber of Commerce of El Paso and the El Paso Airport Board; the Huntsville-Madison County Airport Authority; the City of Kansas City, Missouri, and the Chamber of Commerce of Greater Kansas City; the Nebraska Department of Aeronautics; the State of New Mexico; the City and Chamber of Commerce of Oklahoma City; the Omaha Airport Authority and the Omaha Chamber of Commerce; the City and Chamber of Commerce of Portland, the Portland Freight Traffic Association, and the Port of Portland; the City and Chamber of Commerce of Shreveport; the City and Chamber of Commerce of Tulsa; the Defense Traffic Management Service; the Greater Miami Traffic Association; the Utah Agencies; the City and Chamber of Commerce of Little Rock and the Little Rock Municipal Airport Commission; and the Public Utility Commissioner of Oregon;

7. That the following petitions for leave to intervene be and they hereby are dismissed: Western; Trans-Texas; the City and Chamber of Commerce of Dallas; the City and Chamber of Commerce of New Orleans; the City and County of Denver and the Denver Chamber of Commerce; the Washington Parties; the City and Chamber of Commerce of Colorado Springs; the City and Chamber of Commerce of Lubbock; the City of Memphis and the Memphis Area Chamber of Commerce; the City of Boise and the Greater Boise Chamber of Commerce; the City and Chamber of Commerce of Santa Fe; the Montana Aeronautics Commission; and Kansas City, Kansas Area Chamber of Commerce;

8. That, except to the extent granted herein, all motions, petitions, and requests for relief be and they hereby are denied;

9. That any additional applications for Denver-St. Louis service shall be filed by January 4, 1965; and

10. That this order be published in the FEDERAL REGISTER.

By the Civil Aeronautics Board.[1a]

[SEAL] HAROLD R. SANDERSON, *Secretary.*

[F.R. Doc. 64–13373; Filed, Dec. 28, 1964; 8:51 a.m.]

[Docket No. 15761; Order E–21610]

## INTERIM OPERATING CERTIFICATES

### Order To Show Cause

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 23d day of December 1964.

The Board has a statutory duty to assure, to the extent practicable, that the holders of interim certificates issued pursuant to section 7 of Public Law 87–528 confine their activities to permissible operations and do not engage in proscribed individually ticketed services under the guise of charters. In order to carry out its responsibilities in this regard, the Board tentatively concludes that the interim certificates now held by the supplemental air carriers should be amended so as to prohibit the solicitation of individual charter flights in mass-media advertisements regardless of whether such advertisements are directed to specific groups or their members.

A charter as defined in the interim certificates cannot involve the solicitation of individual members of the general public. However, there are at present no clear standards or established specific limitations governing the activities of supplemental air carriers in this area other than the charter definition itself which is contained in the interim certificates.[1]

Of particular concern to the Board is the problem of mass-media advertising for participation in individual charter flights. At the present time, such advertisement relating to domestic charters is not per se prohibited.[2] At present, a carrier (or a travel agency or hotel) may advertise in mass-media publications directed to members of large open-membership organizations offering seats on a particular charter flight in domestic air transportation, thus giving rise to the implication that the public may participate merely by the formality of acquiring membership.[3] Even though such a solicitation is done with the consent of the organization and the administration of the charter vests, at least technically, in the organization, large-scale mass-media advertising opens the way to solicitation of the general public and, indeed, is an inducement to the general public to participate in a "charter" through acquiring membership in the organization. Clearly, a person whose sole or primary purpose of joining a group is to obtain reduced transportation on a particular fligh cannot be deemed a bona fide member of the charter group.

We are not here concerned with a mere academic problem. On the contrary, we have recently been confronted with precisely this kind of a problem involving numerous charter flights.[4] Although we found that the advertising practices which were the subject of the proceeding noted in the margin were not proscribed by the carrier's interim operating certificate, it by no means follows that the practices are consistent with the public interest. As a matter of fact, we are now convinced that mass-media advertising practices of the type there involved should be prohibited. The advertising practices which we were constrained to find did not represent a technical violation of the terms of the carrier's interim certificate have not abated—they have increased.

We see no real necessity for the use of newspapers or other publications of general circulation as a device to promote specific charter flights to the members of an organization. Certainly, there is no need for small organizations to use these means. And large organizations normally have means, such as regular newsletters or bulletins of making announcements to their membership.[5]

[1a] Gilliland, member; concurring and dissenting statement filed as part of the original document.

[1] 1. As used in this certificate, the term "charter trips" means air transportation (other than transportation purusant to contracts with the Department of Defense) where the entire capacity of one or more aircraft has been engaged on a time, mileage, or trip basis:

(a) By a person for his own use;

(b) By a person (no part of whose business is the formation of groups or the consolidation of shipments for transportation or the solicitation or sale of transportation services) for the transportation of a group of persons and/or their property, as agent or representative of such group;

(c) By two or more persons acting jointly for the transportation of themselves and/or their property or of a group of persons and/or their property;

(d) By an indirect air carrier authorized, under any applicable part of the Economic Regulations of the Board, to charter aircraft from a direct air carrier; and where such air transportation does not include services (i) offered by or on behalf of the holder hereof for the carriage of individual members of the general public who are formed into or joined with any group with the direct or indirect assistance or participation of the holder hereof, or (ii) performed under an arrangement with a person (other than an indirect air carrier authorized as hereinabove set forth) who provides or offers to provide transportation to the general public, or (iii) engaged by persons paying for such services an amount aggregating in excess of the holder's duly published charter rate or fare.

[2] See Order E–21440, served October 23, 1964, in Docket 15005. Section 295.2(1) of the Board's Economic Regulations was designed to prohibit advertising in mass-media for individual participation in transatlantic charters.

[3] It goes without saying that mass-media advertising for an individual charter flight which is not directed to a particular group or its members constitutes a solicitation of the general public.

[4] See Eastern Air Lines, Inc., et al. v. Trans International Airlines, Order E–21440, October 23, 1964.

[5] As discussed, infra, such advertisements are proper.

Moreover, even if it were clear that such mass-media advertising greatly facilitated charter promotion we would be inclined to restrict it because of our concern that it places in motion violative forces which cannot be controlled.

In short, mass-media advertisements for individual charter flights, regardless of whether they are directed to members of a particular group, represent an unwarranted inducement to large-scale violation. Thus, this practice should be prohibited.

The proposed prohibition would apply to mass-media advertisements (newspapers and magazines as well as radio and television advertisements), for individual charter flights. Thus, the carriers would still be permitted to advertise via mass-media the fact that they are duly authorized to perform charters for bona fide charter groups so long as the advertisement is not directed to securing individual participation in a charter. In addition, advertising in industrial plant newsletters or bulletins, student newspapers on a college campus, etc., shall not be deemed mass-media advertising so long as the advertising is placed in the publications of the sponsoring organization.

On the other hand, advertisements for an individual charter flight which appear in newspapers or magazines would be proscribed regardless of whether the circulation is large or small.[6] It should be noted in this connection that under the proposed amendment a carrier who performs a charter which is the subject of the proscribed type of advertisement will be held to be in violation of the terms of its certificate regardless of who places or pays for such advertisement.

Upon consideration of the foregoing, we tentatively find and conclude that the public interest requires that the interim operating certificates now held by the supplemental air carriers should be amended so as to prohibit the holders thereof from utilizing mass-media advertising in connection with individual charter flights regardless whether such advertising is directed to members of a particular group.[7]

*Accordingly, it is ordered:*

1. That all interested persons show cause why the Board should not amend the outstanding interim operating certificates issued pursuant to section 7 of Public Law 87–528 in the form and manner as set forth in Appendix A below;

2. That any interested persons having objections to the issuance of an order making final the tentative findings, conclusions and certificate amendments contained herein shall, within 10 days from the date of issuance of this order, file written objections with the Board in this Docket;

3. That in the event objections are filed, the Board will take such further action with respect to the issues raised by the objections as it deems appropriate;

4. That in the event no objections to this order are filed within the time prescribed in ordering paragraph 2, above, the Board shall issue an order making final the tentative findings and conclusions contained herein and amending the outstanding interim certificates effective February 1, 1965; and

5. That copies of this order shall be served on all holders of interim operating certificates issued under Public Law 87–528.

This order will be published in the FEDERAL REGISTER.

By the Civil Aeronautics Board.

[SEAL] HAROLD R. SANDERSON,
*Secretary.*

*Proposed amendment.* The Civil Aeronautics Board proposes to amend the outstanding interim operating certificates issued pursuant to section 7 of Public Law 87–528 by inserting a new paragraph in Part IV—Definitions, as follows:

As used in this certificate the term "charter trip" shall not be deemed to include air transportation services offered by an air carrier under circumstances in which the services are advertised in mass-media, whether or not the advertisement is addressed to members of a specific organization, and regardless of who places or pays for the advertising. Mass-media shall be deemed to include radio and television, and newspapers and magazines. Advertising in regular newsletters or periodicals of membership organizations, industrial plant newsletters, and student newspapers shall not be considered mass-media advertising if the advertising is placed in the publication of the sponsoring organization. This paragraph shall not be construed as prohibiting air carrier advertising which offers charter services to bona fide organizations, without reference to a particular organization or flight.

[Docket No. 15459]

## PACIFIC NORTHWEST-SOUTHWEST SERVICE INVESTIGATION

### Notice of Prehearing Conference

Notice is hereby given that a prehearing conference in the above-entitled matter is assigned to be held on February 2, 1965, at 10:00 a.m., e.s.t., in Room 1027, Universal Building, Connecticut and Florida Avenues NW., Washington, D.C., before Examiner Ross I. Newmann.

In order to facilitate the conduct of the conference, interested parties are instructed to submit to the examiner and other parties on or before January 20, 1965, (1) proposed statements of issues; (2) proposed stipulations; (3) requests for information; (4) statements of positions of parties; and (5) proposed procedural dates.

Dated at Washington, D.C., December 23, 1964.

[SEAL] FRANCIS W. BROWN,
*Chief Examiner.*

# FEDERAL AVIATION AGENCY

[OE Docket No. 64–EA–6]

## OUTLET CO.

### Determination of No Hazard to Air Navigation

The Federal Aviation Agency has circularized the following proposal for aeronautical comment and has conducted a study (EA–OE–4639) to determine its effect upon the safe and efficient utilization of the navigable airspace.

The Outlet Company, Providence, R.I., proposes to increase by 87 feet the height of the existing WJAR–TV antenna structure near Rehoboth, Mass., at latitude 41°51′54″ N., longitude 71°17′15″ W. The overall height of the structure would be 1,136 feet above mean sea level (940 feet above ground).

The structure is located approximately 12 miles northeast of the Providence, R.I., VOR, within the boundaries of VOR Federal airways Nos. 139 and 457. At the proposed height, it would exceed the standards for determining hazards to air navigation as defined in § 77.23(a) (2) of the Federal Aviation Regulations by 740 feet as applied to the airways, since it would be more than 200 feet above ground. The proposed increase in the height of the structure would require an increase from 2,000 feet to 2,100 feet in the minimum en route altitude (MEA) for that segment of V457 between the Providence VOR and Walpole, Mass., Intersection and for the segment of V139 between the Providence VOR and the Whitman, Mass., VOR.

The aeronautical study disclosed that the increase in the MEA on V457 would have no substantial adverse effect on aeronautical operations since the minimum altitude is not used and there are no plans for its use. Furthermore, due to recent changes in Boston area procedures, the Agency on November 12, 1964, issued Airspace Docket No. 64–WA–52 realigning V457. The realinement of V457 will permit retention of the 2,000-foot cardinal altitude.

The study further disclosed that intercity traffic between Providence and Boston, Mass., is routed via V139 at altitudes of 2,000 and 3,000 feet and that the loss of the 2,000-foot cardinal altitude would have a substantial adverse effect upon this operation. On November 3, 1964, the Agency issued Airspace Docket 64–EA–35 designating an east alternate segment of V139 to be used at a minimum en route altitude of 2,000 feet between Providence VOR and Whitman VOR.

The realinement of V457 and the designation of the east alternate to V139 will become effective on January 7, 1965.

Based upon the aeronautical study, it is the finding of the Agency that effective with the designation of V139 east alternate airway, the proposed increase in height of the antenna structure would have no substantial adverse effect on aeronautical operations or procedures.

Therefore, pursuant to the authority delegated to me by the Administrator (§ 77.37 [New]), it is found that the proposed structure would have no substantial adverse effect upon the safe and efficient utilization of navigable airspace and it is hereby determined that the proposed structure would not be a hazard to air navigation provided that it is obstruction marked and lighted in accordance with Agency standards.

This determination is effective and will become final 30 days after the date of issuance unless an appeal is filed under § 77.39 [New] (27 F.R. 10352). If the appeal is denied, the determination will then become final as of the date of the denial or 30 days after the issuance of the determination, whichever is later. Unless otherwise revised or terminated, a final determination hereunder will expire 18 months after its effective date or upon earlier abandonment of the construction proposal (§ 77.41 [New]).

Issued in Washington, D.C., on December 16, 1964.

GEORGE R. BORSARI,
*Chief,*
*Obstruction Evaluation Branch.*

[OE Docket No. 63–SO–15]

## WDEF BROADCASTING CO.

### Order Entering Final Determination of Hazard to Air Navigation

*History of proceedings.* The Federal Aviation Agency was notified by letter dated May 10, 1963, that the WDEF Broadcasting Co., Chattanooga, Tenn. (hereinafter referred to as the company), proposed to increase by 462 feet the height of its existing television tower and antenna near Chattanooga at latitude 35°08′05″ N., longitude 85°19′25″ W. The new overall height of the structure would be 2749 feet above mean sea level (841 feet above ground).

This was the third proposal by the company for a taller television tower and antenna at Chattanooga. The first proposal was for a structure with an overall height of 3293 feet AMSL (1385 feet AGL). The proposal, filed in May 1962, received objections from the aviation community and was subsequently withdrawn by the company.

A second proposal was filed in September 1962. The overall height for this proposal was 3049 feet AMSL (1141 feet AGL). A study conducted by the FAA again disclosed objections by the aviation community. The study also disclosed that the structure would have a substantial adverse effect upon the safe utilization of the navigable airspace. As a result, the Agency issued, on February 13, 1963, a Notice of Determination of Hazard to Air Navigation (FAA OE Docket No. 63–SO–1, FEDERAL REGISTER, 28 F.R. 1748).

On May 10, 1963, the company filed a third and present proposal for an overall height of 2749 feet AMSL (841 feet AGL). This proposal was the subject of an aeronautical study (FAA Study No. SO–OE–2507) to determine its effect upon the safe utilization of navigable airspace. A notice pertaining to the proposal and the study was circularized to all known interested parties for comment. Substantial objections to the proposal were received. The Agency completed the study on September 30, 1963, with the issuance of a Determination of Hazard to Air Navigation (FAA OE Docket No. 63–SO–15, FEDERAL REGISTER, 28 F.R. 9286).

On October 30, 1963, the company petitioned the Administrator for a public hearing in appeal of this determination. The public hearing was granted on January 1, 1964. The Agency issued a notice of public hearing on May 22, 1964 (28 F.R. 10726).

A prehearing conference and a public hearing were held in Chattanooga, Tenn., commencing June 6, 1964. Interested parties at the public hearing were:

1. WDEF Broadcasting Co.
2. Aircraft Owners and Pilots Association.
3. Airport Manager, Lovell Field.
4. National Business Aircraft Association.
5. Tennessee Aeronautics Commission.

The two questions of fact presented for consideration at the hearing were:

1. Whether justification exists for the proposed structure to occupy that airspace which exceeds the standards for determining hazards to air navigation contained in Part 77 of the Federal Aviation Regulations; and

2. Whether the proposed antenna structure would have a substantial adverse effect upon the safe and efficient utilization of airspace so as to be a hazard to air navigation.

Only the second question, dealing with the issue of whether or not the proposed alteration is a hazard to air navigation, is considered relevant to this proceeding and will be considered in this determination.

The primary reason for listing the first question was to satisfy the desire of WDEF to demonstrate the type of television coverage problem it has in the Chattanooga area. The company stated to the FAA, in advance of the public hearing, that the needed additional height of 462 feet would permit the station to extend coverage throughout areas that the company is not serving at present.[1]

After giving this matter careful study the Agency believes the question concerning the company's need for additional television coverage to be within the exclusive jurisdiction of the Federal Communications Commission.

Part 77 of the Federal Aviation Regulations was created to deal with determinations of hazards affecting air navigation (§§ 71.21(b), 77.23(a), 77.31(b), 77.37(a)). Should the proposed construction or alteration present a possible danger to the safety of aircraft in airspace, it is the Administrator's obligation to issue a determination of hazard (section 307(a), Fed. Avia. Act). The FCC has the expertise and facilities to determine if the communications interests of the public would be better served by permitting a station to increase its coverage, while the FAA is concerned with the safety aspect of structures penetrating into navigable airspace. These functions are not contradictory and a clear division separates the two. Accordingly, this determination will be directed to the question of whether or not the proposed extension to the existing tower of WDEF will constitute a hazard to air navigation.

*Evidence.* The evidence presented at the hearing was related principally to the effect the proposed addition to the WDEF antenna structure would have on VFR operations. The facts bearing on this question were produced at the hearing as hereinafter set forth.

WDEF–TV operates a television station in Chattanooga. An antenna for this station is maintained on Signal Mountain (latitude 35°08′05″ N.; longitude 85°19′25″ W.), which is proximal to Chattanooga. The antenna is 2,287 feet MSL (379 AGL) in height. The company proposes to increase the height of the existing antenna 462 feet (2,749 MSL). The site of the WDEF–TV antenna is northwest of Chattanooga and approximately 10 miles from Lovell Field, the principal airport servicing the city. The elevation of Lovell Field is 682 feet MSL. The terrain stretching northwesterly from the airport gradually rises to approximately 1,150 feet MSL where it touches the base of Lookout Mountain. At that point the mountain sharply rises to a height of approximately 1,900 feet MSL. The WDEF–TV antenna rests on the brow of the cliff.

Evidence was introduced at the hearing by local pilots, who either represented themselves or spoke on behalf of pilot organizations, to show that the mountainous conditions northwest of the airport, coupled with deceptive weather conditions existing in the area of the WDEF tower site, made the proposed alteration a hazard to pilots operating aircraft in this area under VFR. All of the active pilots agreed that the area between Chattanooga and Nashville, over V–5 airway, is a heavily travelled route that is frequently used by itinerant pilots flying from the northwest to Florida and from locations in the southeastern part of the United States to the northwestern States. The only U.S. Weather Bureau reporting stations along this line are those located at Chattanooga and Nashville. Based upon their experience in this area, all of these pilots agreed that on many occasions the weather at Chattanooga and Nashville would be VFR while the weather conditions over the mountain would be marginal for VFR operations.

During the spring and summer months the WDEF–TV tower site is surrounded by haze caused by smoke carried from the city of Chattanooga to the moun-

---

[6] For example, the proposed restriction would apply alike to both small and big town newspapers, and whether the print is in English or in some foreign language. In short, substance, not form will be determinative. The intent of the proposed amendment is to prevent the solicitation of the general public for individual charter trips by any advertising means whatsoever.

[7] The Board will not entertain petitions for reconsideration of this order.

[1] CBS affiliates operating from Knoxville (NE of WDEF), Atlanta (SE of WDEF), and Birmingham (SW of WDEF) already serve much of the area WDEF wishes to reach through added tower height. According to testimony given on behalf of WDEF, the main reason for the proposed increase in the tower height is to influence as many people as possible to come to Chattanooga to shop.

tains by southerly and southwesterly winds. At times, this haze layer extends as high as 8,000 feet MSL, and often extends into the base of an overlying cloud layer. Also, during the summertime, thunderstorm conditions cause a lowering of ceilings over the mountains in the area of the WDEF–TV antenna. During the wintertime, weather backs up against the mountain and the ceilings are often low. While this condition exists in the mountains the weather is often clear at Lovell Field.

The Director of the Tennessee Aeronautics Commission, an active pilot for 32 years, testified that for the past 11 years he has been headquartered in Nashville. During this time he made hundreds of flights from Nashville to Chattanooga. He testified that often the weather briefing obtained from the Nashville office indicated good VFR weather conditions in Nashville and Chattanooga, but in making the flight he has observed rapid deterioration of the weather and the existence of marginal VFR flight conditions in the Cumberland-Signal Mountain area. It was the director's opinion that, since the WDEF tower is located near a heavily flown airway, any additional height to the present structure would make the tower a matter of concern for itinerant pilots coming from the north and the northwest who must cross over the hilly area in the vicinity of the tower, and then descend into the flat country extending southeast of Signal Mountain. The director has been involved in many search and rescue missions attempting to locate transient pilots who have been missing for several days. In practically all these missions, the missing pilots were along V–5 airway en route to Florida. On two occasions the director personnally located missing aircraft that had crashed into the mountains because the pilots, who were not IFR qualified, had become involved in fast deteriorating weather and were attempting to proceed under VFR conditions.

Pilot testimony was also produced to show that pilots approaching Chattanooga from Nashville during night VFR conditions could easily mistake the WDEF–TV tower lights as lights in the city below the mountain. While flying the same route during daytime, particularly during the early morning hours, a pilot would be flying into the sun. When this condition is coupled with the visibility problem associated with haze, it is almost impossible for a pilot to find the latticed WDEF–TV tower. During the wintertime, the pilot of a light aircraft without de-icing equipment often must fly less than 2,500 feet MSL to stay under a low ceiling and to avoid precipitation. This would place his aircraft lower than the proposed height of the WDEF tower.

All pilots questioned at the hearing indicated that a VFR pilot uses a chart to fly by, and he determines a congested area principally from the yellow markings on the chart. All of the active pilots questioned understood that the area around Signal Mountain is noncongested and that pilots, for the most part, fly 500 feet over the area, thereby operating at approximately 2,500 feet MSL.

Mr. F. Ward Reilly, who has lived in the Lookout Mountain area for many years and who also has been a pilot for 42 years, was able to provide the hearing with a definitive account of the local weather conditions in the vicinity of the WDEF tower. Mr. Reilly is an aircraft owner and has been an active pilot for the past 18½ years. He is presently the commander of the Southeastern Regional Civil Air Patrol and has served for 10 years as a member of the Tennessee Aeronautics Commission. He has flown approximately 3,000 hours under visual flight rules. It was his opinion that certain of the low-performance aircraft operating from Runway 32 at Lovell Field are barely able to clear the existing WDEF tower, and that any extension to the tower would constitute a serious hazard to the operation of this type aircraft.

During the fall and winter months it is not unusual to find marginal VFR conditions with a cloud layer hanging slightly above the mountain in the area of the tower. Under these circumstances, the Weather Bureau could be reporting VFR conditions at Lovell Field. Mr. Reilly has flown his aircraft in the vicinity of the tower at 2,500 feet MSL and has reported that he observed other pilots flying in that area at lower altitudes. Based upon his extensive flight experience in the local area, he viewed the route from Chattanooga to Nashville as an extremely busy and heavily travelled airway. Mr. Reilly stated that the peculiar weather situation in the Lookout Mountain area places the pilot in a "squeeze when [he] get[s] trying to go over these mountains." He gauged that approximately 50 percent of the time pilots must operate into and out of Chattanooga, in the vicinity of the tower site, under some form of overcast.

The AOPA produced a technical expert who is also its Director of Policy Coordination. This witness is an active pilot and has had extensive past air traffic control experience with the CAA.

He testified that he studied the Chattanooga situation and determined that certain of the lighter aircraft taking off from Lovell Field and proceeding in a northwesterly direction would not reach a desired safe level above the proposed tower height. The problem is heightened because the structure is not easily observed by a pilot climbing his aircraft from a lower elevation since the tower would be viewed against the open sky and is of lattice-type construction. A further problem is that the visibility in the vicinity of the tower is often reduced because of haze.

AOPA opposed the proposed tower extension because there is a large volume of VFR flying in the area and the pregnant possibility exists that a pilot, who is endeavoring to operate in strict conformity with all pertinent regulations, may inadvertently be diverted or stray from his intended flight path and crash into the tower. According to the AOPA technical witness, the WDEF tower is not in a congested area. This he determined from a visual inspection of the WDEF site from the air and from studies he made of the Sectional Chart. It was the witness' view that VFR pilots were free to fly 500 feet above the ground in this area (approximately 2,500 feet MSL). This would place the proposed height of the tower (2,749 feet MSL) higher than the altitude used for VFR flights.

The company produced an aeronautical expert who holds a commercial pilot certificate but is not an active pilot. This witness had, in the past, extensive air traffic control experience with the Civil Aeronautics Administration. Prior to his testimony, this expert witness did not make a study of the WDEF site by air, nor has he ever flown as a pilot in the Chattanooga area.

The witness testified that it was difficult to make a VFR evaluation of this area because of the lack of VFR traffic information indicating the number of flights that pass over the tower site. In order to obtain necessary information concerning this matter, a traffic count was conducted by the company over the period of one week (May 13–19, 1964). It was determined from this study that only 5 aircraft and 2 helicopters out of 180 observations were as low as 3,000 feet MSL. This evidence indicated that the tower height, as proposed, would not have inconvenienced, or in any way endangered, any of the 180 flights. In addition, the witness maintains that, since the Signal Mountain area is congested, pilots would be required to fly 1,000 feet over the area. Accordingly, even if a pilot operated over the antenna at the proposed height, the aircraft would clear the obstruction easily. He concluded that Signal Mountain was as good a place for an antenna site as any other area, and that there could not be any adverse effect on VFR operations by increasing the tower height.

In the course of making his VFR study this witness did not fly over the area with a light aircraft, nor did he testify that he talked to a single local pilot concerning any VFR problem the proposed height may cause. While this witness agreed that under certain atmospheric conditions, some of the towers are difficult to see, he made no effort to familiarize himself with significant weather factors in the area. He was unaware of whether there was a haze layer in the area of the tower site, or the height and density of such. He had no information concerning winter weather phenomena in the area of Lookout Mountain that may create marginal-to-hazardous VFR flight conditions. He was unaware of the thunderstorm conditions that occur during the summer months and the effect the position of the sun has on a pilot who is flying from Nashville to Chattanooga during the morning hours.

The company also produced two witnesses who made a traffic study from the tower each day from May 13 through May 19, 1964, between 0700 and 1900 hours c.s.t. A record was made of each aircraft observed and included the time, aircraft type, estimated heading, estimated altitude (above ground), estimated position from observation post and general weather conditions at the time. For the seven-day period the two witnesses observed 180 flights that passed between one-fourth mile and seven miles from the tower. No aircraft were observed directly over the tower site. Only two aircraft were observed at 1,000 feet; and the other passed one mile southwest of the site. Two Army helicopters were observed at 1,000 feet one-half mile southwest of the site. One aircraft was observed three miles southwest of the site at 1,500 feet; another was one-half mile northeast at 1,500 feet and a third was two miles southwest of the site at 1,500 feet. Aircraft observed in all other instances were at altitudes of 2,000 feet and higher. The recorded observations reflect that the study was made during a time when the sky was almost always clear, or a high ceiling existed.

Both witnesses are long-time employees of WDEF and neither has ever flown an aircraft. Neither had any prior experience in estimating altitudes or distances of aircraft from a given point, and the only equipment provided for the job was a telescope and a set of binoculars. Each stood duty alone for periods as long as 12 hours (except for short rest periods) on some planking that had been placed across latticed sections of the tower 45 feet above the ground. The majority of the time each observer had to stand since no chair or table was provided. Some cardboard shielding was placed around the outside of the tower to break the chilling wind. One of the observers stated that, at times, wind gusts up to 30 mph shook the tower. Each observer admitted that the recordings of the wind velocity, visibility and cloud heights were only rough estimates.

Based upon studies made by the FAA, it was determined that an accurate count of traffic operating VFR over the TV site could not be made. However, the FAA study did indicate that flights on routes such as Chattanooga-Nashville, Nashville-Chattanooga, Nashville airways to Atlanta, Nashville airways to Macon or Jacksonville, etc., would undoubtedly operate in the vicinity of the structure. This study revealed that at least 1,360 aircraft operated on VFR flight plans in this vicinity during calendar year 1962. The altitudes of these aircraft are unknown. The expert witness for the AOPA was of the view that, based upon his study, approximately 6,900 VFR flights travelled in the vicinty of the WDEF tower during fiscal year 1963.

In the Determination of Hazard to Air Navigation issued in Washington, D.C., on September 30, 1963, determinations were made that the proposed structure would affect IFR aeronautical operations, procedures and altitudes as follows:

1. The minimum transition altitude from the Whitwell Intersection to the North Chattanooga radio beacon would be increased from 3400 feet to 3700 feet MSL.

2. The minimum transition altitude from Haletown Intersection to the North Chattanooga radio beacon would be increased from 3400 to 3700 feet MSL.

3. The minimum transition altitude from the Bridgeport Intersection to the North Chattanooga radio beacon would be increased from 3400 feet to 3700 feet MSL.

The determination was also made that, because of the relatively short distance from the proposed structure to Lovell Field, only aircraft with a very fast climb capability would be able to depart on course with safety when proceeding in a northerly or westerly direction. Due to the high terrain and present towers in the Chattanooga area, the Agency has found it necessary to caution pilots, operating aircraft with limited climb capabilities and departing on westerly and northwesterly routes, to request clearance to climb on a track of either 016° or 196° from the instrument landing system middle marker to 3,000 feet before continuing climb on course. The greater height of the proposed structure would complicate this problem further.

The increase in the minimum transition altitudes that would be required if this structure were constructed would cause delay to instrument approach operations because of the higher initial approach altitude. In addition, when air traffic control found it necessary to direct a departing aircraft via the above special climb procedure, aircraft awaiting approach would be delayed further, or approaches would be stopped altogether until the departing aircraft had left the immediate area or climbed to an altitude above 4,000 feet. Thus, when the Chattanooga terminal area was under heavy IFR traffic and minimum weather conditions, approach and departure procedures could become quickly saturated and traffic unavoidably delayed. During fiscal year 1963 there were 19,433 instrument operations and 3,321 instrument approaches at Lovell Field.

The study disclosed that the above procedures and minimum flight altitudes cannot be altered to accommodate the proposed structure without having a substantial adverse effect upon aeronautical operations in the Chattanooga terminal area.

The aviation consultant for the company testified that his study indicated the following:

1. The Whitwell to N. Chattanooga transition altitude would be increased from 3400 feet to 3700 feet MSL.

2. The Haletown to N. Chattanooga transition altitude would be increased from 3400 feet to 3700 feet MSL.

3. The Bridgeport to N. Chattanooga transition altitude would be increased from 3400 feet to 3700 feet MSL.

He disagreed that the proposed height increase for the tower would further complicate the climbout problem for pilots intending to fly northwesterly from Lovell Field, or that the increase in the minimum transition altitudes would cause delay to instrument approach operations because of the higher initial approach altitude. It was his opinion that the proposed increase in the tower height would not have any adverse effect upon IFR operations in the Chattanooga area.

*Analysis.* The principal problem is to evaluate the effect the proposed additional height to the WDEF tower will have on VFR flight. To accomplish this effectively, the standards to be applied to this type of case should be stated first. In general, surface obstructions are of concern to a pilot at three distinct times during flight:

(1) When climbing to a cruising altitude after takeoff;

(2) When cruising at a low altitude, and

(3) When descending from cruising altitude preparatory to landing.

Surface structures have their greatest impact upon VFR operations when the ceiling and visibility conditions are near minimums and pilots are forced to fly at low altitudes to maintain visual surface reference.

Any structure which would interfere with the safe transit of aircraft through the navigable airspace would have an adverse effect upon such aircraft, thereby creating a hazard to air navigation. It could be said that any structure which is over 500 feet high, or which is under 500 feet high and adversely affects an approach or departure, is a hazard to air navigation since it occupies airspace which has been declared to be "navigable airspace," and aircraft attempting to use the airspace would run the risk of colliding with the structure. It is a fact, however, that not every structure penetrating into the navigable airspace is a hazard to air navigation if it can be marked and lighted in a manner so as to provide visual observance by pilots, or if it is located in terrain so as not to increase the potential hazard to aircraft. In general, the converse is also true. When the structure is of such a height that aircraft operating in navigable airspace may collide with it because weather conditions, or topographic features, or both, prevent the pilot from observing the structure, such must be considered a hazard to air navigation. As already stated, the greatest danger arises in situations when the weather is marginal and a VFR pilot, operating under a lowering ceiling, reduces his altitude to stay under the overcast. In this situation he normally will devote the major portion of his attention to maintaining safe flight. Residual time will be used for studying aeronautical charts for obstructions and searching for them. Such pilots do not search ahead with their eyes, but, rather, look down in order to use any familiar landmark as a navigational aid to safely reach the airport. In these situations, it is foreseeable that a collision could occur if the tower extends above 500 feet in navigable airspace and is located near a route that is routinely travelled by VFR aircraft. The same result may follow where, because of haze or some other atmospheric condition, a pilot is unable to see a tower until his aircraft is in a position of danger. On the other hand, the proponents for the tower contend that a pilot operating under a VFR flight plan is responsible solely for the safety of his flight and under no circumstances should he permit himself to be entrapped in a marginal weather situation. They believe that a prudent pilot will plan his flight to avoid restricted areas and obstructions that he might not reasonably be able to fly around or over.[2] We are reminded that where visual flight rules

[2] The purpose of the traffic study conducted by the company was to demonstrate

are followed, the primary responsibility of avoiding collisions or accidents rests with the pilot (U.S. v. Schultetus, 277 F. 2d 322, 5th Cir., 1960). In addition, they state that since the Signal Mountain area is a congested area a pilot must operate his aircraft at lest 1000 feet over the tallest obstacle. This would place the aircraft in controlled airspace where a pilot, needing a visibility of 3 miles, would observe the WDEF tower as proposed.

The best answer to the company's position is that made by Mr. Reilly who, in referring to this area, testified:

• • • Well, it is usually my criteria that unless I have approximately a thousand feet above terrain between the mountains and the ceilings I avoid going underneath but you can't always determine that. This thing is a booby trap. We picked up lots of people during my time in the Civil Air Patrol between Nashville and Chattanooga that didn't make it.

Q. You recognize, sir, that a pilot flying VFR has the responsibility to use care and to turn back when he is getting into or approaching instrument conditions?

A. I am well aware of that, but I am also aware of the fact that it is a great deal more complicated than just that. This VFR flying is the most complicated type of flying you can do cross country • • •

Evidence produced by active pilots indicated that they consider the climbout from Lovell Field in a northwesterly direction toward Nashville as a potentially dangerous maneuver, particularly for an itinerant pilot. Also, it is agreed that an itinerant pilot who is flying between Nashville and Chattanooga during the fall and winter months unexpectedly may encounter reduced ceilings over the mountain, and in the process of reducing altitude to stay out of the clouds, may reduce his altitude to a level at which he could collide with a tower. When a pilot is in this position of stress, particularly a relatively inexperienced one, he is not overly concerned whether the scattered houses beneath him constitute a congested area. Instead, he will continue on as long as he can keep a reasonable altitude above the ground and remain beneath the overcast. Should this type of operation occur in the Lookout Mountain area, as we are advised it does during the fall and winter months, it is foreseeable that an addition in height to the existing WDEF tower will constitute a hazard to air navigation. The Agency does not consider as satisfactory the argument that since no aircraft have yet struck any of these towers on Lookout Mountain they do not constitute a hazard. There is proof of record that accidents have resulted because of the hazards associated with deteriorating weather in this mountain chain. The erection of a tall tower in the vicinity of a busy airway or an area used by aircraft operated VFR would increase the hazard, and it is precisely this that the company proposes to do. The aviation safety situation is already critical with the existing towers in this area. It would be an unreasonable act to further the risk by approving an increase in height for WDEF–TV.

*Finding.* The proposal of WDEF Broadcasting Co. to increase the height of its existing television tower and antenna by 462 feet would have an unacceptably hazardous effect upon the safe navigation of aircraft in the navigable airspace in the Chattanooga, Tenn., area.

*It is hereby ordered,* That a final determination of hazard to air navigation be and is hereby entered in accordance with § 77.77 of the Federal Aviation Regulations with respect to the proposal by WDEF Broadcasting Co., Chattanooga, Tenn., to increase by 462 feet the height of its existing television tower and antenna near Chattanooga at latitude 35°08'05'' N., longitude 85°19'25'' W.

Issued in Washington, D.C., on December 18, 1964.

N. E. HALABY,
*Administrator.*

[OE Docket No. 64–PC–1]

## HAWAIIAN LANES INC.

### Determination of Hazard to Air Navigation

The Federal Aviation Agency has circularized the following proposal for aeronautical comment and has conducted a study (PC–OE–101) to determine its effect upon the safe and efficient utilization of navigable airspace.

Hawaiian Lanes, Inc., Honolulu, Hawaii, proposes to construct a five-story, 98-unit hotel building to incorporate an existing one-story complex consisting of a bowling alley, a resturant and a child care center. The structure would be located near Honolulu, Hawaii, at latitude 21°20'15'' N., longitude 157°54'15'' W. The overall height of the structure would be 64.5 feet above mean sea level (55.5 feet above ground).

The proposed structure would be located 1.5 statute miles northeast of the Honolulu International Airport reference point and 2,550 feet, bearing 58 degrees true, from the approach end of Runway 22 left (22L). The structure would exceed the standards for determining hazards to air navigation as defined in § 77.27(b)(1) of the Federal Aviation Regulations by penetrating the noninstrument approach area surface of Runway 22L by 16.3 feet.

In addition, turbojet aircraft departing Runway 4 right (4R) would be adversely affected since under Special Civil Air Regulations No. SR–422B they would be required to attain an altitude of approximately 99 feet above mean sea level over the structure, if erected. Under conditions such as maximum aircraft loading (which is quite probable due to the long overseas flights), engine malfunction, or hot weather, the obstruction clearance would be reduced resulting in the availability of less maneuvering area in case of an emergency. This would be critical. Aircraft departing Runway 4R are at present adversely restricted to weight limitations under certain climatic conditions and the proposed buildings would in effect reduce the usable length of that runway thereby further restricting weight limitations. In addition, aircraft taking off to the northeast or landing to the southwest on this runway pass over the proposed site while in a climbing or descending attitude and at a time when a pilot's attention is directed toward an extremely critical phase of flight. The proposed structure would extend 57.3 feet above the nearest airport elevation and would be within the normal traffic pattern for this runway.

A review of the aeronautical study disclosed that Runway 8/26 is the primary runway used; however, Runway 4R/22L becomes the primary runway whenever Runway 8/26 is closed for maintenance, or unusable due to existing wind and weather conditions. Southerly winds prevailed about one-fifth of the present year creating a cloud condition which required approaches to Runway 22L to be made under reduced visibility. The yearly average wind coverage, with 15 MPH allowable crosswind component, is 94% for Runway 4R and 4% for 22L. During fiscal year 1964, there were 265,179 aircraft operations at the Honolulu International Airport with an average of 114 turbojet operations per day. This airport is also a joint-use airport at which MATS, KC–135 and other military jet aircraft operate.

The estimated annual operation for Runway 4R is 37,501 landings and 33,001 takeoffs; for Runway 22L 1,649 landings and 1,749 takeoffs.

The structure, if erected, would be located in close proximity to the airport in such a position that it may be necessary for aircraft to maneuver at a dangerously low altitude to obtain adequate vertical or horizontal obstruction clearance at a time when the pilot's attention is required for the observance of other air traffic and therefore the structure would be detrimental to the safety of aircraft in flight.

In addition, operational procedures require aircraft departing Runway 4R to execute a right turn as soon as safety permits after takeoff due to the high rising terrain and congested area situated beyond the end of the runway. Conversely, arriving aircraft are required to execute a curved approach to Runway 22L. The building site is situated beneath these curved approaches and departures and, since these maneuvers are necessary as a safety precaution they cannot be altered.

Such construction could also lead to considerable noise complaints; however, objections based upon noise abatement factors are not relevant to the determination of whether a structure would be a hazard to air navigation.

On the basis of the reasons enumerated above, the proposed structure would constitute a hazard to aircraft conducting approaches and departures to Runway 4R/22L of the Honolulu International Airport and would be a formidable obstruction to aircraft using these runways.

Based upon the aeronautical study, it is the finding of the Agency that the proposed hotel would have a substantial adverse effect upon aeronautical operations at the Honolulu International Airport, since the proposed construction would be detrimental to the safety of aircraft approaching Runway 22L and departing Runway 4R.

Therefore, pursuant to the authority delegated to me by the Administrator (§ 77.37 [New]), it is found that the proposed structure would have a substantial adverse effect upon the safe and efficient utilization of navigable airspace; and it is hereby determined that the proposed structure would be a hazard to air navigation.

This determination is effective and will become final 30 days after the date of issuance unless an appeal is filed under Section 77.39 [New] (27 F.R. 10352). If the appeal is denied, the determination will then become final as of the date of the denial or 30 days after the issuance of the determination, whichever is later.

Issued in Washington, D.C., on December 18, 1964.

JOSEPH VIVARI,
*Acting Chief,*
*Obstruction Evaluation Branch.*

[F.R. Doc. 64–13365; Filed, Dec. 28, 1964; 8:51 a.m.]

---

[OE Docket No. 64–CE–12]

## SOO ELECTRONICS, INC.

### Determination of No Hazard to Air Navigation

The Federal Aviation Agency has circularized the following proposal for aeronautical comment and has conducted an aeronautical study (CE–OE–6375) to determine its effect upon the safe and efficient utilization of the navigable airspace.

Soo Electronics, Inc., South Sioux City, Nebr., proposes to construct a community antenna television structure at latitude 42°28'21'' N., longitude 96°25'19'' W., in South Sioux City, Nebr. The overall height of the structure would be 1,589 feet above mean sea level (500 feet above ground).

The structure would be located approximately 2.7 miles northeast of the Martin, Nebr., Airport and within the boundaries of VOR Federal airways Nos. 15 and 15E. It would exceed the standards for determining hazards to air navigation as defined in § 77.25(b)(2) of the Federal Aviation Regulations by 128 feet as applied to the airport. It would exceed the standards for determining hazards to air navigation as defined in § 77.23(a)(2) by 300 feet as applied to the airways.

The proposed structure would not require an increase in the instrument flight rules minimum en route altitudes on Victor 15 and 15E. It would not adversely affect operations at Martin Airport since it would be located beyond a normal airport traffic pattern.

The proposed structure would be located in the fringe area of the city. Therefore, aircraft operating in accordance with visual flight rules in the vicinity of the structure would be expected to maintain an altitude well above its proposed height.

The proposed structure would be located approximately 20,950 feet northwest of the northwest end of Runway 13/31 of the Sioux City Municipal Airport and 11,290 feet northeast of the extended centerline of that runway. At this location, it would require an increase from 2400 feet to 2600 feet in the transition altitudes and procedure turn altitudes for Standard Instrument Approach Procedures (SIAP) AL–395–ILS–RWY 13 (BC), AL–395–ADF–2, and AL–395–VOR/DME–2, and an increase from 2400 feet to 2600 feet in the missed approach altitudes for SIAPs AL–395–ADF–1 and AL–395–ILS–RWY 31.

The aeronautical study disclosed that, except for SIAP AL–395–VOR/DME–2, the above increases in operational altitudes would have no substantial adverse effect on these procedures since the rate of descent would remain within prescribed standards.

The increase in the transition and procedure turn altitude for SIAP AL–395–VOR/DME–2 would result in an excessive rate of descent for aircraft using this procedure. The study disclosed, however, that the procedure could be altered so as to conform with the rate of descent criteria by relocating the 10-mile DME fix to 8.5 miles and lowering the altitude over the 8.5-mile fix from 2,200 feet to 2,100 feet. To facilitate this action, the proponent is hereby required to give notice to the Agency of the date that construction is scheduled to begin. Such notice shall be given not less than 30 days prior to commencement of construction.

Therefore, pursuant to the authority delegated to me by the Administrator (§ 77.37 [New]), it is found that the proposed structure would have no substantial adverse effect upon the safe and efficient utilization of navigable airspace and it is hereby determined that the proposed structure would not be a hazard to air navigation provided that it is obstruction marked and lighted in accordance with Agency standards.

This determination is effective and will become final 30 days after the date of issuance unless an appeal is filed under Section 77.39 [New] (27 F.R. 10352). If the appeal is denied, the determination will then become final as of the date of the denial or 30 days after the issuance of the determination, whichever is later. Unless otherwise revised or terminated, a final determination hereunder will expire 18 months after its effective date or upon earlier abandonment of the construction proposal (§ 77.41 [New]).

Issued in Washington, D.C., on December 17, 1964.

JOSEPH VIVARI,
*Acting Chief,*
*Obstruction Evaluation Branch.*

# FEDERAL COMMUNICATIONS COMMISSION

[Docket No. 15705, etc.; FCC 64–1163]

## CHARLES VANDA ET AL.

### Order Designating Applications for Consolidated Hearing on Stated Issues

In re applications of Charles Vanda, Henderson, Nev., Docket No. 15705, File No. BPCT–3315; Sovereign Television Corporation, Henderson, Nev., Docket No. 15706, File No. BPCT–3323; Boulder City Television, Inc., Boulder City, Nev., Docket No. 15707, File No. BPCT–3327; Vegas Valley Broadcasting Co., Boulder City, Nev., Docket No. 15747, File No. BPCT–3454; for construction permit for new television broadcast station.

At a session of the Federal Communications Commission held at its offices in Washington, D.C., on the 16th day of December 1964;

The Commission, having under consideration the above-captioned applications, each requesting a construction permit for a new television broadcast station to operate on Channel 4, the first two in Henderson, Nevada, and the last two in Boulder City, Nev.; and

It appearing, that on November 18, 1964, the Commission designated for comparative hearing (FCC 64–1075) the above-captioned applications of Charles Vanda, Sovereign Television Corp., and Boulder City Television, Inc.; and

It further appearing, that the above-captioned application of Vegas Valley Broadcasting Co. was substantially complete and accepted for filing on the day preceding the date on which the prior applications were designated for hearing, and that it is mutually exclusive and entitled to comparative consideration therewith, in accordance with §§ 1.227 (b)(1) and 1.572(e) of the Commission's rules; and

It further appearing, that, in addition to the matters to be considered in connection with the applications of Charles Vanda, Sovereign Television Corp., and Boulder City Television, Inc., as set forth in the above-mentioned Order (FCC 64–1075), the following matters with respect to the application of Vegas Valley Broadcasting Co. are to be considered in connection with the issues specified below:

(a) Based on information contained in the application of Vegas Valley Broadcasting Co., cash in the amount of approximately $127,000 will be required for the construction and initial operation of the proposed new station. The applicant appears to rely upon the availability of $250,000 from stock subscriptions and loans from subscribers, but none of the subscribers has shown current and liquid assets in excess of current liabilities in an amount sufficient to meet his commitments to the applicant. Additionally, the applicant proposes to lease equipment, land and buildings from Bentonite, Inc., but no showing has been made that Bentonite, Inc. has the financial ability to perform in ac-

that VFR aircraft were not operated in close proximity to the WDEF tower. Because of the manner in which the study was conducted, coupled with the lack of expertise of the observers who performed their functions under adverse conditions, very little weight is given to this evidence.

cordance with its undertaking. It cannot be determined, therefore, that the applicant is financially qualified.

(b) The antenna system and site proposed by Vegas Valley Broadcasting Co. has not been approved by the Federal Aviation Agency. An issue will be specified, therefore, to determine whether the antenna system and site proposed might constitute a hazard to air navigation.

It further appearing, that, except as indicated above, Vegas Valley Broadcasting Co. is legally and otherwise qualified to construct, own and operate the proposed television broadcast station; and

It further appearing, that, upon due consideration of the above-captioned applications, the Commission finds that, pursuant to section 309(e) of the Communications Act of 1934, as amended, a hearing is necessary and that the said applications must be designated for hearing in a consolidated proceeding on the issues set forth below:

*It is ordered,* That, pursuant to section 309(e) of the Communications Act of 1934, as amended, the above-captioned applications of Charles Vanda, Sovereign Television Corp., Boulder City Television, Inc., and Vegas Valley Broadcasting Co. are designated for hearing in a consolidated proceeding in Docket Nos. 15705–15707, at a time and place to be specified in a subsequent Order upon the following issues:

1. To determine whether Charles Vanda is financially qualified to construct, own and operate the proposed television broadcast station.

2. To determine whether Boulder City Television, Inc., is financially qualified to construct, own and operate the proposed television broadcast station.

3. To determine whether there is a reasonable possibility that the tower height and location proposed by Boulder City Television, Inc., would constitute a hazard to air navigation.

4. To determine whether Vegas Valley Broadcasting Co. is financially qualified to construct, own and operate the proposed television broadcast station.

5. To determine whether there is a reasonable possibility that the tower height and location proposed by Vegas Valley Broadcasting Co. would constitute a hazard to air navigation.

6. To determine, in the light of section 307(b) of the Communications Act of 1934, as amended, which of the proposals would best provide a fair, efficient and equitable distribution of radio service among communities.

7. To determine, in the event it is concluded that a choice between the applications should not be based solely on considerations relating to section 307(b), which of the operations proposed in the above-captioned applications would best serve the public interest, in light of the evidence adduced pursuant to the foregoing issues and the record made with respect to the significant differences between the applicants as to:

(a) The background and experience of each bearing on its ability to own and operate the proposed television broadcast station.

(b) The proposals of each of the applicants with respect to the management and operation of the proposed television broadcast station.

(c) The programming services proposed in each of the above-captioned applications.

8. To determine, in the light of the evidence adduced pursuant to the foregoing issues, which of the instant applications should be granted.

*It is further ordered,* That the specification of issues herein shall supersede the specification of issues in the Commission's order of November 20, 1964, in this proceeding.

*It is further ordered,* That, to avail themselves of the opportunity to be heard, Charles Vanda, Sovereign Television Corp., Boulder City Television, Inc., The City of Boulder City, Nev., and Vegas Valley Broadcasting Co., pursuant to § 1.221(c) of the Commission's rules, in person or by attorney, shall, within twenty (20) days of the mailing of this order, file with the Commission, in triplicate, a written appearance stating an intention to appear on the date set for the hearing and present evidence on the issues specified in this order.

*It is further ordered,* That the applicants herein shall, pursuant to section 311(a)(2) of the Communications Act of 1934, as amended, and § 1.594(a) of the Commission's rules, give notice of the hearing either individually or, if feasible, jointly, within the time and in the manner prescribed in such rule, and shall advise the Commission of the publication of such notice as required by § 1.594(g) of the rules.

Released: December 22, 1964.

FEDERAL COMMUNICATIONS COMMISSION,
[SEAL] BEN F. WAPLE,
*Secretary.*

[F.R. Doc. 64–13313; Filed, Dec. 28, 1964; 8:46 a.m.]

# FEDERAL POWER COMMISSION

[Docket No. CP65–57]

## BACA GAS GATHERING SYSTEM, INC.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on August 28, 1964, as supplemented on September 30, 1964 and October 21, 1964, Baca Gas Gathering System, Inc. (Applicant), 1818 Republic Bank Building, Dallas, Tex., 75201, filed in Docket No. CP65–57 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale for resale of natural gas in interstate commerce, all as more fully set forth in the application, as supplemented, which is on file with the Commission and open to public inspection.

Applicant proposes to construct and operate approximately 38 miles of natural gas pipeline to transport gas which will be purchased by Applicant from producers in Baca County, Colo., and sold to Panhandle Eastern Pipe Line Co. (Panhandle) in Morton County, Kans. The estimated cost of the proposed facilities is $530,000, including approximately $50,000 of organization expenses, which will be financed by the issuance of common stock, convertible debentures and notes.

Applicant estimates that 43,602 MMcf of gas at 14.73 p.s.i.a. are dedicated to the project. The gas will be purchased by Applicant from the producers at an initial rate of 12 cents per Mcf at 14.65 p.s.i.a. and sold to Panhandle at an initial rate of 16 cents per Mcf at 14.65 p.s.i.a.

The application states that although exploration and development by independent producers operating in southeastern Colorado have established the existence of substantial gas reserves in the region from which Applicant proposes to obtain its supplies, these reserves have remained uncommitted because of the unavailability of an adequate market, and as a result there are presently shut-in gas wells in several fields in this region. The application states further that in the absence of any satisfactory market for supplies already developed, the producers are not in a position to undertake the further substantial expenditures required for further development of the productive potential of the area.

This matter is one that should be disposed of as promptly as possible under the applicable rules and regulations and to that end:

Take further notice that preliminary analysis has indicated that there are no problems which would warrant a recommendation that the Commission designate this application for formal hearing before an examiner and that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act, and the Commission's rules of practice and procedure, a hearing may be held without further notice before the Commission on this application provided no protest or petition to intervene is filed within the time required herein. Where a protest or petition for leave to intervene is timely filed, or where the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 15, 1965.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64–13277; Filed, Dec. 28, 1964; 8:45 a.m.]

[Docket No. RI65–298]

## CITIES SERVICE OIL COMPANY ET AL.

### Correction of Date

DECEMBER 11, 1964.

In the Order Providing for Hearing on and Suspension of Proposed Change in Rate, and Allowing Rate Change to Become Effective Subject to Refund, issued November 12, 1964 and published in the FEDERAL REGISTER November 24, 1964 (F.R. Doc. 11871; 29 15784) change "December 5, 1964" to read "October 5, 1964" under column headed "Date Filing Tendered" also change "November 1, 1965" to read "January 1, 1965" in the fourth line of "Appendix A" counting from the bottom of the page.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64–13278; Filed, Dec. 28, 1964; 8:45 a.m.]

[Project No. 2487]

## CENTRAL VERMONT PUBLIC SERVICE CORP.

### Notice of Application for License

DECEMBER 18, 1964.

Public notice is hereby given that application has been filed under the Federal Power Act (26 U.S.C. 791a–825r) by Central Vermont Public Service Corp. (correspondence to: Porter E. Noble, Clerk and General Counsel, 77 Grove Street, Rutland, Vt.) for a license for constructed Project No. 2487, known as the Hoosick Falls Plant, located on Hoosick River, in Rensselaer County, N.Y., in the vicinity of Hoosick Falls, Vt.

The project consists of: (1) A concrete dam, approximately 220 feet long and 30 feet high surmounted by 2-foot flashboards, containing a spillway section and a concrete structure with sliding head gates; (2) the spillway occupies about 150 feet of the dam's length; (3) a 16.3-acre reservoir with storage limited to hourly pondage; (4) a canal approximately 900 feet long and 75 feet wide (the north wall of which is an earth dike) containing three trash racks at the powerhouse end and a 53-foot concrete spillway equipped with 2-foot flashboards located directly below the dam; (5) a powerhouse, the foundation of concrete and heavy stone masonry with brick superstructure, containing three vertical generating units with a combined capacity of 1,050 kw driven by three turbines with a combined capacity of 1,510 hp; (6) a 34.5 kv transmission line connecting the plant to the North Bennington substation; and (7) appurtenant electrical and mechanical facilities.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure of the Commission (18 CFR 1.8 or 1.10). The last day upon which protests or petitions may be filed is February 2, 1965. The application is on file with the Commission for public inspection.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64–13279; Filed, Dec. 28, 1964; 8:45 a.m.]

[Docket No. G–17849, etc.]

## EL PASO NATURAL GAS CO.

### Notice of Petition for Amendments of Certificates

DECEMBER 18, 1964.

Take notice that on October 28, 1964, El Paso Natural Gas Co. (El Paso) filed a petition, pursuant to the Natural Gas Act and the regulations thereunder, for amendment of certificates of public convenience and necessity issued in Docket No. G–17849, CP63–207 and CP64–292 on June 19, 1963, April 15, 1963 and July 31, 1964, respectively, all as more particularly described in said petition which is on file with the Commission and open to public inspection.

In Docket No. G–17849, El Paso requests that it be permitted to substitute three used 165 horsepower compressor units, at the Beaver Compressor Station in lieu of the single 440 horsepower unit authorized therein; in Docket No. CP63–207 requests authorization to use a 2,400 horsepower compressor unit at its existing Blanco Compressor Station in lieu of 2,500 horsepower unit authorized to be constructed and operated therein; in Docket No. CP64–22 to substitute Arizona Public Service Co. as its customer for sale and distribution to domestic and irrigation customers by means of the authorized Aravaipa Canyon tap in lieu of Southwest Gas Corp. originally authorized therein.

El Paso alleges that savings under estimated costs in Docket Nos. G–17849 and CP63–207 would amount to $126,930 with no appreciable diminution in design capacity.

Protests, petitions to intervene or requests for hearing in this proceeding may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 12, 1965.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64–13280; Filed, Dec. 28, 1964; 8:45 a.m.]

[Docket No. CP65–165]

## FLORIDA GAS TRANSMISSION CO.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on December 9, 1964, Florida Gas Transmission Co. (Applicant), Post Office Box 44, Winter Park, Fla., 32790, filed in Docket No. CP65–165 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of added facilities to its pipeline system and sales and deliveries of additional volumes of natural gas to its customers, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant proposes to construct and operate (1) a total of 15 30-inch mainline loops on its transmission pipeline system at various points between Compressor Station 7 at Eunice, La., and Compressor Station 16 at Brooker, Fla., comprising approximately 210 miles of main line looping; (2) two new compressor stations, one near Juniper Springs, Fla., and another near Fort Pierce, Fla., with a total of 10,500 installed horsepower, and installation of additional units at eight existing compressor stations and turbocharging at two existing compressor stations, which will provide an additional 20,200 installed horsepower; (3) one new 18-inch gas supply lateral approximately 51 miles in length from E. White Lake Field in southern Louisiana to Applicant's existing 24-inch main pipeline near Port Barre, La., and approximately 22 miles of 6- and 8-inch line loops on four sales laterals in Florida; and (4) one new meter and regulator station in E. White Lake Field for receipt of gas, and miscellaneous additions and changes in existing sales meter and regulator stations in Florida.

Applicant estimates that the proposed facilities will increase its pipeline system annual average day capacity to deliver gas to markets in Florida from 358,930 Mcf to 444,060 Mcf, an increase of 85,130 Mcf. The application states that the increased main line capacity will enable Applicant to keep pace with the growth and market demands of its customers in the State of Florida and is necessary to prevent more or less continuous interruptions of service to industrial customers by the year 1967.

The application further states that Applicant has entered into a gas purchase contract with Pan American Petroleum Corp. and Austral Oil Co., Inc., dated November 20, 1964, for the purchase of an average daily quantity of from 81,600 to 102,000 Mcf of natural gas, which will be incremental to Applicant's existing gas supply.

The estimated total cost of Applicant's proposed construction is $42,690,000, which will be financed through the sale of bonds and debentures and expenditures out of cash on hand.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene

is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13281; Filed, Dec. 28, 1964; 8:45 a.m.]

[Project No. 2330]

## NIAGARA MOHAWK POWER CORP.

### Notice of Application for Amendment of License

DECEMBER 18, 1964.

Public notice is hereby given that application has been filed under the Federal Power Act (16 U.S.C. 791a-825r) by Niagara Mohawk Power Corp. (correspondence to: Niagara Mohawk Power Corp., 300 Erie Boulevard West, Syracuse, N.Y.), for amendment of its license for Project No. 2330, located on the Raquette River, in St. Lawrence County, N.Y.

The application requests authorization to replace the existing timber crib dam at the Norfolk Development of Project No. 2330 with a concrete dam. The new dam will be 20 feet shorter in length than the old dam. The licensee advises that the old dam was constructed in 1905 and its present condition is such that there is leakage through the dam which requires considerable maintenance.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure of the Commission (18 CFR 1.8 or 1.10). The last day upon which protests or petitions may be filed is February 2, 1965. The application is on file with the Commission for public inspection.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13282; Filed, Dec. 28, 1964; 8:45 a.m.]

[Docket No. CP65-71]

## PANHANDLE EASTERN PIPE LINE CO.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on September 14, 1964, Panhandle Eastern Pipe Line Co. (Applicant), New York, N.Y., and Kansas City, Mo., filed in Docket No. CP65-71 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the purchase and operation of natural gas facilities in Parke County, Ind., all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant seeks to purchase and operate approximately 5.7 miles of 4-inch line, from Applicant's main line measuring and regulating station to the Mecca, Ind., plant of American Vitrified Products Co. (American), all in Parke County, Ind.

The application states that the line was originally installed to serve the plant, then owned by Clay City Pipe Co. (Clay City), pursuant to an agreement giving Applicant the option to purchase the line at cost. The application further states that Clay City sold the plant to American, and American has asked Applicant to exercise its option to purchase the line, thus obviating the necessity of its operation by American. The application further states that no change in service is proposed.

The cost to Applicant of the subject 4-inch line is stated to be $103,433.74.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protests or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. G-1922, etc.]

## TENNESSEE GAS TRANSMISSION CO.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on December 1, 1964, Tennessee Gas Transmission Co. (Applicant), Tennessee Building, Houston, Tex., filed in Docket No. CP65-157 an application pursuant to section 3 of the Natural Gas Act requesting an order of the Commission authorizing Applicant to export natural gas from the United States to the Dominion of Canada (Canada). On the same date Applicant filed in Docket No. CP65-158 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to be used in the exportation of natural gas to Canada, all as more fully set forth in the application on file with the Commission and open to public inspection.

Concurrently with the above two applications, Applicant also filed, in Docket No. G-1922, an application to further amend its Presidential Permit, originally issued on September 11, 1953, in Docket No. G-1922, and amended June 4, 1962, by requesting authorization to operate and maintain its existing facilities at the international boundary for the exportation of natural gas to Canada as proposed in the application in Docket No. CP65-157.

The above three applications have been filed by Applicant for the purpose of obtaining necessary Commission authorization for the exportation of natural gas from the United States to Canada, through Applicants' existing facilities on the international boundary, near Niagara Falls, N.Y. Pursuant to an agreement between the parties dated November 2, 1964, Trans-Canada Pipe Lines Limited (Trans-Canada) has agreed to purchase 75 billion cubic feet of natural gas from Applicant, over a contract period ending November 1, 1970.

In order to effectuate the proposed sale and export, Applicant seeks authorization to construct and operate facilities necessary to increase its system annual average day delivery capacity from 2,971,000 Mcf to 3,027,000 Mcf. These proposed facilities consist of approximately 94.28 miles of 36-inch pipeline, approximately 7.97 miles of 30-inch pipeline, and a total of 12,300 additional horsepower at Applicant's compressor stations Nos. 860, 87, and 219, located in Centerville, Tenn.; Portland, Tenn.; and Mercer, Pa., respectively.

Total estimated cost of the project herein proposed is $23,537,000, which will be financed by the issuance of debentures, First Mortgage Pipeline Bonds, and preferred stock.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 3, 7, and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on these applications if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificates and amendment of the Presidential Permit are required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP64-5]

## TEXAS EASTERN TRANSMISSION CORP.

### Notice of Application To Amend

DECEMBER 18, 1964.

Take notice that on December 14, 1964, Texas Eastern Transmission Corp. (Applicant), Houston, Tex., filed in Docket No. CP64-5 an application to amend the order of the Commission issued in said docket December 19, 1963, and amended by Commission order issued October 28, 1964, which orders authorized, among other things, the construction and operation of approximately 638 miles of 30-inch pipeline loops to be installed at various locations and in varying lengths along Texas Eastern's pipeline system between Opelousas, La., and Lambertville, N.J. In the subject application, Applicant requests authorization to construct and operate approximately 337 miles of 36-inch pipeline loops in lieu of the presently remaining authorized 421 miles of 30-inch pipeline loops.

The application states that under the aforesaid orders, the Commission authorized Applicant to construct and operate additional facilities to its pipeline system to provide an additional 408,010 Mcf of peak day capacity over a four year period commencing in 1964. The additional facilities so authorized by the Commission included approximately 177 miles of 36-inch pipeline from the vicinity of Venice, Plaquemines Parish, La., to a point on Texas Eastern's 30-inch South Louisiana pipeline system near New Roads, Pointe Coupee Parish, La., and a total of approximately 638 miles of 30-inch pipeline loops to be installed at various locations and in varying lengths along Texas Eastern's pipeline system between Opelousas, La., and Lambertville, N.J. Pursuant to such authorizations, the 1964 pipeline facilities consisting of approximately 136 miles of 30-inch pipeline loops and the 36-inch Venice pipeline have been installed, leaving approximately 502 miles of 30-inch pipeline loops to be installed under such authorizations during the 1965, 1966 and 1967 construction programs.

By the instant application, Applicant seeks authorization to substitute approximately 337 miles of 36-inch pipeline loops along its pipeline system between Kosciusko, Miss., and Delmont, Pa., and between Bechtelsville, Pa., and Lambertville, N.J., for approximately 421 miles of the remaining total of the 502 miles of 30-inch pipeline loops presently authorized to be constructed during 1965, 1966 and 1967. Approximately 81 miles of the remaining 30-inch pipeline loops authorized under the aforesaid orders will be constructed.

The application further states that the substitution of the 337 miles of 36-inch pipeline loops for the 421 miles of 30-inch pipeline loops will not increase the estimated capital cost of the four-year project, which cost was estimated in the original application to be $195,046,000; the total capital cost of the four year project as proposed in the subject application is estimated to be $194,974,000, a reduction of approximately $72,000.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that the proposed amendment is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP65-167]

## TRANSWESTERN PIPELINE CO.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on December 10, 1964, Transwestern Pipeline Co. (Applicant), 2500 First City National Bank Building, Houston, Tex., filed in Docket No. CP65-167 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas and the installation and operation of facilities incident thereto, all as more fully set forth in the application on file with the Commission and open to public inspection.

The application states that on April 6, 1964, in Docket No. CP64-148, Applicant was granted permanent authorization by the Commission to render service to Great Plains Gas Co. (Great Plains) in Dallam, Sherman, Hansford, Ochiltree, Lipscomb, Moore, Hutchinson and Hemphill Counties, Tex. In the present application, Applicant seeks authorization to sell natural gas to Great Plains pursuant to an agreement between the parties dated November 9, 1964, which provides that sales to Great Plains for resale to right-of-way customers may be made in the remaining counties in the Texas panhandle and Oklahoma in which Applicant has pipeline facilities. Applicant seeks further authorization for the installation and operation of such additional pipeline tap valves as may be required to render service to Great Plains at points on Applicant's existing pipeline system in the remaining counties in Texas and Oklahoma.

The application states that no increase in authorized maximum daily or annual volumes is requested. The application further states that Great Plains will reimburse Applicant for material and installation costs required to make such sales.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP65-174]

## TRUNKLINE GAS CO.

### Notice of Application

DECEMBER 18, 1964.

Take notice that on December 14, 1964, Trunkline Gas Co. (Applicant), Houston, Tex., filed in Docket No. CP65-174 a "budget-type" application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities during the calendar year 1965, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant seeks authorization to construct and operate miscellaneous field facilities including field compressors, dehydration units, meter and regulator equipment and gathering lines, to facilitate the taking of such natural gas into Applicant's main pipeline system as is or may become available from time to time in the general area of its system, or which is or may become available due to expansion, development or production of existing sources of supply during the calendar year 1965.

The estimated cost of Applicant's proposed facilities is not to exceed $2,500,000 with no single project to exceed $500,000, and will be financed with funds on hand.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. RI65-381]

## BOWERS DRILLING CO., INC., ET AL.

### Order Providing for Hearing on and Suspension of Proposed Change in Rate, and Allowing Rate Change to Become Effective Subject to Refund

DECEMBER 18, 1964.

Respondent named herein has filed a proposed change in rate and charge of a currently effective rate schedule for the sale of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that the supplement herein be suspended and its use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR Ch. I), and the Commission's rules of practice and procedure, a public hearing shall be held concerning the lawfulness of the proposed change.

(B) Pending hearing and decision thereon, the rate supplement herein is suspended and its use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act: *Provided, however,* That the supplement to the rate schedule filed by Respondent shall become effective subject to refund on the date and in the manner herein prescribed if within 20 days from the date of the issuance of this order Respondent shall execute and file under its above-designated docket number with the Secretary of the Commission its agreement and undertaking to comply with the refunding and reporting procedure required by the Natural Gas Act and § 154.102 of the regulations thereunder, accompanied by a certificate showing service of a copy thereof upon the purchaser under the rate schedule involved. Unless Respondent is advised to the contrary within 15 days after the filing of its agreement and undertaking, such agreement and undertaking shall be deemed to have been accepted.

(C) Until otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commissioner, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 3, 1965.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE,
*Secretary.*

APPENDIX A

| Docket No. | Respondent | Rate Schedule No. | Supplement No. | Purchaser and producing area | Amount of annual increase | Date filing tendered | Effective date unless suspended | Date suspended until— | Cents per Mcf: Rate in effect | Cents per Mcf: Proposed increased rate | Rate in effect subject to refund in docket Nos. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| RI65-381 | Bowers Drilling Co., Inc. (Operator), et al., Union Center Bldg., Wichita, Kans., 67202. | 1 | 2 | Cities Service Gas Co. (Barber County, Kans). | $11,000 | 11-18-64 | [1] 12-22-64 | [2] 12-23-64 | [4] 13.0 | [3] [4] 14.0 | |

[1] The stated effective date is the effective date requested by Respondent.
[2] The suspension period is limited to 1 day.
[3] Periodic rate increase.
[4] Pressure base is 14.65 p.s.i.a.
[5] Subject to a downward B.t.u. adjustment.

Bowers Drilling Co., Inc. (Operator), et al.'s (Bowers) related contract was executed subsequent to September 28, 1960, the date of issuance of the Commission's Statement of General Policy No. 61-1, as amended, and the proposed rate is above the applicable area ceiling for increased rates but does not exceed the applicable ceiling price for initial rates in the area involved. We believe, in this situation, that Bowers' proposed rate increase should be suspended for one day from December 22, 1964, the proposed effective date.

## ATLANTIC REFINING CO.

### Order Providing for Hearings on and Suspension of Proposed Changes in Rates [1]

DECEMBER 18, 1964.

The Respondents named herein have filed proposed increased rates and charges of currently effective rate schedules for sales of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

[1] Does not consolidate for hearing or dispose of the several matters herein.

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon hearings regarding the lawfulness of the proposed changes, and that the supplements herein be suspended and their use be deferred as ordered below.

The Commission orders: (A) Under the Natural Gas Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR Ch. I), and the Commission's rules of practice and procedure, public hearings shall be held concerning the lawfulness of the proposed changes.

(B) Pending hearings and decisions thereon, the rate supplements herein are suspended and their use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act.

(C) Until otherwise ordered by the Commission, neither the suspended supplements, nor the rate schedules sought to be altered, shall be changed until disposition of these proceedings or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f)) on or before February 3, 1965.

By the Commission.

[2] For resale to El Paso Natural Gas Co. under West Lake Natural Gasoline Co. (Operator), et al.'s FPC Gas Rate Schedule No. 1.
[3] End of suspension period for West Lake's related increased rate in Docket No. RI65-29.
[4] The suspension period is shortened to 1 day.
[5] Revenue-sharing rate increase.
[6] Pressure base is 14.65 p.s.i.a.
[7] The stated effective date is the first day after expiration of the required statutory notice.
[8] Periodic rate increase.
[9] Pressure base is 15.025 p.s.i.a.
[10] Includes partial reimbursement for full 2.55 percent New Mexico Emergency School Tax, protested by buyer by letter filed Dec. 1, 1964.

C. D. Davis, et al. (Davis), request that their proposed rate increase be permitted to become effective as of November 1, 1964. Good cause has not been shown for waiving the 30-day notice requirement provided in section 4(d) of the Natural Gas Act to permit an earlier effective date for Davis' rate filing and such request is denied.

All of the proposed increased rates and charges exceed the applicable area price levels for increased rates as set forth in the Commission's Statement of General Policy No. 61-1, as amended (18 CFR Ch. I, Part 2, § 2.56).

[F.R. Doc. 64-13289; Filed, Dec. 28, 1964; 8:46 a.m.]

[Project No. 2489]

## CENTRAL VERMONT PUBLIC SERVICE CORP.

### Notice of Application for License

DECEMBER 22, 1964.

Public notice is hereby given that application has been filed under the Federal Power Act (16 U.S.C. 791a-825r) by Central Vermont Public Service Corp. (correspondence to: Porter E. Noble, Clerk and General Counsel, 77 Grove Street, Rutland, Vt.) for license for constructed Project No. 2489, known as the Cavendish Plant, located on Black River in Windsor County, Vt., in the township of Cavendish.

The project consists of: (1) A concrete dam approximately 130 feet long and 33 feet high containing a spillway section, an intake structure equipped with a head gate and a steel trash rack, and a steel bridge for manipulating flashboards; (2) a 105-foot spillway section 90 feet of which is topped with six-foot steel flashboards and the remaining 15 feet with flashboards two and one-half feet high; (3) a reservoir 10 acres in size with storage limited to hourly pondage; (4) a

180-foot tunnel seven feet in diameter extending from the intake structure to a steel penstock six feet in diameter and approximately 1,050 feet long with a 90-foot surge tank near the powerhouse; (5) a powerhouse with a concrete substructure, steel frame and brick superstructure, containing three generating units having a total capacity of 1,440 kw; (6) a 44-kv substation; and (7) appurtenant electrical and mechanical facilities.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure of the Commission (18 CFR 1.8 or 1.10). The last day upon which protests or petitions may be filed is February 2, 1965. The application is on file with the Commission for public inspection.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13290; Filed, Dec. 28, 1964; 8:46 a.m.]

[Docket No. CP65-166]

## CITIES SERVICE GAS CO.

### Notice of Application

DECEMBER 21, 1964.

Take notice that on December 10, 1964, Cities Service Gas Co. (Applicant), Oklahoma City, Okla., filed in Docket No. CP65-166 a "budget-type" application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities during the calendar year 1965, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant seeks authorization to construct and operate gas sales and transportation facilities, including lateral and loop lines, taps, metering and regulating equipment, sites for such equipment, and rights of way, for the purpose of making (1) direct sales of natural gas to consumers who will use the gas solely for one or more of the following purposes: road building, irrigation, agriculture, general use in schools and hospitals in areas outside local distributors' franchise areas, and seasonal industrial purposes, and (2) miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, including changes in existing field operations and relocation of existing sales and transportation facilities when required by highway construction, dam construction development of private property, industrial plant expansion and other similar reasons.

The application states that the proposed facilities will not result in deliveries to any one consumer exceeding 100,000 Mcf annually, and the gas so delivered will not be used by any consumer for boiler fuel purposes.

The total estimated cost of the proposed facilities is not to exceed $300,000, and will be financed with treasury cash.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP65-92]

## NORTHERN NATURAL GAS CO.

### Notice of Application

DECEMBER 24, 1964.

Take notice that on October 6, 1964, as supplemented on November 13, 1964, Northern Natural Gas Co. (Applicant), 2223 Dodge Street, Omaha, Nebr., filed in Docket No. CP65-92 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant seeks authorization to construct and operate facilities to enable it to deliver natural gas to Nebraska Natural Gas Co. (Nebraska), consisting of (1) a total of approximately 13.7 miles of 24- and 30-inch pipeline, looping portions of Applicant's mainline near the Palmyra, Nebr., and Tescott, Kans., Stations respectively, and (2) necessary measuring and regulating facilities in Dodge County, Nebr.

Applicant seeks further authorization to sell natural gas to Nebraska for resale to Fel-Tex, Inc., for use in the Fel-Tex plant to be located near Fremont, Dodge County, Nebr.

The annual firm and interruptible sales to Fel-Tex in the third year of service are estimated to be 1,853,000 Mcf.

The estimated cost of Applicant's facilities is $1,241,200, and will be financed with cash on hand.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP63-143]

## TRANSWESTERN PIPELINE CO.

### Notice of Application To Amend

DECEMBER 21, 1964.

Take notice that on August 7, 1964, Transwestern Pipeline Co. (Applicant), First City National Bank Building, Houston, Tex., filed in Docket No. CP63-143 an application to amend the order of the Commission issued April 3, 1963 in said docket, which order authorized the construction and operation of a tap valve on Applicant's line in Curry County, N. Mex., and the transportation and sale, through September 30, 1964, of surplus natural gas on an interruptible basis to Southern Union Gas Co. (Southern) for resale through Southern's distribution facilities in Portales, N. Mex.

In the present application to amend, Applicant requests an extension of the authorization for a period of two years, ending September 30, 1966, pursuant to an agreement between Applicant and Southern dated July 27, 1964.

The application states that the proposed service will be rendered under Applicant's Rate Schedule E-1.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that the proposed amendment is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP65-168]

## CITY OF GRAND TOWER, ILL.

### Notice of Application

DECEMBER 21, 1964.

Take notice that on December 11, 1964, the City of Grand Tower, Ill. (Applicant) filed in Docket No. CP65-168 an application pursuant to section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Co. of America to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in the City of Grand Tower, Ill., all as more fully set forth in the application on file with the Commission and open to public inspection.

The estimated annual and peak day requirements for the initial three year period are stated to be:

| | First year | Second year | Third year |
|---|---|---|---|
| Annual (Mcf) | 18,890 | 25,050 | 31,230 |
| Peak day (Mcf) | 207 | 286 | 362 |

The estimated cost of Applicant's proposed distribution system is $150,000, which will be financed by the issuance of gas revenue certificates to Midwest Securities Co.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 14, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that an order is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Docket No. CP62-59]

## PACIFIC GAS TRANSMISSION CO.

### Notice of Application To Amend

December 21, 1964.

Take notice that on November 19, 1964, Pacific Gas Transmission Co. (Applicant), 245 Market Street, San Francisco, Calif., 94106, filed in Docket No. CP62-59 an application to amend the certificate granted therein by extending the authorization for an additional three years and to provide for the construction, maintenance and operation of taps and metering facilities to enable it to transport natural gas for the account of El Paso Natural Gas Co. (El Paso) to certain delivery points in Idaho, Washington, and Oregon, pursuant to authorizations to be obtained by El Paso from time to time, all as more fully set forth in the application to amend and open to public inspection.

The application to amend states that under its tariff El Paso will pay for the construction costs not to exceed $15,000 at any delivery point.

Protests, petitions to intervene or requests for hearing in this proceeding may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13295; Filed, Dec. 28, 1964; 8:46 a.m.]

[Docket No. CP64-295]

## TOWN OF WAYLAND, IOWA

### Notice of Application

December 21, 1964.

Take notice that on June 10, 1964, as supplemented on October 16, 1964 and December 8, 1964, the Town of Wayland, Iowa (Applicant) filed in Docket No. CP64-295 an application pursuant to section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Co. to establish physical connection of its natural gas transmission facilities in Henry County, Iowa, with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and delivery in the Town of Wayland, Iowa, all as more fully set forth in the application on file with the Commission and open to public inspection.

The volumes of natural gas needed to meet Applicant's annual and peak day requirements for the initial three years of proposed operation are stated to be:

| | First year | Second year | Third year |
|---|---|---|---|
| Annual (Mcf) | 50,160 | 67,950 | 80,950 |
| Peak Day (Mcf) | 445 | 599 | 710 |

Applicant proposes to construct and operate a municipally owned natural gas distribution system within the borders of Wayland, Iowa. The estimated cost of such construction is $229,460, which will be financed by means of Gas Revenue Bonds to be issued by Applicant.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that an order is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64-13296; Filed, Dec. 28, 1964; 8:46 a.m.]

[Docket No. CP65-169]

## NATURAL GAS PIPELINE CO. OF AMERICA

### Notice of Application

DECEMBER 21, 1964.

Take notice that on December 11, 1964, Natural Gas Pipeline Co. of America (Applicant), 122 South Michigan Avenue, Chicago, Ill., 60603, filed in Docket No. CP65-169 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, and the transportation and sale of natural gas, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant seeks a certificate of public convenience and necessity authorizing:

1. Construction and operation of facilities to increase the total maximum day withdrawal capacity of Applicant's storage facilities by 50,000 Mcf to a total of 1,000,000 Mcf. These facilities are the Herscher, Cairo and Cooks Mills storage

areas in Kankakee County, Ill., Louisa County, Iowa, and Coles and Douglas Counties, Ill., respectively:

2. Construction and operation of facilities to increase the daily design sales capacity of its transmission system by 185,000 Mcf to a total of 2,154,000 Mcf;

3. The transportation and sale of approximately 152,000 Mcf of natural gas to seventeen of Applicant's existing resale customers and the transportation of 22,700 Mcf of natural gas for sale to one of Applicant's existing direct customers, Phillips Petroleum Co.;

4. The construction and operation of facilities for the transportation of natural gas to be produced from reserves located in the Permian Basin Area of Southeastern New Mexico to a point of interconnection with Applicant's existing Amarillo Line in Moore County, Tex.; and

5. The construction and operation of facilities for the transportation of natural gas to be produced from reserves located in the West Cameron Blocks 17–49 Field Area, South Louisiana to a point of interconnection with Applicant's existing Gulf Coast Line in Montgomery County, Tex.,

all as more fully set forth in the application on file with the Commission and open to public inspection.

The application states that Applicant proposes to construct and operate approximately 481 miles of pipeline of varying diameter, to retire approximately 5.5 miles of pipeline, to install 51,960 horsepower of compression, and to construct and operate 16 injection-withdrawal wells for underground storage operations. Applicant also proposes to inject additional cushion gas, and to construct and operate measurement, dehydration and other facilities necessary or convenient to the operation of the above described and existing facilities.

Total estimated cost of Applicant's proposed facilities is $60,702,000, which will be financed with funds obtained by short-term borrowings from banks and from The Peoples Gas Light and Coke Co., parent company of Applicant; and the issuance of first mortgage bonds, although firm commitments for financing have not been obtained, nor has the precise form of such financing been finally determined as of the time of the filing of the application.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 or 1.10) on or before January 18, 1965.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by sections 7 and 15 of the Natural Gas Act and the Commission's rules of practice and procedure, a hearing will be held without further notice before the Commission on this application if no protest or petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a protest or petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

JOSEPH H. GUTRIDE,
*Secretary.*

[Project No. 2497]

## AMERICAN WRITING PAPER DIVISION, BROWN CO.

### Notice of Application for License

DECEMBER 21, 1964.

Public notice is hereby given that application has been filed under the Federal Power Act (16 U.S.C. 791a–825r) by American Writing Paper Division, Brown Co. (correspondence to: C. L. Kirkpatrick, Vice President, American Writing Paper Division, Brown Co., 10 Eagle-A Avenue, Holyoke, Mass., 01042) for a license for constructed Project No. 2497, known as Project No. 8 (Mt. Tom Mill), located on the canal system of the Holyoke Water Power Co. along the Connecticut River, within the City of Holyoke, Mass.

The project consists of: A 237-foot-long steel penstock, 8 feet in diameter; a 600-horsepower water wheel direct connected to a 400-kilowatt generator located in Applicant's mill building; a 173-foot-long arched brick tailrace; and appurtenant electrical and mechanical facilities.

Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure of the Commission (18 CFR 1.8 or 1.10). The last day upon which protests or petitions may be filed is February 10, 1965. The application is on file with the Commission for public inspection.

JOSEPH H. GUTRIDE,
*Secretary.*

[F.R. Doc. 64–13298; Filed, Dec. 28, 1964; 8:46 a.m.]

Docket No. RI65–399 etc.]

## UNION PRODUCING CO. ET AL.

### Order Providing for Hearings on and Suspension of Proposed Changes in Rates [1]

DECEMBER 21, 1964.

The Respondents named herein have filed proposed increased rates and charges of currently effective rate schedules for sales of natural gas under Commission jurisdiction, as set forth in Appendix A hereof.

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds: It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon hearings regarding the lawfulness of the proposed changes, and that the supplements herein be suspended and their use be deferred as ordered below.

The Commission orders: (A) Under the Natural Act, particularly sections 4 and 15, the regulations pertaining thereto (18 CFR, Ch. I), and the Commission's rules of practice and procedure, public hearings shall be held concerning the lawfulness of the proposed changes.

(B) Pending hearings and decisions thereon, the rate supplements herein are suspended and their use deferred until date shown in the "Date Suspended Until" column, and thereafter until made effective as prescribed by the Natural Gas Act.

(C) Until otherwise ordered by the Commission, neither the suspended supplements, nor the rate schedules sought to be altered, shall be changed until disposition of these proceedings or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the rules of practice and procedure (18 CFR 1.8 and 1.37(f) on or before February 3, 1965.

By the Commission.

[SEAL] JOSEPH H. GUTRIDE,
*Secretary.*

[1] Does not consolidate for hearing or dispose of the several matters herein.

APPENDIX A

| Docket No. | Respondent | Rate schedule No. | Supplement No. | Purchaser and producing area | Amount of annual increase | Date filing tendered | Effective date unless suspended | Date suspended until— | Cents per Mcf: Rate in effect | Cents per Mcf: Proposed increased rate | Rate in effect subject to refund in docket Nos. |
|---|---|---|---|---|---|---|---|---|---|---|---|
| RI65–399 | Union Producing Co. Post Office Box 1407, Shreveport, La. | 81 | 9 | Coastal States Gas Producing Co.[2] (Hidalgo Field, Hidalgo County, Tex.) (R.R. District No. 4). | $14,829 | 10–26–64 | [3] 1–1–65 | 6–1–65 | [4] 12.6864 | [5] [6] 13.1248 | |
| RI65–400 | Texaco Inc., Post Office Box 52332, Houston, Tex., 77052, Attn: Mr. W. V. Vietti. | 157 | 3 | Coastal States Gas Producing Co.[7] (Alfred (Brownlee) Field, Jim Wells County, Tex.) (R.R. District No. 4). | 606 | 10–26–64 | [3] 1–1–65 | 6–1–65 | [3] [8] 11.1056 | [5] [8] 12.1152 | |
| RI65–401 | Humble Oil & Refining Co., Post Office Box 2180, Houston, Tex., 77001, Attn: Mr. John J. Carter. | 113 | 5 | Coastal States Gas Producing Co.[7] (Brownlee Field, Jim Wells County, Tex.) (R.R. District No. 4). | 698 | 11–16–64 | [3] 1–1–65 | 6–1–65 | [9] 10.0960 | [5] [8] 11.1056 | |

[2] Coastal States Gas Producing Co. (Coastal States) resells the subject gas to Trunkline Gas Co. under their FPC Gas Rate Schedule No. 1 at a redetermined rate of 13.946 cents per Mcf inclusive of reimbursement for taxes and dehydration.
[3] The stated effective date is the effective date requested by Respondent.
[4] Periodic rate increase.
[5] Pressure base is 14.65 p.s.i.a.
[6] Rate is subject to a downward B.t.u. adjustment.
[7] Coastal States resells the subject gas to Trunkline Gas Co. under their FPC Gas Rate Schedule No. 47 at a periodic rate of 13.3556 cents per Mcf inclusive of reimbursement for taxes and dehydration.
[8] Subject to a 1.0 cent per Mcf compression charge deducted by buyer for gas requiring compression.

Union Producing Co. (Union) proposes an increase from a prior revenue-sharing increase to a fixed periodic rate of 13.1248 cents per Mcf. Coastal States Gas Producing Co. (Coastal States) gathers the subject gas into its South Hidalgo Gathering System, dehydrates and delivers such gas for resale to Trunkline Gas Co. (Trunkline) under Coastal States' FPC Gas Rate Schedule No. 1 at a redetermined rate of 13.946 cents, inclusive of 0.13023 cent per Mcf reimbursement for taxes and 0.25 cent per Mcf dehydration allowance.

Texaco Inc. (Texaco) and Humble Oil & Refining Co. (Humble) propose periodic increases to 12.1152 cents to 11.1056 cents per Mcf, respectively. Coastal States gathers the subject gas into its Alfred Gathering System, compresses, treats (including dehydration and removal of hydrogen sulphide and other objectionable sulphur compounds) and transmits such gas for resale to Trunkline under Coastal States' FPC Gas Rate Schedule No. 47 at a periodic rate of 13.3556 cents, inclusive of 0.1056 cent reimbursement for taxes and 0.25 cent dehydration allowance.

Union, Texaco and Humble's contracts are geared to the gatherer's contracts in that they all provide for periodic increases on January 1, 1965, and every five years thereafter and the gatherer is required to pass on to the producer all of any increase or increases received as a result of its contracts with the pipeline due to price redetermination or favored-nation provisions contained therein, thus maintaining a set differential between the producers' rates and the gatherer's rates. Coastal States has not, as yet, filed for its January 1, 1965 contractually provided for increases under its contracts with Trunkline. Even though the producers' proposed rates are below the applicable area increased ceiling level as set forth in the Commission's Statement of General Policy No. 61–1, as amended (18 CFR 2.56) they are suspended because they are geared to the gatherer's rates and the related contractual due rates under the gatherer's contracts.

# FEDERAL RESERVE SYSTEM

## VALLEY BANCORPORATION

### Order Approving Application Under Bank Holding Company Act

In the matter of the application of Valley Bancorporation, Appleton, Wisconsin, for approval of the acquisition of voting shares of Reedsville State Bank, Reedsville, Wisconsin.

There has come before the Board of Governors, pursuant to section 3(a)(2) of the Bank Holding Company Act of 1956 (12 U.S.C. 1842(a)(2)) and section 222.4(a)(2) of Federal Reserve Regulation Y (12 CFR 222.4(a)(2)), an application by Valley Bancorporation, Appleton, Wisconsin, a registered bank holding company, for the Board's prior approval of the acquisition of 80 percent or more of the voting shares of Reedsville State Bank, Reedsville, Wisconsin.

As required by section 3(b) of the Act, the Board notified the Commissioner of Banks for the State of Wisconsin of receipt of the application and requested his views and recommendation. The Commissioner advised that he would not interpose objection to approval of the application.

Notice of Receipt of Application was published in the FEDERAL REGISTER on August 27, 1964 (29 F.R. 12057), which provided an opportunity for the filing of comments and views regarding the proposed acquisition, and the time for filing such comments and views has expired and all comments and views filed with the Board have been considered by it.

*It is hereby ordered,* for the reasons set forth in the Board's Statement [1] of this date, that the said application be and hereby is approved, provided that the acquisition so approved shall not be consummated (a) within seven calendar days after the date of this order or (b) later than three months after said date.

Dated at Washington, D.C., this 21st day of December 1964.

By order of the Board of Governors.[2]

# INTERAGENCY TEXTILE ADMINISTRATIVE COMMITTEE

## CERTAIN COTTON TEXTILES AND COTTON TEXTILE PRODUCTS PRODUCED OR MANUFACTURED IN YUGOSLAVIA

### Limitation of Entrance or Withdrawal From Warehouses

DECEMBER 23, 1964.

On October 5, 1964, the United States Government, in furtherance of the objectives of, and under the terms of, the Long Term Arrangement Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962, concluded a bilateral agreement with the Government of the Socialist Federal Republic of Yugoslavia concerning exports of cotton textiles from Yugoslavia to the United States over a three-year period. Under this agreement the Socialist Federal Republic of Yugoslavia has undertaken to limit its exports to the United States of certain cotton textiles and cotton textile products to specified annual amounts. The first year of the agreement will commence on January 1, 1965, and extend through December 31, 1965. The categories which are subject to specific export limitation under the agreement are as follows: 1–2, 9, 15–16, 18–19, 22, part of 26 (duck only), 31, 48 and 49.

There is published below a letter of December 23, 1964, from the Chairman of the President's Cabinet Textile Advisory Committee to the Commissioner of Customs directing that the amounts of cotton textiles and cotton textile products in Categories 1–2, 9, 15–16, 18–19, 22, part of 26 (duck only), 31, 48 and 49 produced or manufactured in the Socialist Federal Republic of Yugoslavia which may be entered, or withdrawn from warehouse, for consumption in the United States from January 1, 1965, through December 31, 1965, be limited to certain designated levels. The levels set forth in this letter are those designated under the bilateral agreement for the first calendar year with certain adjustments. Under the terms of a separate exchange of letters dated October 5, 1964 between the Governments of the United States and the Socialist Federal Republic of Yugoslavia, certification procedures have been instituted with respect of cotton textiles in Categories 1, 2, 9, 18, 19, 22, 26, 48 and 49, exported from Yugoslavia to the United States during the period November 10, 1964 through December 31, 1964.

[3] Voting for this action: Chairman Martin, and Governors Balderston, Mills, Shepardson, Mitchell, and Daane. Voting against this action: Governor Robertson.

Accordingly, cotton textiles in the aforementioned categories exported from Yugoslavia to the United States during the period November 10, 1964 through December 31, 1964 and licensed under certification procedures instituted by the Socialist Federal Republic of Yugoslavia shall be eligible for entry and withdrawal from warehouse for consumption even though these are in excess of the current levels of restraint for such goods. Such entries and withdrawals in excess of the current levels will be charged against the appropriate category ceilings designated under the bilateral agreement for the first calendar year.

THOMAS JEFF DAVIS,
*Acting Chairman, Interagency Textile Administrative Committee and Acting Deputy to the Secretary of Commerce for Textile Programs.*

THE SECRETARY OF COMMERCE

PRESIDENT'S CABINET TEXTILE ADVISORY COMMITTEE

*Washington 25, D.C.*
DECEMBER 23, 1964.

COMMISSIONER OF CUSTOMS
DEPARTMENT OF THE TREASURY
*Washington, D.C.*

DEAR MR. COMMISSIONER: Effective January 1, 1965, this directive supersedes all previous directives issued to you concerning entry into the United States for consumption and withdrawal from warehouse for consumption of cotton textiles and cotton textile products produced or manufactured in Yugoslavia, however the unfilled balances in levels of restraint established under my directive of October 15, 1964, will remain open through March 29, 1965 with respect to cotton textiles in Categories 1, 2, 26, 48, and 49 exported from Yugoslavia prior to January 1, 1965.

Under the terms of the Long Term Arrangement Regarding International Trade in Cotton Textiles done at Geneva on February 9, 1962, and in accordance with the procedures outlined in Executive Order 11052 of September 28, 1962, you are directed to prohibit, effective January 1, 1965, and for the period extending through December 31, 1965, entry into the United States for consumption, and withdrawal from warehouse for consumption, of cotton textiles and cotton textile products in Categories 1–2, 9, 15–16, 18–19, 22, 26 (duck only), 31, 48, and 49 produced or manufactured in the Socialist Federal Republic of Yugoslavia in excess of the following levels of restraint:

| Category: | *12-Month level of restraint* |
|---|---|
| 1–2 | 130,434 pounds. |
| 9 | 4,566,110 square yards. |
| 15–16 | 1,500,000 square yards. |
| 18–19 | 2,100,000 square yards. |
| 22 | 1,000,000 square yards. |
| 26 (duck only)* | 1,650,000 square yards. |
| 31 | 2,873,563 pieces. |
| 48 | 4,500 dozen. |
| 49 | 10,000 dozen. |

*T.S.U.S.A. Nos. 320.--01, 320.--02, 320.--03, 320.--04, 320.--06, 320.--08, 321.--01, 321.--02, 321.--03, 321.--04, 321.--06, 321.--08, 322.--01, 322.--02, 322.--03, 322.--04, 322.--06, 322.--08, 326.--01, 326.--02, 326.--03, 326.--04, 326.--06, 326.--08, 327.--01, 327.--02, 327.--03, 327.--04, 327.--06, 327.--08, 328.--01, 328.--02, 328.--03, 328.--04, 328.--06, and 328.--08.

In carrying out this directive, you shall only permit entry into the United States for consumption and withdrawal from warehouse for consumption of cotton textiles and cotton textile products in Categories 1, 2, 9, 18, 19, 22, 26, 48 and 49, produced or manufactured in Yugoslavia and exported from Yugoslavia prior to January 1, 1965, to the extent of the balances remaining unfilled under the respective levels of restraint in effect on December 31, 1964, except that whenever requested to do so in writing by the Chairman of the Interagency Textile Administrative Committee, you are hereby directed to authorize the entry for consumption and withdrawal from warehouse for consumption of designated cotton textiles in the aforementioned categories exported to the United States from Yugoslavia during the period November 10, 1964 through December 31, 1964. Such entries and withdrawals in excess of the levels of restraint in effect on December 31, 1964, are to be charged against the appropriate levels of restraint established under this directive for the twelve-month period beginning on January 1, 1965 and extending through December 31, 1965, but are in no event to exceed the following quantities:

| Category: | *Maximum quantity* |
|---|---|
| 1–2 | 26,087 pounds. |
| 9 | 913,622 square yards. |
| 18–19 | 525,000 square yards. |
| 22 | 200,000 square yards. |
| 26 (duck only) | 330,000 square yards. |
| 48 | 900 dozen. |
| 49 | 2,000 dozen. |

You shall allow entry into the United States for consumption and withdrawal from warehouse for consumption of cotton textiles and cotton textile products in Categories 15, 16 and 31, produced or manufactured in Yugoslavia, whenever the cotton textiles and cotton textile products sought to be entered have been exported to the United States from Yugoslavia prior to January 1, 1965, regardless of whether the levels of restraint established under this directive for the twelve-month period beginning on January 1, 1965 and extending through December 31, 1965 have been filled and such entries are not to be counted against these levels even if not filled at the time of entry.

A detailed description of the above mentioned categories in terms of T.S.U.S.A. numbers was published in the FEDERAL REGISTER on October 1, 1963 (28 F.R. 10551), and amendments thereto on March 24, 1964 (29 F.R. 3679).

In carrying out the above directions, entry into the United States for consumption shall be construed to include entry for consumption into the Commonwealth of Puerto Rico.

The actions taken with respect to the Government of the Socialist Federal Republic of Yugoslavia and with respect to imports of cotton textiles and cotton textile products from the Socialist Federal Republic of Yugoslavia have been determined by the President's Cabinet Textile Advisory Committee to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of Customs, being necessary to the implementation of such actions, fall within the foreign affairs exception to the notice provisions of Section 4 of the Administrative Procedure Act. This letter will be published in the FEDERAL REGISTER.

Sincerely yours,

LUTHER H. HODGES,
*Secretary of Commerce, and Chairman, President's Cabinet Textile Advisory Committee.*

# SECURITIES AND EXCHANGE COMMISSION

[File No. 24FW-1350]

## GOLD SEAL INTERNATIONAL A & C, INC.

### Order Temporarily Suspending Exemption, Statement of Reasons Therefor, and Notice of Opportunity for Hearing

DECEMBER 22, 1964.

I. Gold Seal International A & C, Inc. (issuer), 5446 South Washington Street, Tacoma, Washington, incorporated in the State of Delaware on July 29, 1964, filed with the Commission on November 5, 1964, a notification on Form 1–A relating to proposed offering of 150,000 shares of its common stock of a par value of 50 cents per share at a price of $2.00 per share, for an aggregate offering price of $300,000, for the purpose of obtaining an exemption from the registration provisions of the Securities Act of 1933, as amended, pursuant to the provisions of section 3(b) thereof and Regulation A promulgated thereunder.

II. The Commission has reasonable cause to believe that:

A. The terms and conditions of Regulation A have not been complied with in that:

1. The issuer has failed to disclose accurately and adequately sales of securities by an affiliated issuer (Gold Seal Chinchilla Association, Inc.) within the past year, as required by Item 9 of Form 1–A.

2. The issuer has failed to describe accurately and adequately in the offering circular all material interests of officers and directors, as required by Item 9 of Schedule I.

B. The offering would be made in violation of section 17 of the Securities Act of 1933, in that the notification and offering circular contain untrue statements of material facts and omit to state material facts necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, particularly with respect to:

1. The extent of chinchilla breeding stock sales by Gold Seal Chinchillas, Inc., an affiliate of the issuer.

2. The extent and results of the chinchilla manufacturing and marketing program carried out by affiliated companies.

3. The risks inherent to the raising and breeding of chinchillas.

4. The selling price of the chinchillas, methods of selling, and problems of financing contract sales.

5. The injunction entered by Washington State Superior Court against issuer's affiliates, Gold Seal Chinchillas, Inc. and its president, Estell C. Streets, and Gold Seal Chinchilla Association, Inc., involving fraud in the sale of chinchillas.

6. The entry of a Federal Trade Commission Cease and Desist Order against issuer's affiliate, Gold Seal Chinchillas, Inc. and Estell G. Streets, its president, involving misrepresentation as to profits to be derived through raising chinchillas.

7. The background and current status of the gyroplane.

8. The terms of the dealership for the sale of the gyroplane.

9. The distributorship held and franchises sold by E. G. Streets for the distribution and sale of the gyroplane.

10. The extent to which dealerships for the sale of the gyroplane have already been sold.

11. Proposed merger of issuer's affiliate, Gold Seal Chinchilla Association, Inc., and Gold Seal Chinchillas, Inc.

12. The possible contingent liability of the guarantor of certain of issuer's assets.

C. The subject offering would involve a violation of Sections 5 and 17 of the Securities Act of 1933 since the subject offering also involves an offering of a security by Gold Seal Chinchillas, Inc., and such security is neither registered nor exempt from registration. The issuer's notification and offering circular fail to disclose accurately and adequately the information with respect to Gold Seal Chinchillas, Inc., which is required to be disclosed in a notification and offering circular concerning the issuer of a security, including financial statements, the use of proceeds, the business of the issuer, the history of the issuer, and material transactions and proposed transactions with the subject issuer and with other affiliates.

III. It appearing to the Commission that it is in the public interest and for the protection of investors that the exemption of the issuer under Regulation A be temporarily suspended.

*It is ordered*, Pursuant to Rule 261 of the General Rules and Regulations under the Securities Act of 1933, as amended, that the exemption under Regulation A of securities of Gold Seal International A & C, Inc., pursuant to said notification, be, and it hereby is, temporarily suspended.

Notice is hereby given that any person having any interest in the matter may file with the Secretary of the Commission, within thirty days after the entry of this order, a written request for hearing; that within twenty days after receipt of such request the Commission will, or at any time upon its own motion may, set the matter down for hearing, at a place to be designated by the Commission, for the purpose of determining whether this order of suspension should be vacated or made permanent, without prejudice, however, to the consideration and presentation of additional matters at the hearing; that if no hearing is requested and none is ordered by the Commission, this order shall become permanent on the thirtieth day after its entry and shall remain in effect unless or until it is modified or vacated by the Commission; and that notice of the time and place for any hearing will promptly be given by the Commission.

By the Commission.

[SEAL] ORVAL L. DUBOIS,
*Secretary.*

[File No. 812-1358]

## VIRGINIA CAPITAL CORP.

### Notice of Filing of Application Regarding Arrangement by Registered Investment Company and Its Affiliated Persons

DECEMBER 23, 1964.

Notice is hereby given that Virginia Capital Corp. ("Virginia Capital"), 907 State Planters Bank Building, Richmond 19, Va., a Virginia corporation and a registered closed-end, non-diversified management investment company, has filed an application under section 17(d) of the Investment Company Act of 1940 ("Act") and Rule 17d–1 thereunder, for an order permitting a proposed arrangement whereby Virginia Capital and certain of its affiliated persons will purchase securities to be issued by Pandick Press, Inc. ("Pandick"), the surviving corporation of a proposed merger with James F. Newcomb, Inc. ("Newcomb"). All interested persons are referred to the application, which is on file with this Commission, for a full statement of Virginia Capital's representations which are summarized below.

Newcomb is a small business concern engaged in the printing business and, as stated, it will merge with and into Pandick, which is also engaged in the printing business. As an incident to the merger the applicant here, and various other affiliated and unaffiliated persons have agreed to provide the merged company with approximately $900,000 additional capital and to refund certain of its outstanding indebtedness. As a part of such program Pandick will issue $300,000 principal amount of its 8 percent Subordinated Notes with accompanying Stock Purchase Warrants. Virginia Capital will purchase $200,000 principal amount of such notes, and part or all of the remaining $100,000 principal amount of such notes may be purchased by one or more of the following affiliated persons of Virginia Capital, namely: Robert H. Pratt, Arthur S. Brinkley, Jr., W. Gibson Harris, and Robert Haskins.

Virginia Capital and the above named affiliated persons, purchased and presently hold part of an issue of notes and attached common stock warrants issued by Newcomb. The arrangements pursuant to which such purchases were made were the subject of an order of this Commission dated December 27, 1960 (Investment Company Act Release No. 3167, File No. 812–1358). It is now proposed to modify these prior issued notes, warrants, and agreements pursuant to which they were issued, and a contemporaneous agreement with former stockholders of Newcomb, so as, among other things, to permit the proposed merger and financing program, subordinate such prior issued notes and to defer their payment for a period of approximately two years from the effective date of the proposed merger.

Section 17(d) of the Act and Rule 17d–1 taken together provide, among other things, that it shall be unlawful, with certain exceptions not applicable here, for an affiliated person of a registered investment company or any affil-

iated person of such a person, acting as principal, to participate in, or effect any transaction in connection with any joint arrangement in which any such registered company is a participant unless an application regarding such arrangement has been granted by the Commission, and that, in passing upon such an application, the Commission will consider whether the participation of such registered company in such arrangement is consistent with the provisions, policies and purposes of the Act and the extent to which such participation is on a basis different from or less advantageous than that of other participants.

Since affiliated persons of Virginia Capital will participate in the financing of Pandick in the manner noted above, the arrangement is subject to the provisions of section 17(d) and Rule 17d–1.

Notice is further given that any interested person may, not later than January 11, 1965 at 12:30 p.m. submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission should order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C., 20549. A copy of such request shall be served personally or by mail (air mail if the person being served is located more than 500 miles from the point of mailing) upon applicant. Proof of such service (by affidavit or in case of an attorney-at-law by certificate) shall be filed contemporaneously with the request. At any time after said date, as provided by Rule 0–5 of the rules and regulation promulgated under the Act, an order disposing of the application herein may be issued by the Commission upon the basis of the information stated in said application, unless an order for hearing upon said application shall be issued upon request or upon the Commission's own motion.

For the Commission (pursuant to delegated authority).

ORVAL L. DUBOIS,
*Secretary.*

# DEPARTMENT OF LABOR

## Wage and Hour Division

### CERTIFICATES AUTHORIZING EMPLOYMENT OF LEARNERS AT SPECIAL MINIMUM RATES

Notice is hereby given that pursuant to section 14 of the Fair Labor Standards Act of 1938 (52 Stat. 1060, as amended, 29 U.S.C. 201 et seq.), and Administrative Order No. 579 (28 F.R. 11524) the firms listed in this notice have been issued special certificates authorizing the employment of learners at hourly wage rates lower than the minimum wage rates otherwise applicable under section 6 of the act. The effective and expiration dates, occupations, wage rates, number or proportion of learners and learning periods for certificates issued under general learner regulations (29 CFR 522.1 to 522.9), and the principal product manufactured by the employer are as indicated below. Conditions provided in certificates issued under the supplemental industry regulations cited in the captions below are as established in those regulations.

Apparel Industry Learner Regulations (29 CFR 522.1 to 522.9, as amended, and 29 CFR 522.20 to 522.25, as amended).

The following learner certificates were issued authorizing the employment of ten percent of the total number of factory production workers for normal labor turnover purposes. The effective and expiration dates are indicated.

Alabama Textile Products Corp., Andalusia, Ala.; effective 12–1–64 to 11–30–65 (men's dress and sport shirts, work pants).

Alabama Textile Products Corp., Troy, Ala.; effective 12–1–64 to 11–30–65 (men's dress shirts).

The Andala Co., Andalusia, Ala.; effective 12–1–64 to 11–30–65 (men's work shirts and pants).

Anthracite Shirt Co., 1 South Franklin Street, Shamokin, Pa.; effective 12–1–64 to 11–30–65 (men's and boys' dress and sport shirts and tailored blouses).

Baumel Dress Co., Corner Willow and Grant Streets, Olyphant, Pa.; effective 11–5–64 to 11–4–65 (ladies' and children's dresses).

Bayly Mfg. Co., 2508 Fourth Avenue, Greeley, Colo., effective 11–19–64 to 11–18–65 (men's and boys' denim jeans).

Bayly Mfg. Co., 21 West Viola Avenue, Yakima, Wash., effective 11–19–64 to 11–18–65 (men's, boys' and girls' work jeans).

Bestform Foundations of Windber, Inc., Stockholm Avenue, Windber, Pa.; effective 12–9–64 to 12–8–65 (brassieres and girdles).

Blue Bell, Inc., 450 East Barnes Street, Bushnell, Ill., effective 129–64 to 12–8–65 (boys' dungarees and ladies' jeans).

Blue Buckle Overall Co., Marshall, Tex.; effective 11–14–64 to 11–13–65 (men's, women's and children's jeans).

Byrds Mfg. Corp., Albany, Ky.; effective 11–19–64 to 11–18–65 (women's shirts).

Champ Trouser Co., Inc., Post Office Box 97, Winfield, Ala., effective 11–21–64 to 11–20–65 (men's and boys' dress slacks).

Cowden Mfg. Co., 112 Hamilton Avenue, Lancaster, Ky.; effective 11–28–64 to 11–27–65 (overalls and jackets).

Dickson-Jenkins Mfg. Co., 202–208 St. Louis Avenue, Fort Worth, Tex., effective 11–9–64 to 11–8–65 (men's, women's, children's, western shirts, pants).

Dixie Mfg. Co., Inc., 14th and Bailey Streets, Columbia, Tenn.; effective 11–12–64 to 11–11–65. Learners may not be employed at special minimum wage rates in the production of skirts (ladies' and girls' shorts and slacks).

Duti Duds, Inc., 300 Monticello Avenue, Lynchburg, Va.; effective 12–2–64 to 12–1–65 (women's uniforms).

Duti-Duds, Inc., 300 Monticello Avenue, Lynchburg, Va.; effective 12–2–64 to 12–1–65 (women's uniforms).

Ely and Walker, a division of Burlington Industries, Inc., Canton, Miss.; effective 11–20–64 to 11–19–65 (men's sport shirts).

Ely and Walker, Stewart County Plant, Dover, Tenn.; effective 11–16–64 to 11–15–65 (boys' work pants and walking shorts).

Florence Mfg. Co., Inc., 1104 Chase Avenue, Florence, S.C.; effective 11–29–64 to 11–28–65 (ladies' dresses).

Four's Company, Inc., R.D. No. 1, Box 377, Blairsville, Pa.; effective 11–16–64 to 11–15–65 (children's dresses).

Garan, Inc., Corinth Division, Corinth, Miss.; effective 11–14–64 to 11–13–65 (boys' sport shirts).

Glamorise Foundations, Inc., 228 Pine Street, Williamsport, Pa.; effective 11–3–64 to 11–2–65 (brassieres, girdles).

Guntown Slacks, Inc., Guntown, Miss.; effective 11–12–64 to 11–11–65 (men's and boys' dress and play slacks).

Harbor Sportswear, Inc., 1405 East Columbus Drive, East Chicago, Ind.; effective 11–6–64 to 11–5–65 (men's slacks).

Hartsville Mfg. Co., Hartsville, S.C.; effective 11–26–64 to 11–25–65 (ladies' dresses).

Hercules Trouser Company, Hillsboro, Ohio; effective 12–1–64 to 11–30–65 (men's and boys' single pants).

Hercules Trouser Co., Manchester, Ohio; effective 12–1–64 to 11–30–65 (men's and boys' single pants).

Junction City Mfg. Corp., Junction City, Louisiana; effective 11–17–64 to 11–16–65 (ladies' nightwear).

Lady Ester Lingerie Corp., 10th and Walnut Streets, The Kaydette Corp., 1101 Freas Avenue, Berwick, Pa.; effective 11–12–64 to 11–11–65 (ladies' slips).

Lamar Mfg. Co., Millport, Ala.; effective 11–23–64 to 11–22–65 (men's and boys' separate dress pants).

The H. D. Lee Co., Inc., Boaz, Ala.; effective 11–5–64 to 11–4–65 (men's work clothing).

Linden Apparel Corp., Plant No. 1, Factory Street, Plant No. 2, Averett Street, Linden, Tenn.; effective 11–13–64 to 11–12–65 (men's and boys' dungarees, single pants).

Lismore Mfg. Corp., 460 Glove Street, Fall River, Mass.; effective 12–1–64 to 11–30–65 (women's and children's woven underwear and sleepwear).

Phillips-Van Heusen Corp., Brinkley, Ark.; effective 12–2–64 to 12–1–65 (men's dress shirts).

Pittston Apparel Co., East and Tompkins Streets, Pittston, Pa.; effective 12–8–64 to 12–7–65 (girdles and brassieres).

Pollak Bros. Inc., 315 East Wallace Street, Fort Wayne, Ind.; effective 11–26–64 to 11–25–65 (dresses).

Publix Tenn. Corp., Huntingdon, Tenn.; effective 12–1–64 to 11–30–65 (men's and boys' sport shirts).

Pyke Manufacturing Co., 1025 South Sixth West, Salt Lake City, Utah; effective 11–7–64 to 11–6–65 (women's blouses, sport pants and jump suits).

Salant and Salant, Inc., Pine Street, Lexington, Tenn.; effective 11–6–64 to 11–5–65 (men's and boys' cotton slacks).

Seminole Mfg. Co., Aberdeen, Miss.; effective 11–23–64 to 11–22–65 (men's and boys' separate dress pants).

Seminole Mfg. Co., Columbus, Miss.; effective 11–23–64 to 11–22–65 (men's and boys' separate dress pants).

Shawmut Mfg. Corp., 1 Riverside Avenue, New Bedford, Mass.; effective 11–17–64 to 11–16–65 (women's dresses).

Spring City Mfg. Co., Spring City, Tenn.; effective 11–20–64 to 11–19–65 (men's and boys' pajamas).

Stafford Garment Mfg. Corp., 657 Quarry Street, Fall River, Mass.; effective 11–18–64 to 11–17–65 (ladies' dresses).

States Nitewear Mfg. Co., Inc., Healy and Bates Streets, New Bedford, Mass.; effective 12–1–64 to 11–30–65 (ladies' nightgowns and pajamas).

Sustan Garments, Inc., Winnsboro, La.; effective 11–1–64 to 10–31–65 (men's and boys' cotton and synthetic trousers).

Toccoa Garment Co., Inc., Toccoa, Ga.; effective 11–18–64 to 11–17–65 (ladies' blouses).

Troy Textiles, Inc., Troy, Ala.; effective 11–24–64 to 11–23–65 (men's sport shirts).

Warsaw Mfg. Co., Warsaw Road, Kingstree, S.C.; effective 11–23–64 to 11–22–65 (ladies' sportswear-pedal pushers, capris and slacks).

Whiteville Mfg. Co., Wilmington Road, Whiteville, N. Dak.; effective 11–7–64 to 11–6–65 (children's pants, jackets, shirts and jeans).

The following learner certificates were issued for normal labor turnover purposes. The effective and expiration dates and the number of learners authorized are indicated.

Allee-Berry, Inc., Columbus, Kans.; effective 12–8–64 to 12–7–65; 10 learners (boys' and youths' semi-dress pants).

Benjamin & Johnes, Inc., 410 Ashe Avenue, Dunn, N.C.; effective 11–9–64 to 11–8–65; 10 learners (foundation garments).

Blain Products, Inc., Blain, Pa.; effective 12–9–64 to 12–8–65; 5 learners (ladies' woven nightwear).

Blue Bell, Inc., Mount Jackson, Va.; effective 12–1–64 to 11–30–65; 10 learners (men's, boys', ladies' and girls' dungarees).

Blue Bell, Inc., Elkton, Va.; effective 11–29–64 to 11–28–65; 10 learners (men's dungarees).

Blue Bell, Inc., Shenandoah, Va.; effective 11–29–64 to 11–28–65; 10 learners (men's, boys', ladies' and girls' dungarees).

Dushore Lingerie Co., Inc., Box 231, Cherry Street, Dushore, Pa.; effective 11–25–64 to 11–24–65; 10 learners (women's nightwear).

Elpern Manufacturing Inc., 113 Summit Avenue, Hagerstown, Md.; effective 11–9–64 to 11–8–65; 10 learners (children's dresses).

Gulf Sewing Industries, Inc., Citronelle, Ala.; effective 11–6–64 to 11–5–65; 10 learners (women's slacks).

Knitwear Associates, Inc., 1427 Chew Street, Allentown, Pa.; effective 11–19–64 to 11–18–65; 10 learners (men's, boys', polo shirts, shirts and ladies' and girls' shifts).

Sally Marks, Ltd., Rienzi, Miss.; effective 11–16–64 to 11–15–65; 10 learners (women's blouses and dresses).

Meyers and Son Mfg. Co., Inc., New Castle, Ky.; effective 11–16–64 to 11–15–65; 10 learners (men's one piece work shirts).

O'Bryan Brothers, Inc., 600 West Seminary Street, Richland Center, Wis.; effective 11–15–64 to 11–14–65; 10 learners (women's and children's pants).

Ronnie Dress Co., 29 North Main Street, Schickshinny, Pa.; effective 11–23–64 to 11–22–65; 10 learners (ladies' dresses).

Safford Mfg. Corp., Safford, Ariz.; effective 11–2–64 to 11–1–65; 10 learners (women's, misses', underwear, nightwear, negligees).

Society Lingerie Co., Inc., Springland and Roeske Avenues; Michigan City, Ind.; effective 12–3–64 to 12–2–65; 10 learners (slips, petticoats, panties, pajamas, night gowns).

# INTERSTATE COMMERCE COMMISSION

## FOURTH SECTION APPLICATIONS FOR RELIEF

DECEMBER 22, 1964.

Protests to the granting of an application must be prepared in accordance with Rule 1.40 of the general rules of practice (49 CFR 1.40) and filed within 15 days from the date of publication of this notice in the FEDERAL REGISTER.

### LONG-AND-SHORT HAUL

FSA 39479: *Tin or terne plate to Birmingham, Ala.* Filed by O. W. South, Jr., agent (No. A4615), for and on behalf of Illinois Central Railroad Co. Rates on tin or terne plate and tin mill black plate, in carloads, from St. Louis, Mo., East St. Louis, and Graniteville, Ill., to Birmingham, Ala.

Grounds for relief: Market competition and rate relationship.

Tariff: Supplement 159 to Southern Freight Association, agent, tariff I.C.C. S–163.

FSA 29480: *Liquid caustic soda to St. Marys, Ga.* Filed by O. W. South, Jr., agent (No. A4616), for interested rail carriers. Rates on liquid caustic soda, in tank carloads, from Evans City, Ala., to St. Marys, Ga.

Grounds for relief: Market competition.

Tariff: Supplement 163 to Southern Freight Association, agent, tariff I.C.C. S–194.

FSA 39481: *Superphosphate from Florida producing points.* Filed by O. W. South, Jr., agent (No. A4617), for interested rail carriers. Rates on superphosphate, not defluorinated superphosphate, nor feed grade superphosphate, in bulk, in carloads, from Florida producing points to Louisville, Ky., and New Albany, Ind.

Grounds for relief: Rail-barge-truck competition.

Tariff: Supplement 122 to Southern Freight Association, agent, tariff I.C.C. S–88.

FSA 39482: *T.O.F.C. rates from and to Waterloo, Iowa.* Filed by Southwestern Freight Bureau, agent (No. B–8653), for interested rail carriers. Rates on property moving on class and commodity rates, loaded in trailers and transported on railroad flat cars, between Waterloo, Iowa, on the one hand, and points in southwestern territory, on the other.

Grounds for relief: Short-line distance formula and grouping.

Tariff: Supplement 130 to Southwestern Freight Bureau, agent, tariff I.C.C. 4480.

FSA 39484: *Grain and grain products to and between points in southern territory.* Filed by O. W. South, Jr., agent (No. A4612), for interested rail carriers. Rates on grain, grain products and feed, in carloads, between points in southern territory, also Ohio and Mississippi River crossings, Virginia cities gateway points, Washington, D.C., and St. Lous, Mo., and intermediate points on lines of southern carriers; also from points in Ohio to points in southern territory.

Grounds for relief: Short-line distance formula and grouping.

Tariff: Supplement 13 to Southern Freight Association, agent, tariff I.C.C. S–478.

### AGGREGATE-OF-INTERMEDIATES

FSA 39483: *Pullman charges in eastern territory.* Filed by The Pullman Co. (No. 16), for carriers parties to its tariff I.C.C. A–81. Pullman charges for upper and lower berths, sections, duplex roomettes, roomettes, bedrooms, bedroom suites, compartments and drawing rooms, between points in the United States.

Grounds for relief: Experimental space charges to meet competition of other modes of transportation.

By the Commission.

The matters relied upon by petitioners must be specified in their petitions with particularity.

No. MC–FC 66968. By order of December 16, 1964, The Transfer Board approved the transfer to Shannon Transport, Inc., Sweet Home, Oreg., of portion of the operating rights issued by the Commission January 19, 1959, under Certificate No. MC 113282, to Cement Distributors, Incorporated, Seattle, Wash., authorizing the transportation, over irregular routes, of machinery, contractors' equipment, and construction material, between points in Washington, and Oregon west of the Cascade Mountains and north of a line beginning at Florence, Oreg., and extending along Oregon Highway 36 to junction U.S. Highway 99, thence south along U.S. Highway 99 to junction U.S. Highway 126

(formerly U.S. Highway 28), thence along U.S. Highway 126 to the Cascade Mountains, including points on the indicated portions of the highways specified, restricted against the transportation of cement and pozzolan between points in Washington; and wood poles, reinforcing and construction steel, and steel piling, between Milwaukee, Oreg., and points in Multnomah County, Oreg., on the one hand, and, on the other, points in that part of Washington west of the Cascade Mountains. Earl V. White, % White & Southwell, 2130 SE. Fifth Avenue, Portland, Oreg., attorneys for applicants.

No. MC-FC 67339. By order of December 18, 1964, The Transfer Board approved the transfer to Coyman Brothers, Inc., Hackensack, N.J., a portion of Certificate No. MC 59507, issued March 20, 1942, to Edgar H. Allen & Son, Inc., Kenilworth, N.J., authorizing the transportation of equipment requiring special handling equipment, and rigging, over irregular routes, between Newark, Kearney, Jersey City, Paterson, Manville and Hoboken, N.J., on the one hand, and, on the other, Newport, Del., New London, Conn., Scranton and Reading, Pa., and points in Connecticut west of the Connecticut River; those in Pennsylvania south of U.S. Highway 22, and east of U.S. Highway 309; those in Orange, Rockland, and Sullivan Counties, N.Y.; and those in that part of New York east of the Hudson River and south of a line beginning at Albany, N.Y., and extending east through West Sand Lake, N.Y., to the New York-Massachusetts State line, including West Sand Lake and points on the indicated portions of the highways specified. Robert B. Pepper, 297 Academy Street, Jersey City, N.J., 07306, representative for transferee and August W. Heckman, 297 Academy Street, Jersey City, N.J., 07306, representative for transferor.

[SEAL] HAROLD D. McCOY, *Secretary.*

[F.R. Doc. 64-13359; Filed, Dec. 28, 1964; 8:50 a.m.]

## CUMULATIVE CODIFICATION GUIDE—DECEMBER

**CODE OF FEDERAL REGULATIONS**

**[ Supplements to Title 3 ]**

Contain the full text of proclamations, Executive orders, reorganization plans, trade agreement letters, and certain administrative orders issued by the President and published in the Federal Register during the period June 2, 1938–December 31, 1963. Tabular finding aids and subject indexes are included. Volumes are priced as follows:

**1938–1943 Compilation—$3.00**
**1943–1948 Compilation— 7.00**
**1949–1953 Compilation— 7.00**
**1954–1958 Compilation— 4.00**
**1959–1963 Compilation— 6.00**

Compiled by Office of the Federal Register, National Archives and Records Service, General Services Administration

Order from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402

FEDERAL REGISTER
Area Code 202 Phone 963–3261

Published daily, Tuesday through Saturday (no publication on Sundays, Mondays, or on the day after an official Federal holiday), by the Office of the Federal Register, National Archives and Records Service, General Services Administration (mail address National Archives Building, Washington, D.C. 20408), pursuant to the authority contained in the Federal Register Act, approved July 26, 1935 (49 Stat. 500, as amended; 44 U.S.C., ch. 8B), under regulations prescribed by the Administrative Committee of the Federal Register, approved by the President (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $1.50 per month or $15.00 per year, payable in advance. The charge for individual copies (minimum 15 cents) varies in proportion to the size of the issue. Remit check or money order, made payable to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

The regulatory material appearing herein is keyed to the CODE OF FEDERAL REGULATIONS, which is published, under 50 titles, pursuant to section 11 of the Federal Register Act, as amended. The CODE OF FEDERAL REGULATIONS is sold by the Superintendent of Documents. Prices of books and pocket supplements are listed in the first FEDERAL REGISTER issue of each month.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER or the CODE OF FEDERAL REGULATIONS.

VOLUME 29 NUMBER 252

Washington, Tuesday, December 29, 1964

## Interstate Commerce Commission

# Explosives and Other Dangerous Articles

# Revision of Regulations

# Title 49—TRANSPORTATION

## Chapter I—Interstate Commerce Commission

### SUBCHAPTER A—GENERAL RULES AND REGULATIONS

### PARTS 71–90—EXPLOSIVES AND OTHER DANGEROUS ARTICLES

### Revision and Republication

Because of the numerous amendments, Parts 71–90 of Title 49 are revised and republished for convenience. This revision contains all amendments which have been published in the FEDERAL REGISTER to date.

Part
71 General information and regulations.
72 Commodity list of explosives and other dangerous articles containing the shipping name or description of all articles subject to Parts 71–78 of this chapter.
73 Shippers.
74 Carriers by rail freight.
75 Carriers by rail express.
76 Rail carriers in baggage service.
77 Shipments made by way of common contract, or private carriers by public highway.
78 Shipping container specifications.
79 Specifications for tank cars.
80–90 [Reserved]

### PARTS 71–79: EXPLOSIVES AND OTHER DANGEROUS ARTICLES

CROSS REFERENCE: For transportation of explosives and other dangerous articles by air, see 14 CFR Part 49. For U.S. Coast Guard dangerous cargo regulations, see 46 CFR Parts 146 and 147.

### PART 71—GENERAL INFORMATION AND REGULATIONS

Sec.
71.1 Plan of the regulations in Parts 71–78 of this chapter.
71.2 Act of Congress.
71.3 Changes in the regulations, shippers by rail, highway, and water, and carriers by rail and highway.
71.4 Changes in tank car specifications.
71.5 Procedure covering tank car construction.
71.6 Approved changes; notice.
71.7 Public hearings.
71.8 Definitions.
71.9 Vessels stores.
71.10 Flammable or combustible liquids in bulk on board vessels.
71.11 Transportation by carriers by water.
71.12 Export shipments by domestic carriers by rail and motor vehicles.
71.13 Emergency regulations.

AUTHORITY: The provisions of this Part 71 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

**§ 71.1 Plan of the regulations in Parts 71–78 of this chapter.**

(a) Regulations in Parts 71–78 of this chapter cover preparation of explosives and other dangerous articles for transportation by common carriers by rail freight, rail express, rail baggage, highway or water, construction of containers, packaging, weight, marking, labeling when required, billing, and shipper's certificate of compliance with these regulations; also cars, loading, storage, billing, placarding, and movement thereof by carriers by rail.

(b) Regulations for equipment and operation of motor vehicles on the highways are published in separate issue of the Commission.

**§ 71.2 Act of Congress.**

(a) Section 833, Title 18 of the United States Code, approved September 6, 1960 (Pub. Law 710, 86th Congress), which amended the act approved June 25, 1948 (Pub. Law 772, 80th Congress), provides that "Any person who knowingly delivers to any carrier engaged in interstate or foreign commerce by land or water, and any person who knowingly carries on or in any car or vehicle of any description operated in the transportation of passengers or property by any carrier engaged in interstate or foreign commerce by land, any explosive, or other dangerous article, specified in or designated by the Interstate Commerce Commission pursuant to section 834 of this chapter, under any false or deceptive marking, description, invoice, shipping order, or other declaration, or any person who so delivers any such article without informing such carrier in writing of the true character thereof, at the time such delivery is made, or without plainly marking on the outside of every package containing explosives or other dangerous articles the contents thereof, if such marking is required by regulations prescribed by the Interstate Commerce Commission, shall be fined" or imprisoned, as provided in the Act.

**§ 71.3 Changes in the regulations, shippers by rail, highway, and water, and carriers by rail and highway.**

(a) Section 834 of the act of September 6, 1960, authorizes the Commission to formulate regulations for the safe transportation of explosives and other dangerous articles and, either upon its own motion or upon application by any interested party, to make changes or modifications in such regulations made desirable by new information or altered conditions. It further provides that in the execution of sections 831–835 of the act the Commission may utilize the services of carrier and shipper associations, including the Bureau for the Safe Transportation of Explosives and other Dangerous Articles (hereafter called Bureau of Explosives). The Bureau of Explosives will make inspections and conduct investigations and will confer with manufacturers and shippers with a view to determining what regulations will within reasonable limits afford the highest degree of safety in preparation and packing explosives and other dangerous articles for transportation by carriers by rail, highway, or water. The Commission will give due weight to the expert opinions thus obtained. Reports of these investigations will be made to the Commission with recommendations.

(b) Specifications for shipping containers, methods of packing for shipment, and other regulations will be considered and prescribed from time to time by orders effective as conditions may appear to warrant.

**§ 71.4 Changes in tank car specifications.**

(a) Proposals of changes in or additions to specifications for tanks to be mounted on or to form part of a car and to be classified as tank cars should be submitted to the Secretary, Mechanical Division, Association of American Railroads, for thorough investigation and consideration by its committee on tank cars, that committee to report its recommendations, together with objections offered to its proposals, with explanations and reasons for desired approval thereof, through said secretary to the Commission, and such reports may be submitted to the Bureau of Explosives, as circumstances appear to warrant, for comments and suggestions before appropriate action by the Commission.

**§ 71.5 Procedure covering tank car construction.**

(a) Complete detailed prints of new or improved types of tank-car tanks and detailed prints or samples of new or improved types of equipment therefor should be submitted to the Secretary, Mechanical Division, Association of American Railroads, for thorough investigation and laboratory tests of samples by its committee on tank cars.

(b) When in the opinion of the committee such tanks or equipment therefor are in full compliance with effective specifications of the Commission and no increase in hazard is involved, their use should be permitted.

(c) When in the opinion of the committee such tanks or equipment therefor are in full compliance with effective specifications of the Commission and a possible increase in hazard is involved, service trials should be agreed upon among interested parties before more extended use is permitted.

(d) When in the opinion of the committee such tanks or equipment therefor do not comply with effective specifications of the Commission and service trials are desirable, approval by the Commission of the conditions of such trials must be obtained.

(e) Prompt reports of the tank car committee on these matters should be made to the Commission through said mechanical division secretary and should include objections to proposed modifications of the specifications and advice of any extensions of pending investigations found necessary. The committee's expert opinions thus obtained will be given due weight by the Commission in determining upon appropriate final action to be taken. The merits of controversies arising under the foregoing procedure will be considered and changes in or additions to the specifications, or authorizations of service trials, will be made by the Commission as conditions appear to warrant.

**§ 71.6 Approved changes; notice.**

(a) The Act of September 6, 1960, requires that notice of 90 days after formulation and publication should be given of the effective date of new or modified regulations, unless a shorter time is authorized by the Commission. The authority to establish amended regulations upon less than 90 days' notice will be exercised only in instances where special and peculiar circumstances or conditions fully justify it.

**§ 71.7 Public hearings.**

(a) Public hearings concerning regulations contained in Parts 71–78 of this chapter will be held by the Commission at sufficiently frequent intervals. At these hearings evidence may be introduced in favor of proposed changes or additions and protest against the adoption thereof will also be heard. Final action also may be taken by the Commission without hearing, following 20 days' notice by the Commission of proposed changes or additions, or without such notice, as conditions appear to warrant.

**§ 71.8 Definitions.**

(a) The word "must" or "shall" is used in Parts 71–78 of this chapter in mandatory regulations. The word "should" indicates recommendatory provisions.

(b) Section 832 of the act of September 6, 1960 provides that any person who knowingly transports certain explosives, or any radioactive materials, or etiologic agents, on or in any passenger car or passenger vehicle of any description operated in the transportation of passengers by any for-hire carrier engaged in interstate or foreign commerce, by land, shall be fined or imprisoned or both. It further provides that emergency movements and movements of small quantities of those commodities on or in any such car or vehicle may be made under such regulations as the Commission may prescribe. As used in Parts 71–78 of this chapter the term "passenger car or passenger vehicle of any description operated in the transportation of passengers by any for-hire carrier . . . by land" means any railroad car of a passenger train, or highway vehicle, with passengers for-hire in the same such railroad car or highway vehicle.

(c) Whenever use of a container type is prescribed in the packing regulations but without specification number, the authorized type of container, either specification or nonspecification, may be used for the shipment.

(d) Numbering and lettering. The terms used in the numbering and lettering system employed in Parts 71–78 of this chapter, and adhered to in references made from one requirement to another, are as follows:

(1) Section: A major subdivision of a part, as § 73.193 of this chapter.

(2) Paragraph: A subdivision of a section, as paragraph (a) of this section, or § 73.193 (a).

(3) Subparagraph: A subdivision of a paragraph, as paragraph (a) (1) of this section, or § 73.193 (a) (1).

(e) Tank motor vehicle. The term "tank motor vehicle" means any motor vehicle designed or used for the transportation of liquids or gases covered by Parts 71–78 of this chapter in any cargo tank.

(f) Cargo tank. The term "cargo tank" means:

(1) *Permanently attached tank.* Any tank designed to be permanently attached to any motor vehicle or any container not permanently attached to any motor vehicle which by reason of its size, construction, or attachment to any motor vehicle must be loaded and/or unloaded without being removed from the motor vehicle and which tank or container is to be used to transport any flammable liquid, corrosive liquid, or poisonous liquid, class B, is hereby designated "cargo tank".

(2) *Fuel tank not a cargo tank.* A fuel tank is not a cargo tank, but one used to transport flammable liquid or compressed gas solely for the purpose of supplying fuel for the propulsion of a vehicle.

(g) The term "portable tank" means any tank designed primarily to be temporarily attached to a motor vehicle, other vehicle, railroad car other than tank car, or vessel, and equipped with skids, mountings or accessories to facilitate handling of the tank by mechanical means. The term "portable tank" shall not be construed to include any cargo tank, any tank car tank, or any tank of the ICC 106A (§§ 78.275 or 78.276 of this chapter) type.

**§ 71.9 Vessels stores.**

(a) Vessels stores are regulated by the regulations prescribed by the Commandant of the Coast Guard (46 CFR Part 147) and are not included in Parts 71–78 of this chapter.

**§ 71.10 Flammable or combustible liquids in bulk on board vessels.**

(a) Nothing in Parts 71–78 of this chapter shall be construed as affecting the transportation of flammable or combustible liquids in bulk on board vessels which transportation is governed by the rules and regulations promulgated under R.S. 4417a; 47 U.S.C. 391a (46 CFR Part 146).

**§ 71.11 Transportation by carriers by water.**

(a) When the transportation of a shipment involves movement by carrier by water, the applicable provisions of Parts 71–78 of this chapter must be observed by the shipper.

**§ 71.12 Export shipments by domestic carriers by rail and motor vehicles.**

(a) Explosives and other dangerous articles authorized to be exported from the United States when packed, marked, labeled, and described, in accordance with rules and regulations in force at destination ports, must not be offered to any common carrier by rail or motor vehicle for domestic transportation unless in full accordance with the regulations in Parts 71–78 of this chapter.

(b) Except for the requirements of §§ 77.817 and 77.823 of this chapter, the provisions of Parts 71–78 of this chapter do not apply to such transportation by motor vehicle or water as may be necessary to effect transfer of export shipments from place of shipment to other places within the same port area or delivery to a water carrier within the same port area (including contiguous harbors). Further transportation of such export shipments by connecting water carrier shall be subject to the regulations prescribed by the Commandant of the Coast Guard.

**§ 71.13 Emergency regulations.**

(a) Until further order of the Commission, shipments of explosives may be made upon requests of the Departments of the Army, Navy, and Air Force of the United States Government complying with the following:

(1) Shippers' and carriers' regulations; handling detonating agents and explosives and explosive ammunition in same car or vehicle. Detonating fuzes, class A explosives, primer-detonator assemblies or other detonating elements containing explosive components, if of a safe type, may be shipped either assembled in bombs, depth charges, mines, projectiles, or torpedoes (torpedo warheads) or in properly packed containers in the same car or vehicle with bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) when separated from the explosive bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) by not less than 3 feet. The intervening space of 3 feet must be filled with dry sand or dry earth in bags or in a crib so constructed or lined as to prevent sifting of the sand or earth. The crib must be secured against movement.

(2) When bomb fuzes are packed with bomb fin assemblies, either crated or boxed in wooden or metal containers, the sand or earth filled space between bombs and the fuzes may be omitted provided adequate blocking and bracing is supplied to prevent the bombs from crushing and injuring the detonating fuzes due to ordinary shocks incident to transportation.

---

### PART 72—COMMODITY LIST OF EXPLOSIVES AND OTHER DANGEROUS ARTICLES CONTAINING THE SHIPPING NAME OR DESCRIPTION OF ALL ARTICLES SUBJECT TO PARTS 71–78 OF THIS CHAPTER

Sec.
72.1 Proper shipping name.
72.2 Articles not described.
72.3 Labels required and prohibited articles.
72.4 Explanation of signs and abbreviations.
72.5 List of explosives and other dangerous articles.

AUTHORITY: The provisions of this Part 72 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

**§ 72.1 Proper shipping name.**

(a) The proper shipping name which must be used and shown on outside shipping containers appears in Roman type (not italics). The abbreviations N.O.I. and N.O.I.B.N. may be used in lieu of the abbreviation n. o. s. where it appears in the list of explosives and other dangerous articles.

**§ 72.2 Articles not described.**

**(a) For an article not described by name shown in § 72.5, when such article is classified as dangerous by §§ 73.115, 73.150, 73.151, 73.240, 73.300, 73.326, 73.343, 73.381, or 73.391 of this chapter, the article must be prepared and offered for shipment in compliance with the regulations for the group within which it is properly classified.**

**§ 72.3 Labels required and prohibited articles.**

**(a) Section 72.5 also shows the kind of label when required on shipments of explosives and other dangerous articles and the articles which are prohibited for transportation.**

**§ 72.4 Explanation of signs and abbreviations.**

**(a) An asterisk indicates that articles may or may not be classed as flammable liquids, flammable solids, oxidizing materials, compressed gases, poisons, or corrosive liquids by Parts 71–78 of this chapter. If so classed, such articles are subject to the regulations prescribed for articles within these definitions.**

**F. L.—Flammable liquid.**
**F. S.—Flammable solid.**
**Oxy. M.—Oxidizing material.**
**Cor. L.—Corrosive liquid.**
**Nonf. G.—Nonflammable compressed gas.**
**F. G.—Flammable compressed gas.**
**Pois. A.—Poison gas or liquid, class A.**
**Pois. B.—Poisonous liquid or solid, Class B.**
**Pois. C.—Tear gas, class C.**
**Pois. D.—Radioactive materials, class D.**
**Expl. A.—Class A explosives.**
**Expl. B.—Class B explosives.**
**Expl. C.—Class C explosives.**
**Not accepted—Means not to be offered or accepted for transportation.**
**Forbidden—Means prohibited by law.**
**ϕ Indicates that articles may be transported as rail baggage.**
**# Required for rail express shipments only.**
**## Required for rail express and water shipments only.**
**N. O. S.—Means not otherwise specified.**
**N. O. I.—Means not otherwise indexed.**
**N. O. I. B. N.—Means not otherwise indexed by name.**

**NOTE 1: Where the word "INFLAMMABLE" is now painted, stenciled, or otherwise permanently marked on tank cars, cargo tank motor vehicles, portable tanks, or other containers, it may be so continued until such tanks or other containers are repainted, restenciled or both, and at such times shall be replaced with the word "FLAMMABLE" unless otherwise ordered by the Commission.**

**§ 72.5 List of explosives and other dangerous articles.**

**(a) For explanation of signs and abbreviations see § 72.4.**

| Ammonium perchlorate | Oxy. M | 73.153, 73.154 | do | Do. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Arsenic solid | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Arsenic sulfide (powder), solid | Pois. B | 73.364, 73.365 | do | Do. |
| Arsenic trichloride, liquid | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| Arsenic, white, solid (arsenic, white, solid; arsenous acid, solid) | Pois. B | 73.364, 73.365, 73.368 | do | 200 pounds. |
| Arsenical compounds or mixtures, n. o. s., liquid | Pois. B | 73.364, 73.365 | do | Do. |
| Arsenical compounds or mixtures, n. o. s., solid | Pois. B | 73.364, 73.367 | do | 55 gallons. |
| Arsenical dip, liquid (sheep dip) | Pois. B | 73.345, 73.346 | do | 200 pounds. |
| Arsenical dip, solid | Pois. B | 73.364, 73.368 | do | Do. |
| Arsenical fine dust | Pois. B | 73.364, 73.368 | do | Do. |
| Arsenous acid, solid | Pois. B | 73.364, 73.365 | do | Do. |
| Arsenous and mercuric chloride solution, liquid | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| *Asphalt, cut-back. *See* Road asphalt, cut-back. | | | | |
| Automobiles, motorcycles, tractors or other self-propelled vehicles. | See §§ 73.120, 73.306. | | | |
| 1-Aziridinyl phosphine oxide (tris). | F. S | No exemption, 73.155 (a) | Yellow | 25 pounds. |
| Bag, filter, of soda, empty and unwashed. | F.S | No exemption, 73.239 | do | 1 pound. |
| Batteries, dry | Not regulated | | | |
| Batteries, electric storage, wet | Cor. L | 73.250, 73.260 | White | 600 pounds. |
| Batteries, electric storage, wet, with automobiles, auto parts, engines or other mechanical apparatus. | Cor. L | 73.250, 73.260 | do | No limit. |
| Batteries, electricstorage, wet, with containers of corrosive battery fluid. | Cor. L | No exemption, 73.258 | do | 2 gallons. |
| *Battery charger with electrolyte (acid)* or *battery fluid. See* Electrolyte (battery fluid). | See § 73.259 | | | |
| Battery fluid, alkaline corrosive battery fluid. *See* Alkaline corrosive battery fluid. | | | | |
| Benzene (benzol) | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Benzine | F. L | 73.118, 73.119 | do | Do. |
| Benzol (benzene) | F. L | 73.118, 73.119 | do | Do. |
| Benzoyl chloride | Cor. L | 73.244, 73.247 | White | 1 quart. |
| Benzoyl peroxide | Oxy. M | No exemption, 73.157, 73.158 | Yellow | 25 pounds. |
| Benzyl bromide (bromotoluene, alpha) | Cor. L | No exemption, 73.281 | White | 5 pints. |
| Benzyl chloride | Cor. L | 73.244, 73.295 | do | 1 quart. |
| Benzyl chlorocarbonate. *See* Benzyl chloroformate. | | | | |
| Benzyl chloroformate | Cor. L | No exemption, 73.288 | do | 5 pints. |
| Beryllium metal powder | Pois. B | No exemption, 73.378 | Poison | 25 pounds. |
| Black blasting powder. *See* Black powder. | | | | |
| Black pellet powder. *See* Black powder. | | | | |
| Black powder | Expl. A | No exemption, 73.60 | | Not accepted. |
| Black powder igniters with empty cartridge shell. | Expl. C | No exemption, 73.106 | | 150 pounds. |
| Black rifle powder. *See* Black powder. | | | | |
| Blasting caps | Expl. C | No exemption, 73.103 | | See § 73.86. |
| Blasting caps with metal clad mild detonating fuse—1,000 or less. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,001 to 5,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,001 to 10,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,001 to 25,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—25,001 to 50,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—50,001 to 100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—100,001 to 200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—200,001 to 300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—300,001 to 400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—400,001 to 500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—500,001 to 600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—600,001 to 700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—700,001 to 800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—800,001 to 900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—900,001 to 1,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,000,001 to 1,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,100,001 to 1,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,200,001 to 1,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,300,001 to 1,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,400,001 to 1,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,500,001 to 1,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,600,001 to 1,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,700,001 to 1,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,800,001 to 1,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—1,900,001 to 2,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,000,001 to 2,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,100,001 to 2,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,200,001 to 2,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,300,001 to 2,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,400,001 to 2,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,500,001 to 2,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,600,001 to 2,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,700,001 to 2,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,800,001 to 2,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—2,900,001 to 3,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,000,001 to 3,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,100,001 to 3,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,200,001 to 3,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,300,001 to 3,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,400,001 to 3,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,500,001 to 3,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,600,001 to 3,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,700,001 to 3,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,800,001 to 3,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—3,900,001 to 4,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,000,001 to 4,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,100,001 to 4,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,200,001 to 4,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,300,001 to 4,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,400,001 to 4,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,500,001 to 4,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,600,001 to 4,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,700,001 to 4,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,800,001 to 4,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—4,900,001 to 5,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,000,001 to 5,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,100,001 to 5,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,200,001 to 5,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,300,001 to 5,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,400,001 to 5,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,500,001 to 5,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,600,001 to 5,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,700,001 to 5,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,800,001 to 5,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—5,900,001 to 6,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,000,001 to 6,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,100,001 to 6,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,200,001 to 6,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,300,001 to 6,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,400,001 to 6,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,500,001 to 6,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,600,001 to 6,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,700,001 to 6,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,800,001 to 6,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—6,900,001 to 7,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,000,001 to 7,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,100,001 to 7,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,200,001 to 7,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,300,001 to 7,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,400,001 to 7,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,500,001 to 7,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,600,001 to 7,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,700,001 to 7,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,800,001 to 7,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—7,900,001 to 8,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,000,001 to 8,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,100,001 to 8,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,200,001 to 8,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,300,001 to 8,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,400,001 to 8,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,500,001 to 8,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,600,001 to 8,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,700,001 to 8,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,800,001 to 8,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—8,900,001 to 9,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,000,001 to 9,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,100,001 to 9,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,200,001 to 9,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,300,001 to 9,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,400,001 to 9,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,500,001 to 9,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,600,001 to 9,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,700,001 to 9,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,800,001 to 9,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—9,900,001 to 10,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,000,001 to 10,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,100,001 to 10,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,200,001 to 10,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,300,001 to 10,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,400,001 to 10,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,500,001 to 10,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,600,001 to 10,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,700,001 to 10,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,800,001 to 10,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—10,900,001 to 11,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,000,001 to 11,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,100,001 to 11,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,200,001 to 11,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,300,001 to 11,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,400,001 to 11,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,500,001 to 11,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,600,001 to 11,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,700,001 to 11,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,800,001 to 11,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—11,900,001 to 12,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,000,001 to 12,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,100,001 to 12,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,200,001 to 12,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,300,001 to 12,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,400,001 to 12,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,500,001 to 12,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,600,001 to 12,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,700,001 to 12,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,800,001 to 12,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—12,900,001 to 13,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,000,001 to 13,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,100,001 to 13,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,200,001 to 13,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,300,001 to 13,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,400,001 to 13,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,500,001 to 13,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,600,001 to 13,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,700,001 to 13,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,800,001 to 13,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—13,900,001 to 14,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,000,001 to 14,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,100,001 to 14,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,200,001 to 14,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,300,001 to 14,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,400,001 to 14,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,500,001 to 14,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,600,001 to 14,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,700,001 to 14,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,800,001 to 14,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—14,900,001 to 15,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,000,001 to 15,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,100,001 to 15,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,200,001 to 15,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,300,001 to 15,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,400,001 to 15,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,500,001 to 15,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,600,001 to 15,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,700,001 to 15,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,800,001 to 15,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—15,900,001 to 16,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,000,001 to 16,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,100,001 to 16,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,200,001 to 16,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,300,001 to 16,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,400,001 to 16,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,500,001 to 16,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,600,001 to 16,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,700,001 to 16,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,800,001 to 16,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—16,900,001 to 17,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,000,001 to 17,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,100,001 to 17,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,200,001 to 17,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,300,001 to 17,400,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,400,001 to 17,500,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,500,001 to 17,600,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,600,001 to 17,700,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,700,001 to 17,800,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,800,001 to 17,900,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—17,900,001 to 18,000,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—18,000,001 to 18,100,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—18,100,001 to 18,200,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—18,200,001 to 18,300,000. | Expl. C | No exemption, 73.103 | | Do. |
| Blasting caps with metal clad mild detonating fuse—18,300,001 to 18,400,000. | Expl. C | No exemption, 73.103 | | Do. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Blasting caps—more than 1,000 | Expl. A | No exemption, 73.66 | | Not accepted. |
| Blasting caps with metal clad mild detonating fuse—more than 1,000 | Expl. A | No exemption, 73.66(c), 73.67 | Poison | Do. |
| Blasting caps with safety fuse—1,000 or less | Expl. C | No exemption, 73.103 | | See § 73.86. |
| Blasting caps with safety fuse—more than 1,000 | Expl. A | No exemption, 73.66(c), 73.67 | | Not accepted. |
| Blasting caps, electric. *See* Electric blasting caps. | | | | |
| *Blasting gelatin. See* High explosives. | | | | |
| *Blasting powder. See* Black powder. | | | | |
| *Boiler compound, liquid | Cor. L | 73.244, 73.249 | White | 10 gallons. |
| *Bombs, explosive. See* Explosive bomb. | | | | |
| *Bombs, explosive, with gas, smoke, or incendiary material. See* Explosive bomb. | | | | |
| *Bombs, fireworks. See* Special fireworks. | | | | |
| *Bombs, gas, smoke or incendiary, non-explosive. See Chemical ammunition.* | | | | |
| *Bombs, explosive, incendiary. See* Explosive bombs. | | | | |
| *Bombs, incendiary or smoke, without bursting charges. See* Special fireworks. | | | | |
| *Bombs, practice, with electric primers or electric squibs* | See § 73.55 | | | |
| *Bombs, sand-loaded or empty* | See § 73.55 | | | |
| Boosters (explosive) | Expl. A | No exemption, 73.69 | | Not accepted. |
| Bordeaux arsenites, liquid | Pois. B | 73.345, 73.346 | Poison | 55 gallons. |
| Bordeaux arsenites, solid | Pois. B | 73.364, 73.365 | do | 200 pounds. |
| Boron trichloride | Cor. L | No exemption, 73.251 | White | 1 quart. |
| Boron trifluoride | Nonf. G | 73.306, 73.302 | Green | 300 pounds. |
| Bottles, *acid or other corrosive liquids*, empty | See § 73.29 | | | |
| *Box toe gum | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Brass, reused* | See § 73.28 | | | |
| Bromoacetone, liquid | Pois. A | No exemption, 73.329 (a) | Poison Gas | Not accepted. |
| Brombenzyl cyanide, liquid | Pois. C | No exemption, 73.382 | Tear Gas | 20 pounds. |
| Bromine | Cor. L | No exemption, 73.252 | White | 1 quart. |
| Bromine pentafluoride | Cor. L | No exemption, 73.284 | do | 100 pounds. |
| Bromine trifluoride | Cor. L | No exemption, 73.283 | do | Do. |
| Bromotoluene, alpha. *See* Benzyl bromide. | | | | |
| *Bronze liquid (or paint). *See* *Paint, enamel, lacquer, stain, shellac, varnish, etc. | | | | |
| Brucine, solid (dimethoxy strychnine) | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Burnt cotton (not repicked) | F. S | No exemption, 73.159 | Yellow | Not accepted. |
| Burnt fiber | F. S | No exemption, 73.169 | do | Do. |
| Bursters (explosive) | Expl. A | No exemption, 73.69 | Red | Do. |
| Butadiene, inhibited | F.G | 73.306, 73.304, 73.314, 73.315 | Red Gas | 300 pounds. |
| *Butane. See* Liquefied petroleum gas. | | | | |
| *Butyl acetate | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Butyl alcohol. *See* Alcohol, n.o.s. | | | | |
| Butyl mercaptan | F. L | No exemption, 73.141 | do | Do. |
| Butyl trichlorosilane | Cor. L | No exemption, 73.280 | White | Do. |
| Butyraldehyde | F. L | 73.118, 73.119 | Red | Do. |
| Cacodylic acid, solid (dimethylarsenic) | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Calcium arsenate, solid | Pois. B | 73.364, 73.367, 73.368 | do | Do. |
| Calcium arsenite, solid | Pois. B | 73.364, 73.365 | do | Do. |
| Calcium chlorate | Oxy. M | 73.153, 73.163 | Yellow | 100 pounds. |
| Calcium chlorite | Oxy. M | No exemption, 73.160 | do | Do. |
| Calcium cyanide. *See* Cyanide of calcium. | | | | |
| Calcium hypochlorite compounds, dry, containing more than 39 percent available chlorine | Oxy. M | 73.153, 73.217 | do | Do. |
| Calcium, metallic | F. S | 73.153, 73.154 | do | Do. |
| Calcium, metallic, crystalline | F. S | No exemption, 73.231 | do | 25 pounds. |
| Calcium nitrate | Oxy. M | 73.153, 73.182 | do | 100 pounds. |
| Calcium peroxide | Oxy. M | 73.153, 73.186 | Yellow | 100 pounds. |
| Calcium permanganate | Oxy. M | 73.153, 73.154 | do | Do. |
| Calcium phosphide | F. S | No exemption, 73.161 | do | 25 pounds. |
| Calcium resinate | F. S | No exemption, 73.166 | do | 125 pounds. |
| Calcium resinate, fused | F. S | No exemption, 73.166 | do | Do. |
| Cannon primers | Expl. C | No exemption, 73.107 | | 150 pounds. |
| *Caps, blasting. See* Blasting caps. | | | | |
| *Caps, toy. See* Toy caps. | | | | |
| Caprylyl peroxide solution | Oxy. M | 73.153 (b), 73.221 | do | 1 quart. |
| Carbolic acid, fused solid. *See* Carbolic acid (phenol), solid. | | | | |
| Carbolic acid (phenol), liquid, (liquid tar acid containing over 50 percent benzo-phenol). | Pois. B | 73.345, 73.349 | Poison | 55 gallons. |
| Carbolic acid (phenol), solid | Pois. B | 73.369 | do | 200 pounds. |
| Carbon bisulfide (disulfide) | F. L | No exemption, 73.121 | Red | Not accepted. |
| Carbon dioxide gas, liquefied ("mining device"). | Nonf. G | 73.304(a)(2) table Note 4 | Green | 6 pounds. |
| ϕCarbon dioxide, liquefied | Nonf. G | 73.306, 73.304, 73.314, 73.315 | do | 300 pounds. |
| Carbon dioxide—nitrous oxide mixture | Nonf. G | 73.306, 73.304 | do | Do. |
| Carbon dioxide—oxygen mixture | Nonf. G | 73.306, 73.304 | do | Do. |
| Carbon monoxide | F.G | 73.306, 73.304 | Red Gas | 150 pounds. |
| *Carbon remover, liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Carbonyl chloride. See* Phosgene. | | | | |
| Carboys, acid, empty | See § 73.29 (c) | | | |
| Carboys, empty. *See* Acid carboys, empty. | | | | |
| Cartridge bags, empty, with black powder igniters. | Expl. C | No exemption, 73.106 | | 150 pounds. |
| Cartridge cases, empty, primed | Expl. C | No exemption, 73.107 | | Do. |
| Case oil. *See* Gasoline, *Naphtha. | | | | |
| *Casinghead gasoline. See* Gasoline. | | | | |
| Casks, empty. *See* Drums, empty. | | | | |
| Caustic potash, liquid | Cor. L | 73.244, 73.249 | White | 10 gallons. |
| Caustic soda, liquid | Cor. L | 73.244, 73.249 | do | Do. |
| *Cement, adhesive, n.o.s. *See* Cement, liquid, n.o.s. | | | | |
| *Cement, leather | F. L | 73.118, 73.119 | Red | 12 gallons. |
| *Cement, linoleum, tile, wallboard, or container, liquid | F. L | 73.118, 73.132 | do | 15 gallons. |
| *Cement, liquid, n.o.s | F.L | 73.118, 73.119, 73.132 | do | Do. |
| *Cement, pyroxylin | F. L | 73.118, 73.132 | do | Do. |
| *Cement, roofing, liquid | F. L | 73.118, 73.119 | do | 12 gallons. |
| *Cement, rubber | F. L | 73.118, 73.132 | do | 15 gallons. |
| Cesium 137 | Pois. D | 73.392, 73.393 | Poison radioactive materials, red. | 300 curies. See § 73.391 (c). |
| *Charcoal, activated | F. S | 73.162 | Yellow# | 200 pounds. |
| Charcoal briquettes | F. S | 73.162 | | Do. |
| Charcoal, shell | F. S | 73.162 | Yellow# | Do. |
| Charcoal, wood, ground, crushed, granulated or pulverized | F. S | 73.162 | do | Do. |
| Charcoal, wood, lump | F. S | 73.162 | do | 100 pounds. |
| Charcoal screenings, *made from "pinon", wood* | F. S | 73.162 | Yellow# | 200 pounds. |
| Charcoal, wood screenings *other than "pinon" wood screenings* | F. S | No exemption, 73.162 | Yellow | Not accepted. |
| Charcoal screenings, wet | Not accepted | | | Do. |
| Charcoal, wet | Not accepted | | | Do. |
| Charged oil well jet perforating guns *(total explosive contents in guns exceeding 90 pounds per motor sehicle)*. | Expl. A | No exemption, 73.53(u), 73.80. | | Do. |
| Charged oil well jet perforating guns *(total explosive contents in guns not exceeding 90 pounds per motor sehicle)*. | Expl. C | No exemption, 73.53(u), 73.110. | | Do. |
| *Chemicals, n. o. s. *See* *Drugs, chemicals, medicines or cosmetics, n. o. s. | | | | |
| *Chemical ammunition (containing class A poisons, liquids, or gases)*. | Pois. A | No exemption, 73.330 | Poison Gas | Do. |
| *Chemical ammunition (containing class B poisons, liquids, or gases)*. | Pois. B | 73.345, 73.350 | Poison | 55 gallons. |
| *Chemical ammunition (containing class C poisons, liquids, or solids)*. | Pois. C | No exemption, 73.383 | Tear Gas | 20 pounds. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |

| Chlorine dioxide hydrate, frozen | Oxy. M | No exemption, 73.237 | Yellow | Not accepted. |
| Chlorine trifluoride | Oxy. M | No exemption, 73.285 | White | 100 pounds. |
| Chlorobenzoyl peroxide (para) | Oxy. M | No exemption, 73.157, 73.158 | Yellow | 25 pounds. |
| *Chlorodinitrobenzol. See* Dinitrochlorbensol, solid. | | | | |
| Chlorosulfonic acid | Cor. L | 73.244, 73.254 | White | 1 quart. |
| Chlorosulfonic acid-sulfur trioxide mixture | Cor. L | 73.244, 73.254 | do | Do. |
| 4-Chloro-o-toluidine hydrochloride | Pois. B | No exemption, 73.362 | Poison | Do. |
| Chloropicrin and methyl chloride mixtures | Pois. A | No exemption, 73.329 (b) | Poison Gas | Not accepted. |
| Chloropicrin, liquid | Pois. B | No exemption, 73.357 | Poison | 24 pounds. |
| Chloropicrin, absorbed | do | do | do | 75 pounds. |
| Chloropicrin, mixtures *(containing no compressed gas or poisonous liquid, class A)*. | do | do | do | Do. |
| Chloropicrin and nonflammable, nonliquefied compressed gas mixtures | Pois. A | No exemption, 73.329(c) | Poison Gas | Not accepted. |
| Chromic acid | Oxy. M | 73.153, 73.164 | Yellow | 100 pounds. |
| Chromic acid solution | Cor. L | 73.244, 73.245, 73.287 | White | 1 gallon. |
| Chromic anhydride. See Chromic acid. | | | | |
| Chromium trioxide. *See* Chromic acid. | | | | |
| Chromyl chloride | Cor. L | No exemption, 73.247 | do | Do. |
| Cigar and cigarette lighter fluid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Cigarette lighters charged with fuel* | See § 73.21(d) | | | |
| Cigarette loads | Expl. C | No exemption, 73.111 | | 150 pounds. |
| *Cleaning fluid or liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Cloud gas cylinders. See Chemical ammunition.* | | | | |
| Coal briquettes, hot | Not accepted | | | Not accepted. |
| *Coal gas. See* Hydrocarbon, gas, non-liquefied. | | | | |
| Coal, ground bituminous, sea coal, coal facings, etc. | See §73.165 | | | |
| *Coal tar distillate | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Coal tar light oil | F. L | 73.118, 73.119 | do | Do. |
| *Coal tar naphtha | F. L | 73.118, 73.119 | do | Do. |
| *Coal tar oil | F. L | 73.118, 73.119 | do | Do. |
| *Coating solution | F. L | 73.118, 73.132 | do | 15 gallons. |
| Cobalt 60 | Pois. D | 73.392, 73.393 | Poison radioactive materials, red. | 300 curies. See § 73.391 (c). |
| Cobalt resinate, precipitated | F. S | No exemption, 73.166 | Yellow | 125 pounds. |
| Cocculus, solid (*fish berry*) | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Coke, hot | Not accepted | | | Not accepted. |
| Collodion | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Collodion cotton, wet. *See* Wet nitrocellulose. | | | | |
| Cologne spirits (*alcohol*) | F. L | 73.118, 73.119 | do | Do. |
| *Colored fire. See* Common fireworks. | | | | |
| Columbian spirits (*wood alcohol*) | F. L | 73.118, 73.119 | do | Do. |
| Combination fuses | Expl. C | No exemption, 73.105 | | 150 pounds. |
| Combination primers | Expl. C | No exemption, 73.107 | | Do. |
| *Commercial shaped charges. See* High explosives | See § 73.65 (b) | | | |
| Common fireworks | Expl. C | No exemption, 73.100 (r), 73.108. | | 200 pounds. |
| *Compounds, cleaning, liquid | Cor. L | 73.244, 73.245 | White | 1 quart. |
| *Compounds, cleaning liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Compounds, cleaning, liquid (containing, hydrochloric (muriatic) acid). | Cor. L | 73.244, 73.263 | White | Do. |
| Compounds, cleaning, liquid (*containing hydrofluoric acid*). | Cor. L | 73.244, 73.256 | do | Do. |
| *Compounds, enamel | F. L | 73.118, 73.128 | Red | 55 gallons. |
| *Compounds, iron or steel rust preventing or removing. | Cor. L | 73.244, 73.245 | White | 1 gallon. |
| *Compounds, lacquer, paint, or varnish, etc., removing, reducing or thinning, liquid. | F. L | 73.118, 73.128 | Red | 55 gallons. |
| *Compounds, lacquer, paint, or varnish removing, liquid. | Cor. L | 73.244, 73.245 | White | 1 gallon. |
| *Compounds, polishing, liquid | F. L | 73.118, 73.129 | Red | 55 gallons. |
| *Compounds, tree or weed killing, liquid. | F. L | 73.118, 73.119 | do | 10 gallons. |
| *Compounds, tree or weed killing, liquid. | Pois. B | 73.345, 73.346 | Poison | 55 gallons. |
| *Compounds, tree or weed killing, solid. | Oxy. M | 73.153, 73.154, 73.229 | Yellow | 100 pounds. |
| *Compounds, type-cleaning, liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Compounds, vulcanizing, liquid | Cor. L | 73.244, 73.245 | White | 1 quart. |
| *Compounds, vulcanising, liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Compressed gases, n. o. s | Nonf. G | 73.306, 73.304, 73.302 | Green | 300 pounds. |
| Compressed gases, n. o. s | F. G | 73.306, 73.304, 73.302 | Red Gas | Do. |
| *Containers, empty, See* Acid carboys, empty; bottles empty, drums empty, cylinders empty. | See § 73.29 | | | |
| *Containers, reused* | See § 73.28 | | | |
| Copper acetoarsenite, solid (*emerald green, imperial green, Kinge green, moss green, meadow green, mitis green, parrot green, Vienna green*). | Pois. B | 73.364, 73.367 | Poison | 200 pounds. |
| Copper arsenite, solid (Scheele's green, cupric green, copper orthoarsenite, Swedish green). | Pois. B | 73.364, 73.365 | do | Do. |
| Copper cyanide | See § 73.370 | | | |
| Cordeau detonant fuse | Expl. C | No exemption, 73.104 | | 200 pounds. |
| Corrosive battery fluid. *See* Electrolyte (acid), or Alkaline corrosive battery fluid. | | | | |
| Corrosive liquid, n. o. s | Cor. L | 73.244, 73.245 | White | 5 pints. |
| Cotton, burnt. *See* Burnt cotton. | | | | |
| Cotton waste, oily *with more than 5 percent of animal or vegetable oil*. | F. S | No exemption, 73.167 | Yellow | Not accepted. |
| Crotonaldehyde | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Crude nitrogen fertilizer solution | Nonf. G | 73.306, 73.304, 73.314 | Green | 300 pounds. |
| *Crude oil, petroleum | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Cumene hydroperoxide | Oxy. M | 73.153, (b), 73.224 | Yellow | 1 quart. |
| Cuprietbylene-diamine solution | Cor. L | 73.244, 73.249 | White | 1 gallon. |
| Cyanide of calcium or cyanide of calcium mixtures, solid. | Pois. B | 73.370 (c) and (d) | Poison | 200 pounds. |
| Cyanides of copper, zinc, lead, and silver. | See § 73.370 | | | |
| Cyanides or cyanide mixtures, dry | Pois. B | 73.364, 73.370 | Poison | 200 pounds. |
| Cyanide of potassium, liquid | Pois. B | 73.345, 73.352 | do | 55 gallons. |
| Cyanide of potassium, solid | Pois. B | 73.370 | do | 200 pounds. |
| Cyanide of sodium, liquid | Pois. B | 73.345, 73.352 | do | 55 gallons. |
| Cyanide of sodium, solid | Pois. B | 73.370 | do | 200 pounds. |
| Cyanogen bromide | Pois. B | No exemption, 73.379 | do | 25 pounds. |
| Cyanogen chloride containing less than 0.9 percent water. | Pois. A | No exemption, 73.328 | Poison Gas | Not accepted. |
| Cyanogen gas | Pois. A | No exemption, 73.328 | do | Do. |
| Cyclohexane | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration. | Oxy. M | No exemption, 73.157, 73.158 | Yellow | 25 pounds. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Cyclohexanone peroxide not over 30 percent concentration. | Oxy. M | 73.153, 73.154 | Yellow | 25 pounds. |
| Cyclohexenyl trichlorosilane | Cor. L | No exemption, 73.280 | White | 10 gallons. |
| Cyclohexyl trichlorosilane | Cor. L | No exemption, 73.280 | do | Do. |
| Cyclopentane | F. L | 73.118, 73.119 | Red | Do. |
| Cyclopentane, methyl | F. L | 73.118, 73.119 | do | Do. |
| Cyclopropane | F. G | 73.306, 73.304 | Red Gas | 300 pounds. |
| *Cyclotrimethylenetrinitramine, desensitized.* See High explosives. | | | | |
| *Cyclotrimethylenetrinitramine, wet with not less than 10 percent of water.* See High explosives. | | | | |
| Cylinders, empty | See § 73.29 | | | |
| Decaborane | F.S | No exemption, 73.236 | Yellow | 25 pounds. |
| Delay electric igniters | Expl. C | No exemption, 73.106 | | 150 pounds. |
| Denatured alcohol. *See* Alcohol, n.o.s. | | | | |
| *Depth bombs.* See Explosive bomb. | | | | |
| Detonating fuses, class A explosives | Expl. A | No exemption, 73.69 | | Not accepted. |
| Detonating fuses, class A explosives, radioactive. | Expl. A | No exemption, 73.69 | | Do. |
| Detonating fuzes, class C explosives. | Expl. C | No exemption, 73.113 | | 150 pounds. |
| Detonating primers | Expl. A | No exemption, 73.68 | | Not accepted. |
| *Diatodinitrophenol.* See Initiating explosive. | | | | |
| Dichlorethylene | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Dichlorodifluoromethane | Nonf. G | 73.304, 73.304, 73.314, 73.315 | Green | 300 pounds. |
| ϕDichlorodifluoromethane-dichlorotetrafluoroethane mixture. | Nonf. G | 73.306, 73.304, 73.314, 73.315 | do | Do. |
| ϕDichlorodifluoromethane-monochlorodifluoromethane mixture. | Nonf. G | 73.306, 73.304, 73.314 | do | Do. |
| ϕDichlorodifluoromethane-trichloromonofluoromethane-monochlorodifluoromethane mixture. | Nonf. G | 73.306, 73.304, 73.314 | do | Do. |
| ϕDichlorodifluoromethane-trichlorotrifluoroethane mixture. | Nonf. G | 73.306, 73.304, 73.314 | do | Do. |
| *Dichlorodifluoromethane-monofluorotrichloromethane mixture. | Nonf. G | 73.306, 73.314, 73.315 | do | Do. |
| Dichlorodifluoromethane and difluoroethane mixture (*constant boiling mixture*). | Nonf. G | 73.806, 73.304, 73.314, 73.315 | do | Do. |
| Dicumyl peroxide, solid | Oxy. M | 73.153, 73.154 | Yellow | 25 pounds. |
| Dicumyl peroxide, 50 percent solution. | Oxy. M | 73.153 (b), 73.224 | do | 1 quart. |
| Diethyl aluminum chloride | F.L | No exemption, 73.134 | Red | 2 ounces. |
| Diethyl dichlorosilane | Cor. L | No exemption, 73.280 | White | 10 gallons. |
| Diethylamine | F. L | 73.118, 73.119 | Red | Do. |
| *Diethylene glycol dinitrate* | See § 73.51 (d). | | | |
| Difluoroethane | F.G | 73.306, 73.304, 73.314, 73.315 | Red Gas | 300 pounds. |
| Difluoromonochloroethane | F. G | 73.306, 73.304, 73.314 | do | Do. |
| Difluorophosphoric acid, anhydrous. | Cor. L | No exemption, 73.275 | White | 1 gallon. |
| *Di iso octyl acid phosphate | Cor. L | 73.244, 73.296 | do | 1 quart. |
| Diisopropylbenzene hydroperoxide. | Oxy. M | 73.153(b), 73.224 | Yellow | Do. |
| Dimethylamine, anhydrous | F. G | 73.306, 73.304, 73.314, 73.315 | Red Gas | 300 pounds. |
| Dimethylamine, aqueous solution | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Dimethyldichlorosilane | F. L | No exemption, 73.135 | do | Do. |
| Dimethylhexane dihydroperoxide | Oxy. M | No exemption, 73.157, 73.158 | Yellow | 25 pounds. |
| Dimethylhydrazine, unsymmetrical. | F.L | No exemption, 73.145 | Red | 5 pints. |
| Dimethyl ether | F. G | 73.306, 73.304, 73.314 | Red Gas | 300 pounds. |
| Dimethyl sulfate | Cor. L | No exemption, 73.255 | White | 1 quart. |
| Dimethyl sulfide | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Dinitrobenzol, solid | Pois. B | 73.364, 73.371 | Poison | 200 pounds. |
| Dinitrobenzol, liquid | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| Dinitrochlorbenzol, solid (*dinitrochlorobenzene, chlorodinitrobenzol*). | Pois. B | 73.364, 73.365 | do | 200 pounds. |
| Dinitrophenol solutions | Pois. B | 73.345, 73.362a | do | 65 pounds. |
| Diphenyl dichlorosilane | Cor. L | No exemption, 73.280 | White | 10 gallons. |
| Diphenylaminechlorarsine, gas, liquid or solid. | Pois. C | No exemption, 73.382 | Tear Gas | 75 pounds. |
| Diphenylchlorarsine, solid | Pois. C | No exemption, 73.382 | do | 20 pounds. |
| Diphosgene. *See* Phosgene. | | | | |
| *Dispersant gas, n.o.s.* | See §§ 73.314(c) table Note 13, 73.315(a) table Note 9. | | | |
| *Distillate | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Dodecyltrichlorosilane | Cor. L | No exemption, 73.280 | White | Do. |
| *Dressing, leather | F. L | 73.118, 73.119 | Red | Do. |
| *Driers, paint, varnish, enamel, etc. *See* *Paint driers, liquid. | | | | |
| Drill cartridges | See § 73.55 | | | |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. | F. L | 73.118, 73.119 | Red | Do. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. | F. S | 73.153, 73.154 | Yellow | 100 pounds. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. | Oxy. M | 73.153, 73.154 | do | Do. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. | Cor. L | 73.244, 73.245 | White | 1 quart. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. | Pois. B | 73.345 73.346 | Poison | 55 gallons. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. (liquid). | Pois. B | 73.364, 73.365 | do | 200 pounds. |
| *Drugs, chemicals, medicines or cosmetics, n. o. s. (solid). | | | | |
| Drums, empty | See § 73.29 | | | |
| Dummy cartridges | See § 73.55 | | | |
| Dusts, by-product, poisonous. *See* Arsenical dust. | | | | |
| *Dynamite.* See High explosives. | | | | |
| Electric blasting caps—more than 1,000. | Expl. A | No exemption, 73.66 | | Not accepted. |
| Electric blasting caps—1,000 or less. | Expl. C | No exemption, 73.106 | | See § 73.86. |
| Electric squibs | Expl. C | No exemption, 73.106 | | 150 pounds. |
| Electric storage batteries, wet. *See* Batteries, electric storage, wet. | | | | |
| Electrolyte (acid), battery fluid | Cor. L | 73.244, 73.257 | White | 5 gallons. |
| Electrolyte (acid) or alkaline corrosive battery fluid packed with storage batteries. | Cor. L | No exemption, 73.258 | do | 2 gallons. |
| Electrolyte (acid) or alkaline corrosive battery fluid packed with battery charger, radio current supply device, or electronic equipment and actuating devices. | Cor. L | No. exemption, 73.259 | do | 6 quarts. |
| Empty cartridge bags with black powder igniters. | Expl. C | No exemption, 73.106 | | 150 pounds. |
| Empty cartridge cases, primed | Expl. C | No exemption, 73.107 | | Do. |
| *Enamel. *See* *Paint, enamel, lacquer, stain, shellac, varnish, etc. | | | | |
| Engine starting fluid | F.G | No exemption, 73.304 | Red Gas | 60 pounds. |
| Engines, internal combustion | See § 73.120 | | | |
| *Eradicators, paint or grease, liquid | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Etching acid liquid, n.o.s. | Cor. L | No exemption, 73.299 | White | 10 pounds. |
| Ethane | F. G | 73.306, 73.304 | Red Gas | 300 pounds. |
| Ether | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Ether, ethyl (*sulfuric*). *See* Ether. | | | | |
| Ethyl acetate | F. L | 73.118, 73.119 | do | Do. |
| Ethyl alcohol. *See* Alcohol, n.o.s. | | | | |
| Ethyl aldehyde. *See* Acetaldehyde. | | | | |
| Ethyl aluminum dichloride | F.L | No exemption, 73.134 | Red | 2 ounces. |
| Ethyl aluminum sesquichloride | F.L | No exemption, 73.134 | do | Do. |
| Ethyl chloride | F. L | No exemption, 73.123 | do | 300 pounds in cylinders, 15 pounds in other containers. |
| Ethyl dichlorosilane | F. L | No exemption, 73.135 | do | 10 gallons. |
| Ethyl chlorocarbonate. *See* Ethyl chloroformate. | | | | |
| Ethyl chloroformate | Cor. L | No exemption, 73.288 | White | 5 pints. |
| Ethyldichlorarsine | Pois. A | No exemption, 73.328 | Poison Gas | Not accepted. |
| β Ethylene | F. G | 73.306, 73.304 | Red Gas | 300 pounds. |
| Ethylene dichloride | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Ethylene imine, inhibited | F. L | No exemption, 73.139 | do | 5 pints. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Ethylene oxide | F. L | No exemption, 73.124 | Red | 300 pounds in cylinders, 15 pounds in other containers. |
| Ethyl formate | F. L | 73.118, 73.119 | do | 10 gallons. |
| Ethyl phenyl dichlorosilane | Cor. L | No exemption, 73.280 | White | Do. |
| Ethyl mercaptan | F. L | No exemption, 73.141 | Red | Do. |

| Methyl bromide and nonflammable, nonliquefied compressed gas mixtures, liquid. | Pois. B | No exemption, 73.353 | Poison | 300 pounds. |
| Methyl bromide, liquid (*bromomethane*). | Pois. B | No exemption, 73.353 | do | 55 gallons. |
| ❡ Methyl chloride | F. G | 73.306, 73.304, 73.314, 73.315 | Red Gas | 300 pounds. |
| Methyl chloride-methylene chloride mixture. | F.G | 73.306, 73.304, 73.314 | do | Do. |
| Methyl chloroformate | Cor. L | No exemption, 73.288 | White | 5 pints. |
| Methylchloromethyl ether, anhydrous. | F. L | No exemption, 73.143 | Red | Not accepted. |
| Methyldichlorarsine | Pois. A | No exemption, 73.328 | Poison Gas | Do. |
| Methyl dichlorosilane | F. L | No exemption, 73.136 | Red | 10 gallons. |
| Methyl ethyl ketone | F. L | 73.118, 73.119 | do | Do. |
| Methyl formate | F. L | 73.118, 73.119 | do | Do. |
| Methyl hydrate. See Alcohol or Alcohol, n. o. s. | | | | |
| Methylhydrazine | F. L | No exemption, 73.145 | Red | 5 pints. |
| Methyl iso-propenyl ketone, inhibited. | F. L | 73.118, 73.119 | do | 10 gallons. |
| Methyl magnesium bromide in ethyl ether in concentrations not over 40 percent. | F.L | No exemption, 73.134 | do | 2 ounces. |
| Methyl mercaptan | F.G | 73.302, 73.308, 73.314, 73.315 | Red Gas | 300 pounds. |
| Methyl methacrylate monomer | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Methyl parathion, liquid | Pois. B | No exemption, 73.358 | Poison | 1 quart. |
| Methyl parathion mixture, dry | Pois. B | 73.377 | do | 200 pounds. |
| Methyl parathion mixture, liquid | Pois. B | 73.359 | do | 1 quart |
| Methyltrichlorosilane | F. L | No exemption, 73.135 | Red | 10 gallons. |
| Methyl vinyl ketone, inhibited | F. L | 73.147 | do | Do. |
| Mild detonating fuse, metal clad | Expl. C | No exemption, 73.104 | | 300 pounds. |
| *Mine rescue equipment* | See §§ 73.306 (a)(2) and 76.703(d). | | | |
| Mines, empty | See § 73.55 | | | |
| *Mines, explosive, with gas material.* See Explosive mine. | See § 73.56 (d) | | | |
| Mixed acid. *See* Nitrating (mixed) acid. | | | | |
| *Mixtures of hydrofluoric and sulfuric acids.* See Hydrofluoric and sulfuric acids, mixtures. | | | | |
| *Mixtures or solutions of liquefied nonflammable gases and liquids other than those classified as flammable, corrosive, or poisonous charged with nitrogen, carbon dioxide, or air.* See Compressed gases, n. o. s. | | | | |
| Monobromotrifluoromethane | Nonf. G | 73.306, 73.304, 73.314 | Green | 300 pounds. |
| Monochloroacetic acid, liquid | Cor. L | 73.244, 73.294 | White | 1 quart. |
| Monochloroacetone, stabilized | Pois. C | No exemption, 73.384 | Tear Gas | 5 gallons. |
| Monochloracetone (unstabilized) | Not accepted. | | | Not accepted. |
| Monochlorodifluoromethane | Nonf. G | 73.306, 73.304, 73.314, 73.315 | Green | 300 pounds. |
| Monochloroethylene. *See* Vinyl chloride. | | | | |
| Monochloropentafluoroethane | Nonf. G | 73.306, 73.304 | do | Do. |
| Monochlorotetrafluoroethane | Nonf. G | 73.306, 73.304, 73.314 | do | Do. |
| Monochlorotrifluoromethane | Nonf. G | 73.306, 73.304 | do | Do. |
| Monoethylamine | F.L | 73.118, 73.148 | Red | 10 gallons. |
| Monofluorophosphoric acid, anhydrous. | Cor. L | No exemption, 73.275 | White | 1 gallon. |
| Monomethylamine, anhydrous | F. G | 73.306, 73.304, 73.314, 73.315 | Red Gas | 300 pounds |
| Monomethylamine, aqueous solution. | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Mortar stain, liquid | F. L | 73.118, 73.128 | do | 55 gallons. |
| ❡ Motion-picture film, *nitrocellulose base, including mixed shipments with nonflammable film.* | F. S | No exemption, 73.177 | Yellow | 200 pounds |
| Motion-picture film, old and worn out (*nitrocellulose*). | F. S | No exemption, 73.178 | do | 200 pounds. |
| Motion-picture film, old and worn out (*slow-burning*). | See § 73.181 (a) (1). | | | |
| ❡ Motion-picture outfits, toy | See § 73.181 (a) (4). | | | |
| ❡ Motion-picture film (*processed, positive or negative, nitrocellulose*). | F. S | No exemption, 73.177 | Yellow | 200 pounds. |
| ❡ Motion-picture film (*processed, positive or negative, slow-burning*). | See § 73.181 (a) (1). | | | |
| Motion-picture film scrap (*nitrocellulose*), samples of. | F. S | No exemption, 73.195 | Yellow | 25 pounds. |
| Motion-picture film scrap (*nitrocellulose*), *other than samples.* | F. S | No exemption, 73.195 | do | Not accepted. |
| Motion-picture film scrap (*slow-burning*). | See § 73.181 (a) (2). | | | |
| ❡ Motion-picture film, toy, (*nitrocellulose*). | F. S | No exemption, 73.179 | Yellow | 200 pounds. |
| ❡ Motion-picture film, toy (*slow-burning*). | See § 73.181 (a) (1). | | | |
| ❡ Motion-picture film, toy pieces (*nitrocellulose*). | See § 73.181 (a) (3). | | | |
| Motion-picture film, unexposed (*nitrocellulose base*). | F. S | 73.180 | Yellow## | 250 pounds. |
| Motion-picture film, unexposed (*slow-burning*). | See § 73.181 (a) (1). | | | |
| Motorcycles | See § 73.120. | | | |
| Motor fuel antiknock compound | Pois. B | No exemption, 73.354 | Poison | 55 gallons. |
| *Motor fuel, n. o. s. | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Motors, internal combustion | See § 73.120. | | | |
| Muriatic acid. *See* Hydrochloric acid. | | | | |
| Mustard gas | Pois. A | No exemption, 73.328 | Poison Gas | Not accepted. |
| *Naphtha | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Naphtha distillate | F. L | 73.118, 73.119 | do | Do. |
| *Naphtha, petroleum. *See* *Petroleum naphtha. | | | | |
| *Naphtha, solvent | F. L | 73.118, 73.119 | do | Do. |
| *Natural gasoline. See* Gasoline. | | | | |
| Neohexane | F. L | 73.118, 73.119 | do | Do. |
| Neon gas | Nonf. G | 73.306, 73.302 | Green | 300 pounds. |
| *New explosives or explosive devices* | See §§ 73.51 (c) 73.86, and 74.502 (a) (8). | | | |
| Nickel carbonyl | F. L | No exemption, 73.126 | Red | Not accepted. |
| *Nickel catalyst, finely divided, activated or spent. | F. S | No exemption, 73.233 | Yellow | 100 pounds. |
| Nickel cyanide, solid | Pois. B | 73.370 | Poison | 200 pounds. |
| Nicotine hydrochloride | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| Nicotine, liquid | Pois. B | 73.345, 73.346 | do | Do. |
| Nicotine salicylate | Pois. B | 73.364, 73.365 | do | 200 pounds. |
| Nicotine sulfate, liquid | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| Nicotine sulfate, solid | Pois. B | 73.364, 73.365 | do | 200 pounds. |
| Nicotine tartrate | Pois. B | 73.364, 73.365 | do | Do. |
| Nitrate of aluminum. *See* Aluminum nitrate. | | | | |
| Nitrate of ammonia. *See* Ammonium nitrate. | | | | |
| *Nitrate of ammonia explosives. See* High explosives. | | | | |
| Nitrate of ammonia fertilizer. *See* Ammonium nitrate fertilizer, containing 90 percent or more ammonium nitrate with no organic coating. | | | | |
| Nitrate of barium. *See* Barium nitrate. | | | | |
| Nitrate of lead. *See* Lead nitrate. | | | | |
| Nitrate of potash. *See* Potassium nitrate. | | | | |
| Nitrate of soda. *See* Sodium nitrate. | | | | |
| Nitrate of soda and potash | Oxy. M | 73.153, 73.182 | Yellow | 100 pounds. |
| Nitrate of soda bags, empty, unwashed. *See* Bags, nitrate of soda, empty and unwashed. | | | | |
| Nitrate of strontia. *See* Strontium nitrate. | | | | |
| Nitrates, n. o. s | Oxy. M | 73.153, 73.182 | do | Do. |
| Nitrating (mixed) acid | Cor. L | No exemption, 73.267 | White | 2½ pints. |
| Nitric acid | Cor. L | No exemption, 73.268 | do | 5 pints. |
| *Nitric ether. See* Ethyl nitrate. | | | | |
| Nitric oxide | Pois. A | No exemption, 73.337 | Poison Gas | Not accepted. |
| Nitrite of soda. *See* Sodium nitrite. | | | | |
| Nitrobenzol, liquid (*oil of mirbane*) | Pois. B | 73.345, 73.346 | Poison | 55 gallons. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Nitro carbo nitrate | Oxy. M | 73.153, 73.182 | Yellow | 100 pounds. |

| Propellant explosives (solid), class B. | do | do | do# | Do. |
| *Propellant explosives (solid), class B, and small-arms primers. See* Propellant explosives, class B. | | | | |
| Propellant explosives in water (*smokeless powder for cannon or small arms*). | Expl. B | No exemption, 73.93 | | Not accepted. |
| Propellant explosives in water unstable, condemned or deteriorated (*smokeless powder for cannon or small arms*). | Expl. B | No exemption, 73.93 | | Do. |
| *Propylalcohol. *See* Alcohol, n. o. s. | | | | |
| Propylene imine, inhibited | F. L | No exemption, 73.139 | Red | 5 pints. |
| Propyl mercaptan | F. L | No exemption, 73.141 | do | 10 gallons. |
| Propyl trichlorosilane | Cor. L | No exemption, 73.280 | White | Do. |
| Propylene. *See* Liquefied petroleum gas. | | | | |
| Propylene oxide | F. L | 73.118, 73.119 | Red | Do. |
| *Prussic acid. See* Hydrocyanic acid. | | | | |
| *Pyridine | F. L | 73.118, 73.119 | do | Do. |
| Pyroforic fuel | F. L | No exemption, 73.134 | do | 2 ounces. |
| Pyro ore solutions | do | No exemption, 73.134 | do | Do. |
| Pyro sulfuryl chloride | Cor. L | 73.244, 73.247 | White | 1 quart. |
| *Pyroxylin cement. *See* Cement, pyroxylin. | | | | |
| Pyroxylin plastic scrap | F. S | No exemption, 73.195, 73.196. | Yellow | See § 73.196. |
| Pyroxylin plastics, rods, sheets, rolls, tubes. | F. S | 73.197 | do## | 350 pounds. |
| *Pyroxylin solution | F. L | 73.118, 73.119 | Red | 10 gallons. |
| *Pyroxylin solvent, n. o. s | F. L | 73.118, 73.119 | do | Do. |
| *Radio current supply device with electrolyte (acid) or battery fluid.* | See § 73.259 | | | |
| Radioactive materials, n. o. s | Pois. D | 73.392, 73.393, 73.394 | Poison Radioactive materials (Blue or Red). | See § 73.391 (b) and (c). |
| Rags, oily | F. S | No exemption. 73.199 | Yellow | Not accepted. |
| Rags, wet | F. S | No exemption, 73.200 | do | Do. |
| Railway fusees | Expl. C | No exemption, 73.108 | | 200 pounds. |
| Railway torpedoes | Expl. B | No exemption, 73.91 | Special fireworks.## | Do. |
| *Reducing compounds, paint, varnish, lacquer, etc. *See* *Compounds, lacquer, paint, or varnish, etc., removing, reducing or thinning, liquid. | | | | |
| *Refrigerant gas n.o.s.* | See §§ 73.314 (c) table Note 13, 73.315(a) table Note 9. | | | |
| Refrigerating machines | See § 73.130, 73.306. | | | |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| *Removing compounds, paint, varnish, lacquer, etc. *See* *Compounds, lacquer, paint, or varnish, etc., removing, reducing or thinning, liquid. | | | | |
| *Resin solution (*resin compound, liquid*). | F.L | 73.118, 73.119 | Red | 55 gallons. |
| Resinate of cobalt, precipitated. *See* Cobalt resinate, precipitated. | | | | |
| Rifle grenades | Expl. A | No exemption, 73.56 | | Not accepted. |
| *Rifle powder. See* Propellant explosives, class A, Propellant explosives, class B, or Black powder. | | | | |
| *Road asphalt or tar, liquid | F. L | 73.118, 73.131 | Red | 10 gallons. |
| *Rocket fireworks. See* Common fireworks. | | | | |
| Rocket ammunition with empty projectiles. | Expl. B | No exemption, 73.90 | | Not accepted. |
| Rocket ammunition with explosive projectiles. | Expl. A | No exemption, 73.57 | | Do. |
| Rocket ammunition with illuminating projectiles. | Expl. A | No exemption, 73.57 | | Do. |
| Rocket ammunition with gas projectiles. | Expl. A | No exemption, 73.57 | | Do. |
| Rocket ammunition with incendiary projectiles. | Expl. A | No exemption, 73.57 | | Do. |
| Rocket ammunition with inert-loaded projectiles. | Expl. B | No exemption, 73.90 | | Do. |
| Rocket ammunition with smoke projectiles. | Expl. A | No exemption, 73.57 | | Do. |
| Rocket ammunition with solid projectiles. | Expl. B | No exemption, 73.90 | | Do. |
| Rocket ammunition without projectiles. | Expl. B | No exemption, 73.90 | | Do. |
| *Rocket bodies, with electric primers or electric squibs.* | See § 73.55 | | | |
| Rocket heads. *See* Explosive projectiles. | | | | |
| *Roman candles. See* Common fireworks. | | | | |
| *Rough ammoniate tankages | F.S | No exemption, 73.210 | Yellow | Do. |
| *Rubber cement. *See* *Cement, rubber. | | | | |
| *Rubber scrap or rubber buffings | F. S | 73.153, 73.201 | do | 10 pounds. |
| *Rubber shoddy, regenerated rubber, or reclaimed rubber. | F. S | 73.153, 73.201 | do | Do. |
| *Rum, denatured | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Safety fuse | See § 73.100 (o). | | | |
| Safety squibs | Expl. C | No exemption, 73.108 | | 150 pounds. |
| Saltpeter. *See* Potassium nitrate. | | | | |
| Saltpeter, Chile. *See* Sodium nitrate. | | | | |
| *Salutes. See* Common fireworks and Special fireworks. | | | | |
| *Samples of explosives* | See § 73.86 | | | |
| *Samples, New explosives* | See § 73.86 | | | |
| *Samples of explosives and explosive articles.* | See § 73.86 | | | |
| *Scheele's green. See* Copper arsenite. | | | | |
| *Self-lighting cigarettes* | See § 73.21(d) | | | |
| *Self-propelled vehicles* | See §§ 73.120, 73.257, 73.306. | | | |
| *Shaped charges, commercial. See* High explosives. | See § 73.55 (b) | | | |
| *Shellac. *See* *Paint, enamel, lacquer, stain, shellac, varnish, etc. | | | | |
| Shellac, liquid | F. L | 73.118, 73.128 | Red | 55 gallons. |
| *Shells, fireworks. See* Common fireworks or Special fireworks. | | | | |
| Ship distress signals. *See* Special fireworks. | | | | |
| Signal flares | Expl. C | No exemption, 73.108 | | 200 pounds. |
| Silicon chloride (*tetrachloride*) | Cor. L | 73.244, 73.247 | White | 1 gallon. |
| Silicon tetrafluoride | Nonf. G | 73.306, 73.302 | Green | 300 pounds. |
| Silver cyanide | See § 73.370 | | | |
| Silver nitrate | Oxy. M | 73.153, 73.182 | Yellow | 100 pounds. |
| *Sludge acid | Cor. L | No exemption, 73.248 | White | 1 quart. |
| Small-arms ammunition | Expl. C | No exemption, 73.101 | | 150 pounds. |
| Small-arms ammunition, tear gas cartridges. | Expl. C | No exemption, 73.101 | Tear gas | Do. |
| Small-arms primers | Expl. C | No exemption, 73.107 | | Do. |
| *Smoke generators. See Chemical ammunition, class B or C.* | | | | |
| Smoke candles | Expl. C | No exemption, 73.108 | | 200 pounds. |
| Smoke grenades | Expl. C | No exemption, 73.108 | | Do. |
| *Smokeless powder for cannon or small arms. See* Propellant explosives, class A, or propellant explosives, class B. | | | | |
| Smokeless powder for small arms (100 pounds or less). | See § 73.88(f), §73.197a. | | | |
| Smoke pots | Expl. C | No exemption, 73.108 | | Do |
| *Smoke projectiles with bursting charges. See* Explosive projectile. | | | | |
| *Smoke projectiles with expelling charge but without bursting charge. See* Special fireworks. | | | | |
| Smoke signals | Expl. C | No exemption, 73.108 | | Do. |
| Soda amatol. *See* High explosives. | | | | |
| Sodium aluminate, liquid | Cor. L | 73.244, 73.249 | White | 10 gallons. |
| Sodium aluminum hydride | F. S | No exemption, 73.206 | Yellow | 25 pounds. |
| Sodium amide | F. S | No exemption, 73.205 | Yellow | Do. |
| Sodium azide | Pois. B | 73.364, 73.375 | Poison | 100 pounds. |
| Soda, caustic solution. *See* Caustic soda, liquid. | | | | |
| Sodium arsenate, solid | Pois. B | 73.364, 73.365, 73.368 | do | 200 pounds. |
| Sodium arsenite (solution), liquid | Pois. B | 73.345, 73.346 | do | 55 gallons. |
| Sodium bromate | Oxy. M | 73.153, 73.154 | Yellow | 100 pounds. |
| Sodium cacodylate, solid (*sodium dimethyl arsenate*). | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Sodium chlorate (*soda chlorate*) | Oxy. M | 73.153, 73.163 | Yellow | 100 pounds. |
| Sodium chlorite | Oxy. M | No exemption, 73.160 | do | Do. |
| Sodium chlorite solution (not exceeding 40 percent sodium chlorite). | Cor. L | 73.244, 73.263 | White | 4 gallons. |
| Sodium cyanide. *See* Cyanide of sodium. | | | | |
| Sodium hydride | F. S | No exemption, 73.198 | Yellow | 25 pounds. |
| Sodium hydrosulfite | F. S | 73.153, 73.204 | do | 100 pounds. |
| Sodium hydroxide solution. *See* Caustic soda, liquid. | | | | |
| Sodium, metallic | F. S | No exemption, 73.206 | do | 25 pounds. |
| Sodium, metallic, dispersion in organic solvent. | F. S | No exemption, 73.200 | do | 10 pounds. |
| Sodium, metallic liquid alloy | F. S | No exemption, 73.202 | do | 1 pound. |
| Sodium methylate, dry | F. S | 73.153, 73.154 | do | 100 pounds. |
| *Sodium methylate, alcohol mixture. | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Sodium nitrate | Oxy. M | 73.153, 73.182 | Yellow | 100 pounds. |
| Sodium nitrite | Oxy. M | 73.153, 73.154, 73.234 | do | Do. |
| Sodium nitrite mixed (fused) with potassium nitrate. | Oxy. M | 73.153, 73.183 | do | Do. |
| Sodium nitrite mixtures (*sodium nitrate, sodium nitrite, and potassium nitrate*). | Oxy. M | 73.153, 73.234 | do | Do. |
| Sodium permanganate | Oxy. M | 73.153, 73.154 | do | Do. |
| Sodium peroxide | Oxy. M | No exemption, 73.187 | do | Do. |
| Sodium picramate wet with 20 percent of water. | F. S | No exemption, 73.205 | do | 25 pounds. |
| Sodium potassium alloys | F. S | No exemption, 73.206 | do | Do. |
| *Sodium sulfide | F. S | 73.153, 73.207 | do | 300 pounds. |
| *Solvents, n. o. s | F. L | 73.118, 73.119 | Red | 15 gallons. |
| *Sparklers. See* Common fireworks. | | | | |
| Special fireworks | Expl. B | No exemption, 73.88 (d), 73.91. | Special Fireworks## | 200 pounds. |
| Spent iron mass. *See* Iron mass, spent. | | | | |
| Spent iron sponge. *See* Iron sponge, spent. | | | | |
| Spent mixed acid | Cor. L | No exemption, 73.248 | White | 1 quart. |
| Spent oxide | F. S | No exemption, 73.174 | Yellow | Not accepted. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Spent sulfuric acid | Cor. L | No exemption, 73.248 | White | 1 quart. |
| Spirits of nitroglycerin | F.L | No exemption, 73.133 | Red | 6 quarts. |
| Spirits of nitroglycerin *not exceeding 1 percent nitroglycerin by weight.* | F.L | 73.118, 73.133 | do | Do. |
| *Sporting powder.* *See* Black powder or Propellant explosives, class B explosives. | | | | |
| *Spray starting fluid.* *See* Engine starting fluid. | | | | |

| Vinylidene chloride, inhibited | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Vinyl methyl ether, inhibited | F. G | 73.306, 73.304, 73.314 | Red Gas | 20 pounds. |
| Vinyl trichlorosilane | F. L | No exemption, 73.135 | Red | 10 gallons. |
| War heads. *See* Explosive projectiles. | | | | |
| Waste paper, wet | F. S | No exemption, 73.186 | Yellow | Not accepted. |
| Waste textile, wet | F. S | No exemption, 73.211 | do | Do. |
| Waste wool, wet | F. S | No exemption, 73.213 | do | Do. |
| *Water treatment compound, liquid. | Cor. L | 73.244, 73.249 | White | 10 gallons. |
| *Weed killing compounds, liquid. *See* *Compounds, tree or weed killing, liquid. | | | | |
| Wet hair. *See* Hair, wet. | | | | |
| Wet nitrocellulose, colloided, granular or flakes—20 percent alcohol or solvent; or block—25 percent alcohol. | F.L | 73.118, 73.127 | Red | 25 pounds. |
| Wet nitrocellulose, colloided, granular or flake—20 percent water. | F. S | 73.153, 73.184 | Yellow | 100 pounds. |

| Article | Classed as— | Exemptions and packing (see sec.) | Label required if not exempt | Maximum quantity in 1 outside container by rail express |
|---|---|---|---|---|
| Wet nitrocellulose flakes—20 percent alcohol or solvent. | F.L | 73.118, 73.127 | Red | 25 pounds. |
| Wet nitrocellulose—30 percent alcohol or solvent. | F. L | 73.118, 73.127 | do | Do. |
| Wet nitrocellulose—20 percent water. | F. S | 73.153, 73.184 | Yellow | 100 pounds. |
| Wet nitroguanidine—20 percent water. | F. S | 73.153, 73.184 | do | Do. |
| Wet nitrostarch—20 percent water | F. S | 73.153, 73.184 | do | Do. |
| Wet nitrostarch—30 percent alcohol or solvent. | F. L | 73.118, 73.127 | Red | 25 pounds. |
| Wet paper stock. *See* Paper stock, wet. | | | | |
| Wet rags. *See* Rags, wet. | | | | |
| Wet textile waste. *See* Waste textile, wet. | | | | |
| Wet waste paper. *See* Waste paper, wet. | | | | |
| Wet waste wool. *See* Waste wool, wet. | | | | |
| Wood alcohol (methanol, methyl alcohol). | F.L | 73.118, 73.125 | Red | 10 gallons. |
| *Wood filler. *See* *Paint, enamel, lacquer, stain, shellac, varnish, etc. | | | | |
| *Wood polish. *See* *Polishes, metal, stove, furniture and wood, liquid. | | | | |
| *Wood stain, liquid. *See* *Paint, enamel, lacquer, stain, shellac, varnish, etc. | | | | |
| Wool waste, wet. *See* Waste wool, wet. | | | | |
| X-ray film (*nitrocellulose base*) | F. S | No exemption, 73.177 | Yellow | 200 pounds. |
| X-ray film (*slow-burning*) | See § 73.181 (a) (1). | | | |
| X-ray film scrap (*nitrocellulose base*), samples of. | F. S | No exemption, 73.196 | Yellow | 25 pounds. |
| X-ray film scrap (*nitrocellulose base*), other than samples. | F. S | No exemption, 73.195 | do | Not accepted. |
| X-ray film scrap (*slow-burning*) | See § 73.181 (a) (2). | | | |
| X-ray film, unexposed (*nitrocellulose base*). | F. S | 73.180 | Yellow# | 250 pounds. |
| *Xylol (*xylene*) | F. L | 73.118, 73.119 | Red | 10 gallons. |
| Xylyl bromide | Pois. C | No exemption, 73.382 | Tear Gas | 75 pounds. |
| Zinc ammonium nitrite | Oxy. M | No exemption, 73.228 | Yellow | 100 pounds. |
| Zinc arsenate | Pois. B | 73.364, 73.365 | Poison | 200 pounds. |
| Zinc arsenite, solid | Pois. B | 73.364, 73.365 | do | Do. |
| Zinc chlorate | Oxy. M | 73.153, 73.163 | Yellow | 100 pounds. |
| Zinc cyanide | See § 73.370 | | | |
| Zinc ethyl | F.L | No exemption, 73.134 | Red | 2 ounces. |
| Zinc nitrate. *See* Nitrates, n. o. s. | | | | |
| Zinc permanganate | Oxy. M | 73.153, 73.154 | Yellow | 100 pounds. |
| Zinc peroxide | Oxy. M | 73.153, 73.154 | do | Do. |
| Zirconium metal, dry, *mechanically produced, finer than 270 mesh particle size.* | F.S | No exemption, 73.214 | do | 75 pounds. |
| Zirconium metal, dry, *chemically produced, finer than 20 mesh particle size.* | F.S | No exemption, 73.214 | do | Do. |
| Zirconium metal, wet, *mechanically produced, finer than 270 mesh particle size.* | F.S | No exemption, 73.214 | do | 150 pounds. |
| Zirconium metal, wet, *chemically produced, finer than 20 mesh particle size.* | F.S | No exemption, 73.214 | do | Do. |
| Zirconium, metallic, solutions or mixture thereof, liquid. | F. L | No exemption, 73.140 | Red | 5 pounds. |
| Zirconium picramate, wet *with 20 percent of water.* | Oxy. M | No exemption, 73.216 | Yellow | 25 pounds. |
| Zirconium scrap (borings, clippings, shavings, sheets, or turnings). | F.S | 73.153, 73.220 | do | 100 pounds. |

## PART 73—SHIPPERS

Sec.
73.1 Purpose of the regulations in Parts 71–78 of this chapter.
73.2 Classification; dangerous articles.
73.3 Motor carrier regulations.
73.4 Water carrier regulations.
73.5 Shipments by rail express.
73.6 Shipments as baggage by rail.
73.7 United States Government shipments.
73.8 Canadian shipments.
73.9 Import and export shipments.
73.10 Inefficient containers.
73.11 Violations and accidents to be reported.

**Subpart A—Preparation of Articles for Transportation by Carriers by Rail Freight, Rail Express, Highway, or Water**

73.21 Prohibited packing.
73.22 Specification containers prescribed.
73.23 Closures for containers.
73.24 Design of containers.
73.25 Specification containers in outside containers.
73.26 Quantity limitations.
73.27 Rail express limitations.
73.28 Reused containers.
73.29 Empty containers.
73.30 Loading and placarding of cars by shippers and unloading of cars by consignees.
73.31 Qualification, maintenance, and use of tank cars.
73.32 Qualification, maintenance, and use of portable tanks.
73.33 Qualification, maintenance, and use of cargo tanks.
73.34 Qualification, maintenance, and use of cylinders.

**Subpart B—Explosives; Definitions and Preparation**

73.50 An explosive.
73.51 Forbidden explosives.
73.52 Acceptable explosives.

CLASS A EXPLOSIVES; DEFINITIONS

73.53 Definition of class A explosives.
73.54 Ammunition for cannon.
73.55 Ammunition, nonexplosive.
73.56 Ammunition, projectiles, grenades, bombs, mines, gas mines, and torpedoes.
73.57 Rocket ammunition.
73.58 Ammunition for small arms.
73.59 Chemical ammunition, explosive.
73.60 Black powder and low explosives.
73.61 High explosives.
73.62 High explosives, liquid.
73.63 High explosives with liquid explosive ingredient.
73.64 High explosives with no liquid explosive ingredient and propellant explosives, class A.
73.65 High explosives with no liquid explosive ingredient nor any chlorate.
73.66 Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps.
73.67 Blasting caps with safety fuse and blasting caps with metal clad mild detonating fuse.
73.68 Detonating primers.
73.69 Detonating fuzes class A, with or without radioactive components, detonating fuze parts containing an explosive, boosters, bursters, or supplementary charges.
73.70 Diazodinitrophenol or lead mononitroresorcinate.
73.71 Fulminate of mercury.
73.72 Guanyl nitrosamino guanylidene hydrazine.
73.73 Lead azide.
73.74 Lead styphnate.
73.75 Nitro mannite.
73.76 Nitrosoguanidine.
73.77 Pentaerythrite tetranitrate.
73.78 Tetrazene.
73.79 Jet thrust units (jato), explosive, class A or igniters jet thrust (jato), explosive, class A.
73.80 Charged oil well jet perforating guns.
73.86 Samples of explosives and explosive articles.
73.87 Explosives in mixed packing.

CLASS B EXPLOSIVES; DEFINITIONS

73.88 Definition of class B explosives.
73.89 Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, or without projectiles or shell.
73.90 Rocket ammunition with empty projectiles, inert-loaded or solid projectiles, or without projectiles.
73.91 Special fireworks.
73.92 Jet thrust units (jato), class B or igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B.
73.93 Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, and propellant explosives (liquid).
73.94 Explosive power devices, class B.

CLASS C EXPLOSIVES; DEFINITIONS

73.100 Definition of class C explosives.
73.101 Small-arms ammunition.
73.102 Explosive cable cutters, explosive power devices, class C, explosive release devices, or starter cartridges, jet engine, class C.
73.103 Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps, not exceeding 1,000 caps.
73.104 Cordeau detonant fuse, mild detonating fuse, metal clad or flexible linear shaped charges, metal clad.
73.105 Percussion, tracer, combination, time fuzes and tracers.
73.106 Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse lighters or fuse igniters.
73.107 Primers, percussion caps, and empty grenades, primed.
73.108 Common fireworks, signal flares, hand signal devices, railway or highway fusees, smoke signals, smoke candles, smoke grenades, smoke pots, and Very signal cartridges.
73.109 Toy caps.
73.110 Charged oil well jet perforating guns, total explosive content in guns not exceeding 20 pounds per motor vehicle.
73.111 Cigarette loads, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick noise makers, explosive.
73.112 Oil well cartridges.
73.113 Detonating fuzes, class C explosives.
73.114 Actuating cartridges, explosive, fire extinguisher or valve.

**Subpart C—Flammable Liquids; Definition and Preparation**

73.115 Flammable liquids; definition.
73.116 Outage.
73.117 Closing and cushioning.
73.118 Exemptions for flammable liquids.
73.119 Flammable liquids not specifically provided for.
73.120 Automobiles, motorcycles, tractors, or other self-propelled vehicles.
73.121 Carbon bisulfide (disulfide).
73.122 Acrolein, inhibited.
73.123 Ethyl chloride.
73.124 Ethylene oxide.
73.125 Alcohol.
73.126 Nickel carbonyl.
73.127 Nitrocellulose or collodion cotton, fibrous, or nitrostarch, wet; nitrocellulose flakes, colloided nitrocellulose, granular, flake, or block, and lacquer base or lacquer chips, wet.
73.128 Paints and related materials.
73.129 Polishes, metal, stove, furniture and wood, liquid.
73.130 Refrigerating machines.
73.131 Road asphalt, or tar, liquid.
73.132 Cement, liquid, n.o.s. container cement, linoleum cement, pyroxylin cement, rubber cement, tile cement, wallboard cement and coating solution.
73.133 Spirits of nitroglycerin.
73.134 Aluminum triethyl, aluminum trimethyl, pyroforic fuel, pyroforic solutions, zinc ethyl, and triisobutyl aluminum, ethyl aluminum sesquichloride, diethyl aluminum chloride, ethyl aluminum dichloride, methyl aluminum sesquichloride, methyl aluminum sesquibromide, methyl magnesium bromide in ethyl ether in concentrations not over 40 percent, and mixtures or solutions thereof.
73.135 Dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane.
73.136 Methyl dichlorosilane and trichlorosilane.
73.137 Lithium aluminum hydride, ethereal.
73.138 Pentaborane.
73.139 Ethylene imine, inhibited, and propylene imine, inhibited.
73.140 Zirconium, metallic, solutions, or mixtures thereof, liquid.
73.141 Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures.
73.143 Methylchloromethyl ether, anhydrous.
73.144 Inks.
73.145 Dimethylhydrazine, unsymmetrical, and methylhydrazine.
73.146 Heaters for refrigerator cars, liquid fuel type.
73.147 Methyl vinyl ketone, inhibited.
73.148 Monoethylamine.

**Subpart D—Flammable Solids and Oxidizing Materials; Definition and Preparation**

73.150 Flammable solid; definition.
73.151 Oxidizing material; definition.
73.152 Packing.
73.153 Exemptions for flammable solids and oxidizing materials.
73.154 Flammable solids and oxidizing materials not specifically provided for.
73.155 Bags, nitrate of soda, empty and unwashed.
73.156 Barium peroxide and calcium peroxide.
73.157 Benzoyl peroxide, chlorobenzoyl peroxide (para), cyclohexanone peroxide, dimethylhexane dihydroperoxide, lauroyl peroxide, or succinic acid peroxide, wet.
73.158 Benzoyl peroxide, dry, chlorobenzoyl peroxide (para), dry, cyclohexanone peroxide, dry, dimethylhexane dihydroperoxide, dry, lauroyl peroxide, dry, or succinic acid peroxide, dry.
73.159 Burnt cotton.
73.160 Calcium chlorite and sodium chlorite.
73.161 Calcium phosphide.
73.162 Charcoal.
73.163 Chlorate of soda, chlorate of potash, and other chlorates.
73.164 Chromic acid.
73.165 Coal, ground bituminous, sea coal, coal facings.

Sec.
73.166 Cobalt resinate, precipitated, calcium resinate, and calcium resinate fused.
73.167 Cotton waste, oily.
73.168 Lithium amide, powdered.
73.169 Fiber, burnt.
73.170 Fibers or fabrics impregnated, saturated or coated.
73.171 Fish scrap or fish meal.
73.172 Hair, wet.
73.173 Aluminum dross or magnesium dross.
73.174 Iron sponge, spent oxide, spent iron mass, or spent iron sponge.
73.175 Lacquer base, or lacquer chips, dry.
73.176 Matches.
73.177 Motion-picture film and X-ray film.
73.178 Motion-picture film; old and worn out (not scrap).
73.179 Motion-picture film, toy.
73.180 Motion-picture film, and X-ray film, unexposed.
73.181 Motion-picture film; exemptions.
73.182 Nitrates.
73.183 Potassium nitrate mixed (fused) with sodium nitrite.
73.184 Nitrocellulose or collodion cotton, wet, or nitrocellulose, colloided, granular, or flake, wet, or nitrostarch, wet, or nitroguanidine, wet.
73.185 Paper stock, wet.
73.186 Paper waste, wet.
73.187 Peroxide of sodium.
73.188 Phosphoric anhydride.
73.189 Phosphorus, amorphous, red.
73.190 Phosphorus, white or yellow.
73.191 Phosphorus pentachloride.
73.192 Picrate of ammonia (ammonium picrate), picric acid, trinitrobenzoic acid, and urea nitrate wet.
73.193 Picric acid, trinitrobenzoic acid, or urea nitrate, wet.
73.194 Potassium permanganate.
73.195 Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film.
73.196 Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film, shipments by rail express.
73.197 Pyroxylin plastics, in sheets, rolls, rods, or tubes.
73.197a Smokeless powder for small arms.
73.198 Sodium hydride.
73.199 Rags, oily.
73.200 Rags, wet.
73.201 Rubber scrap, rubber buffings, reclaimed rubber, or regenerated rubber.
73.202 Sodium and potassium, metallic liquid alloy.
73.203 Tetranitromethane.
73.204 Sodium hydrosulfite.
73.205 Sodium picramate, wet.
73.206 Sodium or potassium, metallic, sodium amide, sodium potassium alloys, sodium aluminum hydride, lithium metal, lithium silicon, lithium hydride, and lithium aluminum hydride.
73.207 Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground.
73.208 Titanium metal powder, wet or dry.
73.209 Tankages, garbage, and tankage fertilizers.
73.210 Tankages, rough ammoniate.
73.211 Textile waste, wet.
73.212 Trinitrobenzene and trinitrotoluene, wet.
73.213 Wool waste, wet.
73.214 Hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, chemically produced (See Note 1), finer than 20 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, chemically produced (See Note 1), finer than 20 mesh particle size.
73.216 Zirconium picramate, wet.
73.217 Calcium hypochlorite compounds, dry, and lithium hypochlorite compounds, dry.
73.218 Isopropyl percarbonate, unstabilized.
73.219 Potassium perchlorate.
73.220 Magnesium or zirconium scrap consisting of borings, clippings, shavings, sheets, turnings, or scalpings, and magnesium metallic (other than scrap), powdered pellets, turnings, or ribbon.
73.221 Liquid organic peroxides, n. o. s. and liquid organic peroxide solutions, n. o. s. other than acetyl peroxide solution, acetyl benzoyl peroxide solution, cumene hydroperoxide, dicumyl peroxide, hydrogen peroxide, peracetic acid, and tertiary butylisopropyl benzene hydroperoxide.
73.222 Acetyl peroxide and acetyl benzoyl peroxide, solution.
73.223 Peracetic acid.
73.224 Cumene hydroperoxide, dicumyl peroxide, diisopropylbenzene hydroperoxide, paramenthane hydroperoxide, and tertiary butylisopropyl benzene hydroperoxide.
73.225 Phosphorus sesquisulfide.
73.226 Thorium metal, powdered.
73.227 Urea peroxide.
73.228 Zinc ammonium nitrite.
73.229 Chlorate and borate mixtures or chlorate and magnesium chloride mixutres.
73.230 Sodium, metallic, dispersion in organic solvent.
73.231 Calcium, metallic, crystalline.
73.232 Tank cars containing residual phosphorus.
73.233 Nickel catalyst, finely divided, activated or spent.
73.234 Sodium nitrate and sodium nitrate mixtures.
73.235 Ammonium bichromate (ammonium dichromate).
73.236 Decaborane.
73.237 Chlorine dioxide hydrate, frozen.
73.238 Aircraft rocket engines (commercial) and/or aircraft rocket engine igniters (commercial).
73.239 Barium azide—50 percent or more water wet.

**Subpart E—Acids and Other Corrosive Liquids; Definition and Preparation**

73.240 Acids and other corrosive liquids; definition.
73.241 Outage.
73.242 Bottles containing acid or other corrosive liquids.
73.243 Closing and cushioning.
73.244 Exemptions for acids and other corrosive liquids.
73.245 Acids or other corrosive liquids not specifically provided for.
73.246 Antimony pentafluoride.
73.247 Acetyl chloride, antimony pentachloride, benzoyl chloride, benzyl chloride, chromyl chloride, pyro sulfuryl chloride, silicon chloride, sulfur chloride (mono and di), sulfuryl chloride, thionyl chloride, tin tetrachloride (anhydrous), and titanium tetrachloride.
73.248 Acid sludge, sludge acid, spent sulfuric acid, or spent mixed acid.
73.249 Alkaline corrosive liquids, n. o. s., alkaline caustic liquids, n. o. s., alkaline corrosive battery fluids, and sodium aluminate, liquid.
73.250 Automobiles or other self-propelled vehicles, engines or other mechanical apparatus.
73.251 Boron trichloride.
73.252 Bromine.
73.253 Chloracetyl chloride.
73.254 Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide.
73.255 Dimethyl sulfate.
73.256 Compounds, cleaning, liquid.
73.257 Electrolyte (acid) or corrosive battery fluid.
73.258 Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries.
73.259 Electrolyte, acid, or alkaline, corrosive battery fluid, packed with battery charger, radio current supply device, or electronic equipment and actuating devices.
73.260 Electric storage batteries, wet.
73.261 Fire-extinguisher charges.
73.262 Hydrobromic acid.
73.263 Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures, hydrochloric (muriatic) acid solution, inhibited, sodium chlorite solution, and cleaning compounds, liquid, containing hydrochloric (muriatic) acid.
73.264 Hydrofluoric acid.
73.265 Hydrofluosilicic acid.
73.266 Hydrogen peroxide solution in water.
73.267 Mixed acid (nitric and sulfuric acid) (nitrating acid).
73.268 Nitric acid.
73.269 Perchloric acid.
73.270 Phosphorus tribromide.
73.271 Phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride.
73.272 Sulfuric acid.
73.273 Sulfur trioxide, stabilized.
73.274 Fluosulfonic acid.
73.275 Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, anhydrous, hexafluorophosphoric acid, and mixtures thereof.
73.276 Anhydrous hydrazine and hydrazine solution.
73.277 Hypochlorite solutions.
73.278 Nitrohydrochloric acid.
73.279 Anisoyl chloride.
73.280 Allyl trichlorosilane, amyl trichlorosilane, butyl trichlorosilane, cyclohexenyl trichlorosilane, cyclohexyl trichlorosilane, diethyl dichlorosilane, diphenyl dichlorosilane, dodecyl trichlorosilane, ethyl phenyl dichlorosilane, hexadecyl trichlorosilane, hexyl trichlorosilane, nonyl trichlorosilane, octadecyl trichlorosilane, octyl trichlorosilane, phenyl trichlorosilane, and propyl trichlorosilane.
73.281 Benzyl bromide (bromotoluene, alpha).
73.282 Isopropyl percarbonate, stabilized.
73.283 Bromine trifluoride.
73.284 Bromine pentafluoride.
73.285 Chlorine trifluoride.
73.286 Chemical kits.
73.287 Chromic acid solution.
73.288 Allyl chloroformate, benzyl chloroformate, ethyl chloroformate, and methyl chloroformate.
73.289 Formic acid and formic acid solutions.
73.290 Mixtures of hydrofluoric and sulfuric acid.
73.291 Flame retardant compound, liquid.
73.292 Hexamethylene diamine solution.
73.293 Iodine monochloride.
73.294 Monochloroacetic acid, liquid.
73.295 Benzyl chloride.
73.296 Di iso octyl acid phosphate.

Sec.
73.297 Titanium sulfate solution containing not more than 45% sulfuric acid.
73.298 Memtetrahydro phthalic anhydride.
73.299 Etching acid liquid, n.o.s.
73.299a Tris-(1-aziridinyl) phosphine oxide.

Subpart F—Compressed Gases; Definition and Preparation

73.300 Definitions.
73.301 General requirements for shipment of compressed gases in cylinders.
73.302 Charging of cylinders with nonliquefied compressed gases.
73.303 Charging of cylinders with compressed gas in solution (acetylene).
73.304 Charging of cylinders with liquefied compressed gas.
73.305 Charging of cylinders with a mixture of compressed gas and other material.
73.306 Exemption from compliance with regulations for shipping compressed gas.
73.314 Requirements for compressed gases in tank cars.
73.315 Compressed gases in cargo tanks and portable tank containers.
73.316 Liquefied hydrogen.

Subpart G—Poisonous Articles; Definition and Preparation

73.325 Classes of poisonous articles.
73.326 Extremely dangerous poisons, class A, poison gas label; definition.
73.327 Packing.
73.328 Poisonous gases and liquids not specifically provided for.
73.329 Bromacetone; chlorpicrin and methyl chloride mixtures; chlorpicrin and nonflammable, nonliquefied compressed gas mixtures.
73.330 Chemical ammunition.
73.331 Gas identification sets.
73.332 Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid liquefied.
73.333 Phosgene or diphosgene.
73.334 Hexaethyl tetraphosphate, parathion, tetraethyl dithio pyrophosphate, tetraethyl pyrophosphate, or other class B poison organic phosphate mixtures, n.o.s., mixed with compressed gas.
73.335 Police grenades.
73.336 Nitrogen dioxide, liquid, nitrogen peroxide, liquid, and nitrogen tetroxide, liquid.
73.337 Nitric oxide.
73.338 Nitrogen tetroxide-nitric oxide mixtures containing up to 33.2 percent weight nitric oxide.
73.343 Less dangerous poisons, class B, liquid or solid, poison label; definition.
73.344 Packing for class B poisons, liquid.
73.345 Exemptions for poisonous liquids, class B.
73.346 Poisonous liquids not specifically provided for.
73.347 Aniline oil.
73.348 Arsenic acid.
73.349 Carbolic acid (phenol) liquid.
73.350 Chemical ammunition.
73.351 Hydrocyanic acid solutions.
73.352 Liquid sodium or potassium cyanide.
73.353 Methyl bromide, liquid (bromomethane), mixtures of methyl bromide and ethylene dibromide, liquid, mixtures of methyl bromide and chlorpicrin, liquid, or methyl bromide and nonflammable, nonliquefied compressed gas mixtures, liquid.
73.354 Motor fuel antiknock compound or tetraethyl lead.
73.355 Phenyldichlorarsine.
73.356 Thiophosgene.
73.357 Chlorpicrin and chlorpicrin mixtures containing no compressed gas or poisonous liquid, class A.
73.358 Hexaethyl tetraphosphate methyl parathion, organic phosphate compound, n.o.s., parathion, tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid.
73.359 Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures, liquid.
73.360 Perchloro-methyl-mercaptan.
73.361 Aldrin mixtures, liquid, with more than 60 percent aldrin.
73.362 4-Chloro-o-toluidine hydrochloride.
73.362a Dinitrophenol solutions.
73.363 Packing for class B poisons, solid.
73.364 Exemptions for poisonous solids, class B.
73.365 Poisonous solids not specifically provided for.
73.366 Arsenic (arsenic trioxide) or arsenic acid (solid).
73.367 Arsenical compounds, n.o.s., arsenate of lead, calcium arsenate, Paris green, and arsenical mixtures.
73.368 Arsenical dust, arsenical flue dust, and other poisonous noncombustible by-products dusts, also arsenic trioxide, calcium arsenate, and sodium arsenate.
73.369 Carbolic acid (phenol), not liquid.
73.370 Cyanides, or cyanide mixtures, except cyanide of calcium and mixtures thereof.
73.371 Dinitrobenzol.
73.372 Mercury bichloride (mercuric chloride).
73.373 Ortho-nitroaniline and paranitraniline.
73.374 Nitrochlorbenzene, meta or para.
73.375 Sodium azide.
73.376 Aldrin mixtures, dry, with more than 65 percent aldrin.
73.377 Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures, dry.
73.378 Beryllium metal powder.
73.379 Cyanogen bromide.
73.381 Tear gas or irritating substances, class C, Tear Gas Label, definition.
73.382 Tear gas or irritating substances, class C, not specifically provided for.
73.383 Chemical ammunition.
73.384 Monochloracetone, stabilized.
73.385 Tear gas grenades, tear gas candles, or similar devices.
73.391 Radioactive materials, class D Poison, definition.
73.392 Exemptions for radioactive materials.
73.393 Packing and shielding.
73.394 Radioactive materials labels.
73.395 Cleaning cars and vehicles.
73.396 Radioactive materials, handling.

Subpart H—Marking and Labeling Explosives and Other Dangerous Articles

73.400 Explosives.
73.401 Dangerous articles.
73.402 Labeling dangerous articles.
73.403 Labels for mixed packing.
73.404 Labels.
73.405 Flammable liquids label.
73.406 Flammable solids and oxidizing materials label.
73.407 Acids, corrosive liquids, and alkaline caustic liquids labels.
73.408 Compressed gas labels.
73.409 Poisonous articles and tear gas labels.
73.410 Special fireworks label.
73.411 Explosives samples for laboratory examination label.
73.412 Explosives, class B, label for express shipment.
73.413 Empty container label.
73.414 Radioactive materials labels.

Subpart I—Shipping Instructions

73.425 "Order-Notify", "C. O. D.", and "Stop-off" shipments.
73.426 Cars containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases.
73.427 Shipping order and bill of lading description.
73.428 Label or placard notation.
73.429 Receipts; rail express shipments.
73.430 Certificate.
73.431 Switching ticket.
73.432 Tank car shipments.

AUTHORITY: The provisions of this Part 73 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

[The regulations in Parts 71–78 of this chapter are applicable to every common and contract carrier by motor vehicle and every private carrier of property by motor vehicle subject to the regulatory provisions of Sections 831–835, 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 831–835.

[Private carriers of property by motor vehicle subject to Parts 71–78 of this chapter are prohibited from transporting any explosive or other dangerous article unless the article is properly described by name in papera required by Parts 71–78 of this chapter to accompany every shipment of such article; and every such article must be packed and marked and in proper condition for transportation according to the regulations in Parts 71–78 of this chapter.]

NOTE 1: Because of the present emergency and until further order of the Commission, the following regulations shall apply to transportation of flammable liquids by private carriers of property in interstate or foreign commerce:

All regulations heretofore applying to common or contract carriers by motor vehicle shall apply to such private carriers, except:

Cargo tanks of tank motor vehicles constructed previous to June 15, 1943, may be continued in service if maintained in safe operating condition and sufficiently frequent inspections are maintained to determine compliance with all requirements as specified in this note.

Any defect or deficiency, due to accident or otherwise, that is likely to cause serious hazard must be corrected before any such tank is continued in or returned to service; see however, § 77.856 of this chapter.

Requirements applying to tests of tanks, and provisions for markers thereon except that indicating the flammable nature of the cargo, are waived.

Outages for shipments shall be those provided for by this part, except that filling of tanks to outage markers already incorporated in tanks, having due regard for safety in the transportation of the flammable liquids, need not be changed.

Section 77.815 of this chapter, labels, and § 77.819 of this chapter, certification of packages, of these regulations, need not be complied with by such private carriers, except as to packages transferred from one carrier to another.

### § 73.1 Purpose of the regulations in Parts 71–78 of this chapter.

(a) To promote the uniform enforcement of law and to minimize the dangers to life and property incident to the transportation of explosives and other dangerous articles by common carriers engaged in interstate or foreign commerce, the regulations in Parts 71–78 of this chapter are prescribed to define these articles for transportation purposes, to state the precautions that must be observed by the shipper in preparing them for shipment by rail freight, rail express, rail baggage, highway, or by carrier by water. It is the duty of each such shipper to make the prescribed regulations effective and to thoroughly instruct employees in relation thereto.

(b) Explosives and other dangerous articles may be offered to carriers for transportation provided the articles are in proper condition for transportation, are as defined, and are packed, marked, labeled, described, certified, and otherwise as provided for in Parts 71–78 of this chapter for acceptable articles for transportation by rail freight, rail express, rail baggage, highway, or water. Articles must be loaded and stayed according to regulations in Parts 71–78 of this chapter applying to carriers by rail. Methods of manufacture, packing, and storage, insofar as they affect safety in transportation, must be open to inspection by a duly authorized representative of the initial carrier or of the Bureau of Explosives. Shipments that do not comply with the regulations in Parts 71–78 of this chapter must not be offered for transportation.

### § 73.2 Classification; dangerous articles.

(a) Dangerous articles other than explosives having more than one hazardous characteristic, as defined by the regulations in Parts 71–78 of this chapter must be classified according to the greatest hazard present, except those articles which are also poisons, class A or class D, which must be classified according to both dangerous characteristics as defined in this part.

### § 73.3 Motor carrier regulations.

(a) The packing required for shipments to be offered for transportation by motor carrier is as specified in this part.

### § 73.4 Water carrier regulations.

(a) The packing required for shipments to be offered to common carriers by water is as specified in this part.

### § 73.5 Shipments by rail express.

(a) The packing required for shipments to be forwarded by rail express will be, unless otherwise indicated, as prescribed for shipments by rail freight, provided the quantity limitations in one outside container, as shown in § 72.5 of this chapter, are observed.

### § 73.6 Shipments as baggage by rail.

(a) For shipments of explosives and other dangerous articles acceptable as baggage by rail carriers see Part 76 of this chapter, Regulations Applying to Rail Carriers in Baggage Service.

### § 73.7 United States Government shipments.

(a) Shipments of explosives or other dangerous articles offered by or consigned to the Departments of the Army, Navy, and Air Force of the United States Government, must be packed, including limitations of weight, in accordance with the regulations in this part or in containers of equal or greater strength and efficiency as required by their regulations.

(b) Shipments of radioactive materials, made by the Atomic Energy Commission, or under its direction or supervision, which are escorted by personnel specially designated by the Atomic Energy Commission, are exempt from the regulations in Parts 71–78 of this chapter.

### § 73.8 Canadian shipments.

(a) Explosives and other dangerous articles, as defined in Parts 71–78 of this chapter which are packed, marked, labeled, and loaded, in conformity with the regulations of the Board of Transport Commissioners for Canada, may be transported from point of entry in the United States to their destination in the United States or through the United States en route to a point in Canada.

NOTE 1: Because of the present emergency and until further order of the Commission, compressed gas cylinders 40 inches in length and 8 inches in diameter, charged with not more than 40 pounds of carbon dioxide or when charged with nitrogen not in excess of 2,000 pounds per square inch, and shipped by or to the Canadian Department of National Defense in accordance with Board of Transport Commissioners for Canada Order No. 76258 dated Mar. 10, 1951, may be shipped to destinations in the United States or through the United States to points in Canada.

(b) Specification containers made and maintained in full compliance with corresponding specifications prescribed by the Board of Transport Commissioners for Canada in its Regulations for the Transportation of Explosives and Other Dangerous Articles by Freight, and Specifications for Shipping Containers, and marked in accordance therewith, BTC, CRC, etc., may be used for shipment of explosives and other dangerous articles offered for transportation by carriers by rail freight, rail express, highway, or water.

### § 73.9 Import and export shipments.

(a) Import shipments of explosives and other dangerous articles offered in the United States in original packages for transportation by carriers by rail freight, rail express, motor vehicle, or water must comply with all requirements of the regulations in Parts 71–78 of this chapter. Except for shipments from Canada conforming with § 73.8, the importer must furnish with the order to the foreign shipper, and also to the forwarding agent at the port of entry, full and complete information as to the packing, marking, labeling, and other requirements, as prescribed in Parts 71–78 of this chapter, and the forwarding agent must file with the initial carrier in the United States a properly certified shipping order or other shipping papers as prescribed in this part. Except for the requirements of §§ 77.817 and 77.823 of this chapter, the provisions of Parts 71–78 of this chapter do not apply to such transportation by motor vehicle or water as may be necessary to effect transfer of import shipments from place of discharge to other places within the same port area or delivery to a water carrier within the same port area (including contiguous harbors). Further transportation of such import shipments by connecting water carrier shall be subject to the regulations prescribed by the Commandant of the Coast Guard.

(b) Shipments of explosives and other dangerous articles offered for transportation by common carrier by water from the United States, its insular possessions, or dependencies, destined to such insular possessions or territory, dependencies, or to a foreign country, must be packed, marked, labeled and described in accordance with the rules and regulations in force at destination ports or as prescribed in Parts 71–78 of this chapter.

(c) Outside shipping containers for export shipments offered for transportation by carriers subject to Parts 71–78 of this chapter may have specification markings prescribed for containers plainly and legibly shown on labels or tags securely fastened thereto in lieu of marking requirements as prescribed for containers by Part 78 of this chapter.

### § 73.10 Inefficient containers.

(a) The results of experience gained by examination of broken or leaking containers must be recorded by the Bureau of Explosives to the end that further use of any particular kind of container shown by experience to be inefficient, may be prohibited by the Commission.

### § 73.11 Violations and accidents to be reported.

(a) Consignees must report promptly to the Bureau of Explosives all instances of improper staying and broken, leaking, or defective containers of explosives or other dangerous articles in shipments received by them.

(b) The Bureau of Explosives, upon receipt of reports from consignees, should promptly report to the shipper full particulars covering all such cases.

## Subpart A—Preparation of Articles for Transportation by Carriers by Rail Freight, Rail Express, Highway, or Water

### § 73.21 Prohibited packing.

(a) The offering of packages of dangerous articles in outside packages containing in the same compartment interior packages, the mixture of contents of which would be liable to cause a dangerous evolution of heat or gas or produce corrosive materials, is prohibited for transportation by common, contract, and private carriers by rail freight, rail express, highway, or water, except as specified in §§ 73.152(a), 73.242 (a), (b) and 73.301(a).

(b) The offering for transportation of any package or container of any liquid, solid or gaseous material which under conditions incident to transportation may polymerize (combine or react with itself) or decompose so as to cause dangerous evolution of heat or gas is prohibited. Such materials may be offered for transportation when properly stabilized or inhibited. Refrigeration may be used as a means of stabilization only when approved by the Bureau of Explosives.

(c) The offering for transportation of any package or container of any material which will cause a dangerous evolution of heat or gas under conditions normally incident to transportation is forbidden.

(d) The offering for transportation of any package containing a cigarette lighter charged with fuel and equipped with an ignition element, or any similar heating, lighting, or ignition device, or any self-lighting cigarette, is forbidden unless the design and method of packaging insofar as they affect safety in transportation have been approved by the Bureau of Explosives.

**§ 73.22 Specification containers prescribed.**

(a) Shipping containers, unless otherwise provided in this part (see § 73.9 (c)), used hereafter in shipping explosives or other dangerous articles, must have been made, assembled with all parts or fittings in their proper place, and marked in compliance with specifications prescribed in Part 78 of this chapter or with specifications of the Commission in effect at date of manufacture of container.

(1) Because of the present emergency and until further order of the Commission, containers approved for emergency or experimental shipments may be authorized in the discretion of, and upon special permit to be issued by the Director or Acting Director, Bureau of Safety and Service, Washington, D. C.

(b) Containers that do not comply with the specifications must not be marked to indicate such compliance.

(c) Containers not specified in this part, made before the effective date of the regulations in Parts 71–78 of this chapter and authorized for use under the regulations effective October 1, 1930, which may be continued in use, are as follows:

| When these regulations call for specification numbers— | These specification containers may also be used— | |
|---|---|---|
| 1A | 1 | Boxed carboy, glass or earthenware. |
| 1B | 1 | Boxed carboy, lead. |
| 1C | 1 | Carboy in keg, glass or earthenware. |
| 3A | 3, 25, 26 | Cylinder. |
| 3AA | 3, 25, 26 | Do. |
| 3B | 26 | Do. |
| 3C | 7 | Do. |
| 3D | 33 | Do. |
| 3E | 3 | Do |
| 4A | 26 | Do. |
| 4B | 26, 38 | Do. |
| 4BA | 26, 38 | Do. |
| 4C | 7 | Do. |
| 6B | 20A | Metal drum. |

(d) Where the regulations require spec. 22C or 15P wooden or plywood boxes or drums, spec. 1F or 1G, polyethylene carboys in wooden or plywood boxes or drums, respectively, may be continued in use for the commodities and gross weights for which they were previously authorized until further order of the Commission.

(e) Spec. 5G metal drums manufactured prior to May 12, 1954, may be continued in service until further order of the Commission.

(f) Where the regulations require spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter) metal drums, spec. 37D, 37E, 37F, 37G, and 37H metal drums manufactured prior to August 30, 1955, may be continued in use for commodities and gross weights for which they were previously authorized until further order of the Commission.

(g) Spec. 2S (§ 78.35 of this chapter) polyethylene drums manufactured prior to July 19, 1959 may be continued in service provided they are in satisfactory condition for service or until further order of the Commission.

(h) Aluminum drums complying with Spec. 42G, manufactured prior to February 28, 1960, may be continued in service, provided they are plainly marked ICC–42G, are embossed with maker's name or symbol, gauge of metal, capacity, year of manufacture, and are capable of withstanding the leakage test prescribed by § 78.111–11 of this chapter.

(i) Where the regulations require spec. 21C (§ 78.224 of this chapter) fiber drums, spec. 21A or 21B fiber drums manufactured prior to June 27, 1962, may be used for commodities and gross weights for which they were previously authorized until further order of the Commission.

(j) Specs. 42B and 42D (§§ 78.107 and 78.109 of this chapter) aluminum drums having rolling hoops attached to drums by tack-welding and manufactured prior to February 28, 1960, may be continued in service until further order of the Commission.

(k) Where the regulations require spec. 6D or 37M (§ 78.102 or 78.134 of this chapter) cylindrical steel overpacks, spec. 5B, 6J or 37A (single-trip container) (§ 78.82, 78.100 or 78.131 of this chapter) metal drums manufactured prior to March 18, 1964, having inside spec. 2S, 2SL, 2T or 2TL polyethylene container, may be continued in use for the commodities and gross weights for which they were previously authorized until further order of the Commission.

**§ 73.23 Closures for containers.**

(a) Outside containers must be closed for shipment as prescribed in the specifications for the container unless otherwise authorized for the particular article being shipped and in addition, closures of inside containers must be secured in a manner that will prevent leakage of contents under conditions of normal transportation. Gasketed closures must be fitted with gaskets of efficient material which will not be deteriorated by the contents of the container.

**§ 73.24 Design of containers.**

(a) In addition to standing the tests prescribed, the design and construction of inside and outside containers must be such as to prevent the occurrence in individual packages of defects that permit leakage of their contents under ordinary conditions incident to transportation.

(b) Articles for which detailed specifications for packing are not given in this part must be securely packed in containers strong enough to stand, without rupture or leakage of contents, all shocks ordinarily incident to handling during transit.

**§ 73.25 Specification containers in outside containers.**

(a) Outside specification shipping containers containing no acids or corrosive liquids may be shipped when tightly packed in strong outside fiberboard boxes or drums, wooden boxes, barrels or crates, metal barrels or drums, or other enclosures. The outside shipping container must be marked with the prescribed name of contents and labeled as required. Packages required by the regulations in this part to be marked "This Side Up" or "This End Up" must be packed in the outside package with their filling holes up, and the outside package must be marked "THIS SIDE UP" or "THIS END UP". The outside container must also be marked "INSIDE PACKAGES COMPLY WITH PRESCRIBED SPECIFICATIONS" unless the specification markings on the inside packages are visible through openings in the outside package.

(b) Outside specification shipping containers containing acids or other corrosive liquids, except nitric acid, perchloric acid, or hydrogen peroxide solution containing over 52 percent hydrogen peroxide by weight, may be shipped when tightly packed in strong outside fiberboard or wooden boxes, or in wooden crates, provided such outside container shall not contain any other article except under the following conditions:

(1) As provided in §§ 73.242, 73.257, 73.258, 73.259, 73.260, 73.261, and 73.286.

(2) Electrolyte acid or alkaline corrosive battery fluid in packages prescribed in §§ 73.257 and 73.258 may be included in outside shipping containers with dry charged storage batteries when packed to prevent movement within the outside containers.

(3) The outside container shall be marked with the prescribed name of contents and labeled as required and shall be marked "This Side Up" or "This End Up." The outside container must also be marked "Inside Packages Comply With Prescribed Specifications" unless the specification markings on the inside packages are visible through openings in the outside package.

**§ 73.26 Quantity limitations.**

(a) When quantity limitations are specified in Parts 71–78 of this chapter by United States liquid measure or by avoirdupois weight it is authorized that quantities measured by the metric system may be substituted, up to but not exceeding 1 gallon for liquids and 10 pounds for solids, on the basis of 1 liter per quart specified and 500 grams per pound specified.

(b) When quantity limitations do not appear in the packing requirements, the permitted gross weight or capacity authorized for a container to be offered for transportation by carrier by rail freight, rail express, highway, or water is shown in the container specification. (See also § 73.27.)

**§ 73.27 Rail express limitations.**

(a) Dangerous articles other than explosives, except such as are not accepted for transportation, and except where special packing is prescribed in this part for rail express shipments, must, when offered for shipment by rail express, be packed, marked and labeled in compliance with this part.

(b) The maximum quantity of any explosive or other dangerous article that may be offered for transportation by rail express in one outside container must not exceed that as shown in § 72.5 of this chapter.

(c) When several dangerous articles are placed in one outside package without violating the regulations, the combined quantity of any one group must not exceed the lowest limit prescribed for any one of the articles of that group that is included.

**§ 73.28 Reused containers.**

(a) Containers used more than once (refilled and reshipped after having been previously emptied) must be in such condition, including closing devices and cushioning materials, that they will protect their contents during transit as efficiently as new containers. Repairs must be made in an efficient manner in accordance with requirements for materials and construction as prescribed in Part 78 of this chapter for new containers and parts that are weak, broken, or otherwise deteriorated must be replaced (see paragraphs (e), (f), (g), (h), and (i) of this section for containers that cannot be reused).

(1) Retest of carboy packages must have been made by or for shippers, or their authorized agents, as required by applicable provisions of the specifications in Part 78 of this chapter before carboys which are to be offered for transportation are filled.

NOTE 1: Tests not required by shipper who fills and ships or who reships filled carboys for one shipment only carboy packages which have been properly tested by another shipper or a duly authorized agency.

(b) Markings applied as prescribed by the specifications must be maintained in a legible condition.

(c) If, on account of painting or any other reason, the markings as prescribed for any container cannot be kept plain and legible, a metal plate, brazed or soldered, or otherwise securely fastened to the container, with a reproduction of the prescribed markings plainly stamped thereon, will be permitted.

(d) Containers previously used for the shipment of any explosive or other dangerous article must have the old markings, including name of contents, addresses, and labels, if any, thoroughly removed or obliterated before being used for the shipment of other articles.

(e) Boxes previously used for high explosives containing a liquid explosive ingredient not contained in an inside metal container must not be again used for shipments of any character.

(f) Boxes that have been contaminated by liquid explosive compositions must not again be used for shipments of any character.

(g) Kegs previously used for any chlorate must not be again used for shipments of any character.

(g) Metal kegs previously used for black powder not contained in an interior package must not be again used for shipment of any explosive.

NOTE 1: Because of the present emergency and until further order of the Commission, metal kegs, previously used for the shipment of black powder not contained in an interior package, may be used provided the kegs are in good physical condition and are not liable to permit escape of contents during transportation. Empty kegs previously used for shipment of black powder must be entirely free of black powder on the inside and outside before being offered for transportation.

(h) Single-trip containers made under specifications prescribed in Part 78 of this chapter, from which contents have once been removed following use for shipment of any article, must not be again used as shipping containers for explosives, flammable liquids, flammable solids, oxidizing materials, corrosive liquids, or poisons, class B, C, or D, as defined in this part: *Provided*, That during the present emergency and until further order of the Commission, single-trip containers may be reused if retested in accordance with methods approved by the Bureau of Explosives before each reuse and approved for service for specific commodities or classes of commodities. Applications for permission for reuse should be made to the Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(i) Containers which are designated as nonreusable containers, marked NRC, and made under specifications prescribed in Part 78 of this chapter, from which contents have once been removed following use for shipment of any article, must not be again used as shipping containers for explosives, flammable liquids, flammable solids, oxidizing materials, corrosive liquids, or poisons, class B or C, as defined in this part.

(j) Cylinders or other containers which are designated as nonrefillable or for single-trip use under the specifications prescribed in Part 78 of this chapter, and from which contents have once been removed following use for the shipment of any article, must not be again used as shipping containers for compressed gases.

(k) Containers used for shipments of etching acid liquid, n.o.s. must not be reused for shipment of any commodity.

**§ 73.29 Empty containers.**

(a) Empty cylinders, barrels, kegs, drums, or other containers except carboys (see paragraph (c) of this section) previously used for the shipment of any explosive or other dangerous article, as defined in this part, if authorized for reuse must have all openings including removable heads, filling and vent holes, tightly closed before being offered for transportation. Small quantities of the material with which containers were loaded may remain in "empty" containers and when the vapors remaining therein are unstable, it is permissible to add sufficient inert gas to render the vapors stable.

(b) They may be loaded in open or stock cars when desired. Cars should not be placarded but lighted open-flame lanterns or other open-flame lights should be kept away.

(c) Carboys previously used for the shipment of corrosive liquids when offered to carriers for transportation as "empty" carboys, must have been thoroughly (completely) drained. Whenever practicable they should not be loaded with valuable or perishable freight.

(d) Empty bottles other than carboys previously used for the shipment of acids or other corrosive liquids must be securely stoppered.

(e) All containers and accessories which have been used for shipments of radioactive materials when shipped as empty must be sufficiently free of radioactive contamination so as to conform to the conditions of § 73.392 (a) (1), (2), and (3).

(f) Unless otherwise specifically provided, empty containers offered for transportation (see paragraph (a) of this section) if bearing labels described in §§ 73.405 through 73.414 (except § 73.413) of this chapter must have such labels removed, obliterated, or completely covered. The label described in § 73.413 is authorized for the latter purpose. Containers which last contained explosives on which the word "EXPLOSIVES" and/or commodity name is printed, stenciled or otherwise marked or applied, when shipped as empty shall have such marking completely covered or obliterated if shipped in less-than-carload or less-than-truckload lots, or in open-top or flat cars or open-top or flat bed motor vehicles or trailers. Covering or obliteration of such labels and markings shall not be required for carload or truckload shipments made in closed cars or van-type motor vehicles when loaded by the shipper and unloaded by the consignee or their authorized agents.

**§ 73.30 Loading and placarding of cars by shippers and unloading of cars by consignees.**

(a) When shipments of explosives or other dangerous articles are loaded into cars by shippers, or unloaded from cars by the consignee or his duly authorized agent, the applicable provisions of Part 74 of this chapter must be complied with. See § 74.538 of this chapter for loading and storage chart.

**§ 73.31 Qualification, maintenance, and use of tank cars.**

(a) *General qualifications for use.* (1) Except as otherwise provided in subparagraph (2) of this paragraph, every tank car used for the transportation of dangerous articles shall meet the requirements of the applicable specification and regulations for the transportation of the particular commodity. See subparagraph (3) of this paragraph.

(2) In addition to the tanks authorized in Part 73, tanks built prior to July 1, 1927, in compliance with the American Railway Association's Specifications for Tank Cars or tanks built in compliance with previous specifications of the Commission, if built or under construction on the effective dates thereof, are authorized for service as prescribed in the following table and notes, provided tanks and safety relief devices are retested as prescribed in paragraphs (c) and (d) of this section and equipped with approved valves, valve protection devices and safety relief devices.

| Specifications prescribed in current regulations | Other specifications permitted (subject to the notes) | Notes |
|---|---|---|
| 103 | ARA–II, ARA–III, ARA–IV | 2, 3, 4 |
| 103A | ARA–II, ARA–III | 1, 2 |
| 103B or 103B–W | ARA–II and ARA–III rubber lined. | 2 |
| 104 | ARA–IV | 2, 4 |
| 105A200–W | 105A100–W | 5 |
| 105A200AL–W | 105A100AL–W | 5 |
| 105A200–W | ARA–V, ICC–105, 105–A300. | |
| 105A400–W | 105A400 | |
| 105A500–W | 105A500 | |
| 105A600–W | 105A600 | |
| 106A500–X | ICC–27, BE–27, 106A500 | |
| 106A800–X | 106A800 | |
| 107A**** | | 6 |

NOTE 1: ARA tanks must have been originally designed or subsequently reconstructed for the transportation of acids.

NOTE 2: Tank cars equipped with safety vents must have the vent closure so chained or otherwise fastened as to prevent misplacement.

NOTE 3: These cars must not be used for shipments of smokeless powder in water unless equipped with positive closure type bottom outlet valves.

NOTE 4: Until Jan. 1, 1965, on cars built prior to Jan. 1, 1959, 25 psi safety relief valves may be replaced with 35 psi safety relief valves not having an official rated capacity.

NOTE 5: Tanks built as Spec. ICC–105A100–W or 105A–100AL–W may be altered and reclassified as Spec. 105A–200–W or 105A200AL–W, respectively, by installing safety relief valves, retesting and stenciling in accordance with the applicable specification.

NOTE 6: The test pressures of tanks built in the United States prior to Jan. 1, 1956, may be increased to comply with current Spec. ICC–107A. Original and revised test pressure must be indicated and may be shown on a plate attached to the bulkhead of the car.

(3) Unless otherwise specifically provided, when class ICC–105A–W, 105A–AL–W, 106A, 109A–AL–W, 110A–W, 111A, 112A–W or 114A–W tank car tanks are prescribed, the same class tanks having higher marked test pressures than those prescribed may also be used.

(4) Tank cars and appurtenances may be used for the transportation of any commodity for which they are authorized. Tank cars proposed for a commodity service other than authorized, must be approved for such service by the Association of American Railroads Committee on Tank Cars. Transfer of a tank car from one authorized service to another may be made only by the owner or owner's authorization. Classes ICC–105A, 109A, 111A100–W–4, 112A or 114A tank cars may be used for any commodity for which they are approved by the Committee on Tank Cars when stenciled accordingly. When a tank car is stenciled to indicate that it is authorized for one commodity only, it must not be used for any other service.

NOTE 1: For additional requirements for tank cars for compressed gases, see § 73.314.

(b) *Loading and shipping*—(1) *Examination before shipping.* When tanks are loaded and prior to shipping, the shipper must determine to the extent practicable, that the tank, safety appurtenances and fittings are in proper condition for the safe transportation of the lading. Tanks with bottom discharge outlets must have their outlet caps off, or outlet cap plugs open, during the entire time tanks are being loaded. After loading, tanks with bottom outlet valves which permit more than a dropping of the liquid with the outlet caps off, or the outlet cap plugs open, must not be offered for transportation until proper repairs have been made. Tanks which show any dropping or leaking of liquid contents at seams or rivets, must not be offered for transportation until proper repairs have been made.

(2) *Loading requirements for tanks with interior heater coils.* Tank cars equipped with interior heater coils, except when coils are rendered inoperative by blocking off the inlet and outlet, must be loaded with heater coil inlet and outlet caps off during entire time tanks are being loaded and show no leakage with caps off.

(3) *Securing closures.* All closures of openings in tank cars and of their protective housings must be properly secured in place by the use of a bar, wrench, or other suitable tool. A wrench having a handle at least 36 inches long must be used to apply the outlet valve cap. Manway covers and outlet valve caps must be made tight against leakage of vapor and liquid, by use of gaskets of suitable materials, before cars are tendered to carrier for transportation. Luting materials must not be used in outlet cap or on threads of bottom outlet.

(4) *Inspection of safety relief devices on class ICC–106A and 110A tanks.* Safety relief devices of the frangible disc or fusible plug type used on tanks of classes ICC–106A or 110A must be inspected before each loaded trip of tank by removing at least one vent for visual inspection; if it shows signs of deterioration, all devices must be removed and inspected and those which do not meet the requirements must be renewed.

(c) *Periodic retest and reinspection of single-unit tank car tanks.* (1) Tanks, interior heater systems, and safety relief valves must be retested periodically as specified in Retest Table 1 of this paragraph. Retests may be made at any time during the calendar year the retest falls due except as provided in the notes. Periodic retest of exterior heater systems is not a specification requirement.

(2) Each tank must be retested by completely filling the tank and manway nozzle or expansion dome with water or other liquid of similar viscosity except as otherwise provided for in Note (d) to Retest Table 1 and applying the specified pressure for 10 minutes if the tank is not insulated, or 20 minutes if the tank is insulated. There shall be no leakage or evidence of distress. The tank insulation and jacket need not be removed unless leakage is indicated by a drop in pressure. The liquid temperature must not exceed 100° F. during the test. Calking of welded joints to stop leaks developed during retests is prohibited.

(3) Tanks in service 10 years or over must be internally inspected and interior heater systems inspected for defects which would make leakage or failure probable during transit.

(4) Anchor rivet housings, if used, must not be removed during retest. They shall be retested by applying an air pressure of 100 psi through openings in the tank shell and must show no leakage.

(5) Interior heater systems must be retested hydrostatically at 200 psi and must show no leakage.

(6) Safety relief valves must be retested with air or gas and must start to discharge at the pressure prescribed within plus or minus 3 percent except that if the start-to-discharge pressure is under 100 psi, the valve must start to discharge at the pressure prescribed within plus or minus 3 psi. Valves must be vapor tight at the prescribed pressure.

(7) All ICC tanks built to one specification and authorized to be stenciled to another specification must be retested in accordance with the higher specification and the test pressure stenciled accordingly on the tank or jacket.

(8) Retests of tanks and safety relief devices must be reported by party making tests to car owner. Reports must show initials and numbers of cars, pressure to which tested, date and place of test, and by whom tested. Reports of latest retest must be retained by owner until the next retest has been accomplished and recorded.

(9) After repairs requiring welding, riveting or calking of rivets, tanks must be retested as specified in Retest Table 1 of this paragraph before return to service. Glass, lead or rubber lined tanks must be retested before lining is renewed. Interior heater systems must be retested before return to service after repairs or renewals of any part of the system.

(10) The month and year of tests of tanks, safety relief valves, heater system and pressure to which tested must be stenciled on the tank or on jacket if insulated.

RETEST TABLE 1

| Specification | Retest interval—years[1] | | | | Retest pressure—psi | | |
|---|---|---|---|---|---|---|---|
| | Tank and interior heater systems | | | Safety relief valve | Tank | Safety relief valve | |
| | Up to 10 years | Over 10 to 22 years | Over 22 years | | | Start to discharge | Vapor tight |
| ICC–103 | 10 | 10 | 10 | 10 | 60 | •35 | 25 |
| 103AL | | 5 | 5 | 5 | 60 | 35 | 25 |

| 105 | | | •10 | •5 | 500 | ▪225 | 180 |

See footnotes at end of table.

(d) *Periodic retest and reinspection of tanks other than single-unit tank car tanks.* (1) Tanks designed to be removed from cars for filling and emptying and tanks to spec. ICC–107A**** and their safety relief devices must be retested periodically as specified in Retest Table 2 of this paragraph. Retests may be made at any time during the calendar year the retest falls due.

(2) Each tank must be subjected to the specified hydrostatic pressure and its permanent expansion determined by an accurate method. Pressure must be maintained for 30 seconds and as much longer as may be necessary to secure complete expansion of the tank. Pressure gauge must permit reading to an accuracy of one percent. Expansion gauge must permit reading of total expansion to an accuracy of one percent. Expansion must be recorded in cubic centimeters. Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure and tank must not leak or show evidence of distress.

(3) Each tank, except tanks to spec. ICC–107A, must also be subjected to interior air pressure test of at least 100 psi under conditions favorable to detection of any leakage. No leaks shall appear.

(4) Safety relief valves must be retested by air or gas, must start to discharge at or below the prescribed pressure and must be vaportight at or above the prescribed pressure.

(5) Frangible discs or fusible plugs must be removed from the tank and visually inspected.

(6) Tanks must be retested as specified in Retest Table 2 of this paragraph before return to service after repairs involving welding or heat treatment.

(7) The month and year of test must be plainly and permanently stamped into the metal of one head or chime of each tank passing test; for example, 1–60 for January, 1960. On ICC–107A**** tanks, the date must be stamped into the metal of the marked end; except that if all tanks mounted on a car have been tested, the date may be stamped into the metal of a plate permanently applied to the bulkhead on the "A" end of the car. Date of previous tests and all prescribed markings must be kept legible.

(8) Retests of tanks and safety relief devices must be reported by party making tests to owner of tank. Reports must show registered identifying mark and serial number, pressure to which tested, date and place of test, and by whom tested. Reports of latest retest must be retained by owner until the next retest has been accomplished and recorded.

RETEST TABLE 2

| Specification | Retest interval—years[1] | | | | Retest pressure—psi | | |
|---|---|---|---|---|---|---|---|
| | Tank | Safety relief devices | Tank hydrostatic expansion | Tank air test | Safety relief valve pressure—psi | | |
| | | | | | Start-to-discharge | Vapor tight | |
| ICC–27 | 5 | 2 | 500 | 100 | 375 | 300 | |
| 106A500 | 5 | 2 | 500 | 100 | 375 | 300 | |
| 106A500X | 5 | 2 | 500 | 100 | 375 | 300 | |
| 106A800 | 5 | 2 | 800 | 100 | 600 | 480 | |
| 106A800X | 5 | 2 | 800 | 100 | 600 | 480 | |
| 106A800NCI | 5 | 2 | 800 | 100 | 600 | 480 | |
| 107A**** | 5 | •2 | (▪) | None | None | None | |
| 110A500–W | 5 | 2 | 500 | 100 | 375 | 300 | |
| 110A800–W | 5 | 2 | 800 | 100 | 600 | 480 | |
| BE–27 | 5 | 2 | 500 | 100 | 375 | 300 | |

• If ICC–107A**** tanks are used for transportation of flammable gases, one frangible disc from each car must be burst at the interval prescribed. The sample disc must burst at a pressure not exceeding the marked test pressure of the tank and not less than ⅘ of the marked test pressure. If the sample disc does not burst within the prescribed limits, all discs on the car must be replaced.

▪ The hydrostatic expansion test pressure must at least equal the marked test pressure.

RETEST TABLE 1—Continued

| Specification | Retest interval—years[1] | | | | Retest pressure—psi | | |
|---|---|---|---|---|---|---|---|
| | Tank and interior heater systems | | | Safety relief valve | Tank | Safety relief valve | |

• Tanks and safety relief valves in chlorine service must be retested every 2 years at any time during the calendar month the retest falls due. See § 73.316(c) Note 2.

▪ Spec. 106C–W, and 103A–AL–W cars built prior to Aug. 31, 1956, equipped with safety relief valves set to start to discharge at 45 psi may be continued in service. Such valves may be set to start to discharge at 35 psi by installing a spring suitable for the lower pressure.

[1] See paragraph (b)(2), Note 4 or this section.

[2] A commodity for which a tank is approved may be used for filling tank and dome when retesting tanks in service not over 10 years.

[3] Safety relief valve retest period is same as tank retest period.

[4] Nickel clad tanks in bromine service and any glass, rubber, or lead lined tank need not be periodically retested, but the interior heater systems and safety relief valves must be retested at the prescribed interval. See also paragraph (c)(9) of this section.

[5] If safety relief valves are used in combination with breaking pins designed to break at 225 psi, the safety relief valves must be retested and must start to discharge at 218 psi plus or minus 3 percent.

[6] If safety relief valves are used in combination with breaking pins designed to break at 375 psi, the safety relief valves must be retested and must start to discharge at 360 psi plus or minus 3 percent.

[7] Tanks and safety relief devices in hydrocyanic acid service must be retested and inspected by a written procedure filed with and approved by the Bureau of Explosives.

[8] When the retest interval requirement changes due to the age of the tank, the new retest interval specified is effective the first day of the month following the month in which the retest is due.

[9] Safety relief valves in bromine service must be retested every 2 years.

[10] Tanks complying with this specification need not be periodically retested, but safety relief devices must be retested every 5 years.

[11] When a safety relief valve is used in combination with a breaking pin device, the breaking pin device shall be designed to fail at a pressure of 75 percent of the tank test pressure and safety relief valve shall be set for a start-to-discharge pressure of 71 percent of the tank test pressure.

[12] If start-to-discharge safety relief valve start-to-discharge pressure setting is used, the start-to-discharge pressure of safety relief valves shall be in accordance with the provisions of § 73.102–11 of this chapter.

(e) *Tank car tanks subjected to the action of fire.* (1) Tank car tanks of other than classes ICC–106A, 107A or 110A bearing evidence of damage to the metal by fire must be withdrawn from transportation service except that if the damage to the tank is local only or confined to not more than 25 percent of the tank surface, the damaged material may be replaced. See paragraph (f) (1) of this section for the procedure for handling tank car tanks with more than 25 percent of the tank surface damaged.

(2) Tank car tanks of classes ICC–106A, 107A or 110A bearing evidence of damage to the metal by fire must be withdrawn from transportation service until they have been inspected inside and outside to determine that no reduction in wall thickness has resulted, and have been heat-treated and retested. These operations must be carried out, supervised and reported as prescribed by the specifications for original heat treatment and test.

(f) *Repairs or alterations.* (1) For procedure to be followed in making repairs or alterations to all tank car tanks and securing approval therefor, see Appendix R, Association of American Railroads Specifications for Tank Cars.

(2) After alterations of tank cars or equipment therefor from original design, a certificate of compliance with the respective specification must be furnished to the car owner, to the Bureau of Explosives, and to the Secretary, Mechanical Division, Association of American Railroads.

**§ 73.32 Qualification, maintenance, and use of portable tanks.**

(a) Except as otherwise provided in this section, every portable tank container used for the transportation of dangerous articles shall fulfill the requirements of the specification and regulations for the transportation of the particular commodity. A manufacturer's data report of the portable tank container shall be procured and retained in the files of the owner during the time that such portable tank container is used for such service.

(1) When a portable tank container is used as a cargo tank container, it shall comply with all the requirements prescribed for cargo tank containers. (See § 73.33.)

(2) Portable tank containers for transportation as cargo on vessels in commerce subject to the jurisdiction of the United States Coast Guard shall not exceed a loaded weight of 20,000 pounds. Nothing contained in this section shall be so construed as to pertain to transportation on car floats and car ferries, nor shall such limitation in weight apply to trailerships or containerships if approved under Coast Guard Regulations.

(b) Any portable tank container constructed prior to May 15, 1950, complying with the requirements of either the A. S. M. E. Code for Unfired Pressure Vessels, 1946 Edition, or the A. P. I.–A. S. M. E. Code for Unfired Pressure Vessels, 1943 Edition, may be used for the transportation of liquefied compressed gas, provided it fulfills all the requirements of this part and specifications for the particular gas or gases to be transported therein and shall be marked "ICC Specification 51X" on the plate required by the specification, except as modified by any or all of the following:

(1) Tanks designed and constructed in accordance with Pars. U–68, U–69, or U–201 of the A. S. M. E. Code may be used. Tanks designed and constructed in accordance with Pars. U–68 or U–69 may be re-rated at a working pressure 25 percent in excess of the design pressure for which the tank was originally constructed. If advantage is taken of the increased rating, the re-rated pressure shall be marked on the plate as follows:

Re-rated working pressure -- psig.

NOTE 1: For purposes of setting safety relief valves, pressure control valves and establishing retest pressure, and for purposes of establishing maximum and minimum design pressures, the re-rated working pressure shall be considered as the equivalent of the design pressure as defined in the specification.

(2) Loading and unloading accessories, valves, piping, fittings, safety and gauging devices, do not have to comply with the requirements for the particular location on the tank.

(3) Tanks having capacities of between 750 pounds and 1,000 pounds of water shall be considered as portable tank containers for the purposes of this part. In lieu of using safety relief valves on such containers they may be equipped with fusible plugs only when the container is filled by weight. Size, number, and location, as well as character and physical properties of fusible plugs shall be approved by the Bureau of Explosives. These containers shall be marked "ICC Specification 51S".

(4) Specification requirements as to stress-relieving and radiographing are waived.

(c) Any portable tank container of ICC Specification 50[1] fulfilling the requirements of that specification may be continued in service for transportation of a liquefied petroleum gas if it is retested every five years in accordance with the requirements of paragraph (e) (3), (4), and (5) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas. In this case the container may retain its original markings.

(d) Fusion welded portable tanks manufactured prior to July 19, 1948 in complete compliance with specifications included in ICC Authority No. 3666 dated December 28, 1939 (235 I. C. C. 595),[1] are authorized for the transportation of commercial butane: *Provided*, That they are in and can be maintained in safe operating condition for the transportation of that gas and are retested every five years in accordance with the requirements of paragraph (e) (3), (4), and (5) of this section. Certificate of manufacture for each tank and record of each required five year retest is filed with the Bureau of Explosives, and in addition to the markings prescribed by the aforementioned authority each tank is permanently marked "ICC–50X." (See Appendix A to Subpart C of Part 78 of this chapter.)

[1] Use of existing portable tanks authorized, but new construction not authorized.

(e) Portable tank containers used for the transportation of dangerous articles shall be retested in accordance with the following and shall not be kept in or returned to transportation service unless they shall have successfully withstood the following prescribed tests, as appropriate in each instance:

(1) Every portable tank container manufactured in accordance with ICC Specification 60 (§ 78.255 of this chapter) shall be tested at the end of the first 4 year period after the original test and each 2 years thereafter up to 12 years of service and annually thereafter. Except that retests are not required on such tanks equipped with rubber lining but retests must be made before such tanks are relined. Retest of Specification 60 tanks (see § 78.255 of this chapter) to be as required in § 78.255–12 of Specification 60 (§ 78.255 of this chapter) for new tank.

(2) Every portable tank container which is constructed in accordance with ICC Specification 51 (§ 78.245 of this chapter), or qualified for transporting compressed gases as prescribed in these regulations shall be tested at least once in every five years in accordance with paragraph (e) (3), (4), and (5) of this section. A written record indicating the dates and results of all required pressure tests shall be retained by the owner or his authorized agent until the next retest has been accomplished and recorded.

(3) The tank less any fittings shall be subject to a hydrostatic pressure of one and one-half times the design pressure (maximum allowable working pressure or re-rated pressure) of the tank.

(4) While under test pressure the tank shall be inspected for leakage, corroded areas, bad dents or other conditions which indicate weakness that might render the tank unsafe for transportation service and shall be rejected if evidence of any such unsafe condition is discovered.

(5) The tank lagging, if any, and its jacket need not be removed from lagged tanks unless it is found to be impossible to reach test pressure and maintain a condition of pressure equilibrium after test pressure is reached during tank retesting.

(f) Every tank not complying in all respects with the prescribed specifications, but otherwise allowable under this part, shall successfully withstand the identical tests at test periods required for "specification tanks" by paragraph (e) (3), (4), and (5) of this section. Tanks constructed in accordance with paragraph U–68 or U–69 of the A. S. M. E. Code, and which have not been rerated, must be retested at a hydrostatic pressure of twice the design pressure.

(g) Without regard to any other retest requirement, any tank that shows evidence at any time of bad dents, corroded areas, leakage or other conditions that indicate weakness which might render the tank unsafe for transportation service, shall be retested as prescribed by the requirements of paragraph (e) (3), (4), and (5) of this section.

(h) Any tank which has been in an accident and which has been damaged to an extent likely to cause it to be in unsafe condition or to an extent where such a condition is suspected, shall be tested as prescribed by the requirements of paragraph (e) (3), (4), and (5) of this section.

(i) Any tank which has been out of transportation service for a period of one year or more shall not be returned to or placed in such service until it shall have successfully fulfilled the testing requirements prescribed in paragraph (e) (3), (4), and (5) of this section.

(j) The Commission may require the testing under prescribed conditions of any tank when probable cause appears for suspecting that such tank is in unsafe operating condition.

(k) The repair of tanks is authorized, provided such repairs are made under requirements prescribed in the "Code" for the original design and construction.

(l) In addition to any other provisions of the specification, no tank shall be repaired, or remodeled, as to cause leakage or cracks or likelihood of leakage or cracks, by areas of stress concentration due to shrinkage of cooling metal in welding operations, sharp fillets, reversal of stresses, or otherwise.

(2) No field welding shall be done except to non-pressure parts.

(l) The bursting strength of any piping and fittings shall be not less than four times the design pressure of the tank, and not less than four times that pressure to which, in any instance, it may be subjected in service, by the action of a pump or other device (not including safety relief valves) the action of which may be to subject certain portions of the tank piping to pressures greater than the design pressure of the tank.

(1) Welded pipe joints shall be used wherever possible. Joints in copper tubing where permitted shall be of the brazed type or of any equally strong metal union type. Melting point of brazing material must be not less than 1,000° F. Such joints shall in any event be of such a character as not to decrease the strength of the tubing, as by the cutting of threads.

(2) Fittings shall be extra heavy. Non-malleable metals shall not be employed in the construction of valves or fittings.

(3) Suitable provision shall be made in every case to allow for expansion, contraction, jarring and vibration of all pipe. Slip joints shall not be used for this purpose.

(4) Piping and fittings shall be grouped in the smallest practicable space and shall be protected from damage as required by the specification.

(5) All piping, valves and fittings on every tank shall be leakage tested with gas or air after installation and proved tight at not less than the design pressure of the tank on which they are used. In the event of replacement, all such piping, valves, or fittings so replaced shall be tested in accordance with the requirements of this section before the tank is returned to transportation service. The requirements of this section shall apply with equal force to all hose used on such tanks, except that such hose may be so tested either before or after installation on the tank.

(m) All materials of construction used in portable tank containers and their appurtenances shall not be subject to destructive attack by the contents of the tank.

(1) All parts of tanks and appurtenances for anhydrous ammonia shall be steel. No copper, silver, zinc, nor their alloys shall be permitted. Brazed joints shall not be permitted.

(n) Each outlet of portable tanks used for the transportation of liquefied compressed gases, except carbon dioxide, shall be provided with a suitable automatic excess-flow valve. These valves shall be located inside the tank or at a point outside the tank where the line enters or leaves the tank. The valve seat shall be located inside the tank or shall be located within a welded flange or its companion flange, or within a nozzle, or within a coupling. The installation shall be made in such a manner as reasonably to assure that any undue strain which causes failure requiring functioning of the valve shall cause failure in such a manner that it will not impair the operation of the valve.

*Exception.* Safety device connections and liquid level gauging devices which are so constructed that the outward flow of tank contents shall not exceed that passed by a No. 54 drill size opening are not required to be equipped with excess-flow valves.

(1) Excess-flow valves shall close automatically at the rated flows of gas or liquid as specified by the valve manufacturer. The connections or lines on each side of the excess-flow valve, including valves, fittings, etc., shall have a greater capacity than the rated flow of the excess-flow valve.

(2) Excess-flow valves may be designed with a by-pass, not to exceed a No. 60 drill size opening, to allow equalization of pressures.

(3) Filling and discharge lines shall be provided with manually operated shut-off valves located as close to the tank as is practicable. The use of so-called "Stop-Check" valves to satisfy with one valve the requirements of this subparagraph and of paragraph (n) of this section, is forbidden.

(o) Each tank for carbon dioxide and nitrous oxide shall be lagged with a suitable insulation material of such thickness that the overall thermal conductance is not more than 0.08 Btu per square foot per degree F. differential in temperature per hour. The conductance shall be determined at 60° F. Insulation material used on tanks for nitrous oxide shall be noncombustible.

(p) A refrigerating and/or heating coil or coils may be installed in tanks for carbon dioxide and nitrous oxide. Such coils must be tested externally to at least the same pressure as the test pressure of the tank. The coils must also be tested internally to at least twice the working pressure of the heating or refrigerating system to be used but in no case less than the test pressure of the tank. Such coils shall be securely anchored. The refrigerant or heating medium to be circulated through the coil or coils must be such as to cause no adverse chemical reaction with the tank or tank contents in case of leakage.

**§ 73.33 Qualification, maintenance, and use of cargo tanks.**

(a) Except as otherwise provided in this section, every cargo tank used for the transportation of dangerous articles shall fulfill the requirements of the specification and regulations for the transportation of the particular commodity. A manufacturer's data report of the cargo tank shall be procured and retained in the files of the motor carrier during the time that such cargo tank is used for such service.

(1) Cargo tank containers for transportation as cargo on vessels in commerce subject to the jurisdiction of the United States Coast Guard shall not exceed a loaded weight of 20,000 pounds. Nothing contained in this section shall be so construed as to pertain to transportation on car floats and car ferries, nor shall such limitation in weight apply to trailerships or containerships if approved under Coast Guard Regulations.

(2) Cargo tanks to be used for the transportation of corrosive or flammable liquids shall be of the types prescribed by the regulations and maintained or retested in accordance with the requirements appearing in § 77.824 of this chapter.

(b) Any cargo tank constructed prior to May 15, 1950, complying with the requirements of either the A. S. M. E. Code for Unfired Pressure Vessels, 1946 Edition, or the A. P. I.-A. S. M. E. Code for Unfired Pressure Vessels, 1943 Edition, for the transportation of liquefied compressed gases, may be used in that service, if it is retested every five years in accordance with the requirements of paragraph (k) (2), (3), and (4) of this section: *Provided*, It fulfills all the requirements of the regulations and specifications for cargo tanks for the transportation of the particular gas or gases to be transported therein, except in regard to the provisions of paragraph (b) (1) or (2) of this section, and shall be marked "ICC Specification MC330X" on the plate required by Specification MC330 (§ 78.336 of this chapter).

(1) Tanks designed and constructed in accordance with pars. U–68 or U–69 of the A. S. M. E. Code for the transportation of liquefied compressed gases may be used and may be re-rated at a working pressure 25 percent in excess of the design pressure for which the tank was originally constructed. If advantage is taken of the increased rating, the re-rated pressure shall be marked on the plate as follows:

Re-rated working pressure -- psig.

NOTE 1: For purposes of setting safety relief valves and pressure control valves, and for purposes of establishing maximum and minimum design pressures, the re-rated working pressure shall be considered as the equivalent of the design pressure as defined in the specification.

(2) Loading and unloading accessories, valves, piping, fittings, safety and gauging devices, do not have to comply with the requirements for the particular location on the tank.

(c) Any cargo tank of ICC specification MC 320[1] constructed or put in service on and after February 1, 1942, and prior to May 15, 1950, fulfilling the requirements of that specification may be continued in service for the transportation of any compressed gas for which specification MC 330 (§ 78.336 of this chapter) tanks are authorized if it is retested every five years in accordance with

the requirements of paragraphs (k) (2), (3), and (4) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas, and shall be marked "ICC Specification MC 320" on the plate required by specification MC 330 (§ 78.336 of this chapter).

(d) Any cargo tank of ICC Specification 7.6–S–1.2,[1] constructed or put into service on and after June 15, 1940, and prior to February 1, 1942, fulfilling the requirements of that specification may be continued in service for the transportation of a liquefied petroleum gas if it is retested every five years in accordance with the requirements of paragraph (k) (2), (3), and (4) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas, and shall be marked "ICC Specification MC–7.6–S–1.2" on the plate required by Specification MC330 (§ 78.336 of this chapter).

(e) Any cargo tank constructed prior to June 15, 1940, in accordance with either the A. S. M. E. or A. P. I.-A. S. M. E. Code for Unfired Pressure Vessels effective at the time of fabrication, and previously authorized under ICC Specification MC320,[1] may be continued in service for the transportation of a liquefied petroleum gas if retested annually in accordance with paragraph (k) (2), (3), and (4) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas and shall be marked "ICC Specification MC320Y" on the plate required by Specification MC330 (§ 78.336 of this chapter).

(f) Any cargo tank constructed other than prescribed in paragraphs (c), (d), and (e) of this section, and previously authorized under ICC Specification MC320,[1] may remain in service for the transportation of a liquefied petroleum gas only: *Provided*, That it is retested annually in accordance with the requirements of paragraph (k) (2), (3), and (4) of this section: *Provided*, That it is in and can be maintained in safe operating condition for the transportation of that gas: *Further provided*, That it must be equipped with all the safety devices and fittings required under this section and ICC Specification MC330 (§ 78.336 of this chapter) for the transportation of that gas, although they need not be mounted all in one place as required therein but must be adequately protected against the hazards of collision, overturn, or both, and, in addition, must be marked "ICC Specification MC320Z" on the plate required by Specification MC330.

(g) Cargo tanks of the specifications shown in subparagraph (1) of this paragraph, made prior to December 31, 1953, authorized for use under regulations of the Commission effective March 1, 1935, those effective June 15, 1940, or February 1, 1942, may be continued in use as previously authorized until further order of the Commission. Tanks now under construction under specification MC 310 may be so marked.

[1] Use of existing cargo tanks authorized, but new construction not authorized.

(1)

| Where these regulations call for specification numbers: | Containers made under the following specifications may also be used: |
|---|---|
| MC 200 | 7.2–S–1. |
| MC 201 | 7.2. |
| MC 300 | 7.3–S–1.2. |
| MC 301 | 7.3–S–1.3. |
| MC 302 | 7.3–S–1.4. |
| MC 303 | 7.3–S–1.5. |
| MC 310 | 7.5–S–1.2. |
| MC 311 | MC 310 and 7.5–S–1.2. |
| MC 330 | MC 320. |

(h) Any novel cargo tank which has been or may be authorized for the transportation of a particular dangerous article may be continued in or placed in service only under the terms specifically prescribed by the Commission.

(i) Notwithstanding any of the provisions of paragraphs (a) to (h) of this section, any cargo tank constructed prior to May 15, 1950, which can qualify under and fulfill all of the requirements of any of the specifications and regulations for cargo tanks prescribed for the transportation of a particular dangerous article may be put into service and marked under the terms of such specification.

(j) The Commission may, upon written request for such authorization by a motor carrier, authorize the use of limited numbers, and for limited times, of new cargo tanks which fail to meet the requirements of the specification for cargo tanks contained in Part 78 of this chapter. In the event of such request for authorization, the carrier shall furnish those details concerning the design and construction of the tank motor vehicle and the cargo tank as seem necessary for the determination of its ability to transport safely the proposed commodity.

(k) Cargo tanks used for transportation of liquefied compressed gases shall be retested in accordance with the following and shall not be kept in or returned to transportation service unless they shall have successfully withstood the following prescribed tests, as appropriate in each instance:

(1) Every cargo tank which is constructed in accordance with or fulfilling the requirements of ICC Specification MC 330 shall be tested at least once in every five years in accordance with paragraphs (k) (2), (3), and (4) of this section, except that tanks and safety valves of cargo tanks used for the transportation of chlorine must be retested at intervals of two years or less.

(2) The tank less any fittings shall be subjected to a hydrostatic pressure of one and one-half times the design pressure (maximum allowable working pressure or re-rated pressure) of the tank.

(3) The tank shall be inspected for corroded areas, bad dents, or other conditions, including leakage under test pressure, which indicate weakness that might render the tank unsafe for transportation service, and shall be rejected if evidence of any such unsafe condition is discovered.

(4) The tank lagging, if any, and its jacket need not be removed from lagged tanks unless it is found to be impossible to reach test pressure and maintain a condition of pressure equilibrium after test pressure is reached during tank retesting.

(5) Every tank not complying in all respects with the prescribed specifications, but otherwise allowable under this part, shall successfully withstand the identical tests at test periods required for "specification tanks" by subparagraphs (2), (3), and (4) of this paragraph. Nonspecification tanks (paragraphs (e) and (f) of this section) shall be tested at least once in every calendar year as required in subparagraphs (2), (3), and (4) of this paragraph. Tanks constructed in accordance with Pars. U–68 or U–69 of the A. S. M. E. Code, and which have not been re-rated, must be retested at a hydrostatic pressure of twice the design pressure.

(6) Every cargo tank which shall have been authorized by the Commission to transport dangerous articles under the provisions of paragraph (j) of this section shall be tested under requirements specifically set forth in the terms of such authorization.

(7) Without regard to any other retest requirement, any tank that shows evidence at any time of bad dents, corroded areas, leakage, or other conditions that indicate weakness which might render the tank unsafe for transportation service, shall be retested as prescribed by paragraph (k) (2), (3), and (4) of this section.

(8) Any tank which has been in an accident and which has been damaged to an extent likely to cause it to be in unsafe condition or to an extent where such a condition is suspected, shall be tested as prescribed by paragraph (k), (2), (3), and (4) of this section.

(9) Any tank which has been out of transportation service for a period of one year or more shall not be returned to or placed in such service until it shall have successfully fulfilled the testing requirements prescribed by paragraph (k) (2), (3), and (4) of this section.

(10) The Commission may require the testing under prescribed conditions of any tank when probable cause appears for suspecting that such tank is in unsafe condition.

(l) The repair of tanks is authorized, provided such repairs are made under requirements prescribed in the "Code" for its original design and construction.

(1) In addition to any other provisions of the specification, no tank shall be repaired, or remodeled, as to cause leakage or cracks or likelihood of leakage or cracks, by areas of stress concentration due to shrinkage of cooling metal in welding operations, sharp fillets, reversal of stresses, or otherwise.

(2) No field welding shall be done except to non-pressure parts.

(m) On tanks used for compressed gases (except chlorine for which provisions are made at subparagraphs (9) to (11) of this paragraph), the bursting strength of any piping and fittings shall be not less than four times the design pressure of the tank, and not less than four times that pressure to which, in any instance, it may be subjected in service, by the action of a pump or other device (not including safety relief valves) the action of which may be to subject certain portions of the tank piping to pressures greater than the design pressure of the tank.

(1) Welded pipe joints shall be used wherever possible. Joints in copper tubing shall be of the brazed type where permitted or of any equally strong metal union type. Melting point of brazing material must be not less than 1000° F. Such joints shall in any event be of such a character as not to decrease the strength of the tubing, as by the cutting of threads.

(2) Fittings shall be extra heavy. Non-malleable metals shall not be employed in the construction of valves or fittings.

(3) Suitable provision shall be made in every case to allow for expansion, contraction, jarring, and vibration of all pipe. Ship joints shall not be used for this purpose.

(4) Piping and fittings shall be grouped in the smallest practicable space and shall be protected from damage as required by the specification.

(5) All hose, wherever used, shall be designed for a bursting pressure not less than four times the design pressure of the tank with which it is used, and not less than four times that pressure to which, in any instance, it may be subjected in service by the action of a pump or other device, the action of which may be to subject the hose to pressures greater than the design pressure of the tank. Any coupling used on hose to make connections shall be designed for a pressure not less than 20 percent in excess of the design pressure of the hose and shall be so designed that there will be no leakage when connected.

(6) All piping, valves, and fittings on every tank motor vehicle shall be proved free from leaks at not less than the design pressure for the tank. This condition will be considered to have been met when such piping, valves, and fittings have been tested for leakage with gas or air after installation and proved tight at not less than the design pressure marked on the cargo tank with which they are used. In the event of replacement, all such piping, valves, or fittings so replaced shall be tested in accordance with the requirements of this section before the tank is returned to transportation service. The requirements of this section shall apply with equal force to all hose used on such tanks, except that such hose may be so tested either before or after installation on the tank.

(7) Liquid pumps or gas compressors, wherever used, must be of suitable design, adequately protected against breakage by collisions, and kept in good condition. They may be driven by motor vehicle power take-off or other mechanical, electrical, or hydraulic means. Unless they are of the centrifugal type, they shall be equipped with suitable pressure actuated by-pass valves permitting flow from discharge to suction or to the tank. Liquid pumps shall not be used on tanks for the shipment of sulphur dioxide.

(8) Each tank used for the shipment of carbon dioxide or nitrous oxide shall be provided with a suitable pressure gauge. A shut-off valve must be installed between the pressure gauge and the tank. This gauge need be used only during the filling operation.

(9) On cargo tank motor vehicles for the transportation of chlorine, no piping, hose, or other means of loading or unloading shall be attached to the angle valves required by paragraph (o) (4) of this section except at the time of loading or unloading, nor shall any hose, piping, or tubing used for loading or unloading be mounted on or carried on the vehicle nor shall such devices be considered as part of the cargo tank motor vehicle. On cargo tank motor vehicles for the transportation of chlorine, except at the time of loading or unloading, pipe connections of the angle valves must be closed with screw plugs, chained or otherwise fastened to prevent misplacement.

(10) Angle valves on chlorine cargo tank motor vehicles shall be tested at not less than 225 p. s. i. g., using dry air or inert gas, before installation of such valves on the cargo tank, and such tests shall be made before each loading. The valves and gasketed joints shall be inspected for leaks, at a pressure of not less than 50 p. s. i. g., after loading and prior to shipment, and such inspections shall be made for each loading. Leaks which are detected shall be corrected before the cargo tank motor vehicle is shipped.

(11) Liquid chlorine pumps shall not be installed on cargo tank motor vehicles used for the shipment of chlorine.

(n) All materials of construction used in cargo tanks and their appurtenances shall not be subject to destructive attack by the contents of the tank.

(o) Each outlet of cargo tanks used for the transportation of liquefied compressed gases, except carbon dioxide, shall be provided with an approved suitable automatic excess-flow valve or in lieu thereof may be fitted with an approved automatic quick-closing internal valve. These valves shall be located inside the tank or at a point outside the tank where the line enters or leaves the tank. The valve seat shall be located inside the tank or shall be located within a welded flange or its companion flange, or within a nozzle, or within a coupling. The installation shall be made in such a manner as reasonably to assure that any undue strain which causes failure requiring functioning of the valve shall cause failure in such a manner that it will not impair the operation of the valve.

*Exception.* Safety device connections and liquid level gauging devices which are so constructed that the outward flow of tank contents shall not exceed that passed by a No. 54 drill size opening are not required to be equipped with excess-flow valves.

(1) Excess-flow valves shall close automatically at the rated flows of gas or liquid as specified by the valve manufacturer. The connections or lines on each side of the excess-flow valve, including valves, fittings, etc., shall have a greater capacity than the rated flow of the excess-flow valve.

(2) Excess-flow valves may be designed with a by-pass, not to exceed a No. 60 drill size opening, to allow equalization of pressures.

(3) Filling and discharge lines shall be provided with a shut-off valve located as close to the tank as is practicable, except where an automatic quick-closing internal valve or an automatic shut-off valve is used, in which case a manually operated shut-off valve shall be located anywhere in the line ahead of the hose connection.

NOTE 1: The use of so-called "Stop-Check" or excess flow valves to satisfy with one valve the requirements of this rule and of paragraph (o) of this section is forbidden.

(4) Angle valves and excess-flow valves on chlorine tank motor vehicles shall conform to the standards of the Chlorine Institute, Inc. Angle valves to conform with Dwg. 104–4 dated May 5, 1958. Excess-flow valves conforming with Dwg. 101–3 dated January 23, 1959 shall be installed under each liquid angle valve and the excess-flow valves conforming with Dwg. 106–1 dated July 24, 1959 shall be installed under each gas angle valve.

(p) Each tank for chlorine, carbon dioxide, and nitrous oxide shall be insulated with a suitable insulation material of such thickness that the overall thermal conductance is not more than 0.08 Btu per square foot per degree F. differential in temperature per hour. The conductance shall be determined at 60° F. Insulation material used on tanks for nitrous oxide shall be non-combustible. Insulation material used on tanks for chlorine shall be corkboard with minimum thickness of 4 inches.

(q) A refrigerating and/or heating coil or coils may be installed in tanks for carbon dioxide and nitrous oxide. Such coils must be tested externally to at least the same pressure as the test pressure of the tank. The coils must also be tested internally to at least twice the working pressure of the heating or refrigerating system to be used but in no case less than the test pressure of the tank. Such coils shall be securely anchored. The refrigerant or heating medium to be circulated through the coil or coils must be such as to cause no adverse chemical reaction with the tank or tank contents in case of leakage. If desired, the unit furnishing refrigeration may be mounted on the motor vehicle.

### § 73.34 Qualification, maintenance and use of cylinders.[1]

(a) *General qualification for use of cylinders.* (See §§ 73.1 through 73.30 for requirements applying to all shipments.)

(1) Gases must be in cylinders as specified, and such cylinders used more than once (refilled and reshipped after having been previously emptied) must be in such condition, including closing devices and cushioning materials, that they will protect their contents during transit as efficiently as new cylinders.

(2) When cylinders with a marked pressure limit are prescribed, other cylinders made under the same specification but with a higher marked service pressure limit are authorized. For example, cylinders marked ICC–4B500 may be used where ICC–4B300 is specified.

(3) A cylinder in domestic use previous to the date upon which specification therefor was first made effective may be used if the cylinder has been

[1] Requirements covering cylinders are also applicable to spherical pressure vessels.

properly tested and otherwise complies with the requirements applicable for the gas charged therein.

(b) *Change of marked service pressure.* Marked service pressure may be changed only upon application to the Bureau of Explosives and receipt of written instructions as to the procedure to be followed (see paragraph (c)(2) of this section). This is not authorized for cylinders which have failed to pass the prescribed periodic hydrostatic retest unless they are reheat-treated and requalified in accordance with applicable requirements.

(c) *Change of marking.* Each cylinder must be marked in accordance with the specification under which it was made. Marking on cylinders must not be changed except as follows:

(1) Additional markings not affecting any of the prescribed markings may be made in accordance with marking requirements of the specification.

(2) Test pressure or service pressure markings may be changed when service pressure is changed in accordance with paragraph (b) of this section.

(3) Changes may be made in serial numbers and in the identification symbols by the owners. Identification symbols must be registered and approved by the Bureau of Explosives. Before remarking, a report in sufficient detail that previous serial numbers and identification symbols can be determined for each cylinder, arranged by lot numbers or consecutive serial numbers, must be made to the Bureau of Explosives and approval received before markings are changed.

(4) When the space originally provided for dates of subsequent retests becomes filled, the stamping of additional test dates into the external surface of footrings of cylinders is authorized.

(5) All prescribed markings on each cylinder must be maintained in a readable condition, or copy of said markings reproduced by stamping on metal plates may be permanently secured to the cylinder.

(d) *Safety relief devices.* Each cylinder charged with compressed gas, unless excepted in this paragraph, must be equipped with one or more safety relief devices approved, as to type, location, and quantity, by the Bureau of Explosives and must be capable of preventing explosion of the normally charged cylinder when it is placed in a fire. Cylinders shall not be shipped with leaking safety relief devices. Safety relief devices must be tested for leaks before the charged cylinder is shipped from the cylinder filling plant; it is expressly forbidden to repair leaking fuse plug devices, where leak is through the fusible metal or between the fusible metal and the opening in the plug body, except by removal of the device and replacement of the fusible metal.) Exceptions are as follows:

(1) Except as provided in Notes 1, 2, and 3, safety relief devices are not required on cylinders 12 inches or less in length, exclusive of neck, and 4½ inches or less in outside diameter.

NOTE 1: Safety relief devices are required on specs. 9, 40, and 41 (§§ 78.63, 78.66, and 78.67 of this chapter) cylinders.

NOTE 2: Safety relief devices are required on cylinders charged with a liquefied gas for which this part requires a service pressure of 1,800 psi or higher.

NOTE 3: Safety relief devices are required on cylinders charged with nonliquefied gases to a pressure of 1,800 psi or higher at 70° F.

(2) Safety relief devices are not required on cylinders charged with nonliquefied gas, except acetylene in solution, under pressure of 300 psi or less at 70° F.

(3) Safety relief devices are prohibited on cylinders charged with class A poisonous gas or liquid as defined in § 73.326 (a).

(4) Safety relief devices are prohibited on cylinders charged with fluorine.

(5) Safety relief devices are not required on cylinders charged with methyl mercaptan; with mono-, di-, or trimethylamine, anhydrous; with not over 10 pounds of nitrosyl chloride; or with less than 165 pounds of anhydrous ammonia.

(6) Safety relief devices are not required on drums containing liquefied petroleum gas as provided for in § 73.304 (d)(3)(ii).

(e) *Periodic retesting and reinspection of cylinders.* Each cylinder becomes due for periodic retest in accordance with the following table and exceptions thereto:

| Specification under which cylinder was made | Minimum retest pressure (psi) | Retest period (years) |
|---|---|---|
| ICC-3 | 3,000 psi | 5. |
| 3A, 3AA | 5/3 times service pressure, except noncorrosive service (see §73.34(e)(11). | 5. |
| 3B, 3BN | 2 times service pressure | 5. |
| 3C | Retest not required | 5. |
| 3D | 5/3 times service pressure | 5. |
| 3E | Retest not required | |
| 3HT | 5/3 times service pressure | 3 (see § 73.34(e)(13). |
| 4 | 700 psi | 10. |
| 4A | 5/3 times service pressure | 5. |
| 4AA480 | 2 times service pressure | 5. |
| 4B, 4BA, 4B240ET | 2 times service pressure, except noncorrosive service (see § 73.34 (e)(9) and (e)(10). | 5. |
| 4C | Retest not required | |
| 4D, 4DA, 4DS | 2 times service pressure | 5. |
| 4E | do | 5. |
| 4L | Retest not required | |
| 7 | do | |
| 7-150 for liquefied petroleum gas. | 300 psi | 5. |
| 8, 8AL | Retest not required | |
| 9 | 400 psi (maximum 600 psi) | 5 (see § 73.34(e)(15). |
| 25 | 500 psi | 5. |
| 26 for filling at over 450 psi. | 5/3 time service pressure | 5. |
| 26 for filling at 450 psi and below. | 2 times service pressure, except noncorrosive service (see § 73.34 (e)(9) and (e)(10). | 5. |
| 33 | 800 psi | 5. |
| 38 | 500 psi | 5. |
| Any cylinder with marked test pressure. | Retest at marked test pressure | 5. |
| Foreign cylinder charged for export. | As marked on the cylinder, but not less than 5/3 of any service or working pressure marking. | See § 73.301(j). |

NOTE 1: For cylinders not marked with a service pressure, see § 73.301 (e) (1).

(1) This periodic retest must include a visual internal and external examination together with a test by interior hydrostatic pressure in a water jacket or other apparatus of suitable form for the determination of the expansion of the cylinder. The test apparatus must be approved as to type and operation by the Bureau of Explosives. The internal inspection may be omitted for cylinders of the type and in the service described under subparagraphs (9) and (10) of this paragraph.

(2) Cylinders of ICC–4 series, without regard to date of previous test, that show bad dents or other evidence of rough usage, or that are corroded locally to such extent as to indicate possible weakness, or that have lost as much as 5 percent of their official tare weight, must be retested before being again charged and shipped. After any retest, the actual tare weight for those cylinders passing the test may be recorded as their new official tare weight.

(3) In hydrostatic retesting of a cylinder the pressure must be maintained for at least 30 seconds and as much longer as may be necessary to secure complete expansion of the cylinder. The gauge indicating the total expansion of the cylinder must be such that the total expansion can be read with an accuracy of 1 percent, except that a reading to 0.1 cubic centimeter shall be acceptable. The gauge indicating the pressure must be capable of being read to within 1 percent of the test pressure. Any internal pressure applied previous to the test pressure shall not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 psi, whichever is the lower value.

(4) A cylinder must be condemned when it leaks, or when internal or external corrosion, denting, bulging, or evidence of rough usage exists to the extent that the cylinder is likely to be weakened appreciably, or when the permanent expansion exceeds 10 percent of the total expansion, except that for ICC–4E aluminum cylinders, when the permanent expansion exceeds 12 percent of the total expansion. Except for ICC–4E aluminum cylinders, a cylinder condemned for excessive permanent expansion may be reheat-treated. (See paragraph (g) of this section.) ICC–4 series cylinders, condemned for other than excessive permanent expansion, may be repaired and rebuilt as otherwise provided in this section.

(5) Records showing the result of reinspection and retest must be kept by the owner or his authorized agent until either expiration of the retest period, or until the cylinder is again reinspected or retested, whichever occurs first.

(6) Each cylinder passing the reinspection and retest must be marked with the date, (month and year), plainly and permanently stamped into the metal of the cylinder. For example, "4–57" for April, 1957. The dash between the month and year figures may be replaced by the mark of the testing or inspecting agency. Stamping must be in accordance with marking requirements of the specification. Dates of the previous tests must not be obliterated.

(7) Cylinders in chlorine or sulfur dioxide service made before April 20, 1915, must be retested at 500 psi.

(8) For cylinders of not over ten pounds water capacity which are authorized for service pressures not over 300 psi, the hydrostatic testing portion of the retest procedure may consist of application of the prescribed internal hydrostatic test pressure without the use of special apparatus and without the determination of total and permanent expansions. In this test the cylinders shall be examined while under pressure and must show no leak or other harmful defect as enumerated in subparagraph (4) of this paragraph.

(9) Cylinders made in compliance with specifications ICC–4B, ICC–4BA and ICC–26–300 [1], (§§ 78.50 and 78.51 of this chapter) used exclusively for anhydrous dimethylamine, anhydrous monomethylamine, anhydrous trimethylamine, methyl chloride, liquefied petroleum gas, or dichlorodifluoromethane, difluoroethane, difluoromonochloroethane, monochlorodifluoromethane, monochlorotetrafluoroethane, monochlorotrifluorethylene or mixtures thereof or mixtures of one or more with trichloromonofluoromethane, commercially free from corroding components, and protected externally by suitable corrosion resisting coatings (such as galvanizing, painting, etc.) may be retested decennially (see Note 2) instead of quinquennially, or, such cylinders may be subjected to an internal hydrostatic pressure equal to at least 2 times the marked service pressure without determination of expansions (see Note 1), but this type of test must be repeated quinquennially after expiration of the first 10-year period (see Note 2). When subjected to this latter test cylinders must be carefully examined under the test pressure and removed from service if leaks or other harmful defects exist. All tests must be supplemented by a very careful examination of the cylinder at each filling, and must be rejected if evidence is found of bad dents, corroded areas, a leak or other conditions that indicate possible weakness which would render the cylinder unfit for service.

NOTE 1: Cylinders tested by the modified hydrostatic method shall be marked after each retest with the date of test as otherwise required but followed by the symbol S; for example, 8–57S indicating retest by the modified method in August, 1957.

NOTE 2: Until further order of the Commission, the decennial retest period may be extended to a 12-year period, and the quinquennial retest period may be extended to a 7-year period after expiration of the first 12-year period.

(10) Cylinders made in compliance with the specifications listed in the table below and used exclusively in the service indicated may, in lieu of the periodic hydrostatic retest, be given a complete external visual inspection at the time such periodic retest becomes due:

| Cylinders made in compliance with— | Used exclusively for— |
|---|---|
| ICC–3A480, ICC–3AA480, ICC–3A480X, ICC–3B, ICC–4B, ICC–4BA, ICC–26–240,[1] or ICC–26–300.[1] | Liquefied petroleum gas which is commercially free from corroding components. |
| ICC–4, ICC–3A480, ICC–3AA480, ICC–3A480X, ICC–4A480, or ICC–4AA480. | Anhydrous ammonia of at least 99.95 percent purity. |
| ICC–3A480, ICC–3AA480, ICC–3A480X, ICC–4B300, or ICC–4BA300. | Fluorinated hydrocarbons and mixtures thereof which are commercially free from corroding components. |
| ICC–3A480, ICC–3AA480, ICC–3A480X, ICC–3B, ICC–4B, ICC–4BA, ICC–26–240,[1] or ICC–26–300.[1] | Butadiene, inhibited, which is commercially free from corroding components. |
| ICC–3A480, ICC–3AA480, ICC–3A480X, ICC–3B, ICC–4B, ICC–4BA, ICC–26–240,[1] or ICC–26–300.[1] | Liquefied hydrocarbon gas which is commercially free from corroding components. |

[1] Use of existing cylinders authorized, but new construction not authorized.

When this inspection is used in lieu of hydrostatic retesting, subsequent inspections are required 5 years after the first such inspection and periodically at 5-year intervals thereafter. Inspections shall be made only by competent persons and the results shall be recorded on a suitable data sheet, the completed copies of which shall be kept as a permanent record. The points to be recorded and checked on these data sheets are: Date of inspection (month and year); ICC specification number; cylinder identification (registered symbol and serial number, date of manufacture, and ownership symbol (if needed for adequate identification)); type cylinder protective coating (painted, etc., and statement as to need of refinishing or recoating); conditions checked (leakage, corrosion, gouges, dents or digs in shell or heads, broken or damaged footring or protective ring or fire damage); disposition of clyinders (returned to service, to cylinder manufacturer for repairs or scrapped); a cylinder which passes the inspection prescribed shall have the date recorded in the manner presently prescribed for the recording of the retest date, except that an "E" is to follow the date (month and year) indicating requalification by the external inspection method. All inspections must be supplemented by a very careful examination of the cylinder at each filling, and must be rejected if evidence is found of bad dents, corroded areas, a leak or other conditions that indicate possible weakness which would render the cylinder unfit for service.

(11) Cylinders made in compliance with specification ICC–3A480, ICC–3A480X, and ICC–4AA480 (§§ 78.36, 78.43, 78.56 of this chapter), used exclusively for anhydrous ammonia, commercially free from corroding components, and protected externally by suitable corrosion resisting coatings (such as painting, etc.) may be retested decennially instead of quinquennially. All tests must be supplemented by a very careful examination of the cylinder at each filling, and the cylinder must be rejected if evidence is found of bad dents, corroded areas, a leak or other conditions that indicate possible weakness which would render the cylinder unfit for service.

(12) All cylinders not exceeding 2 inches outside diameter and length less than 2 feet are exempted from hydrostatic retest.

(13) In addition to the requirements of this paragraph (e) cylinders marked ICC–3HT shall comply with the following:

(i) Cylinders shall be subjected, at least once in three years, to a test by hydrostatic pressure in a water jacket, for the determination of the expansion of the cylinder. A cylinder must be condemned if the elastic expansion exceeds the original elastic expansion by more than 5 percent.

(ii) A cylinder must be condemned if there is evidence of any denting or bulging.

(iii) A cylinder must be condemned at the termination of a 12-year period following the date of the original test or after 4,380 pressurizations (12×365), whichever comes first. If a cylinder is recharged more than once a day, an accurate record of the number of such rechargings must be maintained.

(iv) Retest dates shall be applied by low stress type steel stamping to a depth no greater than that of the original marking at the time of manufacture. Stamping on sidewall not authorized.

(14) Cylinders made in compliance with specifications ICC–3A, 3AA, 3B, 4A, 4BA (§§ 78.36, 78.37, 78.38, 78.49, 78.51 of this chapter), having service pressures up to and including 300 psi, used exclusively for methyl bromide, liquid, mixtures of methyl bromide and ethylene dibromide, liquid, mixtures of methyl bromide and chlorpicrin, liquid, mixtures of methyl bromide and petroleum solvents, liquid, or methyl bromide and non-flammable, non-liquefied compressed gas mixtures, liquid, commercially free from corroding components, and protected externally by suitable corrosion resisting coatings (such as galvanizing, painting, etc.) and internally by a suitable corrosion resisting lining (galvanized, etc.) may be tested decennially instead of quinquennially. All tests must be supplemented by a visual internal and external examination of the cylinder quinquennially. Examination shall be as required by the Compressed Gas Association's "Standard for Visual Inspection of Compressed Gas Cylinders." (CGA Pamphlet C–6–1959, available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, N.Y.) All tests must be supplemented by a very careful examination of the cylinder at each filling, and the cylinder must be rejected if evidence is found of bad dents, corroded areas, a leak or other conditions that indicate possible weakness which would render the cylinder unfit for service.

(15) All prescribed markings shall be maintained in a legible condition and if at any time the cylinder (spec. ICC–9) is returned for refilling and such marks are illegible, then the cylinder must not be returned to service until it has been retested as prescribed in § 78.63–13(a) of this chapter, and a new test date applied.

(f) *Cylinders subjected to the action of fire.* A cylinder which has been subjected to the action of fire must not again be placed in service until it has been properly reconditioned as follows:

(1) A cylinder made of plain carbon steel with not over 0.25 percent carbon nor over 0.90 manganese need not be reheat-treated but must pass the periodic retest requirements as specified in paragraph (e) of this section.

(2) ICC–8 cylinders made of plain carbon steel with not over 0.25 percent carbon nor over 0.90 percent manganese must be reinspected to determine the condition of the cylinder and the porous filling. If the cylinder is undamaged and the filler is unchanged and intact, the cylinder may be returned to service without reheat treatment or test.

(3) The inner cylinders made under specification ICC–4L (§ 78.57 of this chapter) may be used after again passing the original hydrostatic test.

(4) ICC–4E aluminum cylinders must be removed from service.

(5) Other cylinders must be reheat treated and reconditioned as specified in paragraph (g) of this section.

(g) *Reheat treatment.* (1) Previous to the reheat treatment procedure hereinafter prescribed, each cylinder must be subjected to a careful internal and external inspection.

(2) Cylinders must be segregated for reheat treatment in lots of 100 or less cylinders of the same general size having practically the same chemical composition.

(3) The reheat treatment operation must be carried out, supervised, and reported as prescribed for the heat treatment in the specification covering the manufacture of the cylinder in question. Data from the original reports of manufacture of the cylinders must be available.

(4) The reheat treatment must be followed by hydrostatic retest, such retest to be carried out, supervised, and reported as prescribed for the hydrostatic tests in the specification covering the manufacture of the cylinder in question. The results of the retest must meet either of the following conditions:

(i) The permanent expansion shall be from zero to 10 percent of the total expansion in the hydrostatic retest and one cylinder from each lot shall pass the requirements of the flattening and physical tests prescribed. Failure to pass the flattening or physical tests will reject the lot or;

(ii) The permanent expansion shall not be less than 3 percent nor more than 10 percent of the total expansion in the hydrostatic retest, in which case the flattening and physical tests are not required. For this alternative method the hydrostatic retest pressure shall not exceed 115 percent of the minimum prescribed test pressure except with specific approval of the Bureau of Explosives.

(h) *Repair by welding or brazing of specifications ICC–3A, 3AA, 3B, 3C cylinders.* Repair of specifications ICC–3A, 3AA, 3B or 3C (§ 78.36, 78.37, 78.38 or 78.40 of this chapter) cylinders by welding or brazing authorized, but only for the removal and replacement of neckrings and footrings attached to cylinders originally manufactured to conform to §§ 78.36–9(a), 78.37–9(a), 78.38–9(a), and 78.40–9(a) of this chapter. Removal and replacement must be done by a regular manufacturer of this type of cylinder. After removal and before replacement of such parts, cylinders must be inspected, and defective ones rejected. Cylinders, neckrings, footrings, and method of replacement must conform to § 78.36–9(a), § 78.37–9(a), § 78.38–9(a), or § 78.40–9(a) of this chapter whichever applies. Replacement must be followed by reheat treating, testing, inspection, and supervised and reported as prescribed by the specification covering their original manufacture. Inspector's reports must conform with that required by the specification covering original manufacture with the word "repaired" substituted for "manufactured." Show original markings and the new additional markings added, and statement: "Cylinders were carefully inspected for defects after removal of neckrings and footrings and after replacement, which replacement was made by process of _____."

(Welding-brazing)

(i) *Repair by welding or brazing of ICC–4 series, and ICC–8, welded or brazed cylinders.* Repairs on ICC–4 series and ICC–8 series welded or brazed cylinders are authorized to be made by welding or brazing. Such repairs must be made by a manufacturer of these types of ICC cylinders or by a repair facility authorized by the Bureau of Explosives and by a process similar to that used in its manufacture and under the following specific requirements:

(1) Cylinders with injurious defects in welded joints in or on pressure parts must be repaired by completely removing the defect prior to rewelding.

(2) Cylinders with injurious defects in brazed joints in or on pressure parts must be repaired by rebrazing.

(3) Cylinders during welding must be free of materials in contact with the welded joint that may impair the serviceability of the metal in or adjacent to the weld. (Precautions must be taken to prevent acetylene cylinder steels from picking up carbon during repair.)

(4) Neckrings, footrings, or other nonpressure attachments authorized by the specification may be replaced or repaired. Repair or replacement of footrings, neckrings, or other nonpressure attachments authorized by the specification for ICC–4BA and 8AL (§§ 78.51 and 78.60 of this chapter) cylinders may be made without conforming to the requirements of subparagraph (i) (6) of this section provided the following requirements are met:

(i) Must be done by a manufacturer of these types of ICC cylinders or by a repair facility authorized by the Bureau of Explosives.

(ii) The welder shall have available to him information as to the procedure, equipment, and rod used during manufacture and shall use a similar method for repair.

(iii) Repairs must be by metal arc welding only. Welds shall be 3 inches maximum length and spaced at least 3 inches apart.

(iv) Welds shall not be made on or near a brazed joint (to prevent the possibility of copper penetration).

(v) After repair the welds are to be inspected visually for weld quality.

(vi) After repair the weld area is to be leak tested at the service pressure of the cylinder.

(5) After removal, and before replacement of attachments, cylinders must be inspected and defective ones rejected, repaired or rebuilt.

(6) After repair, cylinders must be reheat-treated, tested, inspected and reported when and as prescribed by the specification covering their original manufacture when welding or brazing seams in a pressure part of a cylinder; or when welding or brazing on pressure parts of cylinders of plain carbon steels with carbon over 0.25 percent or manganese over 1.00 percent or of alloy steels, except that the physical and flattening tests may be omitted when the cylinders are not reheat-treated.

NOTE 1: Heat-treatment is not required after welding or brazing weldable low carbon parts to attachments of similar material which has been previously welded or brazed to the top or bottom of cylinders and properly heat-treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

(7) Repair of cylinders must be followed by a proof pressure leakage test at prescribed test pressure and visual examination for weld quality when welding or brazing on pressure parts of cylinders of plain carbon steel with carbon 0.25 percent or less and manganese 1.00 percent or less.

(j) *Repair of non-pressure attachments.* Repair of non-pressure attachments by welding or brazing without affecting a pressure part of the cylinder must be followed by visual examination for weld quality.

(k) *Prohibited repairs.* Walls, heads or bottoms of cylinders with injurious defects or leaks in base metal shall not be repaired, but may be replaced as provided for in paragraph (i) of this section.

(l) *Rebuilding of ICC–4 series and ICC–8, welded or brazed cylinders.* Rebuilding of ICC–4 series and ICC–8 series, welded or brazed cylinders is authorized. Such rebuilding must be done by a manufacturer of these types of ICC cylinders or by a repair facility authorized by the Bureau of Explosives and by a process similar to that used in its original manufacture and under the following specific requirements:

(1) The replacement of a pressure part such as wall, heads, or bottoms of cylinders or the replacement of the porous filling material, shall be considered as rebuilding.

(2) Rebuilt cylinders shall be considered as new cylinders and shall conform to all the requirements of the specifications applying, including verification of material, examination, inspection, etc., and the rendering of the proper reports to the purchaser, cylinder rebuilder, and the Bureau of Explosives. Report must show that cylinders were rebuilt.

(3) Information in sufficient detail regarding previous serial numbers and identification symbols must be filed with the Bureau of Explosives.

## Subpart B—Explosives; Definitions and Preparation

### § 73.50 An explosive.

(a) For the purpose of Parts 71–78 of this chapter an explosive is defined as any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion, i.e., with substantially instantaneous release of gas and heat, unless such compound, mixture, or device is otherwise specifically classified in Parts 71–78 of this chapter.

### § 73.51 Forbidden explosives.

(a) The offering of the following explosives for transportation by common carriers by rail freight, rail express, highway, or water is forbidden.

(b) Explosive compositions that ignite spontaneously or undergo marked decomposition when subjected for 48 consecutive hours to a temperature of 75° C. (167° F.).

(c) Explosives containing an ammonium salt and a chlorate.

(d) Liquid nitroglycerin, diethylene glycol dinitrate or other liquid explosives not authorized by § 73.53 (e) and (h). (For shipment by carrier by motor vehicle other than common carriers, see § 77.822 (b) of this chapter).

(e) Explosives condemned by the Bureau of Explosives (except properly packed samples for laboratory examinations). Appeal may be made to the Commission from such condemnations.

(f) Leaking or damaged packages of explosives.

(g) Condemned or leaking dynamite must not be repacked and offered for shipment unless the repacking is done by a competent person in the presence of, or with the written consent of, an inspector, or with the written authority of the chief inspector of the Bureau of Explosives.

(h) Firecrackers, flash crackers, salutes, or similar commercial devices which produce or are intended to produce an audible effect, the explosive content of which exceeds 12 grains each in weight, and pest control bombs, the explosive content of which exceeds 18 grains each in weight; and any such devices, without respect to explosive content, which on functioning are liable to project or disperse metal, glass or brittle plastic fragments.

(i) Fireworks that combine an explosive and a detonator or blasting cap.

(j) Fireworks containing an ammonium salt and a chlorate.

(k) Fireworks containing yellow or white phosphorus.

(l) Fireworks or fireworks compositions that ignite spontaneously or undergo marked decomposition when subjected for 48 consecutive hours to a temperature of 75° C. (167° F.).

(m) Fireworks, properly condemned by the Bureau of Explosives, except properly repacked samples for laboratory examinations.

(n) Toy torpedoes, the maximum outside dimension of which exceeds ⅞ inch, or toy torpedoes containing a mixture of potassium chlorate, black antimony and sulfur with an average weight of explosive composition in each torpedo exceeding four grains.

(o) Toy torpedoes containing a cap composed of a mixture of red phosphorus and potassium chlorate exceeding an average of one-half (0.5) grain per cap.

(p) Fireworks containing copper sulfate and a chlorate.

(q) New explosives except samples for laboratory examination (see § 73.86) and military explosives approved by the Chief of Ordnance, Department of the Army; Chief, Bureau of Naval Weapons, Department of the Navy; or Commander, Air Force Systems Command and Commander, Air Force Logistics Command, Department of the Air Force. All other new explosives must be approved for transportation by the Bureau of Explosives.

(r) Loaded firearms.

### § 73.52 Acceptable explosives.

(a) For the purpose of Parts 71–78 of this chapter, acceptable explosives are divided into three classes as defined in this section, viz. (see § 72.5 of this chapter for restrictions for shipments by rail express).

(1) Class A explosives; detonating or otherwise of maximum hazard.

(2) Class B explosives; flammable hazard.

(3) Class C explosives; minimum hazard.

CLASS A EXPLOSIVES; DEFINITIONS

### § 73.53 Definition of class A explosives.

(a) *Type 1.* Solid explosives which can be caused to deflagrate by contact with sparks or flame such as produced by safety fuse or an electric squib, but cannot be detonated (see Note 1) by means of a No. 8 test blasting cap (see Note 2). Example: Black powder and low explosives.

(b) *Type 2.* Solid explosives which contain a liquid explosive ingredient, and which, when unconfined (see Note 3), can be detonated by means of a No. 8 test blasting cap (see Note 2); or which can be exploded in at least 50 percent of the trials in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of 4 inches or more, but cannot be exploded in more than 50 percent of the trials under a drop of less than 4 inches. Example: High explosives, commercial dynamite containing a liquid explosive ingredient.

(c) *Type 3.* Solid explosives which contain no liquid explosive ingredient and which can be detonated, when unconfined (see Note 3), by means of a No. 8 test blasting cap (see Note 2); or which can be exploded in at least 50 percent of the trials in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of 4 inches or more, but cannot be exploded in more than 50 percent of the trials under a drop of less than 4 inches. Example: High explosives, commercial dynamite containing no liquid explosive ingredient, trinitrotoluene, amatol, tetryl, picric acid, urea nitrate, pentolite, and commercial boosters.

(d) *Type 4.* Solid explosives which can be caused to detonate when unconfined (see Note 3), by contact with sparks or flame such as produced by safety fuse or an electric squib; or which can be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4), in more than 50 percent of the trials under a drop of less than 4 inches. Example: Initiating and priming explosives, lead azide, fulminate of mercury, etc., and high explosives.

(e) *Type 5.* Desensitized liquid explosives are explosives which may be detonated separately or when absorbed in sterile absorbent cotton, by a No. 8 test blasting cap (see Note 2); but which cannot be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4), by a drop of less than 10 inches. The desensitizer must not be significantly more volatile than nitroglycerine and the desensitized explosive must not freeze at temperatures above minus 10° F. Example: High explosives, desensitized nitroglycerine.

(f) *Type 6.* Liquid explosives that can be exploded in the Bureau of Explosives' Impact Apparatus (see Note 4) under a drop of less than 10 inches. Example: Nitroglycerin. (See § 73.51 (d).)

(g) *Type 7.* Blasting caps (see Note 5) are small tubes, usually made of an alloy of either copper or aluminum, or of molded plastic closed at one end and loaded with a charge of initiating or priming explosives, class A—Type 4, either with or without other suitable explosives. The total weight of explosives per unit shall not exceed 150 grains. Blasting caps (see Note 5) which have been provided with a means for firing by an electric current, and sealed, are known as electric blasting caps.

(1) Detonating primers are devices for commercial use which contain a detonator and an additional charge of explosives, all assembled in a suitable envelope.

(2) Detonating fuzes, class A, are used in the military service to detonate the high explosive bursting charges of projectiles, mines, bombs, torpedoes, and grenades. In addition to a powerful detonator, they may contain several ounces of a high explosive, such as tetryl or dry nitrocellulose, all assembled in a heavy steel envelope. They may also contain a small amount of radioactive component. Those that are so made and packed that they will not cause functioning of other fuzes, explosives, or explosive devices in the same or adjacent containers are classed as class C explosives.

(h) *Type 8.* Any solid or liquid compound, mixture or device which is not specifically included in any of the above types, and which under special conditions may be so designated and approved by the Bureau of Explosives. Example: Shaped charges, commercial.

(1) A shaped charge, commercial, consists of a plastic, paper, or other suitable container comprising a charge of not to exceed 8 ounces of a high explosive containing no liquid explosive ingredient and with a hollowed-out portion (cavity) lined with a rigid ma-

terial. Detonators or other initiating elements shall not be assembled in the device unless approved by the Bureau of Explosives.

NOTE 1: The detonation test is performed by placing the sample in an open-end fiber tube which is set on the end of a lead block approximately 1½ inches in diameter and 4 inches high which, in turn, is placed on a solid base. A steel plate may be placed between the fiber tube and the lead block.

NOTE 2: A No. 8 test blasting cap is one containing two grams of a mixture of 80 percent mercury fulminate and 20 percent potassium chlorate, or a cap of equivalent strength.

NOTE 3: "Unconfined" as used in this section does not exclude the use of a paper or soft fiber tube wrapping to facilitate tests.

NOTE 4: The Bureau of Explosives Impact Apparatus is a testing device designed so that a guided 8-pound weight may be dropped from predetermined heights so as to impact specific quantities of liquid or solid materials under fixed conditions. Detailed prints may be obtained from the Bureau of Explosives, 63 Vesey Street, New York 7, New York.

NOTE 5: Blasting caps, blasting caps with safety fuse, or electric blasting caps in quantities of 1,000 or less are classified as class C explosives.

(i) *Ammunition for cannon.* Ammunition for cannon is fixed, semi-fixed or separate loading ammunition which is fired from a cannon, mortar, gun, howitzer or recoilless rifle.

(j) *Ammunition for cannon with projectiles.* Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, or shell is fixed ammunition assembled in a unit consisting of the cartridge case containing the propelling charge and primer, and the projectiles, or shell, fuzed or unfuzed. Detonating fuzes, tracer fuzes, explosive or ignition devices, or fuze parts with explosives contained therein must not be assembled in ammunition or included in the same outside package unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government or unless of a type approved by the Bureau of Explosives.

(k) *Explosive projectiles.* Explosive projectiles are shells, projectiles, warheads, or rocket heads, loaded with explosives or bursting charges, with or without other materials, for use in cannons, guns, tubes, mortars or other firing or launching devices.

(l) *Grenades.* Grenades, hand or rifle, are small metal or other containers designed to be thrown by hand or projected from a rifle. They are filled with an explosive or a liquid, gas, or solid material such as a toxic or tear gas or an incendiary or smoke producing material and a bursting charge. When shipped without explosives or bursting charges, see §§ 73.100 (y), 73.330, 73.350, and 73.385.

(m) *Explosive bombs.* Explosive bombs are metal or other containers filled with explosives. They are used in warfare and include aeroplane bombs and depth bombs.

(n) *Explosive mines.* Explosive mines are metal or composition containers filled with a high explosive.

(o) *Explosive torpedoes.* Explosive torpedoes, such as are used in warfare, are metal devices containing a means of propulsion and a quantity of high explosives.

(p) *Rocket ammunition.* Rocket ammunition (including guided missiles) consists of a completely assembled unit for launching from a tube, launcher, rails, trough or other launching device, in which the propellant material is a solid propellant explosive. Such unit consists of an igniter, a rocket motor or jet thrust unit, and a warhead, either fuzed or unfuzed, containing high explosives or chemicals.

(q) *Ammunition for small arms with explosive bullets or explosive projectiles.* Ammunition for small arms with explosive bullets or ammunition for small arms with explosive projectiles is fixed ammunition to be used in machine guns or similar fire arms and consists of a metallic cartridge case, the primer and the propelling charge, with explosive bullet or explosive projectile with or without detonating fuze, the component parts necessary for one firing being all in one assembly. Detonating fuzes, tracer fuzes, explosive or ignition devices or fuze parts with explosives contained therein must not be assembled in ammunition or included in the same outside package unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government or unless of a type approved by the Bureau of Explosives.

(r) *Chemical ammunition.* Chemical ammunition used in warfare is all kinds of explosive chemical projectiles, shells, bombs, grenades, etc., loaded with toxic, tear, or other gas, smoke or incendiary agent, also such miscellaneous apparatus as cloud-gas cylinders, smoke generators, etc., that may be utilized to project chemicals.

(s) *Boosters, bursters, and supplementary charges.* Boosters and supplementary charges consist of a casing containing a high explosive and are used to increase the intensity of explosion of the detonator of a detonating fuze. Bursters consist of a casing containing a high explosive and are used to rupture a projectile or bomb to permit release of its contents.

(t) *Jet thrust units (jato), explosive, (class A), or igniters, jet thrust (jato), explosive, (class A).* Jet thrust units (jato), explosive (class A), are metal cylinders containing a mixture of chemicals capable of burning rapidly and producing considerable pressure. Under certain conditions the chemical fuel with which the unit is loaded may explode. Jet thrust units are designed to be ignited by an electric igniter. They are used to assist aeroplanes to take off, to propel large missiles and to drive moving targets for practice firing.

(1) Igniters, jet thrust (jato), explosive, (class A), are devices consisting of an electrically operated or remotely controlled igniting element and a fast-burning composition assembled in a unit for use in igniting the propelling charge of jet thrust units. Under certain conditions the burning composition may explode.

(u) *Charged oil well jet perforating guns.* Charged oil well jet perforating guns are steel tubes or metallic strips into which are inserted shaped charges connected in series by primacord. Shaped charges must be of a type described in paragraph (h) (1) of this section, except that each shaped charge installed in the steel tube or metallic strip shall contain not over 4 ounces of high explosive. Charged oil well jet perforating guns must not be transported with blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns.

(v) *Type 9.* Propellant explosives, class A, are solid chemicals or solid chemical mixtures which are designed to function by rapid combustion of successive layers, generally with little or no smoke. The combustion is controlled by composition, size, and form of grain. Propellant explosives, class A, include some types of smokeless powder and some types of solid propellant explosives for jet thrust units, rockets, or other devices. Any propellant explosive is class A which detonates in any one out of five trials when tested in the packages in which it is offered for transportation. In conducting the test, one propellant container shall be surrounded by inert loaded containers of the same weight, including one inert container placed on top of the propellant container. The propellant shall be ignited by means of a commercial electric squib placed within 4 inches of the bottom of the container. The presence of a crater and absence of flame shall be considered as evidences of detonation.

### § 73.54 Ammunition for cannon.

(a) Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles or shell must be well packed and properly secured in strong wooden or metal containers, or in linear high-density polyethylene containers designed in accordance with Department of the Army Ordnance Corps Dwg. XP115554 and Sketch No. 4, dated May 4, 1961.

(b) Each outside package must be plainly marked "AMMUNITION FOR CANNON WITH EXPLOSIVE PROJECTILES," "AMMUNITION FOR CANNON WITH GAS PROJECTILES" (see § 73.409 (a) (1) for required label), "AMMUNITION FOR CANNON WITH SMOKE PROJECTILES," "AMMUNITION FOR CANNON WITH INCENDIARY PROJECTILES," or "AMMUNITION FOR CANNON WITH ILLUMINATING PROJECTILES", as the case may be.

(c) Ammunition for cannon must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.55 Ammunition, nonexplosive.

(a) Nonexplosive ammunition is defined as a device which contains no explosives or other dangerous articles, such as cartridge cases, dummy or drill cartridges; empty, sand loaded or solid projectiles with or without tracers (containing not in excess of one ounce of tracer composition), empty mines, empty bombs, solid projectiles, empty torpedoes, or practice bombs. It also includes devices containing no explosives, or other dangerous articles, except installed electric squibs, primers, propellants or thermal batteries required for the activation of the device, provided that it has been proven by test that when initiated the full energy release is contained within the outside shipping container. Such ammunition is exempt from Parts 71–78 of this chapter. Rotating bands should be protected against deformation by method of packing or loading.

### § 73.56 Ammunition, projectiles, grenades, bombs, mines, gas mines, and torpedoes.

(a) Detonating fuzes, tracer fuzes, explosive or ignition devices, bouchons, or fuze parts with explosives contained therein, must not be assembled in explosive projectiles, grenades, explosive bombs, explosive mines, or explosive torpedoes, or included in the same outside package with them unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government or unless of a type approved by the Bureau of Explosives.

(b) Explosive projectiles, explosive torpedoes, explosive mines, explosive bombs, or explosive grenades except as provided in paragraph (c) of this section, must be packed and properly secured in strong wooden or metal boxes.

(c) Explosive projectiles, explosive torpedoes, explosive mines, or explosive bombs, exceeding 90 pounds in weight, and explosive projectiles of not less than 4½ inches in diameter, may be shipped without being boxed only by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government when securely blocked and braced in accordance with methods approved by the Bureau of Explosives.

(1) Explosive projectiles less than 4½ inches in diameter may be shipped without being boxed, when palletized, only by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government when securely blocked and braced in accordance with methods approved by the Bureau of Explosives.

(d) Gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, gas bombs, smoke bombs, incendiary bombs, gas grenades, smoke grenades, incendiary grenades, and gas mines, explosive, containing a bursting charge must be packed and properly secured in strong wooden boxes. Detonating fuzes, boosters or bursters, bouchons or ignition elements must not be assembled in these articles or included in the same package with them unless shipped by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government or unless of a type approved by the Bureau of Explosives. (See §§ 73.190, 73.330, 73.350, and 73.383 for nonexplosive chemical or poisonous ammunition.)

(e) The gross weight of a box containing more than one projectile, mine, grenade, or bomb must not exceed 250 pounds.

(f) Each exterior package or projectile, bomb, or mine must be plainly marked "Explosive Projectile," "Explosive Torpedo," "Explosive Mine," "Explosive Bomb," "Hand Grenades," or "Rifle Grenades," as the case may be, except that each device need not be so marked when palletized and the palletized units are plainly marked and shipped as carload or truckload shipments.

(g) Ammunition for cannon with gas projectiles, and bombs, projectiles, grenades or other containers loaded with a poisonous gas or liquid, class A, and an explosive charge, either boxed or unboxed (see paragraph (c) of this section), must bear the white "Poison Gas" label.

(h) For regulations for shipping ammunition containing chemicals but no explosives or bursting charges, see chemical ammunition, §§ 73.330, 73.350, and 73.383.

(i) Articles described in paragraphs (a), (b), (c), (d) and (g) of this section must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.57 Rocket ammunition.

(a) Rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, or illuminating projectiles must be well packed and properly secured in strong wooden or metal containers or in pre-formed fiber glass resin impregnated containers approved by the Bureau of Explosives.

(b) Each outside package must be plainly marked "ROCKET AMMUNITION WITH EXPLOSIVE PROJECTILES", "ROCKET AMMUNITION WITH GAS PROJECTILES" (see § 73.402 (a) (6) for required label), "ROCKET AMMUNITION WITH SMOKE PROJECTILES", "ROCKET AMMUNITION WITH INCENDIARY PROJECTILES", or "ROCKET AMMUNITION WITH ILLUMINATING PROJECTILES", as the case may be.

(c) Rocket ammunition must not be offered for transporation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.58 Ammunition for small arms.

(a) Ammunition for small arms with explosive bullets and ammunition for small arms with explosive projectiles must be well packed and properly secured in strong wooden or metal containers. The gross weight of the outside package must not exceed 150 pounds.

(b) Each outside package must be plainly marked "AMMUNITION FOR SMALL ARMS WITH EXPLOSIVE BULLETS" or "AMMUNITION FOR SMALL ARMS WITH EXPLOSIVE PROJECTILES," as the case may be.

(c) Ammunition for small arms with explosive bullets or ammunition for small arms with explosive projectiles must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.59 Chemical ammunition, explosive.

(a) When chemical elements of ammunition are shipped assembled with their detonating fuzes or bursting charges, they must be shipped in conformity with the regulations prescribed for explosive articles, class A, see § 73.56. For shipment of these articles not containing ignition elements, bursting charges, detonating fuzes, or other explosive components, see § 73.330, § 73.350, and § 73.383. For shipment of these articles assembled with their ignition elements or expelling charges but without any detonating or bursting charge see § 73.88 (d).

(b) Chemical ammunition, explosive must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.60 Black powder and low explosives.

(a) Black powder and low explosives must be packed in containers complying with the following specifications:

(1) Spec. 10B (§ 78.156 of this chapter). Wooden barrels or kegs. Not over 200 pounds gross weight.

(2) Spec. 13 (§ 78.140 of this chapter). Metal kegs, not less than 7 inches long. Net weight not less than 6¼ pounds nor more than 150 pounds.

(3) Bundles of metal kegs, spec. 13 (§ 78.140 of this chapter), firmly tied together with rope and wrapped in strong burlap, canvas, or similar material, securely sewed and roped, authorized. Net weight of powder must not exceed 100 pounds.

(4) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with inside containers which must be spec. 13 (§ 78.140 of this chapter), metal kegs, or fiber or metal containers not over 1½ pounds capacity each, or cotton bags of at least 4 ounce cotton duck not over 25 pounds capacity each. The gross weight of spec. 14 boxes not to exceed 140 pounds and the gross weight of spec. 15A or 16A boxes not to exceed 200 pounds.

(5) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with inside cylindrical fiber cartridges not over 5 inches diameter nor over 18 inches long with fiber at least 0.05 inch thick paraffined on outer surface with joints securely glued or cemented, or strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Boxes must be completely lined with strong paraffined paper or other suitable waterproofed material without joints or other openings at the bottom or sides. Authorized gross weight not to exceed 75 pounds.

(6) Spec. 12H, 23F, or 23H (§§ 78.209, 78.214, or 78.219 of this chapter). Fiberboard boxes with inside cylindrical fiber cartridges not over 5 inches diameter nor over 18 inches long with fiber at least 0.05 inch thick paraffined on outer surface with joints securely glued or cemented, or strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Authorized gross weight not to exceed 65 pounds.

(b) Black powder (not low explosives) in addition to containers specified in paragraph (a) of this section, must be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with inside containers which must be cloth or paper bags of capacity not exceeding 25 pounds net weight, provided the completed shipping package shall be capable of standing a drop of 4 feet without rupture of inner or outer containers. The completed package must not exceed 50 pounds, net weight, of black powder.

(2) Spec. 12H, 23F, or 23H (§§ 78.209, 78.214, or 78.219 of this chapter). Fiberboard boxes with inside containers which must be cloth, paper, or securely closed polyethylene bags constructed of material not less than 0.004 inch thick of capacity not exceeding 25 pounds net weight for cloth or paper bags and not exceeding 50 pounds net weight for polyethylene bags, or inside fiber or metal containers having not over 1 pound capacity each, provided the completed shipping package shall be capable of withstanding a drop of 4 feet without rupture of inner or outer containers. The tubes of the box may be eliminated and a single tube as specified in spec. 23F (§ 78.214 of this chapter) may be substituted. The completed package shall not contain more than 50 pounds net weight of black powder.

(3) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip), not over 5 gallons capacity each, without opening except bunghole not exceeding 2.3 inches in diameter. Authorized for carload or truckload shipments only.

(c) Black pellet powder primed with an electric squib secured inside the coaxial hole of the pellet powder with loose ends of the wires of the squib effectively short-circuited may be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168 or 78.185 of this chapter). Wooden boxes with inside cartridges which must be strong paraffined paper cartridges not over 12 inches long authorized only for compressed pellets (cylindrical block) ⅞ inch or more in diameter. Boxes must be lined as prescribed for cylindrical fiber cartridges. Gross weight not to exceed 65 pounds.

(d) Low explosives (not black powder) may in addition to the containers specified in paragraph (a) of this section, be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with inside containers which must be strong paper bags of capacity not exceeding 25 pounds. Gross weight of spec. 14 box must not exceed 140 pounds. Gross weight of spec. 15A or 16A box must not exceed 200 pounds.

(2) Spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter). Fiberboard boxes with inside containers which must be strong paper bags of capacity not exceeding 25 pounds. Gross weight must not exceed 65 pounds.

(3) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, lined, spec. 2L (§ 78.30 of this chapter). Authorized only for low explosives in the form of hard nonplastic rods or cylinders not less than ⅝-inch diameter.

(e) Each outside package must be plainly marked, stamped, or stenciled "BLACK POWDER" or "LOW EXPLOSIVES," and may also show "BLASTING," "RIFLE," etc., as "BLACK BLASTING POWDER," "BLACK RIFLE POWDER," "LOW BLASTING EXPLOSIVE" or "BLACK PELLET POWDER," as the case may be.

(1) Inside containers of over 1½ pounds capacity each in boxes, must be packed with filling holes up, and the boxes must be marked on top "THIS SIDE UP."

(2) Additional marks, trade names, etc., may appear if desired, but such additional marking must not be more conspicuous than nor obscure the marking prescribed herein.

(f) Black powder and low explosives must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

### § 73.61 High explosives.

(a) High explosives (dynamite), except gelatin dynamite, when offered for transportation by rail freight or highway must not contain in excess of 60 percent of liquid explosive ingredient and when offered for transportation by carrier by water must not contain in excess of 75 percent of liquid explosive ingredient. Maximum limit of liquid explosive ingredient specified for transportation by carrier by water applies only for such explosives as consist principally of wood pulp or other satisfactory absorbent and liquid explosive, which are comparable with good commercial dynamite under tests as to leakage of liquid ingredient and sensitiveness to the shocks of transportation, and for shipments that are otherwise in compliance with the regulations in Parts 71–78 of this chapter, for the transportation of high explosives.

(b) High explosives consisting of a liquid mixed with an absorbent material must have the absorbent (wood pulp or similar material) in sufficient quantity and of satisfactory quality, properly dried at the time of mixing; nitrate of soda must be dried at the time of mixing to less than 1 percent of moisture; and the ingredients must be uniformly mixed so that the liquid will remain thoroughly absorbed under the most unfavorable conditions incident to transportation.

(c) High explosives containing nitroglycerin or other liquid explosive ingredients must have uniformly mixed with an absorbent material a satisfactory antacid, which must be in quantity sufficient to have the acid neutralizing power of an amount of magnesium carbonate equal to 1 percent of the nitroglycerin or other liquid explosive ingredient.

(d) Cartridges shall consist of a column of explosives completely inclosed in a shell made of strong paper or polyethylene or a combination of paper and polyethylene, so treated that it will not absorb the liquid ingredient of the explosive.

(e) Bags shall be made of strong paper or equally efficient material so treated or of such nature that it will not absorb the liquid ingredient of the explosive.

(f) All boxes in which high explosives are packed must be lined with strong paraffined paper or other suitable material, except as provided in paragraph (j) of this section, § 73.64 (a) (5), and § 73.65 (a) (5). Lining must be without joints or other openings or with cemented joints at the bottom, ends or sides of boxes, and for explosives with liquid ingredients must be impervious to such ingredient and also to water. Covers of boxes must be protected from contact with explosives by lining paper or other suitable material. (See spec. 2L (§ 78.30 of this chapter), for authorized lining material.)

(g) Before cartridges or bags of gelatin explosives are packed in boxes, lined in accordance with paragraph (f) of this section, dry fine wood pulp or sawdust at least ¼ inch in depth must be spread over the bottom of box or bottom of box may have a full area pad formed of absorptive cellulose sheet having nitroglycerin absorptive value equivalent to sawdust as specified; similar materials are required in boxes for packing all non-gelatinous types of explosives containing 30 percent or more liquid explosive ingredient.

(h) Except for cartridges containing gelatin dynamite, all cartridges of high explosives exceeding 4 inches in length and containing more than 10 percent of a liquid explosive ingredient must be placed horizontally in boxes. Bags must be packed with their filling holes up.

(i) Movement of cartridges and bags of high explosives within the boxes shall be prevented by sufficiently tight packing.

(j) High explosives (dynamite), except gelatin dynamite, packed in bags or in cartridges in excess of 2 inches in diameter and containing not more than 30 percent liquid explosive ingredients may be packed in outside containers without sawdust and without lining paper provided either each inside or outside container is sift-proof and is so treated as to prevent penetration by the commodity with which the container is filled for shipping.

### § 73.62 High explosives, liquid.

(a) Liquid explosives as defined in § 73.53(e) must be packed in specification containers as follows:

(1) Spec. 15L (§ 78.176 of this chapter). Wooden boxes which must be plainly marked on top and on one side or end "HIGH EXPLOSIVES—DANGEROUS" in letters not less than 7/16 inch in height. The tops of boxes must be marked "THIS SIDE UP".

(2) Spec. 15M (§ 78.177 of this chapter). Wooden boxes. Metal inside containers shall contain not more than 10 quarts liquid explosives each. Boxes must be plainly marked on top and on one side or end "HIGH EXPLOSIVES—DANGEROUS" in letters not less than 7/16 inch in height. The tops of boxes must be marked "THIS SIDE UP".

(3) Spec. MC–200 (§ 78.315 of this chapter). Motor vehicle container.

(b) High explosives, liquid, must not be offered for transportation by rail express, except as provided in § 73.86 and §75.675 of this chapter.

### § 73.63 High explosive with liquid explosive ingredient.

(a) High explosives (dynamite) containing not more than 30 percent liquid explosive ingredients must be prepared as prescribed in § 73.61, except as otherwise specified, and packed in containers complying with the following specifications:

(1) Spec. 23G (§ 78.218 of this chapter). Fiberboard boxes. Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of § 73.61 (f) and (g). High explosives packed in boxes consisting of one tube closed at the ends are exempt from the requirements of § 73.61 (d), (f), and (g). Gross weight of boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes, or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter) fiberboard boxes, with inside containers which must be cartridges not exceeding 12 inches in diameter or 50 pounds in weight with length not to exceed 36 inches, or bags not exceeding 50 pounds each securely closed so as to prevent leakage therefrom. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(3) Spec. 23F or 23H (§ 78.214 or 78.219 of this chapter). Fiberboard boxes having one inside 26-gauge metal container, measuring not over 8 inches in diameter and 31 inches long, containing high explosives (ammonium dynamite core) surrounded by nitrocarbonitrate. Authorized gross weight not to exceed 65 pounds.

(b) High explosives (dynamite) containing 10 percent or less of a liquid explosive ingredient in cartridges or bags as prescribed in § 73.61 (d) and (e) may be packed in wooden boxes, spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter), gross weight not to exceed 140 pounds, or fiberboard boxes, spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), gross weight not to exceed 65 pounds.

(1) High explosives (dynamite) containing 10 percent or less of a liquid explosive ingredient may be packed in fiberboard boxes, spec. 23G (§ 78.218 of this chapter). Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of § 73.61 (f) and (g). High explosives packed in boxes consisting of one tube closed at the ends are exempt from the requirements of § 73.61 (d), (f), and (g). Gross weight of boxes not to exceed 65 pounds.

(c) High explosives (dynamite) containing more than 30 percent liquid explosive ingredients must be prepared as prescribed in § 73.61 (a) to (i), inclusive, except as otherwise specified, and in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter) wooden boxes or spec. 12H, 23F, or 23H (§§ 78.209, 78.214, or 78.219 of this chapter) fiberboard boxes. Inside containers must consist of:

(i) Cartridges not exceeding 4 inches in diameter and not exceeding 8 inches in length.

(ii) Cartridges exceeding 4 inches in diameter and not exceeding 5 inches in diameter and between 8 inches and not exceeding 10 inches in length must be redipped in melted paraffin or equivalent material.

(iii) Two or more cartridges that must be redipped because of their size may be enclosed in another strong paper shell to form a completed cartridge not exceeding 30 inches in length. The resulting cartridge must be dipped in melted paraffin or equivalent material.

(iv) Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter) wooden boxes, or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be paraffined two-ply paper bags not exceeding 12½ pounds capacity, securely closed by folding the tops and securing the fold by tape, with not more than two such bags inserted into another two-ply paper bag which must be securely closed and dipped in paraffin after closing, or with not more than two inside containers which must be securely closed polyethylene bags not less than 0.004 inch in thickness of not more than 12½ pounds capacity each packed in a securely closed polyethylene or paper bag and packed in polyethylene lined outside fiberboard boxes. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(d) High explosives (gelatin dynamite and blasting gelatin) must be prepared as prescribed in § 73.61 (a) to (i) inclusive, except as otherwise specified, and in containers complying with the following specifications:

(1) Spec. 23G (§ 78.218 of this chapter). Fiberboard boxes. Not more than one cartridge in each box. High explosives packed in boxes consisting of more than one tube joined circumferentially are exempt from the requirements of § 73.61 (f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from the requirements of § 73.61 (d) to (g), inclusive. Gross weight of boxes not to exceed 65 pounds.

(2) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes, or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be cartridges not exceeding 12 inches in diameter or 50 pounds in weight with length not to exceed 36 inches, or bags not exceeding 12½ pounds each. Bags if not completely sealed against leakage by method of closure must be packed with filling holes up. Gross weight of wooden boxes not to exceed 75 pounds and gross weight of fiberboard boxes not to exceed 65 pounds.

(3) High explosives (gelatin dynamite or blasting gelatin) may be shipped in a package consisting of not more than 6 cartridges of such explosives, each not exceeding 32 inches in length or 5 inches in diameter, cartridged with heavy paper in such manner as to have the approximate strength of a spec. 23G (§ 78.218 of this chapter) container, which cartridges shall in turn be placed in a 10-ply paper tube not exceeding 11 feet in length. The outer paper tube must be equipped with a metal cone or equally efficient device on one end which shall serve to close that end of the tube and to the metal cone shall be affixed a wire threaded through fiber tubes running through the center of each of the 6 cartridges; or as an alternative to the single wire running through the cartridges in the outer tube at the center, two wires may be applied, one on each side of the cartridges and between the outside of the cartridges and the inside of the outer tube. In either event, cartridges and the outer tube shall be securely closed so as to prevent spilling of any loose explosive under any conditions normally incident to transportation and cartridges shall be so loaded and stayed within the car or motor vehicle as to prevent damage to individual containers. The total gross weight of each completed package shall not exceed 125 pounds. Shipments are authorized in carload or truckload lots only without transfer of packages other than such transfers as may be necessary in the event of mechanical failure of the car or vehicle in which originally loaded.

(e) High explosives (straight gelatin dynamites of 80 percent strength and over and blasting gelatin) must be packed in cartridges or in bulk in outside boxes. When packed in bulk in boxes double lining paper throughout must be used. Containers must comply with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes.

(2) Spec. 12H, 23F, 23G, or 23H (§ 78.209, § 78.214, § 78.218, or § 78.219 of this chapter). Fiberboard boxes. Spec. 23G must be packed in an outer container consisting of at least 7-ply heavy Kraft paper (see § 73.25 for additional required marking).

(3) Gross weight of wooden boxes not to exceed 75 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds

(f) Boxes containing high explosives must be plainly marked on top and on one side or end, except those made in compliance with spec. 23G which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than 7/16 inch in height. The tops of boxes except those made in compliance with spec. 23G, must be marked "THIS SIDE UP".

(g) High explosives with liquid explosive ingredient must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.64 High explosives with no liquid explosive ingredient and propellant explosives, class A.**

(a) High explosives containing no liquid explosive ingredients if their sensitiveness to percussion is not greater than that measured by the blow delivered by an 8-pound weight dropping from a distance of 7 inches on a compressed pellet of the explosive three-hundredths of an inch thick and two-tenths of an inch in diameter, confined rigidly between hard steel surfaces as in the standard Impact Testing Apparatus of the Bureau of Explosives, must be packed in cartridges or in bags in outside boxes. They must be packed in cartridges when their sensitiveness is greater than the limit prescribed herein. Such explosives when dry may be packed in strong sift-proof cloth or paper bags of capacity not exceeding 25 pounds. These explosives must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes.

(2) Spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter). Fiberboard boxes.

(3) Spec. 10B (§ 78.156 of this chapter). Wooden barrels or kegs.

(4) Gross weight of wooden boxes not to exceed 140 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds.

(5) When such explosives contain over 5 percent moisture, boxes must be lined with strong paraffined paper or other authorized material, spec. 2L (§ 78.30 of this chapter).

(6) When such explosives are in combination cartridges, consisting of column of explosives with core of dynamite, they may be shipped when packed in outside boxes with 65 pounds as the maximum gross weight. The column of explosives must be completely inclosed in waterproofed cloth or strong waterproofed paper and must not exceed 6 inches in diameter, 20 inches in length, or gross weight of 25 pounds.

(7) Spec. 23G (§ 78.218 of this chapter). Fiberboard boxes. Such explosives when packed in boxes consisting of more than one tube joined circumferentially are exempt from requirements of § 73.61 (f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from requirements of § 73.61 (d) to (g) inclusive. The gross weight of boxes not to exceed 65 pounds.

(b) Boxes containing high explosives must be plainly marked on top and on one side or end, except those made in compliance with spec. 23G which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than 7/16 inch in height.

(c) High explosives with no liquid explosive ingredient must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

(d) Propellant explosives, class A must be packed in containers as prescribed in § 73.93. Each outside container must be plainly marked "PROPELLANT EXPLOSIVES, CLASS A".

**§ 73.65 High explosives with no liquid explosive ingredient nor any chlorate.**

(a) High explosives containing no liquid explosive ingredient nor any chlorate if their sensitiveness to percussion is not greater than that measured by the blow delivered by an 8-pound weight dropping from a distance of 7 inches on a compressed pellet of the explosive three-hundredths of an inch thick and two-tenths of an inch in diameter, confined rigidly between hard steel surfaces as in the standard Impact Testing Apparatus of the Bureau of Explosives, must be packed in cartridges, or in bags or metal containers in outside boxes, except that the requirement of packaging in cartridges, bags or metal containers does not apply to plastic-bonded explosives, but they must be packed and cushioned so as to prevent movement of individual pieces within the outside shipping container. They must be packed in cartridges when their sensitiveness is greater than the limit prescribed in this section. Such explosives when dry may be packed in strong sift-proof bags securely closed so as to prevent leakage therefrom or metal containers of capacity not exceeding 60 pounds. These explosives must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes.

NOTE 1: Wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅜ inches from top edge of end of box.

(2) Spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter). Fiberboard boxes.

(3) Spec. 10B (§ 78.156 of this chapter). Wooden barrels or kegs.

(4) Gross weight of wooden boxes not to exceed 140 pounds. Gross weight of fiberboard boxes not to exceed 65 pounds.

(5) When such explosives contain over 5 percent moisture, boxes must be lined with strong paraffined paper or other authorized material, spec. 2L (§ 78.30 of this chapter).

(6) When such explosives are in combination cartridges, consisting of column of explosives with core of dynamite, they may be shipped when packed in outside boxes with 65 pounds as the maximum gross weight. The column of explosives must be completely inclosed in waterproofed cloth or strong waterproofed paper and must not exceed 6 inches in diameter, 20 inches in length, or gross weight of 25 pounds.

(7) Spec. 23G (§ 78.218 of this chapter). Fiberboard boxes. Such explosives when packed in boxes consisting of more than one tube joined circumferentially are exempt from requirements of § 73.61 (f) and (g) or when packed in boxes consisting of one tube closed at the ends are exempt from requirements of § 73.61 (d) to (g) inclusive. The gross weight of boxes not to exceed 65 pounds.

(b) Amatol consisting of 80 percent ammonium nitrate and 20 percent trinitrotoluene, ammonium picrate, nitroguanidine, nitrourea, urea nitrate, picric acid, tetryl, trinitroresorcinol, trinitrotoluene, pentolite, cyclotrimethylenetrinitramine (desensitized), and soda amatol, in dry condition, in addition to containers prescribed in paragraphs (a) (1) to (5) and (7) of this section, may be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with strong paper or cloth bags of capacity not exceeding 50 pounds, packed with filling holes up.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Net weight not to exceed 200 pounds.

(c) Trinitrotoluene and pentolite, in dry condition, in addition to containers prescribed in paragraphs (a), (1) to (5) and (b) (1) and (2) of this section, may be shipped in specification containers as follows:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes with strong paper or cloth bags of capacity not exceeding 100 pounds, packed with filling holes up.

(2) Spec. 14, 15A, or 16A (§§ 78.165, 78.168 or 78.185 of this chapter). Wooden boxes with strong siftproof liners, spec. 2L (§ 78.30 of this chapter).

(d) The following materials may be shipped dry, in quantity not exceeding 4 ounces in one outside package for medicinal purposes or as reagents, by carriers by rail freight, rail express, highway, or water, as drugs, medicines, or chemicals, without other restrictions, when in securely closed bottles or jars properly cushioned to prevent breakage:

(1) Ammonium picrate.
(2) Dipicrylamine.
(3) Dipicryl sulfide.
(4) Dinitrophenylhydrazine.
(5) Nitroguanidine.
(6) Picramide.
(7) Picric acid.
(8) Picryl chloride.
(9) Trinitroanisole.
(10) Trinitrobenzene.
(11) Trinitrobenzoic acid.
(12) Trinitro-m-cresol.
(13) Trinitronaphthalene.
(14) Trinitroresorcinol.
(15) Trinitrotoluene.
(16) Urea nitrate.

(e) Ammonium picrate, picric acid, urea nitrate, trinitrobenzene, trinitroresorcinol, trinitrotoluene, cyclotrimethylenetrinitramine, and trinitrobenzoic acid when wet with not less than 10 pounds of water to each 90 pounds of dry material must be shipped in containers complying with the following specifications:

(1) Spec. 10B (§ 78.156 of this chapter). Wooden barrels or kegs. Not over 50 gallons nominal capacity.

(2) (See § 73.192 for shipments of wet ammonium picrate, wet picric acid, wet trinitrobenzoic acid, and wet urea nitrate not in excess of 16 ounces and § 73.193 for shipments of wet picric acid, wet trinitrobenzoic acid, and wet urea nitrate not in excess of 25 pounds.) (See § 73.212 for shipments of wet trinitrobenzene and wet trinitrotoluene not in excess of 16 ounces.)

(3) Spec. 5B (§ 78.82 of this chapter) metal barrels or drums or Spec. 21C (§ 78.224 of this chapter) fiber drums. Authorized only for cyclotrimethylenetrinitramine wet with not less than 10 pounds of water to each 90 pounds of dry material in inside containers which must be bags made of at least 10-ounce cotton duck, rubber or rubberized cloth and securely closed. The dry weight of cyclotrimethylenetrinitramine in one metal barrel or drum must not exceed 300 pounds and not more than 225 pounds in fiber drums. These bags containing the cyclotrimethylenetrinitramine must then be placed in a rubber bag, rubberized cloth bag or bag made of suitable water-tight material which must be securely closed and then placed in the drum. If shipment of cyclotrimethylenetrinitramine is to take place at a time freezing weather is to be anticipated, it must be wet with a mixture of denatured ethyl alcohol or other suitable anti-freeze and water of such proportions that freezing will not occur in transit.

(f) Amatol when cast or pressed in a block or column, in addition to the containers prescribed in paragraphs (a) (1) to (5) and (7) of this section, may be shipped in specification containers as follows:

(1) Spec. 13A (§ 78.141 of this chapter). Metal drums not exceeding 90 pounds gross weight.

(g) Nitrocellulose must be packed in wooden boxes complying with specs. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter), with inside packages which must be:

(1) Inside packages containing not more than 1 pound each of dry, uncompressed nitrocellulose, wrapped in strong paraffined paper or suitable sparkproof material. Completed outside package not to contain more than 10 pounds dry nitrocellulose.

(2) Inside packages containing compressed sticks or blocks of dry nitrocellulose wrapped in strong paraffined paper. Gross weight not to exceed 75 pounds.

(h) Shaped charges, commercial, having exposed lined conical cavities must have such cavities effectively filled; those having conical cavities that are covered shall be paired together with the cavities facing each other and with one or more pairs in a fiber tube, or so arranged that the conical cavities of the shaped charges at the ends of the column face toward the center of the tube. The shaped charges in the fiber tubes must fit snugly with no excess space and the fiber tubes containing the shaped charges must be packed snugly with no excess space in the outside containers. Other methods of packaging for devices of which shaped charges are a component part may be employed when approved by the Bureau of Explosives. Shaped charges, commercial, must be packed in specification containers as follows:

(1) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes. Gross weight not to exceed 140 pounds.

(2) Spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes which must be manufactured of at least 275-pound strength (Mullen or Cady test) double-wall corrugated fiberboard and shall be provided with double-faced corrugated lining board (see § 78.205–15 of this chapter) having minimum strength (Mullen or Cady test) of 200 pounds. Individual charges of explosives shall be packed in inside securely closed, waterproof plastic containers, or in securely closed waterproof fiberboard containers having metal ends. Gross weight not to exceed 65 pounds. Inside individual containers shall be separated by means of double-faced corrugated fiberboard partitions of material not less than 175-pound Mullen or Cady test.

(i) Cyclotrimethylenetrinitramine (desensitized) in pellet form, dry, in addition to provisions of paragraphs (a) and (b) of this section may be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes. For pellets ¼ inch or less in diameter; pellets must be packed in a slide-type fiber carton with perforated fillers. All openings of the fiber carton shall be securely closed with pressure-sensitive tape. Inside containers shall be cushioned with at least 2 inches of sawdust between inner containers and outside box. No inside container shall contain more than one-half pound net weight of explosive composition and not more than 10 pounds net weight of explosive composition shall be packed in one outside box.

(2) Spec. 15A (§ 78.168 of this chapter). Wooden boxes. For pellets exceeding ¼ inch in diameter; pellets must be packed in a fiber tube with positive closures at both ends, which shall be packed in a fiber carton having not more than one-half pound net weight of explosive composition. Fiber carton shall be cushioned with not less than 2 inches of sawdust in the outside box. Not more than 10 pounds net weight of explosive composition shall be packed in one outside box.

(j) Boxes containing high explosives must be plainly marked on top and on one side or end, except those made in compliance with spec. 23G (§ 78.218 of this chapter) which must be marked on the side or end, and kegs, drums, or barrels containing high explosives must be marked on both ends "HIGH EXPLOSIVES—DANGEROUS" in letters not less than 7/16 inch in height. When space will not permit such marking on ends of kegs or drums, it may be applied to the side of the container. The tops of boxes, except those referred to in paragraph (a) (1) to (7) of this section, must be marked "THIS SIDE UP".

(k) High explosives with no liquid explosive ingredient nor any chlorate must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.66 Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps.**

(a) Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, or electric blasting caps, in quantity of 1,000 or less, are classified as class C explosives. See § 73.103.

(b) The outside of all blasting caps and electric blasting caps must be free from fulminate or other explosive compositions.

(c) Blasting caps containing not to exceed 50 grains of explosive composition each must be placed in strong interior containers, in which they must fit snugly. When caps are loaded vertically in interior metal containers, they must be covered by suitable elastic material placed over the caps. Not more than 100 such blasting caps may be packed in a single container. All inside containers must then be packed snugly in cartons or wrappings made of paper or pasteboard.

(d) Not more than 5,000 blasting caps, not exceeding 50 grains of explosive composition each, packed in inner containers as prescribed in paragraph (c) of this section, must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes (see § 73.67 (a) (1) Note 1) or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be cartons or wrappings with inside containers as prescribed in paragraph (c) of this section, which must be separated from the outside box by at least one inch of tightly packed sawdust, excelsior, or equivalent cushioning material. Gross weight not to exceed 150 pounds.

NOTE 1: Because of the present emergency and until further order of the Commission, fiberboard boxes, spec. 23F (§ 78.214 of this chapter), may be used in lieu of prescribed wooden boxes, spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter).

(e) More than 5,000 blasting caps, not exceeding 50 grains of explosive composition each, packed in inner containers as prescribed in paragraph (c) of this section, must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes (see § 73.67 (a) (1) Note 1) or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be cartons or wrappings with inner containers as prescribed in paragraph (c) of this section, packed in an inside box made of sound lumber, a hermetically sealed metal box of metal not less than 30 gauge United States standard, or a sealed package made of 6-ply Sisalkraft Asphalt Laminated sheeting, or its equivalent; Asphalt Laminated sheeting shall consist of 2 plies of strong fibers, 2 plies of pliable asphalt, and 2 plies of protective cover.

The minimum tensile strength shall be 20 pounds per inch width in each direction. The laminated sheet shall have a minimum water resistance of 24 hours and a maximum water permeability of 4 grams per square meter per 24 hours. The inside wooden box, metal box, or sealed package must be separated at all points from the outside box by at least one inch of tightly packed sawdust, excelsior, or equivalent cushioning material. Gross weight not to exceed 150 pounds.

NOTE 1: Because of the present emergency and until further order of the Commission, fiberboard boxes, spec. 23F (§ 78.214 of this chapter), may be used in lieu of prescribed wooden boxes, spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter).

(2) More than 20,000 blasting caps containing not to exceed 50 grains of explosive composition each, must not be placed in one outside package.

(f) Blasting caps containing in excess of 50 grains of explosive composition each must be packed in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A. (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes (see § 73.67 (a) (1), Note 1) with inside containers which must have strong interior containers, in which they must fit snugly. When caps are loaded vertically in interior metal containers, they must be covered by suitable elastic material placed over the caps. Not more than 10 such blasting caps may be packed in a single inside container. All inside containers must then be packed snugly in cartons or wrappings made of paper or pasteboard. The cartons or wrappings must be separated from outside box by at least 1 inch of tightly packed sawdust, excelsior, or equivalent cushioning material. Not more than 500 caps containing in excess of 50 grains of explosive composition each may be placed in one outside package. Gross weight not to exceed 150 pounds.

(g) Electric blasting caps must be packed in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes (see § 73.67(a)(1), Note 1) or spec. 12H, 23F, or 23H (§ 78.209, 78.214, or 78.219 of this chapter) fiberboard boxes, with inside containers which must be pasteboard cartons containing not more than 100 caps each, or pasteboard tube inclosing each cap with wires or with the wires wrapped around the tube. Gross weight of wooden boxes containing pasteboard cartons or caps with wires 30 feet or more in length in pasteboard tubes must not exceed 150 pounds, except for export shipment. Gross weight of wooden boxes containing caps with wires less than 30 feet in length in pasteboard tubes must not exceed 75 pounds.

(h) Each outside container must be plainly marked "(number) BLASTING CAPS—HANDLE CAREFULLY", or "(number) ELECTRIC BLASTING CAPS—HANDLE CAREFULLY", as the case may be.

NOTE 1: The number of caps must be shown in the marking.

(i) Blasting caps and electric blasting caps must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.67 Blasting caps with safety fuse and blasting caps with metal clad mild detonating fuse.**

(a) Ten or less of the interior containers of not more than 100 blasting caps each, containing not to exceed 50 grains of explosive composition each, packed as prescribed in § 73.66(c), in the same outside container with safety fuse or metal clad mild detonating fuse, must be shipped in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes (see Note 1 of this paragraph) or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be cartons or wrappings with inner containers as prescribed in § 73.66 (c), placed in the center of a coil of fuse and secured and cushioned therein to prevent movement therefrom. Gross weight not to exceed 150 pounds.

NOTE 1: Closing of outside boxes by nailing tops in place with uncoated nails, at not over 3-inch centers into ends, and at not over 6-inch centers into sides, is authorized. Sizes of these nails must be not less than the following:

3-penny into ends and sides not over ⅜ inch thick.

4-penny into ends and sides over ⅜ but not over ½ inch thick.

5-penny into ends and sides over ½ but not over ⅝ inch thick.

6-penny into ends and sides over ⅝ but not over 13/16 inch thick.

7-penny into ends and sides over 13/16 inch thick.

(b) Each outside container must be plainly marked "(number) BLASTING CAPS WITH SAFETY FUSE—HANDLE CAREFULLY" or "(number) BLASTING CAPS WITH METAL CLAD MILD DETONATING FUSE—HANDLE CAREFULLY," as the case may be.

(c) Blasting caps with safety fuse and blasting caps with metal clad mild detonating fuse must not be offered for transportation by rail express, except as provided in §§ 73.86 and 75.675 of this chapter.

**§ 73.68 Detonating primers.**

(a) Detonating primers must be packed in containers complying with the following specifications:

(1) Spec. 14, 15A, or 16A (§ 78.165, § 78.168, or § 78.185 of this chapter). Wooden boxes (see § 73.67 (a) (1) Note 1) or spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter), fiberboard boxes, with inside containers which must be pasteboard cartons containing not more than 50 primers each, or pasteboard or plastic tube inclosing each primer with wires, or pasteboard, wooden, metal, or plastic tubes or spools with wires wrapped around the tube or spool. Gross weight of wooden boxes containing pasteboard cartons must not exceed 150 pounds, except for export shipment. Gross weight of wooden boxes containing pasteboard or plastic tube inclosing each primer with wires, or pasteboard, wooden, metal, or plastic tubes or spools with the wires wrapped around the tube or spool must not exceed 75 pounds.

(b) Each outside container must be plainly marked "DETONATING PRIMERS—HANDLE CAREFULLY".

(c) Detonating primers must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.69 Detonating fuzes, class A, with or without radioactive components, detonating fuze parts containing an explosive, boosters, bursters, or supplementary charges.**

(a) Detonating fuzes, class A with or without radioactive components, detonating fuze parts containing an explosive, boosters, bursters, or supplementary charges, when shipped not assembled in projectiles, bombs, etc., must be packed and well secured in strong, tight wooden or metal boxes.

NOTE 1: Radiation on the surface of any detonating fuze, class A, having a radioactive component shall not exceed 100 milliroentgens per hour and the radiation at the surface of the outside shipping container shall not exceed 200 milliroentgens per hour.

(b) The gross weight of one outside package containing detonating fuzes, class A, must not exceed 190 pounds. Boosters, bursters and supplementary charges, without detonators, when shipped separately, must not exceed a gross weight of 300 pounds.

(c) Each outside package must be plainly marked "DETONATING FUZES CLASS A EXPLOSIVES—HANDLE CAREFULLY—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVES," or "DETONATING FUZES, CLASS A EXPLOSIVES, RADIOACTIVE—HANDLE CAREFULLY—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVES," or "BOOSTERS (EXPLOSIVE)—HANDLE CAREFULLY," or "BURSTERS (EXPLOSIVE)—HANDLE CAREFULLY," or "SUPPLEMENTARY CHARGES (EXPLOSIVE)—HANDLE CAREFULLY," as the case may be.

(d) Detonating fuzes, class A, boosters, bursters, or supplementary charges must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.70 Diazodinitrophenol or lead mononitroresorcinate.**

(a) The offering of diazodinitrophenol or lead mononitroresorcinate in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Diazodinitrophenol or lead mononitroresorcinate must be packed wet with not less than 40 percent by weight of water in specification containers 5 or 5B (§ 78.80 or § 78.82 of this chapter) metal barrels or drums or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside containers which must be bags made of at least 10-ounce cotton duck, rubber, or rubberized cloth, which must be securely closed. The dry weight of diazodinitrophenol in one container must not exceed 220 pounds and the dry weight of lead mononitroresorcinate in one container must not exceed 100 pounds. The bags containing diazodinitrophenol or lead mononitroresorcinate must be placed in a rubber bag, rubberized cloth bag, or bag made of suitable watertight material and then placed in the barrel, keg, or drum. Any empty space in the outside bag must be filled with water and this bag securely closed.

(1) Spec. 21C (§ 78.224 of this chapter). Fiber drums not over 30 gallons capacity of at least nine-ply construction having, in addition, a sheet of steel having a minimum base box of 75 pounds, not less than .008 inch thick, wound between the fifth and sixth plies. The inside ply of kraft paper shall be laminated on each side with polyethylene to form a waterproof lining. The bottom head shall be of fiber, metal covered on the outside. Lead mononitroresorcinate only must be packed wet with not less than 40 percent by weight of water and shall be contained in at least two tightly sealed polyethylene bags of at least 0.004 inch thickness and this unit shall then be placed in a tightly closed polyethylene bag of at least 0.004 inch thickness and this assembly shall be placed within a 0.006 inch thickness polyethylene or other suitable plastic bag, completely filled with water and tightly closed. The 0.006 inch plastic bag shall be of such size as to completely fill the outside shipping container. The dry weight of lead mononitroresorcinate only in one outside container must not exceed 100 pounds.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured alcohol and water may be used to prevent freezing in transit.

(d) Each barrel, box, drum, or keg must be plainly marked "Initiating Explosive—Dangerous—Do Not Store or Load With Any High Explosive."

(e) Diazodinitrophenol or lead mononitroresorcinate, wet, must not be offered for transportation by rail express, except as provided in §§ 73.86 and 75.675 of this chapter.

**§ 73.71 Fulminate of mercury.**

(a) The offering of fulminate of mercury in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Fulminate of mercury must be packed wet with not less than 25 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter), wooden barrels or kegs, with inside container which must be a bag made of 4-ounce duck. Inside the bag and over the fulminate there must be placed a cap of the same fabric, of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The dry weight of fulminate in one container must not exceed 150 pounds. The bag and contents must be packed in the center of the wooden barrel or keg, metal barrel or drum, and must be entirely surrounded by not less than 3 inches of well-packed sawdust saturated with water. The wooden barrel or keg, or metal barrel or drum, must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel, keg, or drum must be inspected carefully and all leaks stopped.

(c) If shipment of fulminate is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethly alcohol and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel, keg or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Fulminate of mercury, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.72 Guanyl nitrosamino guanylidene hydrazine.**

(a) The offering of guanyl nitrosamino guanylidene hydrazine in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Guanyl nitrosamino guanylidene hydrazine must be packed wet with not less than 30 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside container which must be a bag made of 4-ounce duck. Inside the bag and over the guanyl nitrosamino guanylidene hydrazine there must be placed a cap of the same fabric, of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The dry weight of guanyl nitrosamino guanylidene hydrazine in one container must not exceed 75 pounds. The bag and contents must be packed in the center of the wooden barrel or keg, metal barrel or drum, and must be entirely surrounded by not less than 3 inches of well-packed sawdust saturated with water. The wooden barrel or keg, or metal barrel or drum, must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel, keg, or drum must be inspected carefully and all leaks stopped.

(c) If shipment of guanyl nitrosamino guanylidene hydrazine is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE — DANGEROUS — DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Guanyl nitrosamino guanylidene hydrazine, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.73 Lead azide.**

(a) The offering of lead azide in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Lead azide, dextrinated type, or otherwise prepared to effectively control grain size, must be packed wet with not less than 20 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside container which must be a bag made of 4-ounce duck. Inside the bag and over the lead azide there must be placed a cap of the same fabric, of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The dry weight of lead azide in one container must not exceed 150 pounds. The bag and contents must be packed in the center of the wooden barrel or keg, metal barrel or drum, and must be entirely surrounded by not less than 3 inches of well-packed sawdust saturated with water. The wooden barrel or keg, or metal barrel or drum, must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel, keg, or drum must be inspected carefully and all leaks stopped.

(c) If shipment of lead azide is to take place at a time that freezing weather is to be anticipated, a mixture of denatured ethyl alcohol or other suitable antifreeze and water of such proportions that freezing will not occur in transit must be used.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Lead azide, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.74 Lead styphnate.**

(a) The offering of lead styphnate (lead trinitroresorcinate) in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Lead styphnate (lead trinitroresorcinate) must be packed wet with not less than 20 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter), wooden barrels or kegs, with inside container which must be a bag made of rubber cloth. The lead styphnate within this bag should be divided into a number of smaller packages. There must be a cap of the same fabric and of the same diameter as the bag over the lead styphnate and inside the bag. The dry weight of lead styphnate in one outer container must not exceed 150 pounds. The bag and contents must be packed in the center of the wooden barrel or keg, metal barrel or drum, and must be entirely surrounded by not less than 3 inches of well-packed sawdust saturated with water. The wooden barrel or keg, or metal barrel or drum, must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel, keg, or drum must be inspected carefully and all leaks stopped.

(c) If shipment of lead styphnate is to take place at a time freezing weather is to be anticipated, it must be wet with a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Lead styphnate (lead trinitroresorcinate), wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.75 Nitro mannite.**

(a) The offering of nitro mannite in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water, is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Nitro mannite must be packed wet with not less than 40 percent by weight of water in specification containers 5 or 5B (§ 78.80 or § 78.82 of this chapter) metal barrels or drums, or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside containers which must be bags made of at least 10-ounce cotton duck, rubber or rubberized cloth, which must be securely closed. The dry weight of nitro mannite in one container must not exceed 100 pounds. These bags containing the nitro mannite must then be placed in a rubber bag, rubberized cloth bag or bag made of suitable watertight material and then placed in the barrel, keg, or drum. Any empty space in the outside bag must be filled with water and this bag securely closed.

(1) Spec. 21C (§ 78.224 of this chapter). Fiber drums not over 30 gallons capacity of at least nine-ply construction having, in addition, a sheet of steel having a minimum base box of 75 pounds, not less than 0.008 inch thick, wound between the fifth and sixth plies. The inside ply of kraft paper shall be laminated on each side with polyethylene to form a waterproof lining. The bottom head shall be of fiber, metal covered on the outside. Nitro mannite must be packed wet with not less than 40 percent by weight of water and shall be contained in at least two tightly sealed polyethylene bags of at least 0.004 inch thickness and this unit shall then be placed in a tightly closed polyethylene bag of at least 0.004 inch thickness and this assembly shall be placed within a 0.006 inch thickness polyethylene or other suitable plastic bag, completely filled with water and tightly closed. The 0.006 inch plastic bag shall be of such size as to completely fill the outside shipping container. The dry weight of nitro mannite in one outside container must not exceed 100 pounds.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured ethyl alcohol and water may be used to prevent freezing in transit.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Nitro mannite, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.76 Nitrosoguanidine.**

(a) The offering of nitrosoguanidine in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Nitrosoguanidine must be packed wet with not less than 10 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside container which must be a bag made of strong cloth, which must in turn be placed in the wooden barrel, or keg, or metal barrel or drum. The dry weight of nitrosoguanidine in one container must not exceed 75 pounds.

(c) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE — DANGEROUS — DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(d) Nitrosoguanidine, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.77 Pentaerythrite tetranitrate.**

(a) The offering of pentaerythrite tetranitrate in a dry condition for transportation by common carriers by rail freight, rail express, highway or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Pentaerythrite tetranitrate must be packed wet with not less than 40 percent by weight of water in specification containers 5 or 5B (§ 78.80 or § 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside containers which must be bags made of at least 10-ounce cotton duck, rubber, or rubberized cloth, which must be securely closed. The dry weight of pentaerythrite tetranitrate in one container must not exceed 300 pounds. These bags containing the pentaerythrite tetranitrate must then be placed in a rubber bag, rubberized cloth bag, or bag made of suitable watertight material and then placed in the barrel, keg, or drum. Any empty space in the outside bag must be filled with water and this bag securely closed.

(c) Sufficient outage in outside container must be allowed to prevent rupturing of container in freezing weather, or a mixture of denatured ethyl alcohol or other suitable anti-freeze and water may be used to prevent freezing in transit.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Pentaerythrite tetranitrate, wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.78 Tetrazene.**

(a) The offering of tetrazene (guanyl nitrosamino guanyl tetrazene) in a dry condition for transportation by common carriers by rail freight, rail express, highway, or water is forbidden, except as a component of manufactured articles such as percussion caps, detonators, blasting caps, and exploders, the transportation of which is authorized in this part.

(b) Tetrazene (guanyl nitrosamino guanyl tetrazene) must be packed wet with not less than 30 percent by weight of water in specification containers 5 or 5B (§§ 78.80 or 78.82 of this chapter) metal barrels or drums, 17H (§ 78.118 of this chapter) metal drums (single-trip), or 10B (§ 78.156 of this chapter) wooden barrels or kegs, with inside container which must be a bag made of 4-ounce duck. Inside the bag and over the tetrazene there must be placed a cap of the same fabric, of the same diameter as the bag. The bag must be securely tied and placed in a strong grain bag. This grain bag must also be securely tied. The dry weight of tetrazene in one container must not exceed 75 pounds. The bag and contents must be packed in the center of the wooden barrel or keg, metal barrel or drum, and must be entirely surrounded by not less than 3 inches of well-packed sawdust saturated with water. The wooden barrel or keg, or metal barrel or drum must be lined with a heavy, close-fitting, jute bag closed by secure sewing to prevent escape of sawdust. The barrel, keg, or drum must be inspected carefully and all leaks stopped.

(c) If the shipment of tetrazene is to take place at a time that freezing weather is to be anticipated, it must be wet with a mixture of denatured ethyl alcohol and water of such proportions that freezing will not occur in transit.

(d) Each barrel, keg, or drum must be plainly marked "INITIATING EXPLOSIVE—DANGEROUS—DO NOT STORE OR LOAD WITH ANY HIGH EXPLOSIVE".

(e) Tetrazene (guanyl nitrosamino guanyl tetrazene), wet, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.79 Jet thrust units (jato), explosive, class A or igniters jet thrust (jato), explosive, class A.**

(a) Jet thrust units (jato), explosive, must not be shipped with igniters assembled therein unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government. Jet thrust units (jato) or igniters jet thrust (jato) must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, 15E, or 16A (§§ 78.165, 78.168, 78.172 and 78.185 of this chapter), wooden boxes or wooden boxes, fiberboard lined.

(b) Jet thrust units (jato), class A, or igniters, jet thrust (jato), class A, packed in any other manner must be approved by the Bureau of Explosives.

(c) Each outside package must be plainly marked "JET THRUST UNITS, CLASS A EXPLOSIVES" or "IGNITERS, JET THRUST, CLASS A EXPLOSIVES."

(d) Jet thrust units, class A, or igniters, jet thrust, class A, must not be offered for transportation by rail express, except as provided in § 73.86 or § 75.675 of this chapter.

**§ 73.80 Charged oil well jet perforating guns.**

(a) Charged oil well jet perforating guns, when transported by motor vehicles operated by private carriers engaged in oil well operations in which the total weight of the explosive contents of shaped charges assembled to guns being transported does not exceed 20 pounds per such vehicle, are classed as class C explosives. See § 73.110.

(b) Charged oil well jet perforating guns of the steel tube type must be packed without blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns and transported in specially constructed bodies of motor vehicles operated by private carriers engaged in oil well operations whose motor vehicles transporting such guns must have specially built racks or carrying cases designed and constructed so that the guns are held securely in place during transportation and are not subject to damage by contact, one to the other or other articles or materials carried on the vehicle. Shaped charges assembled in the steel tubes must be of the type described in § 73.53(h)(1), except that each shaped charge shall contain not over 4 ounces of high explosive and each shaped charge if not completely enclosed in glass or metal must be fully protected by a metal cover after installation in the gun.

(c) Charged oil well jet perforating guns of the metallic strip or tubular framework type must be packed without blasting caps, electric blasting caps, or other firing devices affixed to or installed in the guns and transported in specially constructed bodies of motor vehicles operated by private carriers engaged in oil well operations transporting charged oil well jet perforating guns shall be segregated; each kind from every other kind, and from jet perforating guns, tools or other supplies. Blasting caps, electric blasting caps, or other firing devices shall be carried in a container having individual pockets for each such device or in a fully enclosed steel container lined with nonsparking material. No more than two blasting caps, electric blasting caps, or other firing devices per gun shall be transported on the same motor vehicle transporting oil well jet perforating guns.

(d) The charged oil well jet perforating guns described in paragraphs (b) and (c) of this section and the bodies of motor vehicles transporting such guns must be so designed and constructed so that the guns are held securely in place during transportation and are not subject to damage by contact, one to the other or other articles or materials carried on the vehicle. The assembled gun or guns packed as required by paragraphs (b) or (c) of this section must not extend beyond the body of the vehicle and must be secured in the body of the motor vehicle in a fixed position so as to prevent movement relative to each other or in the body of the motor vehicle.

(e) Blasting caps, electric blasting caps, or other firing devices transported on any motor vehicle operated by private carriers engaged in oil well operations transporting charged oil well jet perforating guns shall be segregated; each kind from every other kind, and from jet perforating guns, tools or other supplies. Blasting caps, electric blasting caps, or other firing devices shall be carried in a container having individual pockets for each such device or in a fully enclosed steel container lined with nonsparking material. No more than two blasting caps, electric blasting caps, or other firing devices per gun shall be transported on the same motor vehicle transporting oil well jet perforating guns.

(f) Charged oil well jet perforating guns must not be offered for transportation or transported by carriers by rail freight, rail express, rail baggage, water, or by common or contract carriers by public highway.

**§ 73.86 Samples of explosives and explosive articles.**

(a) New explosives, including fireworks and explosive devices, other than Army, Navy, or Air Force explosive or chemical ammunition of a security classification, must be examined and approved by the Bureau of Explosives as safe for transportation before being offered for shipment, except that a sample of such explosives, fireworks, and explosive devices, not to exceed 5 pounds net weight, may be offered for transportation by carriers by rail freight, highway, or water for this examination. Samples of explosives, except liquid nitroglycerin, other than new explosives for laboratory examination not exceeding 5 pounds net weight, may be offered for transportation by carriers by rail freight, highway, or water. For the purpose of Parts 71–78 of this chapter, a new explosive, including fireworks and explosive devices, is the product of a new factory or an explosive or explosive device of an essentially new composition or character made by any factory.

(b) Before being offered for shipment, explosive articles in the experimental state must be made safe by removal of ignition elements or otherwise.

(c) Shipments of samples of explosives, fireworks and explosive devices must be packed, marked, and described as required by this part for the explosive contained therein.

(d) *Samples of explosives and explosive articles for transportation by rail freight, rail express, or highway.* Samples of explosives (except liquid nitroglycerin), including fireworks and explosive devices for examination in a laboratory only and not intended for use or demonstration, may be offered for transportation by rail freight, rail express, or highway provided they fulfill the following requirements:

(1) Samples of explosives including fireworks and explosive devices for laboratory examination must be packed in well-secured metal cans, glass bottles, rubber containers, or compatible plastic containers not subject to static generation by contained products, or in strong water-proof paper or cardboard packages; each sample must consist of not more than one-half pound of explosive, and the interior package must be placed in sawdust or similar cushioning material, at least 2 inches thick, in a wooden box, spec. 14 or 15A (§ 78.165 or 78.168 of this chapter).

(2) Whenever these samples of explosives for laboratory examination are contained in a metal envelope or receptacle, this receptable must be properly cushioned with sawdust or similar cushioning material in a strong wooden box, and this interior box must be packed in a wooden box, spec. 14 or 15A (§§ 78.165 or 78.168 of this chapter), with at least 2 inches of cushioning material separating the boxes.

(3) Not more than 100 blasting caps may be shipped in one outside package for laboratory examination, and they must be packed and cushioned as provided in paragraph (d) (2) of this section.

(4) Not more than 20 half-pound samples of explosives for laboratory examination may be packed in one outside package or transported in a single car or vehicle at one time.

(5) The net weight of the explosive contents must be plainly marked by the shipper on the outside of each box offered for transportation.

(6) *Label.* Each outside package containing samples of explosives for laboratory examination must have securely and

conspicuously attached to it a square red label as described in § 73.411.

**§ 73.87 Explosives in mixed packing.**

(a) Unless specifically authorized by Parts 71–78 of this chapter, explosives must not be packed in the same outside package with each other or with other articles. Explosives, except blasting caps and other initiating explosives, in separate interior containers, may be shipped when packed in the same outside package of gross weight not exceeding 50 pounds, provided the weight of any interior package of explosives does not exceed 8 ounces, and provided the interior packages are so cushioned and protected as to insure their transportation without rupture or leakage of contents. The package must be marked and described with the name of the most dangerous explosive included such as "HIGH EXPLOSIVE", or "BLACK POWDER".

CLASS B EXPLOSIVES; DEFINITIONS

**§ 73.88 Definition of class B explosives.**

(a) Explosives, class B, are defined as those explosives which in general function by rapid combustion rather than detonation and include some explosive devices such as special fireworks, flash powders, some pyrotechnic signal devices and liquid or solid propellant explosives which include some smokeless powders. These explosives are further specifically described in paragraphs (b) to (g) of this section.

(b) Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles or without projectiles, or shell, and catapult charges exceeding 2 inches in diameter, is fixed ammunition assembled in a unit consisting of the cartridge case containing the propelling charge and primer with empty, inert-loaded, or solid projectiles, or without projectiles, which is fired from a cannon, mortar, gun, howitzer or recoilless rifle.

(c) Rocket ammunition is fixed ammunition which is fired from a tube, launcher, rails, trough, or other device as distinguished from cannon ammunition which is fired from a cannon, gun, or mortar. It consists of an igniter and propelling charge, commonly described as a motor, and empty projectile, inert-loaded projectile or solid projectile, or without projectile.

(d) Special fireworks are manufactured articles designed primarily for the purpose of producing visible or audible pyrotechnic effects by combustion or explosion. (See § 73.100 (r) for common fireworks.) Examples are toy torpedoes, railway torpedoes, some firecrackers and salutes, exhibition display pieces, aeroplane flares, illuminating projectiles, incendiary projectiles, incendiary bombs or incendiary grenades and smoke projectiles or smoke bombs fuzed or unfuzed and containing expelling charges but without bursting charges, flash powders in inner units not exceeding 2 ounces each, flash sheets in interior packages, flash powder or spreader cartridges containing not over 72 grains of flash powder each (see § 73.60 for shipments made as low explosives) and flash cartridges consisting of a paper cartridge shell, small-arms primer, and flash composition, not exceeding 180 grains all assembled in one piece. Fireworks must be in a finished state, exclusive of mere ornamentation, as supplied to the retail trade and must be so constructed and packed that loose pyrotechnic composition will not be present in packages in transportation.

(e) Jet thrust units (jato), class B, are metal cylinders containing a mixture of chemicals capable of burning rapidly and producing considerable pressure. Jet thrust units are designed to be ignited by an electric igniter. They are used to assist aeroplanes to take off, to propel large missiles, and to drive moving targets for practice firing.

(1) Igniters, jet thrust (jato), class B, are devices consisting of an electrically operated or remotely controlled igniting element and a fastburning composition assembled in a unit for use in igniting the propelling charge of jet thrust units.

(2) Starter cartridges, jet engine, consist of plastic and/or rubber cases, each containing a pressed cylindrical block of propellant explosive and having in the top of the case a small plastic compartment that encloses an electric squib, small amounts of black powder, and smokeless powder, which constitute an igniter. The starter cartridge is used to activate a mechanical starter for jet engines.

(f) *Propellant explosives, class B.* Propellant explosives, class B, are solid or liquid chemicals or chemical mixtures which function by combustion. The combustion is controlled by composition, size, form of grain, or other chemical or mechanical means. Any propellant is class B which fails to detonate in five trials when tested (see Note 2) in the package in which it is offered for shipment. Propellant explosives, class B, include smokeless powder for small arms (see Note 4), smokeless powder for cannon, liquid monopropellant fuel (see Note 3), smokeless lowder, or solid propellant explosives for rockets, jet thrust units, or other devices. Black powder is not included in this classification and is defined specifically in § 73.53.

(g) Explosive power devices, class B, are devices designed to operate ejecting apparatus or other mechanisms by means of a propellant explosive, class B, and differ from explosive power devices, class C, in that they contain larger or more powerful propellants. The devices must not rupture on functioning and must be of a type approved by the Bureau of Explosives, except as otherwise provided in §§ 73.51(q) and 73.86(a).

NOTE 1. Fire-extinguisher charges containing not to exceed 50 grains of propellant explosives per unit are exempt from the regulations in Parts 71–78 of this chapter.

NOTE 2: In conducting the test, one propellant container shall be surrounded by inert loaded containers of the same weight, including one inert container placed on top of the propellant container. The propellant shall be ignited by means of a commercial electric squib placed within 4 inches of the bottom of the container. The presence of a crater and absence of flame shall be considered as evidences of detonation.

NOTE 3: A liquid monopropellant fuel is defined as any propellant in which the fuel and the oxidizer are physically or chemically combined in one form.

NOTE 4: Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car or motor vehicle, except shipments by, for, or to the Department of the Army, Navy, or Air Force of the United States Government, shall be classed as a flammable solid for purposes of transportation when packaged in accordance with § 73.197a.

**§ 73.89 Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, or without projectiles or shell.**

(a) Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, or without projectiles or shell, must be well packed and properly secured in strong wooden or metal containers.

(b) Each outside package must be plainly marked "AMMUNITION FOR CANNON WITH EMPTY PROJECTILES", "AMMUNITION FOR CANNON WITH INERT-LOADED PROJECTILES", "AMMUNITION FOR CANNON WITH SOLID PROJECTILES", or "AMMUNITION FOR CANNON WITHOUT PROJECTILES", as the case may be.

(c) Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, or without projectiles or shell, must not be offered for transportation by rail express, except as provided in § 73.86 and § 75.675 of this chapter.

**§ 73.90 Rocket ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles.**

(a) Rocket ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles must be well packed and properly secured in strong wooden or metal containers.

(b) Each outside package must be plainly marked "ROCKET AMMUNITION WITH EMPTY PROJECTILES", "ROCKET AMMUNITION WITH INERT-LOADED PROJECTILES", "ROCKET AMMUNITION WITH SOLID PROJECTILES", or "ROCKET AMMUNITION WITHOUT PROJECTILES", as the case may be.

(c) Articles as defined in § 73.88 (c) must not be offered for transportation by rail express, except as provided in §§ 73.86 and 75.675 of this chapter.

**§ 73.91 Special fireworks.**

(a) Special fireworks, except as otherwise authorized, must be securely packed in containers complying with the following specifications:

(1) Spec. 11B (§ 78.161 of this chapter). Strong, tight, sparkproof wooden barrels.

(2) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes. Gross weight not to exceed 500 pounds.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds except as provided in subparagraph (5) of this paragraph. Not permitted for illuminating projectiles and aeroplane flares.

(4) Fireworks that can be exploded en masse, by dropping the completed shipping container from a height of six feet or by the impact of a rifle bullet, if found safe for transportation, may be shipped in accordance with the regulations in this part applying to high explosives.

(5) Ship distress signals when packed in tight inside metal containers of not less than 24 gauge sheet iron or other metal of equal strength, securely closed by positive means (not friction) and of such design and so arranged as to completely fill the outside container, may be packed in spec. 12B (§ 78.205 of this chapter) fiberboard boxes. Gross weight not to exceed 95 pounds when boxes are made in accordance with § 78.205–29 of this chapter.

(b) Flash or spreader cartridges not exceeding 72 grains of flash powder each must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes or spec. 12B (§ 78.205 of this chapter) fiberboard boxes, with inside containers which must be cartons or tin cans containing not over 6 cartridges and not to exceed 150 cartons or cans to an outer box.

(c) Flash cartridges consisting of a paper cartridge shell, small arms primer, and flash composition, not exceeding 180 grains each, all assembled in one piece ready for firing must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes, or spec. 12B (§ 78.205 of this chapter) fiberboard boxes, with inside containers which must be cartons containing not to exceed 12 cartridges each and not more than 12 such cartons in one outside box.

(2) Flash cartridges, in quantity not exceeding 5 pounds, when in small interior wooden boxes, may be packed with nonexplosive, nonflammable or noncorrosive articles.

(d) Flash sheets must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes, or spec. 12B (§ 78.205 of this chapter) fiberboard boxes, with inside containers which must be an inner package or envelope containing not more than 6 flash sheets and not more than one dozen inner envelopes or packages inclosed in each inner pasteboard box or carton. Gross weight of wooden box not to exceed 150 pounds. Gross weight of fiberboard box not to exceed 65 pounds.

(2) Flash sheets, in quantity not exceeding 5 pounds, when in small interior wooden boxes, may be packed with nonexplosive, nonflammable, or noncorrosive articles.

(e) Photographic flash powder must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes, or spec. 12B (§ 78.205 of this chapter) fiberboard boxes, with inside containers which must be any inside container sufficiently strong to retain contents not exceeding 2 ounces each. If bottles are used, each bottle must be packed in a securely closed fiber mailing tube having metal ends. Not more than 4 dozen 2-ounce bottles may be packed in an outer wooden box. When packed in units not exceeding 1 ounce each without bottles in similar fiber mailing tubes and outer wooden boxes, the gross weight of one outside box must not exceed 150 pounds. Gross weight of fiberboard box not to exceed 65 pounds.

(2) Photographic flash powder, in quantity not exceeding 5 pounds, when in small interior wooden boxes, may be packed with nonexplosive, nonflammable, or noncorrosive articles.

(f) Railway torpedoes (track torpedoes) must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, 19A, or 19B (§§ 78.168, 78.169, 78.185, 78.190, or 78.191 of this chapter). Wooden boxes. Net weight not to exceed 125 pounds.

(2) Spec. 12H, 23F, or 23H (§ 78.209, § 78.214, or § 78.219 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside containers which must be cartons containing not to exceed one-half gross track torpedoes each. Gross weight of outside fiberboard box not to exceed 65 pounds.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes without inside containers may be used for not more than 50 track torpedoes provided the smallest dimension of the box is not less than 6 inches.

(g) Toy torpedoes must be securely packed as prescribed in this section in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or § 78.190 of this chapter) wooden boxes, or spec. 12B (§ 78.205 of this chapter) fiberboard boxes which must be constructed to comply with § 78.205–30 of this chapter. Not more than 20 one-quarter gross cartons totalling not more than 5 gross of toy torpedoes are authorized per fiberboard box. Gross weight of fiberboard box must not exceed 35 pounds. Gross weight of wooden box must not exceed 65 pounds.

(2) Toy torpedoes of any kind must not be packed with other fireworks.

(3) Toy torpedoes containing a cap must be packed in sawdust, in inside paper or cardboard cartons. The size of the carton must be not less than 4 cubic inches for each grain of explosive.

(4) Toy torpedoes containing a mixture of potassium chlorate, black antimony and sulfur, must be packed in an inner container, containing not more than one-fourth gross. The capacity of this inner container must be not less than 105 cubic inches, and it must be divided into 12 equal compartments. All vacant space inside the container must then be filled with sawdust or fine shavings.

(5) The gross weight of a container of toy torpedoes must not exceed 65 pounds.

(h) Except as otherwise specified in this section the gross weight of one outside container of special fireworks must not exceed 500 pounds.

(i) *Marking.* Each outside container of special fireworks must be plainly marked in letters not less than 7/16 inch in height "SPECIAL FIREWORKS—HANDLE CAREFULLY—KEEP FIRE AWAY", except that each outside container of railway torpedoes must be plainly marked in letters not less than 7/16 inch in height "RAILWAY TORPEDOES—HANDLE CAREFULLY—KEEP FIRE AWAY".

(1) Outside containers of toy torpedoes must in addition be marked "TOY TORPEDOES".

(j) *Label.* Each outside container of special fireworks when offered for transportation by carriers by rail express or water must have securely and conspicuously attached to it a square red label as described in § 73.410.

**§ 73.92 Jet thrust units (jato), class B, igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B.**

(a) Jet thrust units (jato), class B, must not be shipped with igniters assembled therein unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government. Jet thrust units (jato), class B, igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B, must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, 15E, or 16A (§§ 78.165, 78.168, 78.172 and 78.185 of this chapter), wooden boxes or wooden boxes, fiberboard lined.

(2) Spec. 15B (§ 78.169 of this chapter), wooden boxes. Authorized only for igniters, jet thrust (jato), class B.

(3) Spec. 23F (§ 78.214 of this chapter). Fiberboard boxes. Authorized for igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B, only, which must be packed in tightly closed inside fiberboard boxes, at least 200-pound test (Mullen or Cady), or metal containers. Starter cartridges, jet engine, must have igniter wires short-circuited when packed for shipment.

(4) Jet thrust units (jato), class B, may be packed in the same outside shipping container with separately packaged igniters, jet thrust, class B, when the containers are approved by the Bureau of Explosives.

(b) Jet thrust units (jato), class B, or igniters, jet thrust (jato), class B, packed in any other manner must be approved by the Bureau of Explosives.

(c) Each outside package must be plainly marked "JET THRUST UNITS, CLASS B EXPLOSIVES," "IGNITERS, JET THRUST, CLASS B EXPLOSIVES," or "STARTER CARTRIDGES, JET ENGINE, CLASS B EXPLOSIVES."

(d) *Label.* Each outside container of igniters, jet thrust (jato), class B explosives, jet thrust units (jato), class B explosives, or starter cartridges, jet engine, class B explosives, when offered for transportation by rail express, must have securely and conspicuously attached to it a square red label as described in § 73.412.

**§ 73.93 Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, and propellant explosives (liquid).**

(a) **Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, when offered for transportation by carriers by rail freight, highway, or water, must be packed in containers complying with the following specifications (see paragraphs (g) (1) and (2) of this section and § 75.675 of this chapter for shipments by rail express):**

(1) **Spec. 10B** (§ 78.156 of this chapter). Wooden barrels or kegs. Gross weight not to exceed 200 pounds.

(2) **Spec. 13** (§ 78.140 of this chapter). Metal kegs at least 8 inches long. Gross weight not to exceed 150 pounds.

(3) **Bundles of metal kegs, spec. 13** (§ 78.140 of this chapter), firmly tied together with rope and wrapped in strong burlap, canvas, or similar material, securely sewed and roped, are authorized. Net weight of propellant explosives must not exceed 100 pounds.

(4) Tight metal cases in tight wooden boxes free from loose knots and cracks or tight metal containers. Gross weight not to exceed 200 pounds.

(5) **Spec. 14** or 15A (§§ 78.165 or 78.168 of this chapter). Wooden boxes, metal-lined, spec. 2F (§ 78.25 of this chapter). Gross weight not to exceed 200 pounds.

(6) Spec. 14 or 15A (§ 78.165 or § 78.168 of this chapter) wooden boxes or spec. 23F or 23H (§ 78.214 or § 78.219 of this chapter) fiberboard boxes, with inside containers which must be cloth or paper bags, of capacity not exceeding 25 pounds, net weight, each capable of withstanding, when filled to shipping content, at least two drops on end from a height of 4 feet, without breakage or sifting of contents. Outside container not to exceed more than 50 pounds, net weight.

(7) Spec. 14, 15A, 15B, or 15C (§§ 78.165, 78.168, 78.169, or § 78.170 of this chapter) wooden boxes, or spec. 12B, 23F, or 23H (§§ 78.205, 78.214, or § 78.219 of this chapter) fiberboard boxes, with inside containers which must be spec. 13 metal kegs. Spec. 12B (§ 78.205 of this chapter) fiberboard boxes shall contain not more than 6 metal kegs not over 5 pounds net weight each in one outside box. Gross weight not to exceed 200 pounds in wooden boxes or 65 pounds in fiberboard boxes.

(8) Spec. 14, 15A, 15B, or 15C (§§ 78.165, 78.168, 78.169, or 78.170 of this chapter) wooden boxes, or spec. 12H, 23F, or 23H (§§ 78.209, 78.214, or 78.219 of this chapter) fiberboard boxes, with inside containers which must be fiber or metal containers of not more than 1½ pounds capacity each. Gross weight not to exceed 200 pounds in wooden boxes or 65 pounds in fiberboard boxes.

(9) Spec. 14, 15A, 15B or 15C (§§ 78.165, 78.168, 78.169 or 78.170 of this chapter) wooden boxes, or spec. 23F or 23H (§§ 78.214 or 78.219 of this chapter) fiberboard boxes, with inside containers which must be not to exceed four metal containers, spec. 2A (§ 78.20 of this chapter), of not more than 25 pounds each. Gross weight in fiberboard boxes not to exceed 65 pounds.

(10) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Drums having wooden heads must be provided with a strong sift-proof liner. Authorized net weight not over 225 pounds.

(11) Spec. 14, 15A, or 16A (§§ 78.165, 78.168, or 78.185 of this chapter). Wooden boxes, not lined, authorized only for grains not less than 1-inch in diameter or 3 inches in length, provided such grains are tightly packed and are coated with a protective material. Gross weight not to exceed 200 pounds.

(12) Propellant explosives packed in any manner other than as specifically provided for in this paragraph must be in containers approved by the Bureau of Explosives.

(b) Propellant explosives (smokeless powder for cannon or small-arms) in water when offered for transportation by carriers by rail freight, highway, or water must be packed in containers complying with the following specifications:

(1) Spec. 5, 5A, 5B, 6A, 6B, or 6C (§§ 78.80, 78.81, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter). Wooden barrels or kegs.

(3) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, metal-lined, spec. 2F (§ 78.25 of this chapter).

(c) Igniters composed of black powder may be included in shipments of propellant explosives.

(d) Propellant explosives (unstable, condemned, or deteriorated smokeless powder for cannon or small arms) must be packed submerged in water in containers complying with the following specifications:

(1) Spec. 5, 5A, 5B, 6A, 6B, or 6C (§§ 78.80, 78.81, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter). Wooden barrels or kegs.

(3) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, metal-lined, spec. 2F (§ 78.25 of this chapter).

(4) Spec. 103, 103–W, or 111A100–W–1 (§§ 78.285, 78.280 or 78.303 of this chapter). Tank cars.

(5) Propellant explosives (unstable, condemned, or deteriorated smokeless powder for cannon or small arms) must not be offered for transportation by rail express.

(e) Propellant explosives (liquid), when offered for transportation by rail freight, highway, or water, must be packed in containers complying with the following specifications (see § 73.93(g) for shipments by rail express):

(1) Spec. 15A, 15B, or 15E (§ 78.168, 78.169, or 78.172 of this chapter). Wooden box or wooden box fiberboard lined, with inside polyethylene bottles having taped screw-cap closures, not over 1 gallon capacity each. Each bottle must be entirely contained within a polyethylene or other suitable plastic bag formed of material not less than 0.004 inch thickness, with ends securely closed. Each bottle in the plastic bag shall be enclosed in a tight metal container and be surrounded on all sides with at least 2 inches of incombustible cushioning material; cans in the outside box must likewise be cushioned from each other and sides, top, and bottom of the container.

(2) Spec. 5B, 6A, 6B, 6C, 6D; also 17C or 17H (single-trip containers) (§ 78.82, 78.97, 78.98, 78.99, 78.102, 78.115, or 78.118 of this chapter). Metal barrel, drum, or cylindrical steel overpack, with inside spec. 2S (§ 78.35 of this chapter) polyethylene container, packed inside a strong, tight metal drum securely closed, or with inside glass-lined aluminum carboy not over 12 gallons capacity. Inside steel drum or glass-lined aluminum carboy must be surrounded on all sides with at least 2 inches of incombustible absorbent cushioning material uniformly distributed. Polyethylene containers are authorized only for liquids that will not react dangerously with the plastic or result in container failure.

(3) Outage requirements. Containers must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage or distortion of containers due to the expansion of the contents from increase of temperature during transit.

(4) Propellant explosives (liquid) packed in any manner other than as specifically provided for in this paragraph must be in containers approved by the Bureau of Explosives.

(f) Each outside container must be plainly marked "PROPELLANT EXPLOSIVES (LIQUID), CLASS B," "PROPELLANT EXPLOSIVES (SOLID), CLASS B," or "PROPELLANT EXPLOSIVES (SOLID), CLASS B, IN WATER," as the case may be. There may be added such additional marking as "Smokeless Powder for Cannon" or "Smokeless Powder for Small Arms," as the case may be.

(g) Propellant explosives when offered for transportation by rail express must be packed as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Solids in tightly closed metal cans or fiber containers, not exceeding 1 pound each, or in inside metal cans or fiber containers containing not more than one grain of propellant, not exceeding 5 pounds each, and liquids in polyethylene bottles compatible with contained liquid, with screw-cap closures taped, not exceeding 1 pound or 16 fluid ounces capacity each, packed in outside wooden box, spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter); or outside fiberboard box, spec. 12B, 23F, or 23H (§§ 78.205, 78.214, or 78.219 of this chapter). Not more than 1,000 small-arms primers packed in inside containers as prescribed by § 73.107 may be included in one outside shipping container with solid propellant explosives. Inside containers must be packed so as to prevent movement within the outside container. Not more than 10 pounds of propellant explosives may be shipped in one outside container. Each outside container must be plainly marked "PROPELLANT EXPLOSIVES (LIQUID), CLASS B," or "PROPELLANT EXPLOSIVES (SOLID), CLASS B," as the case may be.

(2) **Label:** Each outside container of propellant explosives, when offered for transportation by rail express, must have securely and conspicuously attached to it a square red label as described in § 73.412.

**§ 73.94 Explosive power devices, class B.**

(a) Explosive power devices, class B, must not be shipped with igniters assembled therein unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government or unless of a type approved by the Bureau of Explosives. Explosive power devices, class B, must be packed in outside containers complying with the following specifications:

(1) Spec. 14, 15A, 15E, or 16A (§§ 78.165, 78.168, 78.172, or 78.185 of this chapter). Wooden boxes or wooden boxes, fiberboard lined.

(2) Strong wooden or metal boxes or containers. Authorized only for shipments made by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government.

(b) Explosive power devices, class B, packed in any other manner must be in containers of a type approved by the Bureau of Explosives.

(c) Each outside container must be plainly marked "EXPLOSIVE POWER DEVICES, CLASS B" and "HANDLE CAREFULLY—KEEP FIRE AWAY."

(d) Label: Each outside container of explosive power devices when offered for transportation by rail express, must have securely and conspicuously attached to it a square red label as described in § 73.412.

CLASS C EXPLOSIVES; DEFINITIONS

**§ 73.100 Definition of Class C explosives.**

(a) Explosives, class C, are defined as certain types of manufactured articles which contain class A, or class B explosives, or both, as components but in restricted quantities, and certain types of fireworks. These explosives are further specifically described in this section.

(b) Small-arms ammunition is fixed ammunition consisting of a metallic, plastic composition, or paper cartridge case, a primer, and a propelling charge, with or without bullet, shot, tear gas material, tracer components, or incendiary compositions or mixtures, but not including bullets loaded with high explosives, and is further limited to the following:

(1) Ammunition designed to be fired from a pistol, revolver, rifle, or shotgun held by the hand or to the shoulder.

(2) Ammunition of caliber less than .75 inch (19.05 millimeters) designed to be fired from machine guns.

(3) Blank cartridges including canopy remover cartridges, starter cartridges, and seat ejector cartridges, containing not more than 500 grains of propellant powder, provided that such cartridges shall be incapable of functioning en masse as a result of the functioning of any single cartridge in the container or as a result of exposure to external flame.

(c) Explosive cable cutters are used for cutting cables, etc. They consist of a metal device containing a knife-edged component which is propelled by a small charge of an explosive compound.

(d) Cordeau detonant fuse is a fuse containing a core of pentaerythrite tetranitrate or cyclotrimethylene-trinitramine not exceeding 400 grains per linear foot, overspun with tapes, yarns and plastics or waterproofing compounds. Wire countering is permissible.

(e) Percussion fuzes, combination fuzes, and time fuzes are devices designed to ignite powder charges of ammunition or to initiate an intermediate charge (booster) in projectiles, bombs, etc. When such fuzes are assembled with booster charges they are properly described as "detonating fuzes" (see § 73.53 (g) (2)).

(f) Tracer fuzes and tracers are devices which are attached to projectiles and contain a slow-burning composition to show the flight of projectiles at night.

(g) Cartridge bags, empty, with black powder igniters consist of empty bags having attached thereto an igniter composed of black powder. (See § 73.93 (b), (c), and (d) when shipped with propellant explosives.)

(h) Igniters consist of fiberboard, plastic, paper or metal tubes containing a small quantity of igniting compound which is ignited by the action of a primer, pull wire or scratch composition.

(i) Delay electric igniters consist of small metal, fiberboard, or pasteboard tubes containing a wire bridge in contact with a small quantity of ignition compound. The ignition compound is in contact with or in close proximity to a short piece of safety fuse.

(j) Electric squibs consist of small tubes or blocks containing a small quantity of ignition compound in contact with a wire bridge.

(k) Fuse lighters and fuse igniters are small cylindrical hollow pasteboard or metal tubes containing an igniting composition in one end, the other end being open to permit it to be placed on safety fuse.

(l) Safety squibs are small paper tubes containing a small quantity of black powder. One end of each tube is usually twisted and tipped with sulfur.

(m) Instantaneous fuse is cotton yarn impregnated with meal powder. No restrictions other than packing in strong wooden boxes or barrels plainly marked "INSTANTANEOUS FUSE" are prescribed in this part.

(n) Primers are devices used to ignite the powder charges of ammunition or the black powder bursting charges of projectiles. For small-arms ammunition the primers are "small-arm primers" or "percussion caps".

(o) Safety fuse, consisting of a core of black powder overspun with yarns, waterproofing compounds, and/or tapes must be packed in outside fiberboard boxes, wooden boxes, wooden barrels, bales, or metal containers, and must be described for shipping purposes as "SAFETY FUSE". No other restrictions apply in this part.

(p) Toy paper caps, consisting of paper cap ammunition for toy pistols, in sheets, strips, rolls, or individual caps, must not contain more than an average of twenty-five hundredths of a grain of explosive composition per cap and must be packed in inside packages constructed of cardboard not less than 0.013 inch in thickness, metal not less than 0.008 inch in thickness, or noncombustible plastic not less than 0.015 inch in thickness, which shall provide a complete enclosure and the minimum dimensions of each side or end of such package shall be not less than ⅛ inch in height. Unless greater weight of composition is approved by the Bureau of Explosives, the number of caps in these inside packages shall be limited so that not more than 10 grains of explosive composition shall be packed into one cubic inch of space and not exceeding 17.5 grains of the explosive composition of toy caps shall be packed in any inside container. These inner containers must be packed in outside containers as specified in § 73.109.

(q) Explosive rivets, each containing not more than 375 milligrams of explosive composition, are exempt from specification packaging and labeling requirements when packed in pasteboard or other inside boxes in securely closed strong wooden boxes, fiberboard boxes or metal containers. Each outside container must be marked "EXPLOSIVE RIVETS". No other restrictions apply in this part.

(r) Common fireworks are fireworks devices suitable for use by the public and designed primarily to produce visible effects by combustion. Some small devices designed to produce audible effects are also included in this class. The types, sizes and amount of pyrotechnic contents of these devices are limited as enumerated in this paragraph. No component, of any device listed in this paragraph, which produces or is intended to produce an audible effect shall contain pyrotechnic composition in excess of 2 grains in weight; nor shall such device or component, upon functioning, project or disperse any metal, glass or brittle plastic fragments. (Propelling or expelling charges consisting of a mixture of sulfur, charcoal, and saltpeter are not considered as designed to produce audible effects.) Any new device, not enumerated in this paragraph, must be approved by the Bureau of Explosives before being offered for transportation as Common Fireworks. Common fireworks must be in a finished state exclusive of mere ornamentation as supplied to the retail trade and must be so constructed and packed that loose pyrotechnic composition will not be present in packages in transportation. Fireworks, except articles defined in paragraphs (s) through (y) inclusive, of this section, other than common fireworks as defined in this paragraph, and those forbidden for transportation in § 73.51, are classed as Special Fireworks (see § 73.88(d)).

(1) Roman candles, not exceeding ten balls spaced uniformly in the tube, total pyrotechnic composition not to exceed twenty grams each in weight. The inside tube diameter shall not exceed ⅝ inch.

(2) Sky rockets with sticks, total pyrotechnic composition not to exceed

twenty grams each in weight. The inside tube diameter shall not exceed ½ inch. The rocket sticks must be securely fastened to the tubes.

(3) Helicopter type rockets, total pyrotechnic composition not to exceed twenty grams each in weight. The inside tube diameter shall not exceed ½ inch.

(4) Cylindrical fountains, total pyrotechnic composition not to exceed seventy-five grams each in weight. The inside tube diameter shall not exceed ¾ inch.

(5) Cone fountains total pyrotechnic composition not to exceed fifty grams each in weight.

(6) Wheels, total pyrotechnic composition not to exceed sixty grams for each driver unit or two hundred and forty grams for each complete wheel. The inside tube diameter of driver units shall not exceed ½ inch.

(7) Illuminating torches and colored fire in any form, total pyrotechnic composition not to exceed one hundred grams each in weight.

(8) Dipped sticks, the pyrotechnic composition of which contains any chlorate or perchlorate shall not exceed 5 grams. Sparklers, the composition of which does not exceed 100 grams each and which contain no magnesium or magnesium and a chlorate or perchlorate, are not subject to the regulations in Parts 71–78 and 197 of this chapter.

(9) Mines and shells of which the mortar is an integral part, total pyrotechnic composition not to exceed forty grams each in weight.

(10) Firecrackers and salutes with casings, the external dimensions of which do not exceed one and one-half inches in length or one-quarter inch in diameter, total pyrotechnic composition not to exceed two grains each in weight.

(11) Novelties consisting of two or more devices enumerated in this paragraph when approved by the Bureau of Explosives.

(s) Igniter cord consists of textile yarns and/or a wire uniformly covered with a combustible chemical mixture, with or without additional textile or wire counterings, waterproofing or finishing coatings which, when ignited, burns externally at various rates according to design. Igniter cord must be packed in strong, tight, outside fiberboard boxes or drums, wooden boxes or metal containers plainly marked "IGNITER CORD."

(t) Explosive auto alarms are tubular devices containing a small amount of explosive composition and igniting compound which is ignited by an electric spark. These devices must be so designed that they will neither burst nor cause external flame on functioning.

(u) Toy propellant devices and toy smoke devices consist of small paper or composition tubes or containers containing a small charge of slow burning propellant powder or smoke producing powder. These devices must be so designed that they will neither burst nor produce external flame on functioning and ignition elements, if attached, must be of a design approved by the Bureau of Explosives.

(v) Oil well cartridges are tubular devices consisting of a thin fiber, metal, or composition shell containing not more than 200 grains of propellant powder and having no ignition device or element.

(w) Actuating cartridges, explosive, fire extinguisher or valve consist of a small metal or fiber housing containing a small amount of initiating explosive and a propellant and are used to actuate valves on remotely controlled fire extinguishers or other apparatus.

(x) Cigarette loads, trick matches, and trick noise makers, explosive, must be of a type approved by the Bureau of Explosives and are described as follows:

(1) Cigarette loads consist of wooden pegs to which are affixed a small amount of explosive composition.

(2) Trick matches consist of book matches, strike anywhere matches, or strike-on-box matches which have small amounts of explosive or pyrotechnic composition affixed to the match stem just below the match head.

(3) Trick noise makers, explosive, consist of spheres containing a small amount of explosive composition.

(y) Smoke candles, smoke pots, smoke grenades, and smoke signals containing not more than 200 grams of pyrotechnic composition each (see Note 1) unless greater weight of composition is approved by the Bureau of Explosives, exclusive of smoke compositions (see Note 2), without bursting charges, hand signals devices, Very signal cartridges, and highway or railway fusees are devices designed to produce visible effects for signal purposes.

NOTE 1: Pyrotechnic compositions (other than smoke compositions) are defined as chemical mixtures which on burning and without explosion, produce visible or brilliant displays or bright lights.

NOTE 2: Pyrotechnic smoke compositions are defined as chemical smoke producing mixtures, which on ignition burn at a controlled rate, without the production of flame and without the build-up of internal pressure that would rupture or burst the end product.

(z) Explosive release devices consist of a rod or link fitted with means for mechanical attachment to other apparatus or equipment and containing a small electrically initiated explosive charge which will break the rod or link upon functioning. These devices must be so designed that they will not function other explosive devices in the package sympathetically.

(aa) Explosive power devices, class C, are devices designed to drive generators or mechanical apparatus by means of propellant explosives, class B. The devices consist of a housing with a contained propellant charge and an electric igniter or squib. The devices must be of a type approved by the Bureau of Explosives for this classification.

(bb) Detonating fuzes, class C explosives, are used in the military service to detonate high explosive bursting charges of projectiles, mines, bombs, torpedos, grenades, demolition charges, and safety and arming devices. They contain a detonator and a quantity of high explosives. Additionally they may be used by the military or commercial users to transmit a detonation between two or more devices. This type detonating fuze contains either an explosive train consisting of mild detonating fuse, metal clad, igniter fuse-metal clad or similar type fuses, and any combination of one or more boosters, detonators and high explosives in a total quantity not exceeding 25 grams of explosive composition. All detonating fuzes, class C explosives, must be made and packed so that they will not cause functioning of other fuzes, explosives, or other explosive devices if one of the fuzes detonates in a shipping container or in adjacent containers.

(cc) Mild detonating fuses, metal clad and flexible linear shaped charges, metal clad consists of a core containing not more than 2½ grains of high explosive composition per lineal foot, clad with metal either with or without a covering of tapes, yarns, plastics or waterproofing compounds. Mild detonating fuse, metal clad, and flexible linear shaped charges, metal clad, in lengths not over 26 feet and not exceeding 15 grains per lineal foot having the individual lengths separated from adjacent lengths so that mass propagation will not occur, may be shipped as class C explosives.

(dd) Igniter fuse-metal clad consists of a base metal tube with a core of explosive igniter composition in quantity not exceeding 20 grains per foot.

(ee) Starter cartridges, jet engine, class C, consist of a metal, plastic, and/or rubber case, each containing a pressed cylindrical block of flammable solid material and having in the top of the case a small compartment that encloses an electric squib, small amount of black powder, and/or smokeless powder which constitute an igniter. The starter cartridge is used to activate a mechanical starter for jet engines and must be of a type approved by the Bureau of Explosives except as provided in § 73.51(q) and § 73.86(a).

### § 73.101 Small-arms ammunition.

(a) Small-arms ammunition must be packed in pasteboard or other inside boxes, or in partitions designed to fit snugly in the outside container, or must be packed in metal clips. The partitions and metal clips must be so designed as to protect the primers from accidental injury. The inside boxes, partitions and metal clips must be packed in securely closed strong outside wooden or fiberboard boxes or metal containers. Blank Industrial Power Load cartridges, similar to the 22 long rim-fire cartridge, may be packed in bulk in securely closed fiberboard boxes.

(b) Small-arms ammunition in pasteboard or other inside boxes, in addition to containers prescribed in paragraph (a) of this section, may be shipped when packed in the same outside container with nonexplosive and nonflammable articles; or with small-arms primers or percussion caps in quantity not to exceed 5 pounds. The weight of the small-arms ammunition packed with other articles must not exceed 55 pounds in outside fiberboard box, or 75 pounds in outside wooden box. The outside package must be a securely closed strong wooden or fiberboard container.

(c) Each outside package must be plainly marked "SMALL-ARMS AMMUNITION".

(d) Outside containers of cartridges with tear gas material must in addition to marking prescribed herein be marked "TEAR GAS CARTRIDGES" and must be labeled with "TEAR GAS" label. (See § 73.409 (a) (3) for label.)

(e) No restrictions other than proper description, packing and marking for small-arms ammunition and additional marking and labeling for tear gas cartridges are prescribed in this part for the transportation of small-arms ammunition and tear gas cartridges.

(f) Shipments of small-arms ammunition, including broken lots which have lost their identity (lot number identification), may be shipped loosely packed in securely closed strong wooden boxes or metal boxes, in carload or truckload lots, when shipments are made by or for the Departments of the Army, Navy or Air Force of the United States Government to depots or manufacturing plants for reprocessing or demilitarization. Seriously deteriorated ammunition or ammunition damaged to the point of exposing incendiary or tracer composition, spillage of propellant powder, or ammunition with other hazardous defects must not be shipped. Each outside package must be plainly marked "SMALL-ARMS AMMUNITION."

### § 73.102 Explosive cable cutters, explosive power devices, class C, explosive release devices, or starter cartridges, jet engine, class C.

(a) Explosive cable cutters, explosive power devices, class C, explosive release devices, or starter cartridges, jet engine, class C must be packed in specification containers as follows:

(1) Spec. 12H, 23F, or 23H (§ 78.209, 78.214, or 78.219 of this chapter). Fiberboard boxes. Authorized gross weight not to exceed 65 pounds.

(2) In addition to specification containers prescribed in this section, explosive cable cutters, explosive power devices, class C, explosive release devices, or starter cartridges, jet engine, class C may be shipped when packed in strong wooden or metal boxes, or other containers approved by the Bureau of Explosives. Starter cartridges, jet engine, must have igniter wires short-circuited when packed for shipment.

(b) Each outside container must be plainly marked "EXPLOSIVE CABLE CUTTERS," "EXPLOSIVE POWER DEVICES, CLASS C," "EXPLOSIVE RELEASE DEVICES," or "STARTER CARTRIDGES, JET ENGINE, CLASS C" and "HANDLE CAREFULLY—KEEP FIRE AWAY."

### § 73.103 Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps, not exceeding 1,000 caps.

(a) Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps, in quantity not exceeding 1,000 caps, must be packed and marked as prescribed in §§ 73.66 and 73.67.

(b) Blasting caps must not be offered for transportation by rail express, except as provided in § 73.86.

### § 73.104 Cordeau detonant fuse, mild detonating fuse, metal clad or flexible linear shaped charges, metal clad.

(a) Cordeau detonant fuse, mild detonating fuse, metal clad or flexible linear shaped charges, metal clad must not be packed in the same package with detonators or with any high explosive.

(b) Cordeau detonant fuse, mild detonating fuse, metal clad or flexible linear shaped charges, metal clad, must be packed in wooden or fiberboard boxes.

(c) Each outside container must be plainly marked "CORDEAU DETONANT FUSE—HANDLE CAREFULLY," "MILD DETONATING FUSE, METAL CLAD—HANDLE CAREFULLY" or "FLEXIBLE LINEAR SHAPED CHARGES, METAL CLAD—HANDLE CAREFULLY" as the case may be.

### § 73.105 Percussion, tracer, combination, time fuzes and tracers.

(a) Percussion, tracer, combination, time fuzes and tracers must be packed in strong, tight, outside wooden boxes or spec. 23F (§ 78.214 of this chapter) fiberboard boxes, with special provision for securing individual packages of fuzes or tracers against movement in the box.

(b) The gross weight of one outside wooden box must not exceed 150 pounds, and the gross weight of one outside fiberboard box must not exceed 35 pounds.

(c) Each outside container must be plainly marked with proper descriptive name and also "HANDLE CAREFULLY"

(d) No restrictions other than proper description, packing, and marking are prescribed in this part for the transportation of percussion, tracer, time, or combination fuzes, or tracers.

### § 73.106 Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse lighters or fuse igniters.

(a) Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse lighters or fuse igniters must be packed in strong fiberboard or wooden boxes or wooden or metal barrels or drums properly described and properly marked with the name of the article packed therein.

### § 73.107 Primers, percussion caps, and empty grenades, primed.

(a) Primers (cannon, combination and small arms), percussion caps, and empty grenades, primed, must be packed in strong, tight, outside wooden boxes, except as otherwise provided herein, with special provision for securing individual packages against movement in the box.

(b) Empty cartridge cases, primed, must be packed in strong, tight, outside wooden or fiberboard boxes.

(c) Small-arms primers containing anvils must be packed in cellular inside packages, with partitions separating the layers and columns of the primers, so that the explosion of a portion of the primers in the completed shipping package will not cause the explosion of all the primers. They must be packed as prescribed in paragraphs (a) of this section or in spec. 12B (§ 78.205 of this chapter) fiberboard boxes, and equipped with corrugated fiberboard liners having Mullen or Cady test equal to or exceeding that of the box, except liner is not required for full depth telescope style box which may be closed as specified by § 78.205–17(a)(2) of this chapter. Not more than 5,000 primers shall be packed in each fiberboard box.

(1) Spec. 23H (§ 78.219 of this chapter). Fiberboard boxes of full depth telescope style with top section having extended end flaps and bottom section with extended side flaps designed to tuck under and form boxes without glued or stapled joints. Boxes shall have full height inside perimeter liner and top and bottom full area pads of double-wall corrugated fiberboard. Hand-holes oval in shape, not more than 1 inch in width by 4 inches in length and horizontal with top score line, are authorized in ends of boxes. Primers shall be packed in cellular inside packages with partitions separating the layers and columns of the primers as required by the introductory text of this paragraph. Not more than 50,000 primers shall be packed in one outside box.

(d) Percussion caps must be packed in metal or other inside boxes containing not more than 500 caps; the construction of the cap or packing and the kind and quantity of explosives in each must be such that the explosion of a part of the caps in the completed shipping package will not cause the explosion of all the caps.

(e) Small-arms primers and/or percussion caps may be packed with nonexplosive and/or nonflammable articles, or with small-arms ammunition as provided in § 73.101(b). Small-arms primers may be included with propellant explosives (solid), class B, in the same outside container as provided in § 73.93 (g)(1). The weight of the small-arms primers or percussion caps must not exceed 5 pounds in any such outside container.

(f) The gross weight of one outside package must not exceed 150 pounds.

(g) Each outside container must be plainly marked with proper descriptive name and also "HANDLE CAREFULLY".

(h) No restrictions other than proper shipping name, packing and marking are prescribed in this part for the transportation of percussion caps, cannon primers, small-arms primers, combination primers, empty cartridge cases primed, or empty grenades primed.

### § 73.108 Common fireworks, signal flares, hand signal devices, railway or highway fusees, smoke signals, smoke candles, smoke grenades, smoke pots, and Very signal cartridges.

(a) Common fireworks, signal flares, hand signal devices, railway or highway fusees, smoke signals, smoke candles, smoke grenades, smoke pots, and Very

signal cartridges, unless otherwise specifically provided for, must be securely packed in containers complying with the following specifications:

(1) Spec. 11B (§ 78.161 of this chapter). Strong, tight, sparkproof wooden barrels.

(2) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes. Gross weight not to exceed 100 pounds, except gross weight of 500 pounds is authorized for Very signal cartridges only.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(4) Firecrackers, Chinese, in addition to containers specified in paragraph (a) (1), (2), and (3) of this section, may also be transported in the package in which they are imported, provided these packages consist of wooden boxes, or fiberboard boxes, spec. 12B (§ 78.205 of this chapter), in good condition, completely covered with strong matting and do not weigh more than 100 pounds, gross.

(5) Fireworks, such as sparklers or fusees, with match tip or head, or similar igniting point or surface, must have each individual tip, head, or similar igniting point or surface entirely covered and securely protected against accidental contact or friction.

(b) Railway fusees, flares or highway signals must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 15C, 16A, 19A, or 19B (§§ 78.168, 78.169, 78.170, 78.185, 78.190, or 78.191 of this chapter). Wooden boxes. Gross weight not to exceed 150 pounds for spec. 19B boxes; 200 pounds for others. When spec. 15C boxes are used, devices must be packed in air-tight inside metal containers.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, provided that ends of boxes are reinforced to prevent penetration of spikes through the outside container when the completed package, prepared for shipment, is subjected to two drops from a height of 4 feet on a solid surface and so as to strike diagonally with the spikes in a downward position. Gross weight not to exceed 65 pounds, except that gross weight not to exceed 75 pounds is authorized in boxes made in accordance with § 78.205–24 (a) of this chapter.

(3) Spec. 29 (§ 78.226 of this chapter). Mailing tubes, provided the penetration of the spikes of fusees (flares or highway signals), through the outside container is prevented by one of the methods specified for fiberboard boxes, spec 12B (§ 78.205 of this chapter) in paragraph (b) (2) of this section. Gross weight not to exceed 5 pounds.

(4) Fusees, flares, pyrotechnic, or highway signals without spikes, or torches, pyrotechnic, when offered for shipment may be packed in containers prescribed in this paragraph, omitting the protection required for these articles when equipped with spikes.

(5) Fusees, flares, or highway signals may be packed with nonexplosive or nonflammable articles provided the outside packages are marked as prescribed in this section.

(c) Except as otherwise specified herein the gross weight of one outside package containing common fireworks must not exceed 100 pounds.

(d) Each outside package must be plainly marked in letters not less than 7/16 inch in height "COMMON FIREWORKS", "SIGNAL FLARES", "HAND SIGNAL DEVICES", "RAILWAY FUSEES", HIGHWAY FUSEES", "SMOKE SIGNALS", "SMOKE CANDLES", "SMOKE POTS", "SMOKE GRENADES", or "VERY SIGNAL CARTRIDGES", as the case may be, and with the additional words "HANDLE CAREFULLY—KEEP FIRE AWAY".

### § 73.109 Toy caps.

(a) Toy caps must be packed in containers complying with the following specifications:

(1) Spec. 15A, 15B, 16A, or 19A (§§ 78.168, 78.169, 78.185, or 78.190 of this chapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Toy caps, in addition to containers specified in subparagraphs (1) and (2) of this paragraph, may be transported in the package in which they are imported, provided the package consists of a wooden box, metal-lined, in good condition, and weighing not over 100 pounds gross. Inside packages must be as defined in § 73.100 (p).

(b) Toy caps may be packed with nonexplosive or nonflammable articles provided the outside containers are marked as prescribed herein.

(c) Toy paper caps of any kind must not be packed with fireworks.

(d) Each outside container must be plainly marked "TOY CAPS—HANDLE CAREFULLY".

### § 73.110 Charged oil well jet perforating guns, total explosive content in guns not exceeding 20 pounds per motor vehicle.

(a) Charged oil well jet perforating guns transported by motor vehicles operated by private carriers engaged in oil well operations in which the total weight of the explosive contents of shaped charges assembled to guns being transported does not exceed 20 pounds per such vehicle must be packed as prescribed in § 73.80 (b), (c), (d) and (e).

(b) Charged oil well jet perforating guns must not be offered for transportation or transported by carriers by rail freight, rail express, rail baggage, water, or by common or contract carriers by public highway.

### § 73.111 Cigarette loads, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick noise makers, explosive.

(a) Cigarette loads, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick noise makers, explosive must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 16A, or 19A (§ 78.168, § 78.169, §78.185, or § 78.190 of this chapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Each outside container must be plainly marked with the proper descriptive name and "HANDLE CAREFULLY".

### § 73.112 Oil well cartridges.

(a) Oil well cartridges must be so packed that the explosive composition does not exceed 20 grains per cubic inch of space in the outside shipping container and must be in specification containers as follows:

(1) Spec. 15A, 15B, 16A, or 19A (§ 78.168, § 78.169, § 78.185, or § 78.190 of this chapter). Wooden boxes. Gross weight not to exceed 150 pounds.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Gross weight not to exceed 65 pounds.

(3) Each outside container must be plainly marked with the name "Oil Well Cartridge" and "HANDLE CAREFULLY".

### § 73.113 Detonating fuzes, class C explosives.

(a) Detonating fuzes, class C explosives, must be packed in specification containers as follows:

(1) Spec. 12H (§ 78.209 of this chapter). Fiberboard boxes without liners, with well secured inside pasteboard cartons.

(2) In addition to specification containers prescribed in this section, detonating fuzes, class C explosive, may be packed in well secured strong, tight outside wooden or metal boxes. The gross weight of the outside wooden or metal box must not exceed 190 pounds.

(b) Each outside package must be plainly marked "DETONATING FUZES, CLASS C EXPLOSIVES—HANDLE CAREFULLY".

### § 73.114 Actuating cartridges, explosive, fire extinguisher or valve.

(a) Actuating cartridges, explosive, fire extinguisher or valve must be packed in strong wooden or fiberboard boxes.

(b) Each outside container must be plainly marked "ACTUATING CARTRIDGES, EXPLOSIVE, FIRE EXTINGUISHER — HANDLE CAREFULLY" or "ACTUATING CARTRIDGES, EXPLOSIVE, VALVE—HANDLE CAREFULLY".

(c) When shipped as components with fire extinguisher or with valve and with not more than 2 cartridges for each extinguisher or valve, they are exempt from Parts 71–78 of this chapter.

## Subpart C—Flammable Liquids; Definition and Preparation

### § 73.115 Flammable liquids; definition.

(a) A flammable liquid for the purpose of Parts 71–78 of this chapter is any liquid which gives off flammable vapors (as determined by flash point from Tagliabue's open-cup tester, as used for test of burning oils) at or below a temperature of 80° F.

(b) Flammable liquids are described as viscous flammable liquids (see § 73.119 (j)) when viscosity is determined by one of the following methods:

(1) The viscosity of the liquids must be determined in a Stormer viscosimeter with an actuating weight of 400 grams and with the liquid maintained at a temperature of 28° C. The cylinder of the viscosimeter must be immersed in the liquid.

(2) For transparent liquids the sample may be tested in a vertical glass tube, 1 inch inside diameter by approximately 13 inches long, having two marks 10 inches apart engraved thereon, the lower mark being 2 inches above the bottom of the tube; the liquid to be tested shall be poured into the tube until its surface rises one-half inch above the upper mark and must be maintained at a temperature of 28° C. during the test; a polished steel ball one-fourth inch in diameter shall be supported one-half inch above the surface of the liquid at the center of the tube and dropped therein.

(3) When the speed of the cylinder in the first test does not exceed 10 revolutions per 13 seconds, or the time required in the second test for the steel ball to fall the vertical distance between the two lines upon the glass tube is not less than 4 seconds the material is classed as "viscous."

### § 73.116 Outage.

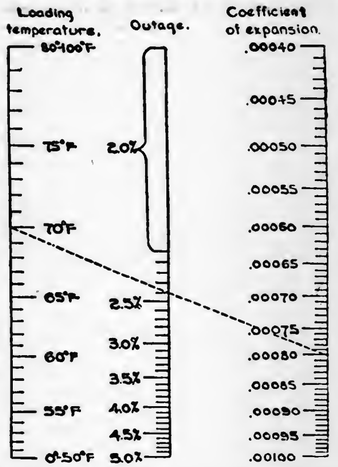
(a) Outage for containers offered for transportation by carriers by rail freight, rail express, highway, or water, except as otherwise specifically provided in this part, must be as prescribed in paragraphs (b) to (h) of this section.

(b) Containers must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage or distortion of containers due to the expansion of the contents from increase of temperature during transit. This outage must be calculated to the total capacity of the container.

(c) In packages containing alcohol, cologne spirits, high wines, or other distilled spirits of 150 proof or over, the vacant interior space must be the maximum permitted by the United States Internal Revenue regulations.

(d) Flammable liquids must not be loaded into domes of tank cars. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage.

(e) Flammable liquids having vapor pressure of 16 pounds per square inch absolute at 100° F. or less must be so loaded in tank cars that the outage shall be not less than 2 percent.



(f) Flammable liquids having a vapor pressure exceeding 16 pounds per square inch absolute at 100° F. for which minimum outage is not otherwise specifically provided herein, when loaded in uninsulated tank cars, must be so loaded that the minimum outage will be the greatest of the following values:

(1) Dome capacity.

(2) Two percent of total capacity of tank and dome.

(3) Outage as shown in paragraph (g) of this section.

(g) Outage chart for flammable liquids:

Example: Suppose the temperature of the liquid at time of loading is 70° F and its coefficient of expansion is 0.00080; lay a ruler on the chart running from 70° to 0.00080 as shown by the dotted line and the required outage is 2.4 percent where the ruler crosses the outage scale.

The following coefficients of expansion per degree Fahrenheit, of the principal flammable liquids shall be used in determining outages:

| | |
|---|---|
| Acetone | 0.00085 |
| Amyl acetate | .00068 |
| Benzol (benzene) | .00071 |
| Carbon bisulfide | .00070 |
| Ether | .00098 |
| Ethyl acetate | .00079 |
| Ethyl (grain) alcohol | .00062 |
| Methyl (wood) alcohol | .00072 |
| Toluol (toluene) | .00068 |
| Gasoline or naphtha: | |
| 50–55° A. P. I.[1] | .00055 |
| 55.1–60° A. P. I.[1] | .00060 |
| 60.1–65° A. P. I.[1] | .00065 |
| 65.1–70° A. P. I.[1] | .00070 |
| 70.1–75° A. P. I.[1] | .00075 |
| 75.1–80° A. P. I.[1] | .00080 |
| 80.1–85° A. P. I.[1] | .00085 |
| 85.1–90° A. P. I.[1] | .00090 |

[1] °A. P. I. (American Petroleum Institute), according to the following formula:

$$\text{°A. P. I.} = \frac{141.5}{\text{specific gravity}} - 131.5$$

(h) No cargo tank or compartment thereof used for the transportation of any flammable liquid shall be liquid full. The vacant space (outage) in a cargo tank or compartment thereof used in the transportation of flammable liquids shall be not less than 1 percent; sufficient space (outage) shall be left vacant in every case to prevent leakage from or distortion of such tank or compartment by expansion of the contents due to rise in temperature in transit.

### § 73.117 Closing and cushioning.

(a) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

### § 73.118 Exemptions for flammable liquids.

(a) Flammable liquids, except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements when packed in accordance with the following subparagraphs of this paragraph except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) In metal containers not over 1 quart capacity each, packed in strong outside containers.

(2) In containers having a capacity not over 1 pint or 16 ounces by weight each, packed in strong outside containers.

### § 73.119 Flammable liquids not specifically provided for.

(a) *Flammable liquids with flash point 20° F. or below.* Flammable liquids with flash point 20° F. or below and having vapor pressure (Reid[1] test) not over 16 pounds per square inch, absolute, at 100° F., other than those for which special requirements are prescribed in this part, must be prepared for shipment in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows (see paragraphs (c) to (l) of this section for high pressure liquids, paragraphs (j) to (l) of this section for viscous liquids, and paragraph (m) of this section for flammable liquids which are also oxidizing materials or corrosive liquids):

(1) Spec. 1A, 1C, or 1D (§§ 78.1, 78.3, or 78.4 of this chapter). Carboys, glass, boxed or in barrels or kegs, capacity not over 5 gallons, except capacity not over 6.5 gallons authorized for Spec. 1D. Must be closed, and when reused must be reconditioned and tested, as provided in the specification.

(2) Spec. 5, 5A, 5B, 5C, or 5M (§§ 78.80, 78.81, 78.82, 78.83, or 78.90 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(3) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip) not over 5 gallons capacity, with openings not over 2.3 inches in diameter. (See also paragraph (a) (16) of this section.)

(4) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip), with openings not exceeding 2.3 inches in diameter.

(5) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs.

(6) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with inside containers which must be glass or earthenware, not over 1 gallon each; metal pails, kits, or cans, not over 2 gallons each.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside con-

[1] American Society for Testing Materials Method of Test for Vapor Pressure of Petroleum Products (D–323).

tainers which must be glass or earthenware, not over 1 quart each; metal cans, not over 1 gallon each.

NOTE 1: Spec. 12B fiberboard boxes (§ 78.205-26(a) of this chapter), with one inside rectangular metal can, spec. 2F (§ 78.25 of this chapter) not to exceed 5 gallons capacity, are authorized for gasoline only. Gross weight of completed package not over 65 pounds.

(8) Spec. 15A, 15B, 15C, 16A, 19A, or 19B (§§ 78.168, 78.169, 78.170, 78.185, 78.190, or 78.191 of this chapter). Wooden boxes with inside containers which must be metal pails, kits, or cans, not over 10 gallons each or inside glass or earthenware containers not over 1 gallon each, except that glass or earthenware containers up to 3 gallons each are authorized when only one inside container is packed in each outside container.

(9) Spec. 21C, 22A or 22B (§ 78.224, § 78.196 or § 78.197 of this chapter). Fiber drums and plywood drums with a single inside glass, earthenware, or metal container of not over one gallon capacity in each drum. Inside container must be so cushioned at top, sides, and bottom, as to prevent breakage or leakage in transit.

(10) Spec. 42B, 42C, or 42H (§ 78.107, 78.108, or 78.112 of this chapter). Aluminum barrels or drums.

(11) Cylinders as prescribed for any compressed gas, except acetylene.

(12) Spec. 103,[2] 103-W, 103AL-W, 103D-W, 104,[2] 104-W, 105A100,[2] 105A-100AL-W 105A100-W, 106A500,[2] 106A-500-X, 106A800-X-NC, 106A800-NCI,[2] 110A500-W, 111A60AL-W, 111A60-F-1, 111A60-W-1, 111A100-W-3, 111A100-W-4, 111A100-W-6, 112A200-W, 112A400-F, 114A340-W, ARA-II,[2] ARA-III,[2] ARA-IV,[2] or ARA-IV-A[2] (§§ 79.100, 79.101, 79.200, 79.201, 79.300, and 79.301 of this chapter). Tank cars. For cars equipped with expansion domes, manway closures must be so designed that pressure will be released automatically by starting the operation of removing the manway cover. Openings in tank heads to facilitate application of lining are authorized and must be closed in an approved manner. (See § 73.432 for shipping instructions.)

(13) The use of spec. 103AL special riveted aluminum tank cars is authorized for the transportation of gasoline, ethyl acetate, acetone, methanol, or butyraldehyde as provided in special orders of November 5, 1937 and February 1, 1939.

(14) Spec. 15X (§ 78.181 of this chapter). Wooden boxes with inside metal containers. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(15) Spec. 17X (§ 78.119 of this chapter). Metal drums (single-trip). For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(16) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip), not over 55 gallons capacity, not less than full 19 gauge body and head sheets for not over 30-gallon drums, and not less than full 18 gauge body and head sheets for not over 55-gallon drums, with openings not exceeding 2.3 inches in diameter. When transported by rail or highway, authorized only for carload and truckload shipments.

NOTE 1: Because of the present emergency and until further order of the Commission, l. c. l. and l. t. l. shipments will be permitted.

(17) Spec. MC 300, MC 301,[2] MC 302, MC 303, MC 304, or MC 305, (§ 78.321, 78.323, 78.324, 78.325, or 78.326 of this chapter). Tank motor vehicles.

NOTE 1: Compartmented tank motor vehicles having compartments not equipped with emergency valves or baffles are authorized provided compartments used for dangerous articles are so equipped when required by the specification and provided each compartment not so equipped is plainly marked near the manhole "This compartment not to be used for flammable liquids".

(18) The use of existing tank cars constructed to specifications Emergency USG-A,[2] USG-B,[2] or USG-C[2] in effect prior to June 4, 1956 is authorized for the transportation of liquids weighing not over 8 pounds per gallon, and having vapor pressures not exceeding 16 pounds per square inch, absolute, at 100° F.

(19) Spec. 5L (§ 78.89 of this chapter) Metal barrels or drums for gasoline shipments offered by or consigned to the Departments of the Army, Navy, and Air Force of the United States Government or Allies. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(20) Spec. 12D (§ 78.207 of this chapter). Fiberboard boxes with inside containers which must be glass or earthenware not over one gallon each; authorized for not more than 75 pounds gross weight; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(21) Gasoline samples in boxes of metal not lighter than 20 gauge, United States standard, having hinged cover securely closed, and containing not more than 5 inside rectangular metal cans with screw cap closure, each having a capacity not to exceed ½ gallon, may be shipped when consigned to state laboratories for examination.

(22) Spec. 17H or 37A (§§ 78.118 or 78.131 of this chapter). Metal drums with inside glass containers not over 9 pints capacity each. Inside containers may contain biological materials.

(23) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each. Not more than four inside containers exceeding 5 pints capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirement prescribed by § 78.210-10 of this chapter.

(24) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S (§ 78.35 of this chapter) polyethylene container.

(25) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

(b) *Flammable liquids with flash point above 20° F. to 80° F.* Flammable liquids with flash point above 20° F. to 80° F. and having vapor pressure (Reid[1] test) not over 16 pounds per square inch, absolute, at 100° F., other than those for which special requirements are prescribed in this part, must be prepared for shipment in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows (see paragraphs (c) to (i) of this section for high pressure liquids and paragraph (m) of this section for flammable liquids which are also oxidizing materials or corrosive liquids):

(1) Containers as specified in paragraph (a) of this section, except that openings greater than 2.3 inches in diameter in barrels and drums are authorized when permitted by the specification, and also the following:

(2) Spec. 17E or 17H (§§ 78.116 or 78.118 of this chapter). Metal drums (single-trip).

(3) Spec. 10B (§ 78.156 of this chapter), wooden barrels or kegs.

NOTE 1: Because of the present emergency and until further order of the Commission, wooden whiskey barrels, properly recoopered, which comply with all the provisions of spec. 10B (§ 78.156 of this chapter), are also authorized. Marking is required on the head of each container, by the reconditioner, by hot branding or legible stenciling, as follows: ICC-10B.

Name or symbol (letters) of reconditioner; this must be registered with the Bureau of Explosives and located just above, below, or following the mark ICC-10B.

Size of marking (minimum) ¾ inch high.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be glass, earthenware, polyethylene (bags are not authorized), or metal, not over 1 gallon each. Packages containing inside glass or earthenware containers must not contain more than 4 such inside containers if their capacity is greater than 5 pints each. Polyethylene containers are authorized only for materials that will not react with or cause decomposition of the plastic.

NOTE 1: Because of the present emergency and until further order of the Commission, fiberboard boxes, spec. 12B (§ 78.205-26 (a) of this chapter), with one inside rectangular metal can, spec. 2F (§ 78.25 of this chapter), not to exceed 5 gallons capacity, are authorized. Gross weight of completed package not over 65 pounds.

(5) Spec. 12E (§ 78.208 of this chapter). Fiberboard box with 1 or 2 rectangular metal inside containers of not over 5 gallons capacity each.

(6) Spec. 6K (§ 78.101 of this chapter). Metal barrels or drums which must be constructed of Type 304 stainless steel, having heads with minimum convexity of ⅝ inch welded to the body, and be equipped at both heads with 12 gauge chime reinforcements. Body seams shall be welded. Drums shall be equipped with I-bar rolling hoops.

(7) Spec. 37P (§ 78.133 of this chapter). Steel drums with polyethylene liner (nonreusable container). Authorized only for materials that will not react with polyethylene and result in container failure.

(8) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2SL (§ 78.35a of this chapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure.

(9) Spec. 21C (§ 78.224 of this chapter). Fiber drum with inside spec. 2S or 2SL (§ 78.35 or § 78.35a of this chapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure. (See § 78.224-1(a)(2) of this chapter.)

(c) *Flammable liquids for which other special packing requirements are not prescribed.* Flammable liquids for which other special packing requirements are not prescribed in this part, must be shipped, depending upon their Reid[1] vapor pressures as prescribed in paragraphs (d) to (i) of this section.

(d) *When the vapor pressure does not exceed 16 pounds per square inch, absolute, at 100° F.* When the vapor pressure does not exceed 13 pounds per square inch, absolute, at 100° F., as prescribed in paragraphs (a) and (b) of this section.

(e) *When the vapor pressure exceeds 16 pounds per square inch, absolute, at 100° F.* When the vapor pressure exceeds 16 pounds per square inch, absolute, at 100° F., but does not exceed 27 pounds per square inch, absolute, at 100° F., flammable liquids must be packed in specification containers as follows:

(1) As prescribed in paragraph (a) (1) to (11) of this section, except specs. 10A and 17E (§§ 78.155 and 78.116 of this chapter). Bung labels required, for metal barrels and drums, as prescribed in paragraph (i) of this section.

(2) Spec. 103,[2] 103-W, 103AL-W, 103D-W, 104,[2] 104-W, 105A100,[2] 105A100AL-W, 105A100-W, 106A500,[2] 106A500-X, 106A-800-X-NC, 106A800-NCI,[2] 110A500-W, 111A60AL-W, 111A60-F-1, 111A60-W-1, 111A100-W-3, 111A100-W-4, 111A100-W-6, 112A200-W, 112A400-F, 114A340-W, ARA-II,[2] ARA-III,[2] ARA-IV,[2] or ARA-IV-A[2] (§§ 79.100, 79.101, 79.200, 79.201, 79.300, and 79.301 of this chapter). Tank cars. Cars having expansion domes must be equipped with manway closures, identification marks, and dome placards as prescribed in (f)(4), (g), (h), and (h)(1) of this section. Openings in tank heads to facilitate application of lining are authorized and must be closed in an approved manner. (See Note 1 of paragraph (f)(3) of this section.)

(3) Spec. MC 300, MC 301,[2] MC 302, MC 303, MC 304, or MC 305 (§ 78.321, 78.323, 78.324, 78.325, or 78.326 of this chapter). Tank motor vehicles.

(4) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

(f) *When the vapor pressure exceeds 27 pounds per square inch, absolute, at 100° F.* When the vapor pressure exceeds 27 pounds per square inch, absolute, at 100° F., but does not exceed 40 pounds per square inch (see note 2), absolute, at 100° F., flammable liquids must be packed in specification containers as follows:

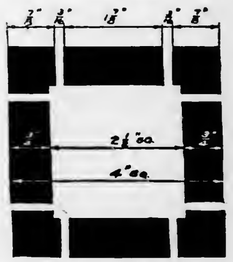
(1) Spec. 5, 5A, or 5P (§ 78.80, 78.81, or 78.92 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter. Bung labels required as prescribed in paragraph (i) of this section.

(2) Cylinders as prescribed for any compressed gas except acetylene.

(3) Spec. 105A100,[2] 105A100AL-W, 105A100-W, 106A500,[2] 106A500-X, 106A800-X-NC, 106A800-NCI,[2] 110A500-W, 111A100-W-4, 112A200-W, 112A400-F, 114A340-W, or ARA-IV-A,[2] (§§ 79.100, 79.101, 79.200, 79.201, 79.300, 79.301 of this chapter) or (see Note 1 of this subparagraph). Tank cars. Spec. 104,[3] 104-W, 111A100-W-3 and ARA-IV[1] (§§ 79.200, 79.201 of this chapter) tank cars are authorized under the conditions prescribed in paragraphs (f)(4), (g), (h), and (h)(1) of this section and Note 3 of this subparagraph. Openings in tank heads to facilitate application of lining are authorized and must be closed in an approved manner.

NOTE 1: Tanks built in compliance with American Railway Association specifications for class IV-A[1] tank cars authorized for use effective October 1, 1925, may be continued in service for the transportation of ethyl chloride and other liquids which do not have a vapor pressure exceeding 28 pounds per square inch, gauge pressure, at 100 F, provided there is stenciled on each side of the tank immediately below the valve protecting housing the words "Liquids having vapor pressure exceeding 28 pounds per square inch at 100 F. must not be loaded into this tank" in letters and figures at least 1 inch high. These tank cars must be retested as prescribed in current spec. 105A100-W except that safety valves must open at pressure not exceeding 35 pounds, and be vapor tight at 28 pounds per square inch.

NOTE 3: Spec. 104[1] or 104-W or ARA-IV[1] tank cars are authorized provided that they are equipped with approved fittings designed to provide for the loading, unloading, gauging, sampling, and taking temperature of the contents without removing the manway closure; that safety valves are set to open at pressure of 35 pounds (with a tolerance of plus or minus 3 pounds), and are vapor tight at 28 pounds per square inch gauge pressure; that bottom discharge outlets are of the same type as authorized for specification 104[1] or 104-W tank cars; and that there is stenciled on each side of the tank above the specification mark, in letters and figures at least 1 inch high, "For vapor pressures not exceeding 40 pounds per square inch, absolute, at 100 F." Because of the present emergency and until further order of the Commission, spec. ICC-104[1] or 104-W tank cars, equipped with safety valves set to open at pressure of 35 pounds (with a tolerance of plus or minus 3 pounds) and which are vapor tight at 28 pounds per square inch, gauge preasure, are authorized provided that they are stenciled as required above.



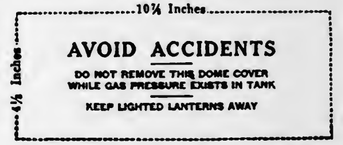
(4) Spec. 103,[1] 103-W, 103AL-W, 104,[1] 104-W, 111A60AL-W, 111A60-F-1, 111A60-W-1, ARA-II,[1] ARA-III,[1] or ARA-IV[1] (§§ 79.200, 79.201 of this chapter). Tank cars. Cars must have their manway closures equipped with approved safeguards making removal of closures from manway openings practically impossible while car interior is subjected to vapor pressure of lading. These cars must be stenciled on each side of domes in line with the ladders, and in a color contrasting to the color of the dome, with the identification mark as prescribed in paragraph (g) of this section.

(5) Spec. MC 304 (§ 78.325 of this chapter). Tank motor vehicle.

(6) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

(g) *Manhole closure identification mark.*

(Reduced size)



(h) *Dome placards.* Spec. 103,[1] 103AL-W, 103-W, 104,[1] 104-W, 111A60AL-W, 111A60-F-1, 111A60-W-1, ARA-II,[1] ARA-III,[1] or ARA-IV[1] (§§ 79.200, 79.201 of this chapter). Tank cars. Cars loaded with materials described in paragraphs (e) and (f) of this section must, in addition to the "Dangerous" placards, be protected by special dome placards, at least 4⅛ by 10⅞ inches, with legible wording as follows:

DOME PLACARD

(Reduced Size)

(Black printing on white)

NOTE 1: For tank car equipped with both inner and outer manhole covers, and when removal of inner cover is not necessary to unload the car, the word "inner" may be

[2] Use of existing tank cars authorized, but new construction not authorized.

[3] Use of existing cargo tanks authorized, but new construction not authorized.

[1] American Society for Testing Materials. Method of Test for Vapor Pressure of Petroleum Products (D-323).

[1] American Society for Testing Materials. Method of Test for Vapor Pressure of Petroleum Products (D-323).

[2] Use of existing tanks cars authorized, but new construction not authorized.

[3] Use of existing cargo tanks authorized, but new construction not authorized.

substituted for the word "this" in the dome placard.

(i) **Dome placards must be applied one on each side of dome and one on the top near the manhole in line with the ladders. Dome placards may be of white paper securely pasted to the dome, or of strong tag board for use in suitable holders; or the wording of the dome placard may be stenciled on the dome of car and remain thereon as long as it is used in the service which requires these special placards.**

(i) ***Bung label.*** **Flammable liquids as described in paragraphs (e) and (f) of this section, shipped in metal drums or barrels, in addition to the standard red caution label prescribed in § 73.405, must be labeled near the bung with a white rectangular label or tag measuring 5 by 3 inches, bearing the following wording:**

**BUNG LABEL**

**(Reduced Size)**

**(Black printing on white)**

5 inches

3 inches

**CAUTION** Unscrew This Bung SLOWLY

Do not unscrew entirely until all interior pressure has escaped through the loosened threads.

REMOVE BUNG IN OPEN AIR. Keep all open flame lights and fires away. Inclosed Electric Lights are safe.

(j) ***Viscous flammable liquids.*** **Flammable liquids having a viscosity as determined by one of the methods prescribed in § 73.115 (b) must be shipped in specification containers as prescribed in paragraph (k) or (l) of this section.**

(k) ***Viscous flammable liquids having a vapor pressure which does not exceed 16 pounds per square inch, absolute, at 100° F.*** **(See paragraphs (c) to (i) of this section for higher pressure liquids) must be prepared for shipment in containers as follows:**

**(1) As prescribed in paragraphs (a) or (b) of this section, irrespective of flash point.**

**(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.**

**(3) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) not over 5 gallons with welded side seams.**

**(4) Spec. 42F (§ 78.110 of this chapter). Aluminum barrels or drums.**

(l) ***Viscous flammable liquids with flash point above 20° F. to 80° F. and having a vapor pressure which does not exceed 18 pounds per square inch, absolute, at 100° F.*** **Viscous flammable liquids with flash point above 20° F. to 80° F. and having a vapor pressure which does not exceed 18 pounds per square inch, absolute, at 100° F. must be prepared for shipment in containers as follows:**

**(1) As prescribed in paragraphs (e) to (i) of this section.**

**(2) Spec. 17E or 17H (§ 78.116 or 78.118 of this chapter). Metal drums (single-trip).**

(m) ***Flammable liquids which are also oxidizing materials or corrosive liquids.*** **Flammable liquids which are also oxidizing materials or corrosive liquids as defined in §§ 73.151 and 73.240 must be packed as follows:**

**(1) Spec. 1A, 1D, or 1EX (single-trip) (§ 78.1, 78.4, or 78.6 of this chapter). Glass carboys, boxed or in plywood drums, capacity not over 5 gallons for spec. 1A.**

**(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container.**

**(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 quart each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container.**

**(4) Spec. 5, 5A, 5B, 5C, 17C (single-trip), or 17E (single-trip) (§ 78.80, 78.81, 78.82, 78.83, 78.115 or 78.116 of this chapter). Metal barrels or drums not over 16 gallons capacity. Authorized only for materials which will not react dangerously with the drum metal, or be decomposed by contact with it.**

**(5) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5-gallons capacity, with polyethylene liner (nonreusable container). Drums exceeding 1 gallon capacity must be constructed of at least 24-gauge metal. Authorized only for materials that will not react with polyethylene and result in container failure.**

**(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles not over 1-gallon capacity each. Not more than four 1-gallon polyethylene bottles shall be packed in one outside fiberboard box. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.**

**(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with one inside polyethylene bottle not over 5-gallons capacity, as specified by § 78.205-34 of this chapter. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.**

**(8) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.**

### § 73.120 Automobiles, motorcycles, tractors, or other self-propelled vehicles.

**(a) Automobiles, motorcycles, tractors, or other self-propelled vehicles, equipped with gasoline or other fuel tanks, provided such tanks are securely closed are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter. When offered for transportation by carriers by rail freight or highway, drainage of fuel tanks is not required. When offered for transportation by rail express, fuel tanks must have been drained and securely closed.**

(b) *Engines or motors (internal combustion).* Engines or motors (internal combustion) employing liquid fuel classed as flammable liquid in this chapter, whether shipped separately or as a part of other apparatus, unless specifically exempt in paragraph (a) of this section, must have their fuel tanks completely drained. Fuel may be left in the carburetor, fuel pump, and fuel lines provided the total flammable fuel content does not exceed 16 ounces and provided the lines are tightly closed to prevent leakage of the fuel.

(c) *Truck bodies or trailers on flat cars.* Truck bodies or trailers with automatic heating or refrigerating equipment of the flammable liquid type may be shipped with fuel tanks filled and equipment operating or inoperative, when used for the transportation of other freight and loaded on flat cars as part of a joint rail-highway movement, provided the equipment and fuel supply are of a type approved by the Bureau of Explosives. The heating or refrigerating units are exempt from specification packaging, marking, and labeling requirements in this service and shall be considered as carriers equipment but not as shipments.

### § 73.121 Carbon bisulfide (disulfide).

**(a) Carbon bisulfide must be packed in specification containers as follows:**

**(1) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass, earthenware, or metal inside containers not over 5 pints capacity each.**

**(2) Spec. 12A or 12B (§ 78.210 or 78.205 of this chapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 pint each, or metal cans, not over 1 quart each. Outside containers not to exceed 65 pounds gross weight.**

**(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside metal containers, spec. 2A (§ 78.20 of this chapter); or with inside glass or earthenware containers not over 5 pints capacity each.**

**(4) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip) not over 5 gallons capacity each, with openings not exceeding 2.3 inches in diameter.**

**(5) Spec. 5, 5A, or 17C (single-trip) (§§ 78.80, 78.81, or 78.115 of this chapter). Metal barrels or drums not over 55 gallons capacity each, with openings not exceeding 2.3 inches in diameter.**

**(6) Tank cars as prescribed in § 73.119 (a) (12). (See § 73.432 for shipping instructions.)**

**(b) Carbon bisulfide (disulfide) must not be offered for transportation by rail express.**

### § 73.122 Acrolein, inhibited.

**(a) Acrolein must be inhibited and when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:**

**(1) Spec. 5, 5A, or 5B (§ 78.80, 78.81, or 78.82 of this chapter). Metal drums not over 55 gallons capacity each. Spec. 5 or 5B drums must have no opening exceeding 2.3 inches in diameter.**

**(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside metal containers, spec. 2A (§ 78.20 of this chapter), not over 5 gallons capacity each.**

**(3) Spec. 105A500W (§ 78.288 of this chapter) tank cars, which must be stenciled near the specification number "For Acrolein Only".**

NOTE 1: Spec. 105A500-W and 105A600-W (§§ 78.288 and 78.289 of this chapter) tank cars stenciled 105A200-W or 105A300-W (§§ 78.307, 78.286 of this chapter) may be used.

**(4) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip) with chime reinforcement for bottom head chime seam and having fixed heads, not over 55 gallons capacity. The openings shall be located in one head and shall not exceed 2.3'' in diameter.**

**(b) Acrolein must be inhibited and when offered for transportation by rail express must be packed in specification containers as follows:**

**(1) Spec. 15A, 15B, 15C, 16A, 19A, or 12B (§ 78.168, § 78.169, § 78.170, § 78.185, § 78.190, or § 78.205 of this chapter). Wooden or fiberboard boxes having not more than one inside container of glass not exceeding one quart capacity, securely cushioned within a metal container.**

### § 73.123 Ethyl chloride.

**(a) Ethyl chloride must be packed in specification containers as follows:**

**(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass, earthenware, or metal inside containers not over 1 pound capacity each.**

**(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with glass, earthenware, or metal inside containers not over 1 pound capacity each. Outside containers not to exceed 65 pounds gross weight.**

**(3) Spec. 5A (§ 78.81 of this chapter). Metal barrels or drums not over 33 gallons capacity each.**

**(4) Cylinders as prescribed for any compressed gas, except acetylene.**

**(5) Spec. 105A100,[1] 105A100-W, 111A100-W-4, 112A200-W, 112A400-F, or ARA-IV-A [1] (§§ 79.100, 79.101 of this chapter). Tank cars. See Note 1 of § 73.119(f)(3). (See § 73.432 for shipping instructions.)**

**(6) Spec. MC330 (§ 78.336 of this chapter). Tank motor vehicle.**

**(b) Outage for all containers except lagged tank cars, must be 7.5 percent or more at 70° F. For lagged tank cars, 4 percent or more at 70° F.**

[1] The use of existing tank cars authorized, but new construction not authorized.

### § 73.124 Ethylene oxide.

**(a) Ethylene oxide must be packed in specification containers as follows and copper or copper bearing alloys shall not be used in any part of a container, container valve or other container appurtenance if that part is normally in contact with ethylene oxide liquid or vapor.**

**(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter) wooden boxes and Spec. 12B (§ 78.205 of this chapter) fiberboard boxes, with metal inside containers not over 12-ounce capacity each. Each inside container must have a minimum bursting strength of 180 psig as prepared for shipment and be provided with a safety vent having a minimum diameter of 0.1023 inch and closed with fusible metal having a yield temperature of 157 to 170° F. The safety vent opening shall be hot tinned before filling with fusible metal. Filling shall be such that the container will not be liquid full below 185° F. Each inside container must be completely insulated, except for top closure, with two coats of heat-retardant paint, of type approved by the Bureau of Explosives, applied over suitable primer and finished with suitable waterproof paint; or with other equally efficient insulation approved by the Bureau of Explosives. Not more than 12 inside containers nor more than one layer of containers may be packed in one outside container.**

**(2) Cylinders as prescribed for any compressed gas, except acetylene, not exceeding 30 gallons water capacity nominal, which meet the following requirements. All cylinders shall be seamless or steel welded. Cylinders shall be equipped with safety devices of the fusible plug type with threaded straight bore orifice, with yield temperature of 157 to 170° F. having a minimum vent area of 0.0055 square inch per pound of water capacity of the container for containers not over one gallon capacity and 0.0012 square inch per pound of water capacity of the container for all containers over one gallon capacity. Each cylinder must be tested for leakage at a pressure of at least 15 p. s. i. gauge with an inert gas before each refilling. Filling shall be such that the container will not be liquid full at 185° F. Pressurizing valves and eductor tubes must be provided for all containers over one gallon capacity. Cylinders having a water capacity in excess of one gallon shall be insulated with three coats of heat-retardant paint, of type approved by the Bureau of Explosives, applied over suitable primer and finished with suitable waterproof paint; or with other equally efficient insulation approved by the Bureau of Explosives.**

**(3) In addition to specification containers prescribed in this section, ethylene oxide may be shipped when packed in strong incombustible outside containers, with inside containers which must be securely sealed glass ampules or vials, contents not over 100 grams each, cushioned in vermiculite or equally efficient incombustible cushioning material. Not more than 100 grams of ethylene oxide shall be packed in any such outside container.**

**(4) Spec. 5P. Lagged steel drums not over 61 gallons capacity each. Drums must be equipped with safety devices of the fusible plug type with threaded straight bore orifice, with yield temperature of 157 to 170° F. having a minimum vent area of 0.0055 square inch per pound of water capacity of the container for containers not over 1 gallon capacity and 0.0012 square inch per pound of water capacity of the container for all containers over one gallon capacity. Each drum must be tested for leakage at a pressure of at least 15 p. s. i. gauge with an inert gas before each refilling; top head of each drum must be plainly marked with paint "Keep This End Up." Filling shall be such that the container will not be liquid full below 185° F. and the maximum filling for 61 gallon drums must not exceed 55 gallons of ethylene oxide at 60° F.**

**(5) Spec. 105A100,[1] 105A100-W, 111A100-W-4, or ARA-IV-A [1] (§§ 79.100, 79.101, 19.200, 79.201 of this chapter). Tank cars. Spec. 105A200-W, 105A300-W, 105A400-W, 105A500-W and 105A600-W (§§ 79.100, 79.101 of this chapter) must be restenciled 105A100-W and be equipped with safety valves of the type and size used on spec. 105A100-W tank cars. Openings in tank heads to facilitate application of nickel lining are authorized and must be closed in an approved manner. See Note 1 of § 73.119 (f)(3). (See § 73.432 for shipping instructions.)**

NOTE 1: Because of the present emergency and until further order of the Commission, specification ARA-IV [1] and ICC-104 [1] and 104-W (§§ 79.200, 79.201, of this chapter) tank cars, converted as follows, are authorized for use. Tanks must be tested to 75 pounds per square inch hydrostatic pressure and show no leakage with lagging removed. Bottom discharge outlet must be removed, the opening closed with a riveted plate, and a sump applied. Safety valves must be removed and replaced by two safety valves of the type and size used on ICC-105A100 [1] or 105A100-W (§§ 79.100, 79.101 of this chapter) tank cars but set to open at 60 pounds per square inch instead of 75 pounds. The various approved dome fittings now required on ICC-105A100 [1] or 105A100-W tank cars, must be installed in an approved manner to provide for the loading, unloading, guaging, sampling, and taking of temperature of contents without removing the manway closure. Tank jacket must be stenciled immediately above the mark ARA-IV,[1] ICC-104,[1] or ICC-104-W with the words "For Ethylene Oxide Only."

**(b) Outage must be sufficient to prevent tank car from becoming entirely filled with liquid at 105° F.**

### § 73.125 Alcohol.

**(a) Alcohol must be packed as follows:**

**(1) In containers as prescribed in § 73.119 (a) and (b).**

**(2) Securely closed metal tanks of not exceeding 16 gallons capacity, made of metal not lighter than 20 gauge, United States standard, packed in strong outside wooden boxes, may be used for the transportation of natural history or laboratory specimens preserved in alcohol, when shipped by or for the United States Government.**

[1] Use of existing tank cars authorized, but new construction not authorized.

(3) Spec. 12B (§ 78.205 of this chapter) fiberboard boxes. Because of the present emergency and until further order of the Commission, inside glass containers not over 1.21 gallons capacity each are authorized when only one inside container is packed in each outside container.

(4) Because of the present emergency and until further order of the Commission, existing tank cars complying with spec. 103,[1] 103–W, ARA–III,[1] AAR 203,[1] or AAR 203–W[1] (§§ 79.200, 79.201 of this chapter), previously used for the transportation of wine, are authorized when stenciled "Alcohol Only" and equipped with safety valves of the type required on spec. 103[1] tank cars.

(5) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S (§ 78.35 of this chapter) polyethylene container.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles, not over 1-gallon capacity each, suitably cushioned to prevent movement within the box.

(7) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

**§ 73.126 Nickel carbonyl.**

(a) Nickel carbonyl must be packed in specification cylinders as prescribed for any compressed gas, except acetylene. Cylinders used exclusively for nickel carbonyl may be given a complete external visual inspection at the time periodic retest becomes due in lieu of the interior hydrostatic pressure test required by § 73.34 (j). Visual inspection shall be in accordance with Compressed Gas Association's "Standards for Visual Inspection of Compressed Gas Cylinders"[2] 1959 edition.

(b) Nickel carbonyl must not be offered for transportation by rail express.

**§ 73.127 Nitrocellulose or collodion cotton, fibrous or nitrostarch, wet; nitrocellulose flakes; colloided nitrocellulose, granular, flake, or block, and lacquer base or lacquer chips, wet.**

(a) Nitrocellulose, fibrous, wet with alcohol or solvent, must contain at least 25 percent by weight of alcohol or a solvent with flash point not lower than 30° F.; collodion cotton, fibrous and nitrostarch, wet with alcohol or a solvent, must contain at least 30 percent by weight of alcohol or a solvent with flash point not lower than 30° F.; nitrocellulose flakes; colloided nitrocellulose, granular or flake; lacquer base or lacquer chips, wet with alcohol or a solvent, must contain at least 20 percent by weight of alcohol or a solvent with flash point not lower than 30° F., and nitrocellulose blocks wet with alcohol must contain at least 25 percent by weight of alcohol and must be packed in specification containers as follows:

(1) Containers, except cargo tanks or tank cars, as prescribed in § 73.119.

(2) Spec. 6A, 6B, 6C, or 6J (§ 78.97, § 78.98, § 78.99, or § 78.100 of this chapter). Metal barrels or drums not over 55 gallons capacity. Spec. 6J (§ 78.100 of this chapter) drums must have removable heads of 14 gauge metal or 16 gauge metal with one or more corrugations near the periphery and heads must have a minimum convexity of 3/8 inch; each drum must have three rolled or swedged-in hoops, one of which shall be in the body near the curl.

(3) Spec. 42F (§ 78.110 of this chapter). Aluminum barrels or drums. Authorized only for nitrocellulose or collodion cotton, fibrous, wet, or colloided nitrocellulose, granular or flake, wet.

(4) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal barrels or drums.

(5) Spec. 6J (§ 78.100 of this chapter). Metal drums. Authorized only for nitrocellulose in solid block forms and wet with alcohol to not less than 25 percent by weight. Authorized only for carload or truckload shipments.

(b) Except for spec. 37A which is limited to 480 pounds, gross weight of any container must not exceed 490 pounds.

**§ 73.128 Paints and related materials.**

(a) Paint, enamel, lacquer, stain, shellac, varnish, aluminum, bronze, gold, wood filler, liquid, and lacquer base liquid, and thinning, reducing and removing compounds therefor, and driers, liquid, therefor, must be packed in specification containers as follows:

(1) As prescribed in § 73.119, according to flash point, pressure, or viscosity.

(2) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) not over 5 gallons capacity with welded side seams for drums over 2 gallons capacity, irrespective of flash point or viscosity. Spec. 37A metal drums constructed with 26-gauge body sheets, 24-gauge removable heads, and 26-gauge bottom heads are authorized for not over 80 pounds gross weight. Because of the present emergency and until further order of the Commission, spec. 37A or 37B metal drums of 8½ gallons capacity, with welded side seams and made of 24-gauge metal, are authorized provided flash point of material shipped is above 20° F.

(3) Spec. 52 (§78.246 of this chapter). Aluminum or magnesium portable tanks.

(4) Spec. 37C (§ 78.135 of this chapter). Metal drums (non-reusable containers) not over 5 gallons capacity each. Authorized only for materials having flash point above 20 F.

(b) Paint, enamel, lacquer, stain, shellac, varnish, aluminum, bronze, gold, wood filler, liquid, and lacquer base liquid, and thinning, reducing and removing compounds therefor, and driers, liquid, therefor, with flash point above 20° F., may, in addition to containers prescribed in paragraph (a) of this section, be shipped in specification containers as follows:

(1) Spec. 10C (§ 78.157 of this chapter). Wooden barrels or kegs.

(c) Paint, enamel, lacquer, stain, shellac, varnish, aluminum, bronze, gold, wood filler, liquid, and lacquer base liquid, and thinning, reducing and removing compounds therefor, and driers, liquid, therefor, in glass or earthenware containers of not over 1 quart capacity each, or metal containers of not over 5 gallons capacity each, packed in strong outside containers are exempt from specification packaging, marking, and labeling requirements when offered for transportation by rail freight, highway, or water except when offered for transportation by carrier by water, name of contents must be marked on outside container. Shipments for transportation by highway carriers are exempt also from Part 77, except § 77.817, and Part 197 of this chapter. When offered for transportation by rail express, such shipments are exempt from specification packaging, marking, and labeling requirements, except that packages having inside containers of over 1 quart capacity each must be marked with name of contents and bear the red label as prescribed in § 73.405. When fiberboard box is used for such shipments by rail freight, rail express, highway, or water, gross weight must not exceed 65 pounds.

(1) Because of the present emergency and until further order of the Commission, paint, varnish and lacquer may be shipped under the conditions prescribed in paragraph (c) of this section, in containers not exceeding 1 gallon capacity with fiberboard bodies and metal tops and bottoms made leakproof in lieu of glass, earthenware, or metal containers as specified.

**§ 73.129 Polishes, metal, stove, furniture and wood, liquid.**

(a) Polishes, metal, stove, furniture and wood, liquid, must be packed in specification containers as follows:

(1) As prescribed in § 73.119, according to flash point, pressure, or viscosity.

(2) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) not over 5 gallons capacity with welded side seams, irrespective of flash point or viscosity.

(b) Polishes, metal, stove, furniture and wood, liquid, in glass or earthenware containers of not over 1 quart capacity each, or metal containers not over 5 gallons capacity each, packed in strong outside containers are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter. These exemptions do not apply to shipments offered for transportation by rail express. (See § 73.118 (b) for rail express exemptions.)

**§ 73.130 Refrigerating machines.**

(a) Refrigerating machines assembled for shipment and containing not over 15 pounds of a flammable liquid for their operation are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.131 Road asphalt, or tar, liquid.**

(a) Road asphalt, or tar, liquid, must be packed in specification containers as follows:

(1) As prescribed in § 73.119, according to flash point, pressure, or viscosity.

(2) Spec. 10C (§ 78.157 of this chapter). Wooden barrels or kegs, authorized only for material with flash point above 20° F.

**§ 73.132 Cement, liquid, n.o.s., container cement, linoleum cement, pyroxylin cement, rubber cement, tile cement, wallboard cement, and coating solution.**

(a) Cement, liquid, n.o.s., container cement, linoleum cement, pyroxylin cement, rubber cement, tile cement, wallboard cement, and coating solution must be packed in specification containers as follows:

(1) As prescribed in § 73.119, irrespective of flash point or viscosity, except that spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter), wooden barrels and kegs, must not be used.

NOTE 1: Because of the present emergency and until further order of the Commission, rubber cement containing no carbon bisulfide may be shipped in specification 10A (§ 78.155 of this chapter) wooden barrels or kegs.

(2) Spec. 52 (§ 78.246 of this chapter). Aluminum portable tanks. Authorized for materials irrespective of flash point but only those defined as viscous liquids by § 73.115(b).

**§ 73.133 Spirits of nitroglycerin.**

(a) Spirits of nitroglycerin must consist of not over 10 percent by weight of nitroglycerin in ethyl alcohol. Solutions of nitroglycerin must consist of not over 10 percent by weight of nitroglycerin in acetone. They must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes lined with paraffined paper, spec. 2L (§ 78.30 of this chapter), and with metal inside containers, securely closed with rubber stoppers tied in place. The inside containers must be entirely surrounded by at least 2 inches of dry, fine sawdust or kieselguhr. There must be not over 6 quarts of the mixture in each outside container.

NOTE 1: Because of the present emergency and until further order of the Commission, spirits of nitroglycerin, consisting of not over 10 percent by weight of nitroglycerin in ethyl alcohol, may be shipped in glass bottles not over 2 quarts capacity, securely closed with rubber stoppers tied in place. Each inside container must be entirely surrounded by at least 2 inches of dry fine sawdust or kieselguhr. There must be not over 8 quarts of the mixture in each outside container.

(b) Spirits of nitroglycerin consisting of not over 1 percent by weight of nitroglycerin in ethyl alcohol, in addition to containers specified in paragraph (a) (1) of this section, may be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes, with glass inside containers not over 1 quart capacity each, cushioned by at least 2 inches of dry, fine sawdust or kieselguhr.

[15 F.R. 8302, Dec. 2, 1950]

**§ 73.134 Aluminum triethyl, aluminum trimethyl, pyroforic fuel, pyroforic solutions, zinc ethyl, triisobutyl aluminum, ethyl aluminum sesquichloride, diethyl aluminum chloride, ethyl aluminum dichloride, methyl aluminum sesquichloride, methyl aluminum sesquibromide, methyl-magnesium bromide in ethyl ether in concentrations not over 40 percent, and mixtures or solutions thereof.**

(a) Aluminum triethyl, aluminum trimethyl, pyroforic fuel, pyroforic solutions, zinc ethyl, triisobutyl aluminum, ethyl aluminum sesquichloride, diethyl aluminum chloride, ethyl aluminum dichloride, methyl aluminum sesquichloride, methyl aluminum sesquibromide, methyl magnesium bromide in ethyl ether in concentrations not over 40 percent, and mixtures or solutions thereof must be shipped in devices or apparatus of a type approved by the Bureau of Explosives or in specification containers as follows:

(1) Cylinders as prescribed for any compressed gas except acetylene.

(2) Spec. 105A300–W, 106A500,[1] 106A500–X, or 110A500–W (§§ 79.100, 79.101, 79.300, 79.301 of this chapter) tank cars. Authorized for aluminum triethyl, aluminum trimethyl, and mixtures or solutions thereof, pyroforic fuel, and triisobutyl aluminum, ethyl aluminum sesquichloride, diethyl aluminum chloride, ethyl aluminum dichloride, methyl aluminum sesquichloride, methyl aluminum sesquibromide, and mixtures or solutions thereof only. Specs. 106A500,[1] 106A500–X and 110A500–W tanks must not be filled to a density exceeding 80 percent of the water capacities of the tanks and tanks must be equipped with an approved spring-relief safety valve. Tanks must be loaded on cars and motor vehicles in such a manner that the safety relief valve will always be in the vapor phase.

NOTE 1: Tanks complying with ICC–106A or ICC–110A (§ 78.275 or § 78.293 of this chapter) specifications may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(3) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

(4) Spec. MC 330 (§ 78.336 of this chapter). Tank motor vehicles having a minimum design pressure of 250 pounds per square inch.

(5) Spec. 17C or 37A (§ 78.115 or 78.131 of this chapter). Metal drums (single-trip) with inside metal cans not over 1-gallon capacity each, constructed of not less than 28-gauge electro-coated tin plate. Inside containers shall have no opening exceeding 1-inch diameter and shall be closed with air-tight soldered screw-cap closures. Inside containers must be surrounded on all sides with incombustible cushioning material. Spec. 17C (§ 78.115 of this chapter) 30-gallon capacity drums shall contain not more than 20 gallons of pyroforic solution per drum and 55-gallon capacity drums shall contain not more than 35 gallons of pyroforic solution per drum; each layer of inside containers must be separated by a tin plate separator in addition to cushioning material. Spec. 37A drums shall not exceed 5-gallons capacity each. Authorized only for pyroforic fuel mixed with solvent.

(b) Aluminum triethyl, aluminum trimethyl and mixtures or solutions thereof, pyroforic fuel, pyroforic solutions, zinc ethyl, triisobutyl aluminum, ethyl aluminum sesquichloride, diethyl aluminum chloride, ethyl aluminum dichloride, methyl aluminum sesquichloride, methyl aluminum sesquibromide, methyl magnesium bromide in ethyl ether in concentrations not over 40 percent, and mixtures or solutions thereof, when offered for transportation by rail express must be packed in glass ampules not over 2 ounces capacity each, securely cushioned with absorbent material in sufficient quantity to completely absorb contents in event of breakage, within an inside metal container, spec. 2R (§ 78.34 of this chapter) enclosed in a strong wooden box.

(c) Methyl magnesium bromide in ethyl ether in concentrations not over 40 percent must be packed in containers as prescribed by paragraphs (a) or (b), or in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside glass bottles not over 1-quart capacity each. Authorized gross weight not over 65 pounds.

(2) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

**§ 73.135 Dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane.**

(a) Dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane must be packed in specification containers as follows:

(1) Spec. 15A or 16B (§§ 78.168 or 78.186 of this chapter). Wooden boxes with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§ 78.118 or § 78.131 of this chapter). Metal drums (single-trip) with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(3) Spec. 5A (§78.81 of this chapter). Metal drums not over 55 gallons capacity.

(4) Spec. 5F (§ 78.85 of this chapter). Metal drums not over 11 gallons capacity.

[1] The use of existing tank cars authorized, but new construction not authorized.

[2] Copies obtainable from the Compressed Gas Association Inc., 500 Fifth Avenue, New York 36, New York.

[1] Use of existing tank cars authorized, but new construction not authorized.

(5) Spec. 5, 5B, 5C, and 17E (single-trip) (§§ 78.80, 78.82, 78.83, and 78.116 of this chapter). Metal drums. These containers not authorized for shipments by rail express.

(6) Specification cylinders as prescribed for any compressed gas, except acetylene.

(7) Spec. 103,[1] 103–W, 111A60–F–1, or 111A60–W–1 (§§ 79.200, 79.201 of this chapter). Tank cars, without bottom discharge outlet.

(8) Spec. 105A100,[1] 105A100–W, or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars.

(9) Spec. MC 300, MC 303; or MC 304 of steel or stainless steel construction (§§ 78.321, 78.324 or 78.325 of this chapter). Tank motor vehicles.

**§ 73.136 Methyl dichlorosilane and trichlorosilane.**

(a) Methyl dichlorosilane and trichlorosilane must be packed in specification containers as follows:

(1) Spec. 15A or 16B (§§ 78.168 or 78.186 of this chapter). Wooden boxes with glass inside containers not over 1 quart capacity each securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§ 78.118 or § 78.131 of this chapter). Metal drums (single-trip) with glass inside containers not over 1 quart capacity each securely closed and cushioned with incombustible absorbent material.

(3) Spec. 5A, 5B, or 5C (§ 78.81, § 78.82, or § 78.83 of this chapter). Metal drums not over 55 gallons capacity each. Spec. 5B drums must have no opening exceeding 2.3 inches in diameter. These containers not authorized for shipment by rail express.

(4) Spec. 5F (§ 78.85 of this chapter). Metal drums not over 11 gallons capacity. This container not authorized for shipment by rail express.

(5) Specification cylinders as prescribed for any compressed gas, except acetylene.

(6) Spec. 103,[1] 103–W, 111A60–F–1, or 111A60–W–1 (§§ 79.200, 79.201 of this chapter. Tank cars, without bottom discharge outlet.

(7) Spec. 105A100,[1] 105A100–W, or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars.

(8) Spec. MC 330 (§ 78.336 of this chapter). Tank motor vehicle.

(9) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

**§ 73.137 Lithium aluminum hydride, ethereal.**

(a) Lithium aluminum hydride, ethereal, must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes with inside glass or earthenware containers not over 1 quart each enclosed in air-tight metal cans and cushioned with sufficient incombustible cushioning material to completely absorb contents in event of breakage.

[1] Use of existing tank cars authorized, but new construction not authorized.

(2) Spec. 6A, 6B, 6C, or 17H (single-trip) (§§ 78.97, 78.98, 78.99, or 78.118 of this chapter). Metal barrels or drums with not more than one inside glass container not exceeding 2 gallons capacity. The inside container must be completely cushioned in sufficient incombustible cushioning material to completely absorb the contents in event of breakage.

(3) Specification cylinders as prescribed for any compressed gas, except acetylene. Valves or fittings must be protected from injury by a cap or equally efficient device.

**§ 73.138 Pentaborane.**

(a) Pentaborane must be packed in specification cylinders as prescribed for any compressed gas, except acetylene. Cylinders must be protected with valve protection cap or must be packed in strong wooden boxes and blocked therein so as to protect the valves from injury under conditions normally incident to transportation. Cylinders not exceeding 2 inches in diameter nor 6 inches in length, excluding the length of the valve, may also be packed in strong solid fiberboard boxes, having no outside dimension less than 4 inches, completely filled with layers of strong corrugated fiberboard, the center of which shall be cut out to fit the cylinder valve, and otherwise so designed that neither the cylinder nor the valve will be in contact with any wall of the box under conditions normally incident to transportation.

(b) Pentaborane must not be offered for transportation by rail express.

**§ 73.139 Ethylene imine, inhibited, and propylene imine, inhibited.**

(a) Ethylene imine and propylene imine must be inhibited and must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes, with inside containers which must be securely sealed glass ampules or glass bottles, contents not over 16 fluid ounces or 1 pound each, in tightly closed metal cans. If more than one ampule or bottle is packed in a metal can, ampules or bottles must be separated by fiberboard partitions. Ampules or bottles must be cushioned in vermiculite or equally efficient incombustible cushioning material in quantity sufficient to completely absorb contents in event of breakage. Not more than 5 pints of liquid may be packed in any outside wooden box.

(2) Spec. 15A, 15B, or 15C (§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with not more than four inside metal drums, spec. 37B (§ 78.132 of this chapter), not over 1-gallon capacity each, or not more than one spec. 37B metal drum of 5-gallons capacity, in one outside box. Inside drums must be surrounded on all sides with incombustible absorbent cushioning material.

(3) Spec. 6A, 6B, 6C, or 6J (§ 78.97, 78.98, 78.99, or 78.100 of this chapter). Metal barrels or drums, with one inside spec. 17E (§ 78.116 of this chapter) metal drum not over 30-gallons capacity. Inside drum must be completely surrounded with incombustible cushioning material.

**§ 73.140 Zirconium, metallic, solutions, or mixtures thereof, liquid.**

(a) Zirconium, metallic, solutions, or mixtures thereof, liquid, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with inside metal containers. Each inside container shall not contain more than 20 individual glass or porcelain jars, not exceeding 2-ounce capacity each, securely closed and completely cushioned in incombustible cushioning material in sufficient quantity to completely absorb the contents.

**§ 73.141 Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures.**

(a) Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with securely closed inside metal containers not over 5 gallons capacity each; or in tightly closed glass bottles not exceeding 1 quart capacity each, securely cushioned in sufficient quantity of absorbent material to completely absorb the contents in event of leakage.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with securely closed inside metal containers not over 1 gallon capacity each; or in tightly closed glass bottles not exceeding 1 quart capacity each, securely cushioned in sufficient quantity of absorbent material to completely absorb the contents in event of leakage.

(3) Spec. 5, 5A, 5B, or 5C (§§ 78.80, 78.81, 78.82, or 78.83 of this chapter). Metal barrels or drums, with not more than one opening not exceeding 2.3 inches in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 3/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material.

(4) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip), with not more than one opening not exceeding 2.3 inches in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 3/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material.

(5) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip), not over 5 gallons capacity, without opening except bung hole not exceeding 2.3 inches in diameter. Gaskets are required and must be not less than 3/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material. (See also paragraph (a) (6) of this section.)

(6) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip), not over 55 gallons capacity, with not more than one opening not exceeding 2.3 inches in diameter and not more than one vent opening not exceeding 1 inch in diameter. Gaskets are required and must be not less than 3/32-inch thick and of resilient material such as polyethylene, neoprene, or equally efficient material. Authorized only for mercaptans having flash point above 20° F.

(7) Spec. 103–W, 105A100,[1] 105A100–W, 111A60–F–1, or 111A60–W–1 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars. Specs. 103–W, 111A60–F–1, and 111A60–W–1 tank cars equipped with bottom outlets must have bottom outlets effectively sealed. Bottom washout permitted.

(8) Spec. MC 330 (§ 78.336 of this chapter), tank motor vehicles.

(9) Specification cylinders as prescribed for any compressed gas, except acetylene.

(b) Warning or odorizing devices containing not more than one ounce of a mercaptan or an aliphatic mercaptan mixture in a hermetically sealed container or in a hermetically sealed portion of the device are not subject to the regulations in Parts 71–78 and 197 of this chapter.

**§ 73.143 Methylchloromethyl ether, anhydrous.**

(a) Methylchloromethyl ether, anhydrous, must be packed in specification containers as follows:

(1) Spec. 5K (§ 78.88 of this chapter). Nickel barrels or drums.

(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon capacity each, except that inside containers up to 3 gallons each are authorized when only one inside container is packed in each outside container.

(b) Methylchloromethyl ether, anhydrous, must not be offered for transportation by rail express.

**§ 73.144 Inks.**

(a) Inks must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.119, according to flash point, pressure, or viscosity.

(2) Spec. 17C (§§ 78.115 of this chapter). Full removable head metal drums (single-trip).

(3) Spec. 37C (§ 78.135 of this chapter). Metal drums (nonreusable container) not over 5 gallons capacity each. Authorized only for material having flash point over 20 F.

**§ 73.145 Dimethylhydrazine, unsymmetrical, and methylhydrazine.**

(a) Dimethylhydrazine, unsymmetrical, and methylhydrazine must be packed in specification containers as follows:

(1) Spec. 1D (§ 78.4 of this chapter). Boxed glass carboys.

(2) Spec. 15A, 15B, or 15C (§ 78.168, § 78.169, or § 78.170 of this chapter). Wooden boxes with inside containers which must consist of glass bottles not exceeding 1-gallon capacity each, cushioned by means of vermiculite within tin cans which shall be tightly closed, or
